MODIFICATION OF YOUR VEHICLE
This vehicle should not be modified. Modification could affect its performance, safety or durability, and may even violate governmental regulations. In addition, damage or performance problems resulting from modification may not be covered under NISSAN warranties.

All information, specifications and illustrations in this manual are those in effect at the time of printing. NISSAN reserves the right to change specifications or design without notice and without obligation.

IMPORTANT INFORMATION
ABOUT THIS MANUAL
You will see various symbols in this manual. They are used in the following ways:

- **WARNING**
  This is used to indicate the presence of a hazard that could cause death or serious personal injury. To avoid or reduce the risk, the procedures must be followed precisely.

- **CAUTION**
  This is used to indicate the presence of a hazard that could cause minor or moderate personal injury or damage to your vehicle. To avoid or reduce the risk, the procedures must be followed carefully.

If you see this symbol, it means “Do not do this” or “Do not let this happen.”

Welcome To The World Of NISSAN

Your new NISSAN is the result of our dedication to produce the finest in safe, reliable and economical transportation. Your vehicle is the product of a successful worldwide company that manufactures cars and trucks in over 17 countries and distributes them in 170 nations.

NISSAN vehicles are designed and manufactured by Nissan Motor Co., Ltd. which was founded in Tokyo, Japan in 1933, and NISSAN affiliates worldwide, collectively growing to become the fifth largest automaker in the world. In addition to cars and trucks, NISSAN also makes textile machinery, fork-lift trucks, marine engines, boats and other products.

NISSAN has made a substantial and growing investment in North America, starting with the opening of Nissan Motor Corporation U.S.A. in 1960, and continuing with the production of some cars and trucks at one of the world's most modern manufacturing facilities, Nissan Motor Manufacturing Corporation U.S.A. in Smyrna, Tennessee, vehicle styling at Nissan Design International in San Diego, California, and engineering at Nissan Research and Development in Farmington Hills, Michigan.

Nissan Motor Corporation U.S.A. and its dealers indirectly employ about 60,000 Americans.

NISSAN is also a substantial contributor to the Canadian economy. Nissan Canada Inc., its suppliers and over 150 dealers employ approximately 4,500 people. These include company employees and the staffs of NISSAN dealers all across Canada. In addition, many Canadians work for companies that supply NISSAN and NISSAN dealers with materials and services ranging from operation of port facilities and transportation services to the supply of lubricants, parts and accessories.

NISSAN pioneered the use of electronics and computers in automobiles, and has led the industry in improving both performance and fuel efficiency through new engine designs and the use of synthetic materials to reduce vehicle weight. The company has also developed ways to build quality into its vehicles at each stage of the production process, both through extensive use of automation and — most importantly — through an awareness that people are the central element in quality control.

From the time the parts arrived from our suppliers until you took delivery of your new NISSAN, dozens of checks were made to ensure that only the best job was being done in producing and delivering your vehicle. NISSAN also takes great care to ensure that when you take your NISSAN to your dealer for maintenance, the service technician will perform his work according to the quality standards that have been established by the factory.

Safety has also been built into your NISSAN. As you know, seat belts are an integral part of the safety systems that will help protect you and your passengers in the event of a sudden stop or an accident. We urge you to use the seat belts every time you drive the vehicle.

The NISSAN story of growth and achievement reflects our major goal: to provide you, our customer, with a vehicle that is built with quality and craftsmanship — a product that we can be proud to build and you can be proud to own.
NISSAN CUSTOMER CARE PROGRAM

NISSAN CARES ...
Both NISSAN and your NISSAN dealer are dedicated to serving all your automotive needs. Your satisfaction with your vehicle and your NISSAN dealer are our primary concerns. Your NISSAN dealer is always available to assist you with all your automobile sales and service needs.

However, if there is something that your NISSAN dealer cannot assist you with or you would like to provide NISSAN directly with comments or questions, please contact our (NISSAN's) Consumer Affairs Department using our toll-free number:

For U.S. mainland customers
1-800-NISSAN-1
(1-800-647-7261)
For Hawaii customers
(808) 836-0888 (Oahu Number)
For Canada customers
1-800-387-0122

The Consumer Affairs Department will ask for the following information:
— Your name, address, and telephone number
— Vehicle identification number (on dashboard)
— Date of purchase
— Current odometer reading
— Your NISSAN dealer's name
— Your comments or questions

OR

You can write to NISSAN with the information on the left at:

WARNING

Do not ride in a moving vehicle when the seatback is reclined. This can be dangerous. The shoulder belt will not be against your body. In an accident you could be thrown into it and receive neck or other serious injuries. You could also slide under the lap belt and receive serious internal injuries.

For the most effective protection when the vehicle is in motion, the seat should be upright. Always sit well back in the seat and adjust the seat belt properly. See “Precautions on seat belt usage” later in this section.

FORWARD AND BACKWARD

Pull the lever up and hold it while you slide the seat forward or backward to the desired position. Release the lever to lock the seat in position.

1-2 Seats, restraints and supplemental air bag systems
Reclining
To recline the seatback pull the lever up and lean back. To bring the seatback forward, pull the lever up and lean your body forward. The seatback moves forward. Release the lever to lock the seatback in position.

TILTING FRONT BUCKET SEAT
(King cab models only)
The front passenger’s seat can be tilted to make it easier for jump seat passengers to get in and out.
To tilt the seatback, pull the reclining lever up or push the tilt lever down. The seat automatically moves forward.
To return the seat, move the whole seat backward, then push the seatback up until it locks.

