ABOUT THIS MANUAL

Thank you for choosing Ford. We recommend that you take some time to get to know your vehicle by reading this manual. The more that you know about it, the greater the safety and pleasure you will get from driving it.

WARNING

⚠ Always drive with due care and attention when using and operating the controls and features on your vehicle.

Note: This manual describes product features and options available throughout the range, sometimes even before they are generally available. It may describe options not fitted to your vehicle.

Note: Some of the illustrations in this manual may be used for different models, so may appear different to your vehicle. However, the essential information in the illustrations is always correct.

Note: Always use and operate your vehicle in line with all applicable laws and regulations.

Note: Pass on this manual when selling your vehicle. It is an integral part of the vehicle.

SYMBOLS GLOSSARY

Symbols in this handbook

WARNING

⚠ You risk death or serious injury to yourself and others if you do not follow the instructions highlighted by the warning symbol.

CAUTION

⚠ You risk damaging your vehicle if you do not follow the instructions highlighted by the caution symbol.

Symbols on your vehicle

When you see these symbols, read and follow the relevant instructions in this handbook before touching or attempting adjustment of any kind.

REPLACEMENT PARTS RECOMMENDATION

Now you can be sure that your Ford parts are Ford parts

Your Ford has been built to the highest standards using high quality Ford Original Parts. As a result, you can enjoy driving it for many years.

Should the unexpected occur and a major part needs replacing, we recommend that you accept nothing less than Ford Original Parts.

The use of Ford Original Parts ensures that your vehicle is repaired to its pre-accident condition and maintains its maximum residual value.

Ford Original Parts match Ford's stringent safety requirements and high standards of fit, finish and reliability. Quite simply, they represent the best overall repair value, including parts and labour costs.
Now it is easier to tell if you have really been given Ford Original Parts. The Ford logo is clearly visible on the following parts if they are Ford Original Parts. If your vehicle has to be repaired, look for the clearly visible Ford branding and make sure that only Ford Original Parts have been used.

Look for the Ford logo on the following parts

Sheet metal
- Fenders
- Doors

Glass
- Rear window
- Side glass
- Windscreen

Lighting
- Headlamps
- Rear lamps

SPECIAL NOTICES

WARNING
Do not use abrasives or chemicals solvents on the tag.
We have installed the radio frequency identifier (RFID) tag in your vehicle in compliance with the government directives under the MORTH final notification GSR 207 (E), dated 08 April 2013. Ford does not in any way guarantee or warranties the quality, contents, accuracy of the product or data contained in the tag.

This tag is for the exclusive use of government authorities or personnel authorised by the government. The responsibility of using this tag is on the owner of the vehicle.

**Note:** The tag is located on the top left-hand side of the windscreen.

A  Odometer  
B  Average fuel consumption  
C  Distance to empty  
D  Tripmeter  
E  Reset button

Press the Reset button to scroll through the displays. See (page 46).

Defrosting and demisting the windscreen

![Defrosting and demisting diagram]

If necessary use the heated rear window to defrost or demist the rear window. See Heated Windows (page 50).

See Manual Climate Control (page 48).

Cooling the interior quickly

![Cooling the interior quickly diagram]

See Manual Climate Control (page 48).

Locking and unlocking the doors with the remote control

![Locking and unlocking diagram]

Unlocking the luggage compartment lid

Press button C twice within three seconds. See Locking and Unlocking (page 23).

Adjusting the steering wheel

**WARNING**

Never adjust the steering wheel when the vehicle is moving.
WARNING

⚠️ Make sure that you fully engage the locking lever when returning it to its original position.

See **Adjusting the Steering Wheel** (page 27).
BOoster Seats

Warnings

Do not install a booster seat or a booster cushion with only the lap strap of the seat belt.

Do not install a booster seat or a booster cushion with a seat belt that is slack or twisted.

Do not put the seat belt under your child’s arm or behind its back.

Do not use pillows, books or towels to boost your child’s height.

Make sure that your children sit in an upright position.

Secure children that weigh more than 15 kilograms but are less than 150 centimetres tall in a booster seat or a booster cushion.

Booster seat (Group 2)

We recommend that you use a booster seat that combines a cushion with a backrest instead of a booster cushion only. The raised seating position will allow you to position the shoulder strap of the adult seat belt over the centre of your child’s shoulder and the lap strap tightly across its hips.

Booster cushion (Group 3)
CHILD SEATS

WARNINGS

- Secure children that are less than 150 centimetres tall or less than 12 years of age in a suitable, approved child restraint, in the rear seat.
- Original warning according to ECE R94.01: Extreme Hazard! Do not use a rearward facing child restraint on a seat protected by an air bag in front of it!
- Read and follow the manufacturer’s instructions when you are fitting a child restraint.
- Do not modify child restraints in any way.
- Do not hold a child on your lap when the vehicle is moving.
- Do not leave children unattended inside your vehicle in a doors closed condition.

If your vehicle has been involved in an accident, have the child restraints checked by properly trained Ford approved technicians.

Note: Mandatory use of child restraints varies from country to country.

A choice of approved child restraints, which have been specifically tested and approved for your vehicle are available from your Dealer.

Child restraints for different mass groups

Use the correct child restraint as follows:

**Baby safety seat**

Secure children that weigh less than 13 kilograms in a rearward facing baby safety seat (Group 0+) in the rear seat.
Child Safety

Child safety seat

Secure children that weigh between 13 and 18 kilograms in a child safety seat (Group 1) in the rear seat.

CHILD SEAT POSITIONING

<table>

**PAB** - Passenger airbag.

**X** Not suitable for children in this mass group.

**U** Suitable for universal category child seats approved for use in this mass.

**UF¹** Suitable for universal category forward facing child seats approved for use in this mass group. However, we recommend that you secure children in a government approved child restraint, in the rear seat.
CHILD SAFETY LOCKS

WARNING

⚠️ You cannot open the doors from inside if you have put the child safety locks on.

A  Unlock
B  Lock

Turn the key in the rear door rearward to activate the lock. To deactivate the lock, turn the key forward.
PRINCIPLE OF OPERATION

This seating position is fitted with an airbag for your protection.

**WARNING**
- You must always wear your seat belt
- Children must always be properly restrained
- The rear seat is the safest place for the children

- If you are too close to an inflating airbag, it could seriously injure you. Move your seat as far back as practical to allow room for airbag inflation.
- Never install any child restraint (e.g. baby capsule, child seat or booster seat) in the front seat where a passenger airbag is fitted.
- Never place objects in front of you while you are seated in the seat.
- Never rest anything on the airbag cover (e.g. feet or dash panel covers).

**YOUR AIRBAG SYSTEM DOES NOT REQUIRE REGULAR MAINTENANCE**

However, if any of the following occur see your Authorised Ford Dealer without delay:
- The "airbag" light does not operate briefly when the ignition key is turned ON or,
- The "airbag" light operates while driving or,
- Group of 5 beeps are heard.

Airbags

**WARNINGS**

- Do not modify the front of your vehicle in any way. This could adversely affect deployment of the airbags.

  Original warning according to ECE R94.01: Extreme Hazard! Do not use a rearward facing child restraint on a seat protected by an airbag in front of it!

  Wear a seat belt and keep sufficient distance between yourself and the steering wheel. Only when you use the seat belt properly, can it hold you in a position that allows the airbag to achieve its optimum effect.

  Have repairs to the steering wheel, steering column, seats, airbags and seat belts carried out by properly trained technicians from Ford authorised dealerships.

  Keep the areas in front of the airbags free from obstruction. Do not affix anything to or over the airbag covers.

  Do not poke sharp objects into areas where airbags are fitted. This could damage and adversely affect deployment of the airbags.

  The airbag may only deploy with the ignition switch in the on (II) position.
**WARNINGS**

Always keep the areas in front of the airbags free. Never affix anything to or over these areas.

If you are too close to an inflating airbag, it could seriously injure you. Move your seat as far back as practical to allow room for airbag inflation.

Several airbag system components get hot after inflation. Do not touch after inflation.

Fitment of certain accessories e.g. bull bars or nudge bars may cause inadvertent or premature deployment of airbags.

---

**Note:** You will hear a loud bang and see a cloud of harmless powdery residue if an airbag deploys. This is normal.

**Note:** Only wipe airbag covers with a damp cloth.

Your vehicle is equipped with an event data recorder which is capable of collecting and storing data during a crash or near crash event. The recorded information may assist in the investigation of such an event. To access this information special equipment must be directly connected to the recording modules. Ford does not access event data recorder information without obtaining consent unless pursuant to a court order or where required by law enforcement, other government authorities or other third parties may seek access to the information independent of Ford.

The airbag is a supplementary restraint system. It is designed to be used in addition to seat belts to help protect against head and chest injuries in certain moderate to severe frontal collisions.

The airbag system is not visible until it is activated. The air bag system is designed to deploy the driver and passenger front air bags in certain frontal and front angled collisions.
Because the system senses crash severity, some frontal and side collisions will not inflate the airbags. Front airbags are not designed to inflate in rollover, rear and low speed impacts.

The restraint system comprises:
- a driver airbag
- a front passenger airbag
- crash sensors
- an airbag warning lamp
- an electronic control and diagnostic unit.