WARNING
After adjustment, gently rock in the seat to make sure it is securely locked.
SEAT ADJUSTMENT

WARNING

- Do not adjust the driver’s seat while driving. The seat may move suddenly and could cause loss of control of the vehicle.
- After adjustment, gently rock in the seat to make sure it is securely locked.

Front and backward

Pull the lever up while you slide the seat forward or backward to the desired position. Release the lever to lock the seat in position.

Reclining

To recline the seatback pull the lever up and lean back. To bring the seatback forward, pull the lever up and lean your body forward. The seatback moves forward. Release the lever to lock the seatback in position.
TILTING FRONT 60/40 BENCH SEAT

The front passenger’s seat can be tilted to make it easier for jump seat passengers to get in and out.

To tilt the seatback, pull the reclining lever up or push the tilt lever down. The seat automatically moves forward.

To return the seat, move the whole seat backward, then push the seatback up until it locks.

WARNING

After adjustment, gently rock in the seat to make sure it is securely locked.
HEADING RESTRAINTS

To raise the head restraint, pull it up. To lower, push the lock knob, then push the head restraint down.

**WARNING**

Head restraints should be adjusted properly as they may provide significant protection against injury in an accident. Do not remove them. Check the adjustment after someone else uses the seat.

**NOTE:**

Adjust the top of the head restraint even with the tops of your ears.

**NOTE:**

The head restraints on the bench seat are not adjustable.

---

**SEAT ADJUSTMENT**

**WARNING**

- Do not use a child restraint in the center position of the front bench seat. This position is not suitable for child restraint installation.
- Do not adjust the bench seat while driving. The seat may move suddenly and could cause loss of control of the vehicle.
- After adjustment, gently rock in the seat to make sure it is securely locked.

---

1-6 Seats, restraints and supplemental air bag systems
Forward and Backward
Pull the lever up and hold it while you slide the seat forward or backward to the desired position. Release the lever to lock the seat in position.

TILTING BENCH SEAT
The bench seat can be tilted forward to make it easier to remove the jacking tools from the storage area.

To tilt the seatback, push the tilting lever down, then pull the seatback forward.

WARNING
After adjustment, gently rock in the seat to make sure it is securely locked.

Seats, restraints and supplemental air bag systems 1-7
Pull down the armrest/storage compartment. Push the release button and lift the armrest assembly to the upright position to access the storage compartment and cup holder.

**WARNING**
Do not sit on the armrest. The armrest is not a seating surface. Using the armrest as a seating surface may cause serious injury in an accident.

**WARNING**
- Do not install a child restraint in the jump seats (King Cab model). These seats are not suitable for child restraint installation.
- When folding the jump seat, be careful not to squeeze your finger between the seat cushion and the body side.

1-8 Seats, restraints and supplemental air bag systems
SUPPLEMENTAL RESTRAINT SYSTEM (supplemental air bag system)

This Supplemental Restraint System section contains important information concerning the driver and passenger supplemental air bags. The Supplemental Restraint System Air Bags can help reduce impact force to the driver and front passenger in certain frontal collisions. The supplemental air bags are designed to *supplement* the crash protection provided by the driver and front passenger seat belts and are *not a substitute* for them. The seat belts should always be correctly worn and the driver and front passenger seated a suitable distance away from the steering wheel and instrument panel. See “Seat belts” for instructions and precautions on seat belt usage later in this section.

The supplemental air bags operate only when the ignition switch is in the ON or START position.

**WARNING**

- The supplemental air bags ordinarily will not inflate in the event of a side impact, rear impact, roll over, or lower severity frontal collision. Always wear your seat belts to help reduce the risk or severity of injury in various kinds of accidents.

- The seat belts and the supplemental air bags are most effective when you are sitting back and upright in the seat. Supplemental air bags inflate with great force. If you are unrestrained, leaning forward, sitting sideways or out of position in any way, you are at greater risk of injury or death in a crash and may also receive serious or fatal injuries from the supplemental air bag if you are up against it when it inflates. Always sit back against the seatback and as far away as practical from the steering wheel or instrument panel. Always use the seat belts.

- Keep hands on the outside of the steering wheel. Placing them inside the steering wheel rim could increase the risk that they are injured when the supplemental air bag inflates.
1-10 Seats, restraints and supplemental air bag systems
WARNING

- Never let children ride unrestrained. Do not attempt to hold them in your lap or arms. Some examples of dangerous riding positions are shown in the previous illustrations.
- Children may be severely injured or killed when the supplemental air bag inflates if they are not properly restrained.
- Never install a rear-facing child restraint in the front seat without turning OFF the air bag. Be sure to turn the air bag OFF. An inflating supplemental air bag could seriously injure or kill your child. See “Child restraints” later in this section for details.
The driver supplemental air bag is located in the center of the steering wheel. The passenger supplemental air bag is located in the top right section of the instrument panel.

These systems are designed to meet optional certification requirements under U.S. regulations. They are also permitted in Canada. The optional certification allows air bags to be designed to inflate somewhat less forcefully than previously. **However, all of the information, cautions and warnings in this manual still apply and must be followed.**

The supplemental air bag system is designed to inflate in higher severity frontal collisions, although it may inflate if the forces in another type of collision are similar to those of a higher severity frontal impact. It may not inflate in certain frontal collisions. Vehicle damage (or lack of it) is not always an indication of proper supplemental air bag system operation.

The front passenger supplemental air bag is equipped with an ON/OFF switch. Because no rear seat exists where a rear facing child restraint can be secured, the switch is designed to turn OFF the passenger supplemental air bag so that a rear facing child restraint can be used in the front passenger seat. See “Passenger supplemental air bag ON/OFF switch and light” later in this section for details.

When the supplemental air bag inflates, a fairly loud noise may be heard, followed by the release of smoke. This smoke is not harmful and does not indicate a fire, but care should be taken not to unintentionally inhale it, as it may cause irritation and choking. Those with a history of a breathing condition should get fresh air promptly.

The supplemental air bags, along with the use of the seat belts, helps to cushion the impact force on the face and chest of the occupant.
can help save lives and reduce serious injuries. However, an inflating supplemental air bag may cause facial abrasions or other injuries. Supplemental air bags do not provide restraint to the lower body.

Seat belts should be correctly worn and the driver and passenger seated upright as far as practical away from the steering wheel or instrument panel. Since the supplemental air bags inflate quickly in order to help protect the front occupants, the force of the supplemental air bag inflating can increase the risk of injury if the occupant is too close to or against the supplemental air bag module during inflation.

The supplemental air bags deflate quickly after a collision.

The supplemental air bags operate only when the ignition switch is in the ON or START position.

**WARNING**

- Do not attach any objects to the steering wheel pad or on the instrument panel. Also, do not place any objects between any occupant and the steering wheel or on the instrument panel. Such objects may become dangerous projectiles and cause injury if the supplemental air bag inflates.
- Right after inflation, several supplemental air bag system components will be hot. Do not touch them; you may severely burn yourself.
- No unauthorized changes should be made to any components or wiring of the supplemental air bag system. This is to prevent accidental inflation of the supplemental air bag or damage to the supplemental air bag system.
- Do not make unauthorized changes to your vehicle's electrical system, suspension system or front end structure. This could affect proper operation of the supplemental air bag system.
- Tampering with the supplemental air bag system may result in serious personal injury. Tampering includes changes to the steering wheel and the instrument panel assembly by placing material over the steering wheel pad, above the dashboard, or by installing additional trim material around the supplemental air bag system.
- Work around and on the supplemental air bag system should be done by an authorized NISSAN dealer. Installation of electrical equipment should also be done by an authorized NISSAN dealer. The yellow SRS wiring should not be modified or disconnected. Unauthorized electrical test equipment and probing devices should not be used on the supplemental air bag system.
- SRS wiring harnesses are covered with yellow insulation either just before the harness connectors or over the complete harness for easy identification.

When selling your vehicle, we request that you inform the buyer about the supplemental air bag system and guide the buyer to the appropriate sections in this owner’s manual.
Passenger supplemental air bag on/off switch and light

**WARNING**

Air bags and seat belts are designed to work as a unit. Do not switch the air bag OFF unless you meet federal government criteria. Switching off the air bag may increase the risk of serious or fatal injuries in a collision where the air bag would have inflated.

In rare instances, some passengers are exposed to serious injury risks from inflating air bags, especially if not properly restrained. The U.S. and Canadian federal governments recognize other limited circumstances in which an air bag could reduce safety. The passenger air bag ON/OFF switch is, therefore, allowed in this vehicle. Because the overall benefits of air bags are great, in most situations air bags should not be switched off unless special government criteria exist.

The passenger air bag ON/OFF switch is located in the center of the instrument panel, near the ashtray. It can be used to
turn the passenger supplemental air bag OFF.

The ON/OFF switch should ONLY be used to turn the passenger supplemental air bag OFF when the following government criteria exists:

- Infants (less than 1 year old) in rear facing child restraints MUST be placed in the front passenger seat.
- Children ages 1-12 years MUST be placed in the front passenger seat.
- The passenger has a medical condition which, according to a physician, causes the air bag to pose a special risk and makes the potential harm from the air bag greater than the potential harm from turning off the air bag.

Seat belts and child restraints should always be properly used. See “Precautions on seat belt usage” and “Child restraints” later in this section for details.

To turn the passenger supplemental air bag OFF, insert the ignition key in the passenger supplemental air bag ON/OFF switch and turn the switch clockwise to the OFF position. Then remove the key. When the ignition is turned to the ON or START position, the passenger air bag OFF indicator light will illuminate to indicate the air bag is OFF. To turn the passenger supplemental air bag ON, insert the ignition key in the passenger supplemental air bag ON/OFF switch and turn the switch counter clockwise to the ON position. Then remove the key. When the ignition is turned to the ON or START position the passenger air bag OFF indicator light will illuminate for 7 seconds to indicate the system is working properly and then go out to indicate that the passenger supplemental air bag is ON.

When the switch is turned to the ON position, the passenger supplemental air bag is enabled and could inflate in a frontal collision. When the switch is turned to the OFF position, the passenger supplemental air bag is disabled and will not inflate in a frontal collision. The passenger supplemental air bag OFF indicator light on the instrument panel illuminates when the passenger supplemental air bag ON/OFF switch is turned to the OFF position. The driver's side supplemental air bag always remains enabled and is not affected by the passenger supplemental air bag ON/OFF switch.

The passenger supplemental air bag light, displaying OFF in the center of the instrument panel, monitors the position of the passenger supplemental air bag ON/OFF switch. When the ignition key is in the ON or START position, the light illuminates for about 7 seconds and then turns off if the air bag is ON/OFF switch is in the ON position, or stays on if the passenger supplemental air bag ON/OFF switch is in the OFF position.

WARNING

- Do not switch the airbag OFF unless you meet the federal government criteria outlined previously. This vehicle is equipped with seat belts with a “load limiter” feature. The seat belts are designed to work with the air bags to reduce the risk of injury in a collision. The seat belts are designed to release additional belt webbing during some collisions to reduce the concentration of force on the occupant’s chest area. In a collision with the airbag turned OFF, the seat belt may allow the occupant enough forward movement to incur serious or fatal injuries.
Keep the passenger supplemental air bag ON/OFF switch turned ON unless a rear-facing child restraint must be used in the front seat, if children ages 1-12 must be placed in the front seat, or if the passenger has a medical condition, which, according to a physician, causes the air bag to pose a special risk of harm (the federal government criteria). If the switch is OFF, the air bag will not inflate in a collision as designed and the extra protection provided by the air bag may be lost.