**Driver and front passenger airbags**

Your vehicle is equipped with an air bag for the driver, located in the steering wheel and a passenger air bag is located in the instrument panel above the glove compartment. The passenger air bag can be identified by the ‘Airbag’ mark embedded on the airbag cover.

The seat back must be set correctly for the airbags to be optimally effective. See **Sitting in the Correct Position** (page 51). This helps to reduce the risk of injury from sitting too close to an inflating airbag.

The driver and front passenger airbags will deploy during significant frontal collisions or collisions that are up to 30 degrees from the left or the right. The airbags will inflate within a few thousandths of a second and deflate on contact with the occupants, thus cushioning forward face/body movement. During minor frontal collisions, overturns, rear collisions and side collisions, the driver and front passenger airbags will not deploy.

**WARNINGS**

If the passenger airbag cover shows signs of having been removed, the car should be towed to the nearest Authorised Ford Dealer for repair. Do not attempt to reinstall the cover. If the vehicle must be driven then on no account should there be an occupant in the front passenger seat.

The airbag(s) and energy management retractors will activate only once. Once activated, the airbags and energy management retractors will not function again and must be replaced immediately. The crash sensor must also be replaced. If the airbag(s) are not replaced, the un-repaired area will increase the risk of injury in a collision.

**Airbag warning light**

When the ignition switch is turned to position II, the airbag warning light on the instrument panel illuminates for approximately 3 seconds to indicate that the system is functional.
If the airbag warning light does not illuminate, if it stays on or illuminates intermittently or continuously while driving, it means there is a malfunction. Have the system checked by an Authorised Ford Dealer.

**Seat belts**

**WARNINGS**

- Wear a seat belt and keep sufficient distance between yourself and the steering wheel. Only when you use the seat belt properly, it can hold you in a position to achieve its optimum effect.
- The wearing of seat belts is required by law, even when airbags are fitted.
- Never use a seat belt for more than one person.
- Use the correct buckle for each seat belt.
- Do not use a seat belt that is slack or twisted.
- Do not wear thick clothing. The seat belt must fit tightly around your body to achieve its optimum effect.
- Position the shoulder strap of the seat belt over the centre of your shoulder and position the lap strap tightly across your hips.

**The importance of wearing seat belts**

Seat belts must be worn by all vehicle occupants to be properly restrained and help reduce the risk of injury in a collision. Wearing a seat belt will:

- help keep you in the proper position when the airbags inflate,
- reduce the risk of harm in rollover, side or rear impact collisions,
- reduce the risk of harm in frontal collisions that are not severe enough to activate the airbags,
- reduce the risk of being thrown from your vehicle.

**FASTENING THE SEAT BELTS**

**WARNINGS**

- Insert the tongue into the buckle until you hear a distinct click. You have not fastened the seat belt properly if you do not hear a click.
- Do not use a seat belt that is slack or twisted.
**Pull the belt out steadily. It may lock if you pull it sharply or if the vehicle is on a slope.**

**Press the red button on the buckle to release the belt. Let it retract completely and smoothly.**

---

**USING SEAT BELTS DURING PREGNANCY**

**WARNING**

Position the seat belt correctly for your safety and that of your unborn child. Do not use only the lap strap or the shoulder strap.

Position the lap strap comfortably across your hips and low beneath your pregnant abdomen. Position the shoulder strap between your breasts, above and to the side of your pregnant abdomen.

---

**Pull the belt out steadily. It may lock if you pull it sharply or if the vehicle is on a slope.**

**Press the red button on the buckle to release the belt. Let it retract completely and smoothly.**
GENERAL INFORMATION ON RADIO FREQUENCIES

**CAUTIONS**

The radio frequency used by your remote control can also be used by other short distance radio transmissions (e.g. amateur radios, medical equipment, wireless headphones, remote controls and alarm systems). If the frequencies are jammed, you will not be able to use your remote control. You can lock and unlock the doors with the key.

Check your vehicle is locked before leaving it unattended. This will safeguard against any potential malicious frequency blocking.

**Note:** You could unlock the doors if you press the buttons on the remote control unintentionally.

The operating range between your remote control and your vehicle varies depending on the environment.

PROGRAMMING THE REMOTE CONTROL

A maximum of four remote controls (Coded Keys) (including the ones supplied with the vehicle) can be programmed.

To programme a new remote control:

- Turn the ignition key to position II four times within six seconds.
- Switch off the ignition. Cluster indicator flashes to indicate that it is now possible to programme a new remote control.
- Press any button on a new remote control. Cluster indicator flashes as confirmation. Repeat this last step for all of your remote controls, including the original.
- Switch the ignition back on or wait for ten seconds without programming another remote control to end remote control programming. Only the remote controls which you have just programmed are now able to lock and unlock your vehicle.

Re-programming the unlocking function

You can change the unlocking function so that pressing the unlock button once deactivates the central locking and unlocks the driver’s door. Pressing the unlock button twice within three seconds also unlocks the passengers’ doors.
In order to re-programme the function, press and hold the unlock and lock buttons simultaneously for at least four seconds with the ignition switched off. The direction indicators will flash twice to indicate that the unlocking function has been successfully re-programmed.

Pressing and holding both buttons simultaneously for at least four seconds again will change the function back.

**CHANGING THE REMOTE CONTROL BATTERY**

Make sure that you dispose of old batteries in an environmentally friendly way. Seek advice from your local authority regarding recycling.

If the range of the transmitter in the key decreases gradually, the battery (type 3V CR 2032) should be replaced.

- Carefully separate the transmitter unit from the key using a flat object (e.g. a screwdriver) at the recess on the back.
- Carefully prise out the battery with the flat object. Fit the new battery between the contacts with the + sign facing downwards. Reassemble the transmitter unit in reverse order.

- Open the transmitter unit by separating the retaining clips on the sides with the flat object.
- Carefully prise out the battery with the flat object. Fit the new battery between the contacts with the + sign facing downwards. Reassemble the transmitter unit in reverse order.
LOCKING AND UNLOCKING

Manual locking

A  Push to lock
B  Pull to unlock

You need to lock all the doors individually and lock the driver side door with the key.

Central locking

You can only centrally lock the doors if they are all closed. Central locking can only be operated from driver door either by the handle in the bezel or by the remote control.

Locking and unlocking confirmation

The direction indicators will flash once while unlocking the doors using the remote control.

The direction indicators will flash twice while locking the doors using the remote control.
Locking and unlocking the doors with the remote control

- Unlock
- Lock
- Luggage compartment lid unlock

Unlocking the luggage compartment lid
Press button C twice within three seconds.

Automatic relocking

All doors will be automatically unlocked when an impact causes the airbags to deploy and following this the hazard warning flashers will flash.

Luggage compartment

Opening the luggage compartment

The luggage compartment can be opened either by pressing the remote button C twice within three seconds or pressing the luggage compartment release switch near the instrument panel.
Using the key.

To unlock/open, turn the key clockwise.

**Closing the luggage compartment**

**WARNING**

⚠️ Close the luggage compartment properly to prevent it opening while you are driving.
**PRINCIPLE OF OPERATION**

The engine immobiliser is a theft protection system that prevents someone from starting the engine with an incorrectly coded key.

**CODED KEYS**

*Note:* Do not shield your keys with metal objects. This may prevent the receiver from recognising your key as a valid one.

*Note:* Have all of your remaining keys erased and recoded if you lose a key. Ask your dealer for further information. Have replacement keys recoded together with your existing keys.

If you lose a key, you can obtain a replacement from your Ford Dealer. If possible, provide them with the key number from the tag provided with the original keys. You can also obtain additional keys from your Ford Dealer.

**ARMING THE ENGINE IMMOBILISER**

The engine immobiliser is armed automatically a short time after you have switched the ignition off.

The indicator in the instrument cluster will flash to confirm that the system is operating.

**DISARMING THE ENGINE IMMOBILISER**

Switching on the ignition disarms the system if the correct code is recognised. The indicator *illuminates* for approximately three seconds and then *extinguishes*.

If the indicator illuminates constantly for one minute or flashes for approximately one minute and then repeatedly at irregular intervals, the system did not recognise the key code or a system fault is present. Remove the key and try again.

If the engine does not start, a system malfunction has occurred. Have the system checked by an expert immediately.
ADJUSTING THE STEERING WHEEL

**WARNING**

Never adjust the steering wheel when the vehicle is moving.

Release the locking lever to adjust the height of the steering wheel.

Return the lever to its original position to secure the wheel.

See **Sitting in the Correct Position** (page 51).

**AUDIO CONTROL**

Select radio, CD or cassette mode on the audio unit.

The following functions can be operated with the remote control:

**Volume**

Volume up: Press the **VOL +** button on the back of the remote control.

Volume down: Press the **VOL -** button on the back of the remote control.

**Seek**

Move the lever up or down:
• In radio mode, this will locate the next radio station up or down the frequency band.

• In CD, MP3, USB and Bluetooth audio mode, it will select the next or previous track.

Mode

Briefly press the button on the side:

• In radio mode, this will locate the next pre-set radio station.

• In MP3 and USB mode, this will play first song of next folder.

Press and hold the button on the side:

• In all modes, this will change the mode function to AM /FM/CD or MP3/USB/Bluetooth audio/Aux.
Wipers and Washers

WINDSCREEN WIPERS

A  Single wipe  
B  Intermittent wiping  
C  Normal wiping  
D  High speed wiping

Intermittent wiping

Fixed intermittent

Select the wiper switch to position B for intermittent wiping.

WINDSCREEN WASHERS

WARNING

Do not operate the windscreen washer for more than 10 seconds or when the reservoir is empty.

When the button at the end of the lever is pressed the washer will work in conjunction with the wiper operating four times.

Once the wash/wipe cycle is completed, the wipers will pause and then perform one more wipe to clear the screen.
Wipers and Washers

REAR WINDOW WIPER AND WASHERS

Intermittent Wipe

Pull the lever towards the steering wheel.

Washer

The washer jet for the rear window is located on the central high mount stop lamp above the rear window.

Note: Avoid dry wiping operation, this will reduce the wiper rubber life.

ADJUSTING THE WINDSCREEN WASHER JETS

The eye ball jets can be adjusted precisely using a pin.

CHECKING THE WIPER BLADES

Pull the lever fully towards the steering wheel and hold it to operate the washer.

The washer will operate in conjunction with the wipers.

WARNING

Do not operate the washer for more than 10 seconds at a time, and never when the reservoir is empty.

Pull the lever fully towards the steering wheel and hold it to operate the washer.

The washer will operate in conjunction with the wipers.

Run the tip of your fingers over the edge of the blade to check for roughness.
Clean the wiper blade lips with water applied with a soft sponge.

**CHANGING THE WIPER BLADES**

**WARNING**

Avoid the contact between wiper arm and windscreen when the wiper arm is placed over windscreen without wiper blade.

**Note:** Ensure to keep a thick paper or foam between the wiper arm and windscreen to avoid scratches.

Install in the reverse order.
**LIGHTING CONTROL**

**Lighting control positions**

- **A** Off
- **B** Side and tail lamps
- **C** Headlamps
- **D** Front fog lamps
- **E** Rear fog lamps

**Note:** To remind you to switch off the headlamps, a chime will come on when the driver door is opened with headlamps on.

**Welcome lighting**

The side repeaters and tail lamps will flash once when you unlock the doors with the remote control. Courtesy lamp comes on if the lamp control is in door mode.

**Main/dipped beam**

Pull the lever fully towards the steering wheel to switch between main and dipped beam.

**Headlamp flasher**

Pull the lever slightly towards the steering wheel.

**HEADLAMP LEVELLING**
You can adjust the level of the headlamp beams according to the vehicle load.

**Recommended headlamp levelling switch positions**

**FRONT FOG LAMPS**

Switch on the headlamps and pull out the control switch one position.

The front fog lamps should be used only when visibility is considerably restricted by fog, snow or rain.

The indicator light in the instrument cluster will illuminate, when the front fog lamps are in use.

**HAZARD WARNING FLASHERS**

For item location: See *At a Glance* (page 8).

Use only in an emergency to warn other traffic of vehicle breakdown or approaching danger. Press the switch to turn on or off.

You can also operate the hazard warning flashers when the ignition is off.

**Note:** The hazard warning flashers flash during emergency braking.

**DIRECTION INDICATORS**

Move the lever up/down to activate right/left direction indicators respectively.
During lane changing flick the lever up or down and the direction indicators will flash three times.

Sudden increase in the rate of flashing warns a failed indicator bulb.

If you set the switch to position A, the courtesy lamp will be off irrespective of the doors being opened or closed.

If you set the switch to position B the courtesy lamp turns on during the following conditions:

### INTERIOR LAMPS

#### Courtesy lamp

CHANGING A BULB

**WARNINGS**

- Switch the lights and the ignition off.
- Let the bulb cool down before removing it.

**CAUTIONS**

- Do not touch the glass of the bulb.
- Only fit bulbs of the correct specification. See Bulb Specification Chart (page 39).

**Note:** The following instructions describe how to remove the bulbs. Fitting is the reverse order unless otherwise stated.

Headlamp main and dipped beam

**Note:** To remove the right hand side headlamp bulb, detach the coolant reservoir.

**Detach the coolant reservoir**

1. Remove the bolt.
2. Pull the container from the bracket.

**Headlamp bulb**
1. Remove the headlamp cover.

2. Disconnect the electrical connector.
3. Release the clip.
4. Remove the bulb.

**Side lamps**

1. Remove the headlamp cover. See headlamp bulb removal.
2. Carefully prise out the bulb holder.
3. Remove the bulb.

**Front direction indicators**

1. Turn the bulb holder anticlockwise and remove it.
2. Gently press the bulb into the bulb holder, turn it anticlockwise and remove it.

**Side Repeaters**

1. Carefully remove the side repeater.
2. Remove the bulb holder.
3. Remove the bulb.

**Rear lamps**
1. Open the tailgate.

2. Unscrew the screws and remove the rear lamp assembly.
3. Gently press the bulbs into the bulb holder, turn them anticlockwise and remove them.

A Parking/Brake bulb
B Turn signal bulb
C Reverse lamp bulb
**Central high mounted stop lamp**

1. Open the tailgate.
2. Remove the rubber grommet.
3. Release the clips using a flat-bladed screwdriver, remove the lamp and disconnect the connector.
4. Unclip the bulb holder and remove the bulb.

**Number plate lamp**

1. Loosen the screws and remove the lamp.
2. Remove the bulb.

**Courtesy lamp**

1. Carefully prise out the lamp.
2. Turn the bulb holder anticlockwise and remove it.
3. Remove the bulb.
Lighting

Luggage compartment lamp

1. Carefully prise out the lamp.
2. Remove the bulb.

POWER WINDOWS

WARNING

⚠️ Do not operate the electric windows unless they are free from obstruction.

**Note:** If you operate the switches often during a short period of time, the system might become inoperable for a certain time to prevent damage due to overheating.

The power windows can be operated only when the ignition is switched on.

The front power window can be operated by the switches located on either of the door trims (driver door and front passenger door). To lower or raise the window, press or pull the power window switch respectively.

Manual windows

To raise/lower the window rotate the handle.

**Note:** The rear window cannot be fully lowered.

EXTERIOR MIRRORS

Folding mirrors

You can fold back your exterior mirror in narrow spaces or when the vehicle is parked to avoid accidental damage to the mirrors.

Make sure that you fully engage the mirror in its support when returning it to its original position.
WARNING

Do not overestimate the distance of the objects that you see in the exterior mirror. Objects seen in the mirror will appear smaller and further away than they actually are.

Manual Exterior Mirrors

Both door mirrors are adjustable from inside the vehicle.

ELECTRIC EXTERIOR MIRRORS

A Left-hand mirror
B Off
C Right-hand mirror

Dip the mirror to reduce glare when driving at night.
GAUGES

Type A

A Tachometer
B Fuel gauge
C Speedometer
D Reset button
E Information display

Type B

A Tachometer
B Fuel gauge
C Speedometer
D Reset button
E Information display
Theater dimming
The instrument cluster illuminates gradually with a theater dimming effect when the side lamps are switched on.

Fuel gauge

![Image of fuel gauge]

CAUTION

Check the fuel level prior starting the journey.

The arrow adjacent to the fuel pump symbol tells you on which side of your vehicle the fuel filler cap is located.

The low fuel level warning light illuminates at approximately 80 kms before the tank is empty and audible chimes will be heard to alert you at 80 kms, 40 kms, 20 kms and at empty respectively. Refuel as soon as possible.

Tachometer
Indicates the current engine speed.

Speedometer
Indicates the current vehicle speed.

WARNING LAMPS AND INDICATORS

The following warning lamps and indicators will come on briefly when you switch the ignition on to confirm that the system is operational:

- Brake warning lamp
- Door open warning lamp
- Engine coolant temperature warning lamp
- ABS warning lamp
- Low fuel warning lamp
- Airbag warning lamp
- PATS
- Engine check warning lamp
- Water in fuel warning lamp
- MIL (malfunction indicator warning lamp)

If a warning or indicator lamp does not illuminate when the ignition is switched on, it indicates a malfunction. Have the system checked as soon as possible.

ABS warning lamp

If ABS warning lamp illuminates (with audible chimes) when you are driving, this indicates a malfunction. You will continue to have normal braking (without ABS) but have this checked as soon as possible.

Airbag warning lamp

If the airbag warning lamp illuminates when you are driving, this indicates a malfunction. Have this checked as soon as possible.
Brake system warning lamp

**WARNING**

⚠️ Reduce your speed gradually. Use your brakes with great care. Do not step on the brake pedal abruptly.

The brake system warning lamp illuminates (with audible chimes) when:

- the parking brake is engaged.
- low brake fluid.
- EBD (Electronic brake force distribution) failure in ABS equipped vehicles.

The brake system warning lamp will stay on until you release the parking brake. If it illuminates when you are driving, this indicates a malfunction in one of the brake circuits. Check the brake fluid level. See **Brake and Clutch Fluid Check** (page 83).