Be sure to turn the passenger supplemental air bag ON/OFF switch OFF when using a rear facing child restraint in the front passenger seat. If it is not OFF, the air bag may inflate in a collision. The force of the rapidly inflating air bag could cause serious injury or kill the child in the child restraint. Children ages 1-12 and persons with special medical conditions may also be at risk from an inflating air bag.

If the supplemental air bag warning light located in the instrument panel next to the speedometer comes on when the passenger supplemental air bag OFF light is also illuminated, something may be wrong with the air bag system. Infants, children ages 1-12 or persons with special medical conditions should not use the front passenger seat until the system is checked by your NISSAN dealer.
Warning labels about the supplemental air bag system are placed in the vehicle as shown in the illustration.

The supplemental air bag warning light, displaying the diagnosis sensor unit, the supplemental air bag modules and all related wiring.

When the ignition key is in the ON or START position, the supplemental air bag warning light illuminates for about 7 seconds and then turns off. This means the system is operational.

If any of the following system conditions occur, the supplemental air bag system
needs servicing and should be taken to your
nearest authorized NISSAN dealer:

1. The supplemental air bag warning light
does not come on and remain on for 7
seconds and then go off as described.
2. The supplemental air bag warning light
flashes intermittently or remains on.
3. The supplemental air bag warning light
does not come on at all.

Under these conditions, the Supplemental
Restraint System (supplemental air bag
system) may not function properly. It must
be checked and repaired.

**WARNING**
If the supplemental air bag warning
light is on, it could mean that the
supplemental air bag system will not
operate in an accident.

Repair and replacement procedure

The supplemental air bag modules are de-
signed to inflate on a one-time-only basis.
As a reminder, unless it is damaged, the
supplemental air bag warning light remains
illuminated after inflation has occurred.

**WARNING**

- Once the supplemental air bag in-
flates, the supplemental air bag
module will not function again and
should be replaced by an authorized
NISSAN dealer. The supplemental air
bag module cannot be repaired.

- The supplemental air bag system
should be inspected by an autho-
rized NISSAN dealer if there is any
damage to the front end portion of
the vehicle.

- If you need to dispose of the supple-
mental air bag or scrap the vehicle,
contact an authorized NISSAN
dealer. Correct supplemental air bag
disposal procedures are set forth in
the appropriate NISSAN Service
Manual. Incorrect disposal proce-
dures could cause personal injury.

1-18 Seats, restraints and supplemental air bag systems
PRECAUTIONS ON SEAT BELT USAGE

Your chances of being injured in an accident and/or the severity of injury may be greatly reduced if you are wearing your seat belt and it is properly adjusted. NISSAN strongly encourages you and all of your passengers to buckle up every time you drive, even if your seating position includes a supplemental air bag.

Most U.S. States and Canadian provinces or territories may specify that seat belts be worn at all times when a vehicle is being driven.

**WARNING**

- Every person who drives or rides in this vehicle should use a seat belt at all times. Children should be properly restrained and, if appropriate, in child restraints.
- The belt should be properly adjusted to a snug fit. Failure to do so may reduce the effectiveness of the entire restraint system and increase the chance or severity of injury in an accident. Serious injury or death can occur if the seat belt is not worn properly.
- Always route the shoulder belt over your shoulder and across your chest. Never run the belt behind your back, under your arm or across your neck. The belt should be away from your face and neck, but not falling off your shoulder.
- Position the lap belt as low as possible AROUND THE HIPS, NOT THE WAIST. A lap belt worn too high could increase the risk of internal injuries in an accident.
CHILD SAFETY

Children need adults to help protect them. They need to be properly restrained.

The proper restraint depends on the child’s size. Generally, infants up to about 1 year and less than 20 pounds (9 kg) should be placed in rear facing child restraints. Front facing child restraints are available for children who outgrow rear facing child restraints.

WARNING

- Be sure to turn the passenger supplemental air bag ON/OFF switch OFF when using a rear facing child restraint in the front passenger seat. If it is not OFF, the air bag may inflate in a collision. The force of the rapidly inflating air bag could cause serious injury or kill the child in the child restraint.
- Do not install a child restraint in the jump seats (King Cab model). These seats are not suitable for child restraint installation.

Be sure the seat belt tongue is securely fastened to the proper buckle.
Do not wear the belt inside out or twisted. Doing so may reduce its effectiveness.
Do not allow more than one person to use the same belt.
Never carry more people in the vehicle than there are seat belts.

Never allow anyone to ride in the cargo area or in a slide-in camper or other type cargo area cover while the vehicle is in motion. These areas do not contain seat belts. It is not designed for passengers. They could be injured in sudden braking or a collision.
If the seat belt warning lamp glows continuously while the ignition is turned ON with all doors closed and all seat belts fastened, it may indicate a malfunction in the system. Have the system checked by an authorized NISSAN dealer.

All seat belt assemblies including retractors and attaching hardware should be inspected after any collision by an authorized NISSAN dealer. NISSAN recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Seat belt assemblies not in use during a collision should also be inspected and replaced if either damage or improper operation is noted.

ARS1103
Do not install a child restraint in the center position of the front bench seat. This position is not suitable for child restraint installation.