**WARNING**

⚠️ If the brake system warning lamp comes on with the ABS warning lamp, this indicates a malfunction. Stop your vehicle as soon as it is safe to do so and have this checked before continuing your journey.

Door open warning lamp

⚠️ The door open warning lamp illuminates (with audible chimes) if a door or the tailgate is open, only when engine is running.

MIL

If the malfunction indicator warning lamp illuminates when the engine is running, this indicates a malfunction. If it flashes when you are driving, reduce the speed of your vehicle immediately. If it continues to flash, avoid heavy acceleration or deceleration. The engine will continue to run but it will have limited power. Have this checked immediately.

Ignition warning lamp

If the ignition warning lamp illuminates (with audible chimes) when you are driving, this indicates a malfunction. Switch off all unnecessary electrical equipment and have this checked immediately.

Low fuel level warning lamp

If the low fuel level warning lamp illuminates (with audible chimes), refuel as soon as possible. See **Gauges** (page 42).

Oil pressure warning lamp

**CAUTION**

⚠️ Do not resume your journey if the oil pressure warning lamp comes on despite the oil level being correct. Have this checked immediately.

If the oil pressure warning lamp illuminates (with audible chimes) when you are driving, this indicates a malfunction. Stop your vehicle as soon as it is safe to do so and switch the engine off. Check the engine oil level. See **Engine Oil Check** (page 81).
Engine check warning lamp

If the engine check warning lamp illuminates when the engine is running, this indicates a malfunction. The engine will continue to run but it will have limited power. Have this checked as soon as possible.

Front fog lamp indicator

It will illuminate when you switch the front fog lamps on.

Water in fuel warning lamp (If Equipped)

If the water in fuel warning lamp illuminates whilst driving immediately see an Authorised Ford Dealer to have the water drained from the fuel filter.

CAUTION

Failure to do so could damage the vehicle's fuel injection system causing engine failure.

Note: Such failures are not covered under warranty repair.

Engine coolant temperature warning lamp

If it stays on after starting or illuminates (with audible chimes) when driving, this indicates a malfunction. Stop your vehicle as soon as it is safe to do so and switch the engine off. Check the coolant level. See Engine Coolant Check (page 83).

CAUTIONS

Do not resume your journey if it illuminates despite the level being correct. Have the system checked by a properly trained technician immediately.

Glow plug indicator

See Starting a Diesel Engine (page 58).

Main beam indicator

The main beam indicator illuminates when you switch the headlamp main beam on. It will flash when you use the headlamp flasher.

Illumination ON indicator

The illumination on indicator illuminates when the side lamps are switched on.

Direction indicator

The direction indicator will flash when you use the direction indicators. A sudden increase in the rate of flashing warns of a failed bulb.
GENERAL INFORMATION

WARNING

Do not operate the information display controls when the vehicle is moving. The driver should at all times be alert and focus his attention on the road ahead only.

Note: The information display will remain on for several minutes after you switch off the ignition.

Information display

Display definitions

Odometer

Note: The maximum value for odometer measurement is 999,999 kms after that it automatically resets and starts from zero.

Registers the total mileage of the vehicle.

Average fuel consumption

Indicates the average fuel consumption since the function was last reset.

Distance to empty

Indicates the approximate distance that your vehicle will travel on the fuel in the fuel tank.

Distance to empty display will stay on for approximately 5 seconds when the ignition is switched on and then cluster will go back to the pre-set mode.

Tripmeter

Note: The maximum value for tripmeter is 9999.9kms and after that it automatically resets and starts from zero.

The tripmeter can register the mileage of individual journeys.

Reset button

A short press toggles the display between odometer, trip, distance to empty and average fuel consumption.

A long press of more than two seconds resets the trip to zero.

A Odometer
B Average fuel consumption
C Distance to empty
D Tripmeter
E Reset button

Press the reset button to scroll through the displays.

Note: The information display illuminates when the driver door is opened.
Climate Control

PRINCIPLE OF OPERATION

Outside air

In this mode the climate control system utilizes outside air.

Cowl filter and wire mesh filter

These filters remove the dust that is brought in from the outside air through the cooling and heating system, when the blower is operated.

Have your dealer replace/clean the filters as mentioned in the Periodical maintenance schedule.

Recirculated air

CAUTION

Prolonged use of recirculated air may cause the windows to mist up. If the windows mist up, follow the settings for defrosting and demisting the windscreen.

The air currently in the passenger compartment will be recirculated. Outside air will not enter the vehicle.

Ensure maximum utilization of the recirculation mode to avoid dust entering into the passenger compartment and bad smell entering from outside.

Heating

The purpose of heating is to heat the interior compartment in cold weather conditions.

Heating performance depends on the temperature of the engine coolant.

Air conditioning

The purpose of air conditioning is to cool the interior compartment.

Air is directed through the evaporator where it is cooled. Humidity is extracted from the air to help keep the windows free of mist. The resulting condensation is directed to the outside of the vehicle and it is therefore normal if you see a small pool of water under your vehicle.

If you use the air conditioning, the fuel consumption of your vehicle will be higher.

Note: The air conditioning operates only when the temperature is above 4°C (39°F).

General information on controlling the interior climate

Warming the interior

Direct the air towards your feet. In cold or humid weather conditions, direct some of the air towards the windscreen and the door windows.

Cooling the interior

Direct the air towards your face.

AIR VENTS

Air is directed through the evaporator where it is cooled. Humidity is extracted from the air to help keep the windows free of mist. The resulting condensation is directed to the outside of the vehicle and it is therefore normal if you see a small pool of water under your vehicle.

If you use the air conditioning, the fuel consumption of your vehicle will be higher.

Note: The air conditioning operates only when the temperature is above 4°C (39°F).

General information on controlling the interior climate

Warming the interior

Direct the air towards your feet. In cold or humid weather conditions, direct some of the air towards the windscreen and the door windows.

Cooling the interior

Direct the air towards your face.
Climate Control

MANUAL CLIMATE CONTROL

Blower

Temperature control

Air distribution control

You can set the air distribution control to any position between the symbols.
A small amount of air is always directed towards the windscreen.

Defrosting and demisting the windscreen

Steps to be followed:
1. Set air distribution control to windscreen.
2. Switch off the recirculation mode.
3. Set the temperature control knob to maximum hot position.
4. Set the blower to maximum speed.
5. Switch on the A/C.

If necessary, switch the heated windows on in the instrument panel. See **Heated Windows** (page 50).

**Ventilation**

There are two types of ventilation.

**Normal ventilation**

Use outside/fresh air mode. Air will flow from outside through the air vents during driving with the blower in off position. The air distribution control mode can be at any desired position.

**Forced ventilation**

In this type of ventilation the blower can be positioned at any speed and the rest are same as normal ventilation.

**Switching the air conditioning on and off**

Press the button, to switch on/off the A/C.

If you turn the blower off, the air conditioning will turn off. When you turn the blower on again, the air conditioning will come on automatically (if the A/C switch is in on position).

**Switching the recirculated air on and off**

Press the recirculated air button to switch on/off.

To use the outside/fresh air switch off the recirculation mode.

The last setting will be kept in memory, press the recirculated air button to change over to the other mode.

**Cooling with outside air**

Steps to be followed:

1. Switch on the blower to maximum speed.
2. Open the windows for 2-3 minutes to allow the inside hot air to go out.
3. Switch on the A/C and recirculation mode.
4. Set the temperature control knob to maximum cold position.
5. Close the windows and set the blower to 2nd speed or to your convenience.

**Heating the interior quickly**

The heating of rear window will function only when the ignition Key is in run position or ON position. Also this has a timer to auto cut-off the heating of rear window operation.

The heated rear window switch is located in the instrument panel.

**Reducing interior air humidity**

**HEATED WINDOWS**

Use the heated rear window to defrost or demist the rear window.
SITTING IN THE CORRECT POSITION

- Do not adjust the seats when the vehicle is moving.
- Only when you use the seat belt properly, can it hold you in a position that allows the airbag to achieve its optimum effect.

When you use them properly, the seat, head restraint, seat belt and airbags will provide optimum protection in the event of a collision. We recommend that you:

- sit in an upright position with the base of your spine as far back as possible.
- do not recline the seatback more than 30 degrees.
- adjust the head restraint so that the top of it is level with the top of your head and as far forwards as possible, remaining comfortable.
- keep sufficient distance between yourself and the steering wheel. We recommend a minimum of 250 millimetres (10 inches) between your breastbone and the airbag cover.
- hold the steering wheel with your arms slightly bent.

- bend your legs slightly so that you can press the pedals fully.
- position the shoulder strap of the seat belt over the centre of your shoulder and position the lap strap tightly across your hips.

Make sure that your driving position is comfortable and that you can maintain full control of your vehicle.

MANUAL SEATS

Moving the seats backwards and forwards

1 Raise the lever to unlock the seat from track
2 Seat forward and rearward movement
WARNING
Rock the seat backwards and forwards after releasing the lever to make sure that it is fully engaged in its catch.

Adjusting the height of the driver’s seat

CAUTION
Do not perform seat cushion height adjustment while driving.

Pull the lever upward to raise the driver seat cushion.
PUSH THE LEVER DOWNWARD TO LOWER THE DRIVER SEAT CUSHION

Adjusting the angle of the seatback

To adjust the front seatback, lift the handle and hold in the fully up position.
Adjust the seatback to the required back angle then release the adjustment handle. Slight rocking of the seatback may be required to ensure engagement.
The handle will return to the downward position when locked.
HEAD RESTRAINTS

Adjusting the head restraint
Adjust the head restraint so that the top of it is level with the top of your head.

Removing the head restraint
Press the locking buttons and remove the head restraint.

REAR SEATS

WARNING
Make sure that the seats and the seatbacks are secured and fully engaged in their catches.

Folding the seatbacks down

WARNING
When folding the seatbacks down, take care not to get your fingers caught between the seatback and seat frame.

Creating a level load floor

WARNING
Make sure the red indicator is not showing when you engage the seat in the catches.
1. Insert your fingers between the seat cushion and seatback and fold the seat cushion forwards.
2. Push the unlock levers.
3. Push the seatback forwards.

**WARNING**

When folding the seatbacks up, make sure that the belts are visible to an occupant and not caught behind the seat.
CONVENIENCE FEATURES

SUN VISORS

The sun visors can be released from the retention clips and swivelled towards the side window. The sun visor on the front passenger side also has a mirror in it.

AUXILIARY POWER POINTS

CAUTION

If you use the socket when the engine is not running, the battery may discharge.

The power socket can be used to power 12 volt electrical appliances having a maximum current rating of 10 amperes.

Audio jack

Audio jack is provided in the audio panel. It is used for connecting MP3 players, iPod’s, etc, to the audio system.

GLOVE BOX

A Card holder
B Coin holders
**Convenience features**

**Note:** Do not store heavy and bulky items in the glove box as it may lead to failure of the glove box securing lock.

**USB PORT**

The USB port is located inside the glove box.

**FLOOR MATS**

**WARNINGS**

⚠️ When using the floor mats, always make sure the floor mat is properly secured using the appropriate fixings and positioned so that it does not interfere with the operation of the pedals.

⚠️ Do not install additional floor mats on top of the factory installed floor mats.
GENERAL INFORMATION

General points on starting

If the battery has been disconnected the vehicle may exhibit some unusual driving characteristics for approx. 8 kilometres (5 miles) after reconnecting the battery. This is because the engine management system must realign itself with the engine. Any unusual driving characteristics during this period may be disregarded.

The starter should not be operated for longer than 10 seconds during each start cycle. Release the ignition key as soon as the engine has started. If the engine has not started, return the ignition key to position 0 and repeat the starting procedure.

If the engine does not start, See Fuel Shutoff (page 69).

Starting the engine by towing or pushing

**WARNING**

Never return the key to the 0 position when the vehicle is in motion.

Starting a petrol engine

Note: You can only operate the starter for a maximum of 10 seconds at a time.

Cold or hot engine

All vehicles

**CAUTION**

When the temperature is below -10°C, switch the ignition on for at least one second before starting the engine. This will make sure that the maximum fuel pressure is established for starting the engine.

Note: Do not touch the accelerator pedal.
1. Fully depress the clutch pedal.
2. Start the engine.
Starting and Stopping the Engine

If the engine does not start within 10 seconds, wait for a short period and try again.

If the engine does not start after three attempts, wait 10 seconds and follow the Flooded engine procedure.

If you have difficulty starting the engine when the temperature is below -10ºC, press the accelerator pedal between ¼ to ½ of its travel and try again.

Flooded engine
1. Fully depress the clutch pedal.
2. Fully depress the accelerator pedal and hold it there.
3. Start the engine.

If the engine does not start, repeat the Cold or hot engine procedure.

Engine idle speed after starting
The speed at which the engine idles immediately after starting will vary depending on the engine temperature.

If the engine is cold then the idle speed will automatically be increased.

The idle speed will slowly decrease to the normal level as the engine warms up.

STARTING A DIESEL ENGINE

Cold or hot engine

Note: When the temperature is below -10ºC, you may need to crank the engine for up to 10 seconds. To aid ease of cranking, turn the ignition key to position II for at least couple of seconds before starting the engine. This ensures that maximum fuel pressure is established.

Note: Continue cranking the engine until it starts.

Note: You can only operate the starter for a maximum of 10 seconds at a time.

Switch the ignition on and wait until the glow plug indicator goes off.

Note: Do not touch the accelerator pedal.

1. Fully depress the clutch pedal.
2. Start the engine.
3. Repeat this exercise for 3 to 4 times until the engine cranks properly.

Note: If starting difficulty is experienced at temperatures below -10ºC, depress the accelerator pedal 1/4 to ½ of its travel to assist starting. This should be done only, if the engine fails to start after several attempts of cranking as given in the above steps.

Flooded Engine

Note: Do not depress the accelerator pedal fully.

1. Depress the clutch pedal fully.
2. Slowly, depress the accelerator fully, hold it in this position and start the engine.
3. If the engine does not start repeat this exercise for 3 to 4 times.

Note: Avoid repeated unsuccessful cranking of Engine. The number of start attempts is limited to approximately six. If you exceed this limit, the system will not allow you to try again until a period of 10 minutes has elapsed.

Note: You cannot start the vehicle, if the fuel level reaches below threshold limit. Upon refueling, you can start the vehicle.
SWITCHING OFF THE ENGINE

Vehicles with a turbocharger

CAUTION

Do not switch the engine off when it is running at high speed. If you do, the turbocharger will continue running after the engine oil pressure has dropped to zero. This will lead to premature turbocharger bearing wear.

Release the accelerator pedal. Wait until the engine has reached idle speed and then switch it off.
SAFETY PRECAUTIONS

**WARNINGS**

⚠️ **Stop refuelling after the fuel nozzle stops the second time.** Additional fuel will fill the expansion space in the fuel tank which could lead to fuel overflowing. Fuel spillage could be hazardous to other road users.

⚠️ **Do not use any kind of flames or heat near the fuel system.** The fuel system is under pressure. There is a risk of injury if the fuel system is leaking.

CATALYTIC CONVERTER

**WARNING**

⚠️ **Do not park or idle your vehicle over dry leaves, dry grass or other combustible materials.** The exhaust will radiate a considerable amount of heat during use, and after you have switched the engine off. This is a potential fire hazard.

Driving with a catalytic converter

**CAUTIONS**

⚠️ **Avoid running out of fuel.**

⚠️ **Do not crank the engine for long periods.**

⚠️ **Do not run the engine when a spark plug lead is disconnected.**

⚠️ **Do not push-start or tow-start your vehicle.** Use booster cables. See Jump Starting the Vehicle (page 90).

⚠️ **Do not switch the ignition off when driving.**

FUEL FILLER FLAP

Pull the release lever located in the floor to the side of front driver seat for opening the fuel filler flap.

Turn the cap anti-clockwise to remove. When the filler cap is removed, a hissing noise may be heard. This is normal and should be disregarded.

To close, turn the cap clockwise until it engages fully.
**REFUELING**

**CAUTION**

‼️ Do not attempt to start the engine if you have filled the fuel tank with the incorrect fuel. This could damage the engine. Have the system checked by a properly trained technician immediately.

**FUEL QUALITY**

**Note:** Add 1 ml of IFTEX System G with every litre of Gasoline (Petrol). It is available at all Ford authorised dealerships.

**CAUTION**

‼️ Do not use leaded petrol or petrol with additives containing other metallic compounds (e.g. manganese-based). They could damage the emission system.

Use **minimum 91 octane unleaded** petrol that meets the specification defined by **EN 228**, or equivalent.

**FUEL QUALITY**

**Note:** We recommend that you use only high quality fuel without additives or other engine treatments.

**WARNING**

‼️ Do not mix diesel with oil, petrol or other liquids. This could cause a chemical reaction.

**CAUTION**

‼️ Do not add kerosene, paraffin or petrol to diesel. This could cause damage to the fuel system.

Use diesel that meets the specification defined by **EN 590**, or equivalent.

You can use diesel that contains up to 5% RME (bio diesel).

Prolonged use of supplemental additives to prevent fuel waxing is not recommended.

**FUEL CONSUMPTION**

**Length of journey/engine temperature**

Frequent cold starts and short distance driving leads to considerably increased fuel usage.

**Traffic and road conditions**

Slow moving traffic, uphill driving, frequent sharp bends and rough roads all have an adverse effect on fuel consumption.

**Erratic driving habits**

Anticipate hazards ahead and keep a safe distance from the vehicle in front. This not only reduces fuel consumption but also the noise level.

If you have a prolonged wait at a railway crossing or at traffic lights in built-up areas, it is advisable to switch off the engine during this period.

**Vehicle load conditions**

Driving in a fully laden condition will result in high fuel consumption.

**Vehicle condition**

Low tyre pressure or inadequate engine or vehicle maintenance will also result in higher fuel consumption.
MANUAL TRANSMISSION

WARNINGS

⚠️ Engage reverse gear only when the vehicle is stationary.

⚠️ Do not apply any undue lateral force to the gear lever when changing from 5th to 4th gear as this could lead to the inadvertent selection of 2nd gear.

Reverse gear

To avoid shifting noises when engaging the reverse gear, wait approximately three seconds with the clutch depressed when the vehicle is stationary.