Infants and children need special protection. The vehicle’s seat belts may not fit them properly. The shoulder belt may come too close to the face or neck. The lap belt may not fit over their small hip bones. In an accident, an improperly fitting seat belt could cause serious or fatal injury. Always use appropriate child restraints.

Infants and small children
NISSAN recommends that infants and small children be seated in child restraints that comply with Federal Motor Vehicle Safety Standards or Canadian Motor Vehicle Safety Standards. You should choose a child restraint which fits your vehicle and always follow the manufacturer’s instructions for installation and use.

Larger children
Children who are too large for child restraints should be seated and restrained by the seat belts which are provided. If the child’s seating position has a shoulder belt that fits close to the face or neck, the use of a booster seat (commercially available) may help overcome this. The booster seat should raise the child so the shoulder belt is properly positioned across the top, middle portion of the shoulder and the lap belt is low on the hips. The booster seat should fit the vehicle seat and have a label certifying that it complies with Federal Motor Vehicle Safety Standards or Canadian Motor Vehicle Safety Standards. Once the child has grown so the shoulder belt is no longer on or near the face and neck, use the shoulder belt without the booster seat.

WARNING
Never let a child stand or kneel on any seat and do not allow a child in the cargo areas while the vehicle is moving. The child could be seriously injured or killed in an accident.

PREGNANT WOMEN
NISSAN recommends that pregnant women use seat belts. Contact your doctor for specific recommendations. The lap belt should be worn snug and positioned as low as possible around the hips, not the waist.

INJURED PERSONS
NISSAN recommends that injured persons use seat belts, depending on the injury. Check with your doctor for specific recommendations.

All U.S. states and Canadian provinces or territories require the use of approved child restraints for infants and small children. See “Child restraints” later in this section for more information.

In addition, there are many types of child restraints available for larger children which should be used for maximum protection.

NISSAN recommends that all preteens and children be restrained in the rear seat if available. According to accident statistics, children are safer when properly restrained in the rear seat than in the front seat.
THREE-POINT TYPE WITH RETRACTOR

**WARNING**

- Every person who drives or rides in this vehicle should use a seat belt at all times. Children should be properly restrained and, if appropriate, in a child restraint.
- Do not ride in a moving vehicle when the seatback is reclined. This can be dangerous. The shoulder belt will not be against your body. In an accident you could be thrown into it and receive neck or other serious injuries. You could also slide under the lap belt and receive serious internal injuries.
- For most effective protection when the vehicle is in motion, the seat should be upright. Always sit well back in the seat and adjust the seat belt properly.

Fastening the seat belt

1. Adjust the seat.
2. Slowly pull the seat belt out of the retractor and insert the tongue into the buckle until it clicks.
   
The retractor is designed to lock during a sudden stop or on impact. A slow pulling motion permits the seat belt to move, and allows you some freedom of movement in the seat.

3. Position the lap belt portion low on the hips as shown.
4. Pull the shoulder belt portion toward the retractor to take up extra slack.

The front passenger seat belt has a cinching mechanism for child restraint installation. It is referred to as the automatic locking mode.

When the cinching mechanism is activated the seat belt cannot be extracted again until the seat belt tongue is detached from the buckle and the seat belt is fully retracted.
See “Child restraints” later in this section for more information.

The automatic locking mode should be used only for child restraint installation. During normal seat belt use by a passenger, the locking mode should not be activated. If it is activated it may cause uncomfortable seat belt tension.

Unfastening the seat belt
To unfasten the seat belt, press the button on the buckle. The seat belt automatically retracts.

Checking seat belt operation
Seat belt retractors are designed to lock seat belt movement by two separate methods:

1) When the seat belt is pulled quickly from the retractor.
2) When the vehicle slows down rapidly.

To increase your confidence in the seat belts, check the operation as follows.

- Grasp the shoulder belt and pull quickly forward. The retractor should lock and restrict further belt movement.

If the retractor does not lock during this check, or if you have any questions about seat belt operation, see an authorized NISSAN dealer.
Shoulder belt height adjustment (front seats only)

The shoulder belt anchor height should be adjusted to the position best for you. (See “Precautions on seat belt usage” earlier in this section.) To adjust, squeeze the adjustment buttons and move the shoulder belt anchor to the desired position, so the belt passes over the center of the shoulder. The belt should be away from your face and neck, but not falling off of your shoulder. Release the adjustment buttons to lock the shoulder belt anchor into position.

**WARNING**

- After adjustment, release the buttons and try to move the shoulder belt anchor up and down to make sure it is securely fixed in position.
- The shoulder belt anchor height should be adjusted to the position best for you. Failure to do so may reduce the effectiveness of the entire restraint system and increase the chance or severity of injury in an accident.

TWO-POINT TYPE WITHOUT RETRACTOR (Center of 60/40 bench seat)

On 60/40 bench seat equipped models, the center seat belt buckle and tongue are identified by the word CENTER. The center seat belt tongue can be fastened only into the center seat belt buckle.

Pull down and latch the armrest/storage compartment lid and push up the arm rest assembly to the upright position.
TWO-POINT TYPE WITHOUT RETRACTOR (Jump seat and center of bench seat)

**WARNING**

- Do not install a child restraint in the jump seats (King Cab model). These seats are not suitable for child restraint installation.
- Do not install a child restraint in the center position of the front bench seat. This position is not suitable for child restraint installation.

- **Serious or fatal injury could occur.**

Selecting the correct set of seat belts

The center seat belt buckle and tongue are identified by the word CENTER. The center seat belt tongue can only be fastened into the center seat belt buckle.

Fastening the seat belt

1. Insert the tongue into the buckle until it clicks.

---

Seats, restraints and supplemental air bag systems 1-25
2. Tighten the belt by pulling the free end of the belt away from the tongue, then pull the belt clip to take up the slack.