To select the reverse gear, shift the lever into the neutral position and then press the lever fully to the right against a spring pressure, before pulling rearwards.

**PRINCIPLE OF OPERATION**

**Dual circuit braking system**

After leaving a car wash or driving the vehicle through water, dab the brake pedal while driving to remove the film of water.

---

**WARNING**

If a brake circuit fails, you will at first experience a softer feel to the brake pedal. You will then need to exert a greater force on the brake pedal, and make allowances for increased stopping distances. Have the braking system checked by an expert before continuing your journey. Authorised Ford Dealers are recommended.

Your vehicle is fitted with a diagonally split, dual circuit brake system. If a brake circuit fails, the other remains operational.

**Disc brakes**

Wet brake discs result in reduced braking efficiency. Dab the brake pedal when driving from a car wash to remove the film of water.

---

**ABS**

**WARNING**

The ABS does not relieve you of your responsibility to drive with due care and attention.

The ABS helps you to maintain full steering and directional stability when you brake heavily in an emergency, by preventing the road wheels from locking.

**HINTS ON DRIVING WITH ANTI-LOCK BRAKES**

When the ABS is operating, the brake pedal will pulse. This is normal. Maintain pressure on the brake pedal.

The ABS will not eliminate the dangers inherent when:

- you drive too close to the vehicle in front of you.
- the vehicle is aquaplaning.
- you take corners too fast.
- the road surface is poor.
Brakes

PARKING BRAKE

Applying the parking brake

WARNING

Make sure that the parking brake is applied before you release the lever.

Note: Do not press the release button when you apply the parking brake.

1. Press the brake pedal firmly.
2. Pull the parking brake lever upwards to its fullest extent.

Parking on a hill

If you have to park facing uphill, select first gear and turn the front wheels away from the kerb. If you have to park facing downhill, select reverse gear and turn the front wheels towards the kerb.

Releasing the parking brake

1. Press the brake pedal firmly.
2. Pull the parking brake lever upwards slightly, press the release button and push the lever downwards.
Automatic speed limiter (ASL)

PRINCIPLE OF OPERATION

Engine speed limiter

The engine speed is limited electronically to protect the engine.
GENERAL INFORMATION

WARNINGS

⚠️ Use load securing straps to an approved standard, e.g. DIN.

⚠️ Make sure that you secure all loose items properly.

⚠️ Place luggage and other loads as low and as far forward as possible within the luggage or loadspace.

⚠️ Do not drive with the tailgate or rear door open. Exhaust fumes may enter the vehicle.

⚠️ Do not exceed the maximum front and rear axle loads for your vehicle.

CAUTIONS

⚠️ Do not allow items to contact the rear windows.

⚠️ Do not use any abrasive materials to clean the interior of the rear windows.

⚠️ Do not install stickers or labels to the interior of the rear windows.

LUGGAGE COVERS

CAUTION

⚠️ Do not place objects on the luggage cover.
**GENERAL DRIVING POINTS**

**Vehicles with a diesel engine**

If the low fuel level warning lamp comes on, refuel as soon as possible. If you continue driving without refuelling, the engine will start to run unevenly. This indicates that you are about to run out of fuel. Refuel immediately.

**RUNNING-IN**

**Tyres**

**WARNING**

⚠️ New tyres need to be run-in for approximately 500 kilometres (300 miles). During this time, you may experience different driving characteristics.

**Brakes and clutch**

**WARNING**

⚠️ Avoid heavy use of the brakes and clutch if possible for the first 150 kilometres (100 miles) in town and for the first 1500 kilometres (1000 miles) on motorways.

**Engine**

**CAUTION**

⚠️ Avoid driving too fast during the first 1500 kilometres (1000 miles). Vary your speed frequently and change up through the gears early. Do not labour the engine.

**DRIVING THROUGH WATER**

**Driving through water**

**CAUTIONS**

⚠️ Drive through water in an emergency only, and not as part of normal driving.

⚠️ Engine damage can occur if water enters the air filter.

In an emergency, the vehicle can be driven through water to a maximum depth of 200 millimetres (8 inches) and at a maximum speed of 10 km/h (6 mph). Extra caution should be exercised when driving through flowing water.

When driving in water, maintain a low speed and do not stop the vehicle. After driving through water, and as soon as it is safe to do so:

- Depress the brake pedal lightly and check that full brake function is achieved.
- Check that the horn works.
- Check that the vehicle’s lights are fully operational.
- Check the power assistance of the steering system.
FIRST AID KIT

First aid kit is stored in the glove box. It contains spare fuses, spare bulbs and emergency medical treatment kit. Use it under emergency situations.

WARNING TRIANGLE

Space is provided in the spare wheel well to store a warning triangle.
Status after a collision

INSPECTING SAFETY SYSTEM COMPONENTS

Seat belts
Belts subjected to strain, as a result of an accident, should be renewed and the anchorages checked by a properly trained technician.

FUEL SHUTOFF

Vehicles with a Duratec Petrol engine

The fuel supply may be cut off as a result of an accident or sudden vibrations (e.g. collision when parking).

The switch is located behind the glove box. Open the glove box and empty the contents. Press the sides inwards and swivel the glove box downwards. The button under the yellow cap will be raised when the switch is activated.

Resetting the switch

WARNING
Do not reset the fuel cut-off switch if you see or smell leaking fuel.

1. Turn the ignition switch to position 0.
2. Check fuel system for leaks.
3. If no fuel leak is apparent, reset the switch by pushing in the button.
4. Turn the ignition switch to position II. After a few seconds return the key to position I.
5. Make a further check for leaks in the fuel system.
Fuses

CHANGING A FUSE

WARNINGS

⚠️ Do not modify the electrical system of your vehicle in any way. Have repairs to the electrical system and the replacement of relays and high current fuses carried out by a Ford authorized dealer personnel.

⚠️ Switch the ignition and all electrical equipment off before touching or attempting to change a fuse.

CAUTION

⚠️ Fit a replacement fuse with the same rating as the one you have removed.

Note: You can identify a blown fuse by a break in the filament.

Note: All fuses, except high current fuses, are a push fit.

Fuse puller is available in the First aid kit. Remove the fuses using fuse puller only.

FUSE LABELS

- **A** Fuse number
- **B** Circuits protected
- **C** Location (L = left and R = right)
- **D** Fuse rating (Amperes)

See Owner's handbook

- Airbag
- ABS
- Headlamp dipped beam
- Headlamp main beam
- Lighting control
- Windscreen wipers
- Heated rear window
Fuses

**FUSE BOX LOCATIONS**

**Engine compartment fuse box**

The engine compartment fuse box is attached with the battery tray in the engine compartment.

![Fuse box image]

**Passenger compartment fuse box**

The passenger compartment fuse box is located behind the glove box in the instrument panel.
Fuses

1. Open the glove box and empty it before continuing.
2. Press the side clips of the glove box inwards and swivel the box further down.

Vehicle recovery

TOWING POINTS

Front towing eye

The towing eye is located in the spare wheel well.

![Image of front towing eye]

The screw-in towing eye is attached to the vehicle jack in the luggage compartment. Keep the towing eye with the vehicle at all times.

CAUTION

The screw-in towing eye has a left-hand thread. Turn it anticlockwise to install it.

Prise off the cover and install the towing eye.

TOWING THE VEHICLE ON FOUR WHEELS

All vehicles

WARNINGS

⚠ Switch the ignition on when your vehicle is being towed. The steering lock will engage and the direction indicators and brake lamps will not work if you do not.

⚠ The brake servo and the power steering pump do not operate unless the engine is running. Press the brake pedal harder and allow for increased stopping distances and heavier steering.

CAUTIONS

⚠ Too much tension in the tow rope could cause damage to your vehicle or the vehicle that is towing.

⚠ Do not use a rigid tow bar on the front towing eye. This may cause damage to both the vehicles.

Drive off slowly and smoothly without jerking the vehicle that is towing.
GENERAL INFORMATION

Have your vehicle serviced regularly to help maintain its roadworthiness and resale value. There is a large network of Ford Authorised Repairers that are there to help you with their professional servicing expertise. We believe that their specially trained technicians are best qualified to service your vehicle properly and expertly. They are supported by a wide range of highly specialised tools developed specifically for servicing your vehicle.

In addition to regular servicing, we recommend that you carry out the following additional checks.

WARNINGS

⚠️ Switch the ignition off before touching or attempting adjustment of any kind.

⚠️ Do not touch the electronic ignition system parts after you have switched the ignition on or when the engine is running. The system operates at high voltage.

⚠️ Keep your hands and clothing clear of the engine cooling fan. Under certain conditions, the fan may continue to run for several minutes after you have switched the engine off.

CAUTION

⚠️ When carrying out maintenance checks, make sure that filler caps are fitted securely.

Check when refuelling

- Engine oil level. See Engine Oil Check (page 81).
- Brake fluid level. See Brake and Clutch Fluid Check (page 83).
- Washer fluid level. See Washer Fluid Check (page 84).
- Tyre pressures (when cold). See Technical Specifications (page 97).
- Tyre condition. See Tyre Care (page 97).

Monthly checks

- Engine coolant level (engine cold). See Engine Coolant Check (page 83).
- Pipes, hoses and reservoirs for leaks.
- Power steering fluid level. See Power Steering Fluid Check (page 84).
- Air conditioning operation.
- Parking brake operation.
- Horn operation.
- Tightness of wheel nuts. See Technical Specifications (page 97).

OPENING AND CLOSING THE BONNET

Opening the bonnet

1. Pull the lever.

Daily checks

- Exterior lamps.
- Interior lamps.
- Warning lamps and indicators.
2. Raise the bonnet slightly and pull the catch towards you.
3. Lift the bonnet from the lock.

4. Open the bonnet.
5. Support the bonnet with the bonnet stay rod.

Closing the bonnet

Note: Make sure that the bonnet is closed properly.

Lower the bonnet and allow it to drop from under its own weight for the last 20 – 30 centimetres.
A  Engine coolant reservoir: See Engine Coolant Check (page 83).
B  Brake and clutch fluid reservoir: See Brake and Clutch Fluid Check (page 83).
C  Engine oil filler cap: See Engine Oil Check (page 81).
D  Engine compartment fuse box. See Fuse Labels (page 70).
E  Battery: No maintenance necessary.
F  Windscreen and rear window washer fluid reservoir: See Washer Fluid Check (page 84).
G  Air cleaner: No maintenance necessary.
H Engine oil dipstick: See Engine Oil Dipstick (page 81).
I Power steering fluid reservoir: See Power Steering Fluid Check (page 84).

* The filler caps and the engine oil dipstick are coloured for easy identification.

UNDER BONNET OVERVIEW

A Engine coolant reservoir: See Engine Coolant Check (page 83).
B Brake and clutch fluid reservoir: See Brake and Clutch Fluid Check (page 83).
Maintenance

C Engine oil filler cap: See Engine Oil Check (page 81).
D Engine compartment fuse box. See Fuse Labels (page 70).
E Battery: No maintenance necessary.
F Windscreen and rear window washer fluid reservoir: See Washer Fluid Check (page 84).
G Air cleaner: No maintenance necessary.
H Engine oil dipstick: See Engine Oil Dipstick (page 81).
I Power steering fluid reservoir: See Power Steering Fluid Check (page 84).

* The filler caps and the engine oil dipstick are coloured for easy identification.

**ENGINE OIL DIPSTICK**

**ENGINE OIL CHECK**

The function of the Engine oil is to lubricate and cool the engine.

**Engine oil consumption**

It is normal for the engine to consume some engine oil during normal operation, the amount of oil consumption depends upon viscosity, quality and the driving conditions. Oil consumption will be more during the following conditions.
• High speed driving.
• Frequent acceleration and deceleration.
• Low speed driving in congested cities.
• Dusty environment such as off road driving and construction site etc.
• Driving with high load.
• Commercial usage such as taxi operation.
• Repeated short trip driving.
• Usage of non Ford oil.

Oil change interval

Oil is to be changed as per the periodic maintenance chart given in periodic maintenance service schedule. However, if the vehicle is used under the above conditions then the engine oil, oil filter and air filter has to be checked at every 5,000 kms (3,000 miles).

Engine Oil Check

CAUTION

Do not use oil additives or other engine treatments. Under certain conditions, they could damage the engine.

Note: The oil consumption of new engines reaches its normal level after approximately 5,000 kilometres (3,000 miles).

Checking the oil level

CAUTION

Make sure that the level is between the MIN and the MAX marks.

Note: Check the level before starting the engine.
Note: Make sure that your vehicle is on level ground.

Note: Oil expands when it is hot. The level may therefore extend a few millimetres beyond the MAX mark.

Remove the dipstick and wipe it with a clean, lint free cloth. Replace the dipstick and remove it again to check the oil level.

If the level is at the MIN mark, top up immediately.

Topping up

E73940

WARNINGS

Only top up when the engine is cold. If the engine is hot, wait 10 minutes for the engine to cool down.

Do not remove the filler cap when the engine is running.

Remove the filler cap.

CAUTION

Do not top up further than the MAX mark.

Top up with fluid that meets the Ford specification. See Technical Specifications (page 85).
**ENGINE COOLANT CHECK**

Checking the coolant level

![Coolant Reservoir](image)

**WARNING**

Do not allow the fluid to touch your skin or eyes. If this happens, rinse the affected areas immediately with plenty of water and contact your doctor.

**CAUTION**

Make sure that the level is between the MIN and the MAX marks.

**Note:** Coolant expands when it is hot. The level may therefore extend beyond the MAX mark.

If the level is at the MIN mark, top up immediately.

**Topping up**

**WARNINGS**

- Only top up when the engine is cold. If the engine is hot, wait 10 minutes for the engine to cool down.
- Do not remove the filler cap when the engine is running.
- Do not remove the filler cap when the engine is hot. Wait for the engine to cool down.

Unscrew the cap slowly. Any pressure will escape slowly as you unscrew the cap.

**CAUTIONS**

- Do not spill coolant on any part of the engine.
- Do not top up further than the MAX mark.

Top up with fluid that meets the Ford specification. See [Technical Specifications](page 85).

**BRAKE AND CLUTCH FLUID CHECK**

![Brake Fluid Reservoir](image)

**WARNING**

Do not allow the fluid to touch your skin or eyes. If this happens, rinse the affected areas immediately with plenty of water and contact your doctor.

**CAUTION**

Make sure that the level is between the MIN and the MAX marks.

**Note:** The brake and the clutch systems are supplied from the same reservoir.

If the level is at the MIN mark, top up immediately.
Topping up
Remove the filler cap.

**CAUTION**
Do not top up further than the MAX mark.

Top up with fluid that meets the Ford specification. See *Technical Specifications* (page 85).

**POWER STEERING FLUID CHECK**

![Power Steering Fluid Check](image)

**WARNING**
Do not allow the fluid to touch your skin or eyes. If this happens, rinse the affected areas immediately with plenty of water and contact your doctor.

**CAUTION**
Make sure that the level is between the MIN and the MAX marks.

If the level is at the MIN mark, top up immediately.

**Topping up**
Remove the filler cap.

**CAUTION**
Do not top up further than the MAX mark.

Top up with fluid that meets the Ford specification. See *Technical Specifications* (page 85).

**WASHER FLUID CHECK**

![Washer Fluid Check](image)

**Note:** The front and rear washer systems are supplied from the same reservoir.
TECHNICAL SPECIFICATIONS

Vehicle fluids

<table>
<thead>
<tr>

**NOTE:** *Check/adjust with engine stationary, not less than 5 minutes after stopping the engine.*
Vehicle Care

CLEANING THE EXTERIOR

WARNING

If you use a car wash with a waxing cycle, make sure that you remove the wax from the windscreen.

CAUTIONS

Prior to using a car wash facility check the suitability of it for your vehicle.

Some car wash installations use water at high pressure. This could damage certain parts of your vehicle.

Remove the aerial before using an automatic car wash.

Switch the heater blower off to prevent contamination of the fresh air filter.

We recommend that you wash your vehicle with a sponge and lukewarm water containing a car shampoo.

Cleaning the headlamps

CAUTIONS

Do not scrape the headlamp lenses or use abrasives, alcoholic solvents or chemical solvents to clean them.

Do not wipe the headlamps when they are dry.

Cleaning the rear window

CAUTION

Do not scrape the inside of the rear window or use abrasives or chemical solvents to clean it.

Use a clean, lint free cloth or a damp chamois leather to clean the inside of the rear window.

Cleaning the chrome trim

CAUTION

Do not use abrasives or chemical solvents. Use soapy water.

Cleaning the alloy wheels

Note: Do not apply a cleaning chemical to warm or hot wheel rims and covers.

Note: Industrial-strength (heavy-duty) cleaners, or cleaning chemicals, in combination with brush agitation to remove brake dust and dirt, could wear away the clear coat finish over a period time.

Note: Do not use hydrofluoric acid-based or high caustic-based wheel cleaners, steel wool, fuels or strong household detergent.

Note: If you intend parking your vehicle for an extended period after cleaning the wheels with a wheel cleaner, drive your vehicle for a few minutes before doing so. This will reduce the risk of increased corrosion of the brake discs, brake pads and linings.

Note: Some automatic car washes may cause damage to the finish on your wheel rims and covers.

Alloy wheels and wheel covers are coated with a clear coat paint finish. To maintain their condition we recommend that you:

- Clean them weekly with the recommended wheel and tyre cleaner.
- Use a sponge to remove heavy deposits of dirt and brake dust accumulation.
- Rinse them thoroughly with a pressurised stream of water when you have completed the cleaning process.

We recommend that you use Ford service wheel cleaner. Make sure that you read and follow the manufacturer’s instructions.
Using other non-recommended cleaning products can result in severe and permanent cosmetic damage.

**Body paintwork preservation**

**CAUTIONS**

- Do not polish your vehicle in strong sunshine.
- Do not allow polish to touch plastic surfaces. It could be difficult to remove.
- Do not apply polish to the windscreen or rear window. This could cause the wipers to become noisy and they may not clear the window properly.

We recommend that you wax the paintwork once or twice a year.