3. Position the lap belt **low on the hips** as illustrated.

4. Loosen the belt by holding the tongue at a right angle to the belt, then pull on the belt.
Unfastening the belt
To unfasten the belt, press the button on the buckle.

SEAT BELT EXTENDERS
If, because of body size or driving position, it is not possible to properly fit the lap-shoulder belt and fasten it, an extender is available which is compatible with the installed seat belts. The extender adds approximately 8 inches (200 mm) of length and may be used for either the driver or front passenger seating position. See an authorized NISSAN dealer for assistance if the extender is required.

WARNING
- Only NISSAN seat belt extenders, made by the same company which made the original equipment seat belts, should be used with NISSAN seat belts.
- Persons who can use the standard seat belt should not use an extender. Such unnecessary use could result in serious personal injury in the event of an accident.

SEAT BELT MAINTENANCE
- To clean the seat belt webbings, apply a mild soap solution or any solution recommended for cleaning upholstery or carpet. Then wipe with a cloth and allow the seat belts to dry in the shade. Do not allow the seat belts to retract until they are completely dry.
- If dirt builds up in the shoulder belt guide of the seat belt anchors, the seat belts may retract slowly. Wipe the shoulder belt guide with a clean, dry cloth.
- Periodically check to see that the seat belt and the metal components, such as buckles, tongues, retractors, flexible wires and anchors, work properly. If loose parts, deterioration, cuts or other damage on the webbing is found, the entire seat belt assembly should be replaced.
CHILD RESTRAINTS

- Infants and small children should always be placed in an appropriate child restraint while riding in the vehicle. Failure to use a child restraint can result in serious injury or death.

- Children and infants should never be carried on your lap. It is not possible for even the strongest adult to resist the forces of a severe accident. The child could be crushed between the adult and parts of the vehicle. Also, do not put the same seat belt around both your child and yourself.

- Never install a rear-facing child restraint in the front seat, unless the passenger supplemental air bag is OFF. Be sure to turn the passenger supplemental air bag ON/OFF switch OFF. An inflating air bag could seriously injure or kill your child. See “Passenger supplemental air bag ON/OFF switch and light” earlier in this section.

- An improperly installed child restraint could lead to serious injury or death in an accident.

- In general, child restraints are designed to be installed with a lap belt or the lap portion of a three-point seat belt.

Child restraints for infants and small children of various sizes are offered by several manufacturers. When selecting any child restraint, keep the following points in mind:

1) Choose only a restraint with a label certifying that it complies with Federal Motor Vehicle Safety Standard 213 or Canadian Motor Vehicle Safety Standard 213.

2) Check the child restraint in your vehicle to be sure it is compatible with the vehicle's seat and seat belt system. Choose a child restraint that meets the guidelines of the Society of Automotive Engineers recommended practice J1819 for child restraint installation.

3) If the child restraint is compatible with your vehicle, place your child in the child restraint and check the various adjustments to be sure the child restraint is compatible with your child. Always follow all of the recommended procedures.

All U.S. states and provinces of Canada require that infants and small children be restrained in an approved child restraint at all times while the vehicle is being operated.

- Do not install a child restraint in the jump seats (King Cab model). These seats are not suitable for child restraint installation.

- Do not install a child restraint in the center position of the front bench seat. This position is not suitable for child restraint installation.
Improper use of a child restraint can result in increased injuries for both the infant or child and other occupants in the vehicle.

Follow all of the child restraint manufacturer’s instructions for installation and use. When purchasing a child restraint, be sure to select one which will fit your child and vehicle as it may not be possible to properly install some types of child restraints in your vehicle.

If the child restraint is not anchored properly, the risk of a child being injured in a collision or a sudden stop greatly increases.

Adjustable seatbacks should be positioned to fit the child restraint, but as upright as possible.

After attaching the child restraint, test it before you place the child in it. Tilt it from side to side. Try to tug it forward and check to see if the belt holds the restraint in place. If the restraint is not secure, tighten the belt as necessary.

For a front facing child restraint, check to make sure the shoulder belt does not go in front of the child’s face or neck. If it does, put the shoulder belt behind the child restraint.

When your child restraint is not in use, keep it secured with a seat belt to prevent it from being thrown around in case of a sudden stop or accident.

CAUTION

Remember that a child restraint left in a closed vehicle can become very hot. Check the seating surface and buckles before placing your child in the child restraint.

WARNING

Keep the passenger supplemental air bag ON/OFF switch turned ON unless a rear-facing child restraint is used in the front seat. If the switch is OFF the air bag will not inflate in a collision as designed.
The three-point belt in your vehicle is equipped with an automatic locking mode retractor which must be used when installing a child restraint.

Failure to use the retractor’s locking mode will result in the child restraint not being properly secured. The restraint could tip over or otherwise be unsecured and cause injury to the child in a sudden stop or collision.

Be sure to turn the passenger supplemental air bag ON/OFF switch OFF when using a rear facing child restraint in the front passenger seat. If it is not OFF, the air bag may inflate in a collision. The force of the rapidly inflating air bag could cause serious injury or kill the child in the child restraint.

If the supplemental air bag warning light located in the instrument panel next to the speedometer comes on when the passenger supplemental air bag OFF indicator light is also illuminated, something may be wrong with the supplemental air bag system. Do not use a child restraint in the front passenger seat until the system is checked by your NISSAN dealer.

**WARNING**

When installing a rear facing child restraint, the passenger supplemental air bag must be disabled using the ON/OFF switch. See “Passenger supplemental air bag ON/OFF switch and light” earlier in this section.