**CLEANING THE INTERIOR**

**Seat belts**

**WARNINGS**

- Do not use abrasives, or chemical solvents to clean them.
- Do not allow moisture to penetrate the seat belt retractor mechanism.

Clean the seat belts with interior cleaner or water applied with a soft sponge. Let the seat belts dry naturally, away from artificial heat.

**Instrument cluster screens, LCD screens, radio screens**

**WARNING**

- Do not use abrasives, alcoholic solvents or chemical solvents to clean them.

**REPAIRING MINOR PAINT DAMAGE**

**CAUTION**

- Remove apparently harmless looking substances from the paintwork immediately (e.g. bird droppings, tree resins, insect remains, tar spots, road salt and industrial fall out).

You should repair paintwork damage caused by stones from the road or minor scratches as soon as possible. A choice of products is available from your Ford Dealer. Read and follow the manufacturer’s instructions.
**BATTERY CARE**

The battery requires very little maintenance. The fluid level is checked regularly during the routine service inspections.

**JUMP STARTING THE VEHICLE**

<table>
<thead>
<tr>
<th>CAUTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>! Connect batteries with only the same nominal voltage.</td>
</tr>
<tr>
<td>! Always use booster cables with insulated clamps and adequate size cable.</td>
</tr>
<tr>
<td>! Do not disconnect the battery from the vehicle’s electrical system.</td>
</tr>
</tbody>
</table>

**To connect the booster cables**

- A Flat battery vehicle
- B Booster battery vehicle
- C Positive connection cable
- D Negative connection cable
Vehicle battery

Vehicles with a petrol engine

CAUTIONS

Do not connect to the negative (−) terminal of the flat battery.

Make sure that the jump leads are clear of any moving parts.

1. Position the vehicles so that they do not touch one another.
2. Switch off the engine and any electrical equipment.
3. Connect the positive (+) terminal of vehicle A with the positive (+) terminal of vehicle B (cable C).
4. Connect the negative (−) terminal of vehicle B to the engine block or engine mount of vehicle A (cable D), as far from the battery as possible.

Vehicles with a diesel engine

CAUTIONS

Do not connect to the negative (−) terminal of the flat battery.

Make sure that the jump leads are clear of any moving parts.

1. Position the vehicles so that they do not touch one another.
2. Switch off the engine and any electrical equipment.
3. Connect the positive (+) terminal of vehicle A with the positive (+) terminal of vehicle B (cable C).
4. Connect the negative (−) terminal of vehicle B to the turbocharger of vehicle A (cable D).

To start the engine

1. Run the engine of vehicle B at moderately high speed.
2. Start the engine of vehicle A.
Wheels and Tyres

GENERAL INFORMATION

**CAUTIONS**

⚠️ Use only approved wheel and tyre sizes. Using other sizes could damage the vehicle and void the warranty.

⚠️ If you change the diameter of the tyres from that fitted at the factory, the speedometer may not display the correct speed. Take the vehicle to your dealer to have the engine management system reprogrammed.

A decal with tyre pressure data is located in the front passenger door opening at the B-pillar.

Check and set the tyre pressure at the ambient temperature in which you are intending to drive the vehicle and when the tyres are cold.

CHANGING A ROAD WHEEL

**Spare wheel**

If the spare wheel differs from the other fitted wheels, these rules must be followed:

**WARNINGS**

⚠️ Do not exceed 80 km/h (50 mph).

⚠️ Drive the shortest possible distances before having the spare wheel changed.

⚠️ Do not fit more than one spare wheel on your vehicle at any one time.

⚠️ Do not use snow chains on this type of wheel.

The spare wheel is located under the floor cover in the luggage compartment. Raise the rear of the floor cover in the luggage compartment and remove it.

Completely unscrew the retaining device and lift out the spare wheel.

**Vehicle jack**

**WARNINGS**

⚠️ The vehicle jack supplied with your vehicle should only be used when changing a wheel in emergency situations.

⚠️ Before using the vehicle jack, check that it is not damaged or deformed and that the thread is lubricated and free from foreign matter.
Wheels and Tyres

WARNINGS

Never place anything between the jack and the ground, or the jack and the vehicle.

Note: Vehicles with a tyre repair kit or run flat tyres are not equipped with a vehicle jack or a wheel brace.

It is recommended to use a workshop type hydraulic jack for changing between summer and winter tyres.

Note: Use a jack with a minimum lifting capacity of 1.5 tonnes and a lifting plate with a minimum diameter of 80 millimetres (3.1 inches).

The jack and wheel brace are located in the spare wheel well. The jack handle is clipped in to the jack.

Jacking and lifting points

CAUTION

Use only the specified jacking points. If you use other positions, you may damage the body, steering, suspension, engine, braking system or the fuel lines.

Note: The jacking points for the vehicle jack and maintenance jack are the same.
Wheels and Tyres

Indentations in the sills A show the location of the jacking points.

A Maintenance jack
Removing a road wheel

**WARNINGS**

- Park your vehicle in such a position that neither the traffic nor you are hindered or endangered.
- Set up a warning triangle.
- Make sure that the vehicle is on firm, level ground with the wheels pointing straight ahead.
- Switch off the ignition and apply the parking brake.
- Select first or reverse gear.
- Have the passengers leave the vehicle.
- Secure the diagonally opposite wheel with an appropriate block or wheel chock.
- Do not work underneath the vehicle when it is supported only by a jack.
- Make sure that the jack is vertical to the jacking point and the base is flat on the ground.

**CAUTION**

- Do not lay alloy wheels face down on the ground, this will damage the paint.

1. Insert the flat end of the wheel brace between the rim and the hub cover and carefully remove the hub cap or cover.
2. Fully extend the wheel brace if applicable.
3. Slacken the wheel nuts.
4. Jack up the vehicle until the tyre is clear of the ground.
5. Remove the wheel nuts and the wheel.

Installing a road wheel

**WARNINGS**

⚠️ Use only approved wheel and tyre sizes. Using other sizes could damage the vehicle and will make the National Type Approval invalid. See Technical Specifications (page 97).

⚠️ Do not fit run flat tyres on vehicles that were not originally fitted with them. Please contact your dealer for more details regarding compatibility.

⚠️ Make sure that the arrows on directional tyres point in the direction of rotation when the vehicle is moving forwards. If you have to fit a spare wheel with the arrows pointing in the opposite direction, have the tyre refitted in the correct direction by a properly trained technician.

---

**CAUTION**

⚠️ Do not install alloy wheels using wheel nuts designed for use with steel wheels.

**Note:** Make sure the wheel and hub contact surfaces are free from foreign matter.

**Note:** Make sure that the cones on the wheel nuts are against the wheel.

1. Install the wheel.

2. Install the wheel nuts finger tight.

3. Partially tighten the wheel nuts in the sequence shown.
4. Lower the vehicle and remove the jack.
5. Fully tighten the wheel nuts in the sequence shown. See Technical Specifications (page 97).
6. Install the hub cap or cover using the ball of your hand.

**WARNING**

⚠️ Have the wheel nuts checked for tightness and the tyre pressure checked as soon as possible.

**TYRE CARE**

**Tyre rotation including spare wheel**

To make sure the front and rear tyres of your vehicle wear evenly and last longer, we recommend that you swap the tyres from front to rear and vice versa at regular intervals of between 5,000 and 10,000 km (3,000 and 6,000 miles).

**CAUTION**

⚠️ Do not scrub the sidewalls of the tyres when you are parking.

If you have to mount a kerb, do so slowly and approach it with the wheels at right-angles to the kerb.

Examine the tyres regularly for cuts, foreign objects and uneven wear of the tread. Uneven wear could mean that the wheel alignment is outside specification.

Check the tyre pressures (including the spare) when cold, every two weeks.

**TECHNICAL SPECIFICATIONS**

**Wheel nut torque**

### Engine & Transmission
- **Engine oil**: Replace every 3,6,9,12,18,24 months.
- **Engine oil filter**: Replace every 3,6,9,12,18,24 months.
- **Sump plug gasket**: Replace every 3,6,9,12,18,24 months.
- **Drive belts (Alternator & PAS pump)**: Replace every 3,6,9,12,18,24 months.
- **Spark plug - only petrol**: Replace every 3,6,9,12,18,24 months.
- **Air filter**: Replace every 3,6,9,12,18,24 months.
- **Transmission oil**: Replace every 3,6,9,12,18,24 months.

### Cooling system
- **Coolant degas bottle pressure cap**: Replace every 3,6,9,12,18,24 months.

### Fuel system
- **Fuel filter - Petrol**: Replace every 3,6,9,12,18,24 months.
- **Fuel filter - Diesel**: Replace every 3,6,9,12,18,24 months.
- **Drain water from fuel filter housing - Diesel**: Replace every 1,2,3,4,5,6 years.
- **Fuel lines and hoses**: Replace every 1,2,3,4,5,6 years.
- **Breather hose**: Replace every 1,2,3,4,5,6 years.

Valve clearance to be checked every 1,60,000kms or 8 years.

*Engine coolant need to be replaced at every 1,00,000kms or 5 years.

*Engine timing belt idler need to be replaced, if found defective at the time of timing belt replacement.