If you choose to install a child restraint in the front seat, follow these steps:

1. Position the child restraint on the front passenger seat. Always follow the restraint manufacturer’s instructions.
2. Route the seat belt tongue through the child restraint and insert the belt tongue into the buckle until you hear and feel the latch engage. Be sure to follow the child restraint manufacturer's instructions for belt routing.

3. Pull on the shoulder belt until all of the belt is fully extended. At this time, the retractor is in the automatic locking mode (child restraint mode). It reverts back to emergency locking mode when the belt is fully retracted.

4. Allow the belt to retract. Pull up on the belt to remove any slack in the belt.
5. Before placing the child in the child restraint, use force to tilt the child restraint from side to side, and tug it forward to make sure it is securely held in place.

6. Check that the retractor is in the automatic locking mode by trying to pull more belt out of the retractor. If you cannot pull any more belt webbing out of the retractor, the belt is in the automatic locking mode.

7. Check to make sure the child restraint is properly secured prior to each use. If the belt is not locked, repeat steps three through six.

After the child restraint is removed and the seat belt is fully retracted, the automatic locking mode (child restraint mode) is canceled.

REAR FACING INSTALLATION ON FRONT PASSENGER SEAT (Three-point type with retractor)

**WARNING**

- Keep the passenger supplemental air bag ON/OFF switch turned ON unless a rear-facing child restraint is used in the front seat. If the switch is OFF the air bag will not inflate in a collision as designed.

- Be sure to turn the passenger supplemental air bag ON/OFF switch OFF when using a rear-facing child restraint in the front passenger seat. If it is not OFF, the air bag may inflate in a collision. The force of the rapidly inflating air bag could cause serious injury or kill the child in the child restraint. See “Passenger supplemental air bag ON/OFF switch and light” earlier in this section.

- If the supplemental air bag warning light located in the instrument panel next to the speedometer comes on when the passenger supplemental air bag is OFF, it may be an indication of a malfunction in the system and should be checked by a qualified technician.
bag OFF indicator light is also illuminated, something may be wrong with the air bag system. Do not use a child restraint in the front passenger seat until the system is checked by your NISSAN dealer.

- The passenger three-point seat belt is equipped with an automatic locking mode retractor which must be used when installing a child restraint.
- Failure to use the automatic locking mode will result in the child restraint not being properly secured. The restraint could tip over or otherwise be unsecured and cause injury to the child in a sudden stop or collision.

If you choose to install a child restraint, follow these steps:
1. Position the child restraint on the front passenger seat. Always follow the restraint manufacturer's instructions.

2. Route the seat belt tongue through the child restraint and insert the belt tongue into the buckle until you hear and feel the latch engage. Be sure to follow the child restraint manufacturer's instructions for belt routing.
3. Pull on the shoulder belt until all of the belt is fully extended. At this time, the belt retractor is in the automatic locking mode (child restraint mode). It reverts back to emergency locking mode when the belt is fully retracted.

4. Allow the belt to retract. Pull up on the belt to remove any slack in the belt.

5. Before placing the child in the child restraint, use force to tilt the child restraint from side to side, and tug it forward to make sure it is securely held in place.

6. Ensure the retractor is in the automatic locking mode by trying to pull more belt webbing out of the retractor. If you cannot pull any more belt webbing out of the retractor, the belt is in the automatic locking mode.

7. Check to make sure the child restraint is properly secured prior to each use. If the lap belt is not locked, repeat steps three through six.
After the child restraint is removed and the seat belt is fully retracted the automatic locking mode (child restraint mode) is canceled.

TOP STRAP CHILD RESTRAINT

If your child restraint has a top strap, install the anchor bracket to the provided anchor point. Anchor bracket hardware must be installed. The top strap anchor bracket hardware is available through an authorized NISSAN dealer.

Part # 88894-89900

Secure the child restraint with the three-point seat belt and latch the top strap hook onto the anchor bracket. Make sure the shoulder belt is placed between the seat back and child restraint. To install the anchor bracket, a metric bolt of the dimensions listed below must be used.

- Bolt diameter: 8.0 mm
- Bolt length: at least 1.18 in (30 mm)
- Thread pitch: 1.25 mm

**WARNING**

- Do not install a child restraint in the center position of the front bench seat. This position is not suitable for child restraint installation.
- A child restraint anchor point is designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances is it to be used for adult seat belts or harnesses.

Seats, restraints and supplemental air bag systems 1-35
Anchor point location

An anchor point is located under the rear window. The back panel carpet is perforated to allow access to the anchor point.

An authorized NISSAN dealer can assist you with the installation of your child restraint.

2-2 Instruments and controls

- Headlight and turn signal/front fog light switch (P. 2-16), (P. 2-16)
- Instrument brightness control (P. 2-17)
- Outside mirror remote control (P. 3-13)
- Cruise control main switch (P. 5-16)
- Hood release lever (P. 3-6)
- Fuse box cover (P. 8-27)
- Tilting steering wheel adjust lever (P. 3-13)
- Driver supplemental air bag (P. 1-9)
- Cruise control set switch (P. 5-16)
- Ignition switch/steering lock (P. 5-4)
- Windshield wiper/washer switch (P. 2-17)
- Hazard warning flasher switch (P. 2-18)
- Passenger supplemental air bag OFF indicator (P. 1-14)
- Heater/air conditioner controls (P. 4-3)
- Center ventilator (P. 4-2)
- Passenger supplemental air bag (P. 1-9)
- Side ventilator (P. 4-2)
- Glove box (P. 3-9)
- AM/FM radio with cassette player (P. 4-11), AM/FM radio with cassette, CD player and sub-woofer (P. 4-16)
- Ash tray (P. 2-18)
- Parking brake lever (P. 5-14)
- 12 volt DC power point (P. 2-18)
- Passenger supplemental air bag ON/OFF switch (P. 1-14)
- Cigarette lighter (accessory) (P. 2-18)

See the page indicated in parentheses for operating details.
SPEEDOMETER AND ODOMETER

Speedometer
The speedometer indicates vehicle speed.

Odometer
The odometer records the total distance the vehicle has been driven.
Trip odometer

The trip odometer records the distance of individual trips. Before each trip reset the trip odometer.

Push the reset knob to change the display as follows:
ODO (odometer) → TRIP A → TRIP B → ODO.

Push and hold the reset knob for more than 1 second to reset either trip odometer.

2-4 Instruments and controls
The tachometer indicates engine speed in revolutions per minute (r/min).

**CAUTION**

When engine speed approaches the red zone, shift to a higher gear. Operating the engine in the red zone may cause serious engine damage.

The gauge indicates the engine coolant temperature.

The engine coolant temperature varies with the outside air temperature and driving conditions.

**CAUTION**

If the gauge indicates over the normal range, stop the vehicle as soon as safely possible. If the engine is overheated, continued operation of the vehicle may seriously damage the engine. See the “In case of emergency” section for immediate action required.
The gauge indicates the APPROXIMATE fuel level in the tank.

The gauge may move slightly during braking, turning, acceleration, or going up or downhill.

The gauge needle is designed to hold its position when the ignition key is turned OFF.

Refill the fuel tank before the gauge registers E (Empty).

**CAUTION**

If the vehicle is driven with the fuel level very low, the malfunction indicator light may come on. Refuel as soon as possible. After driving for a while, the light should remain off. If the light remains on, have the vehicle inspected by an authorized NISSAN dealer.

For additional information, see the "Malfunction indicator light (MIL)" later in this section.

### Checking bulbs

Apply the parking brake and turn the ignition key to ON without starting the engine. The following lights come on:

- ▶️◀️
- 🛌️️
- ⚡️️
- 🛠️️
- 🛠️️️️

If the driver side seat belt is fastened the light will not come on.

The following lights come on briefly and then go off:

- ABS or AIR BAG

If any light fails to come on, it may indicate a burned-out bulb or an open circuit in the electrical system. Have the system repaired promptly.
Turn signal/hazard indicator lights

These lights flash when the turn signal switch or hazard switch is turned on.

Brake warning light

This light functions for both the parking brake and the foot brake systems.

When the ignition key is in the ON position, the light comes on when the parking brake is applied and also warns of a low brake fluid level. If the light comes on while the engine is running with the parking brake not applied, stop the vehicle and perform the following:

1. Check the brake fluid level. Add brake fluid as necessary. See “Brake and clutch fluid” in the “Do-it-yourself” section of this manual.
2. If the brake fluid level is correct, have the warning system checked by an authorized NISSAN dealer.

WARNING

- Your brake system may not be working properly if the warning light is on. Driving could be dangerous. If you judge it to be safe, drive carefully to the nearest service station for repairs. Otherwise have your vehicle towed.
- Pressing the brake pedal with the engine stopped and/or low brake fluid level may increase your stopping distance and require greater pedal effort as well as pedal travel.
- If the level is below the minimum mark on the brake fluid reservoir, do not drive until the brake system has been checked at an authorized NISSAN dealer.

High beam indicator light

This blue light comes on when the headlight high beams are on and goes out when the low beams are selected.

The high beam indicator light also comes on when the passing signal is activated.

Seat belt warning light and chime

The light and chime remind you to fasten your seat belts. If the driver’s seat belt is NOT securely fastened when the ignition key is turned to ON or START, the chime sounds five times and the light illuminates.

Supplemental air bag warning light

When the ignition key is in the ON or START position, the supplemental air bag warning light illuminates for about 7 seconds and then turns off. This means the system is operational.

If any of the following conditions occur, the supplemental restraint system needs servicing and your vehicle must be taken to an authorized authorized NISSAN dealer:

1. The supplemental air bag warning light does not come on and remain on for 7 seconds and then go off as described above.
2. The supplemental air bag warning light flashes intermittently or remains on.
3. The supplemental air bag warning light does not come on at all.

Unless checked and repaired, the supplemental restraint system may not function properly. For additional details on the Supplemental restraint system (Supplemental air bag system), see the “Seats, restraints and supplemental air bag systems” section of this manual.

**WARNING**

If the supplemental air bag warning light is on, it could mean that the air bag will not operate in an accident.

---

**Passenger supplemental air bag OFF indicator light**

The passenger supplemental air bag is equipped with an ON/OFF switch. The switch is located in the center of the instrument panel, near the ashtray. When the switch is turned to the ON position, the passenger supplemental air bag is enabled and could inflate in a frontal collision. When the switch is turned to the OFF position, the passenger supplemental air bag is disabled and will not inflate in a frontal collision. The passenger supplemental air bag OFF indicator light on the instrument panel illuminates when the passenger supplemental air bag ON/OFF switch is turned to the OFF position. The driver’s side supplemental air bag always remains enabled and is not affected by the passenger supplemental air bag ON/OFF switch. The key for the passenger supplemental air bag ON/OFF switch should not be left in the switch. Remove the key after turning the switch in the desired position. Do not leave a key in the switch. See “Passenger supplemental air bag ON/OFF switch and light” in Section 1 for details.

**CAUTION**

Running the engine with the oil pressure warning light on could cause serious damage to the engine almost immediately. Turn off the engine as soon as it is safe to do so.

---

**Charge warning light**

If this light comes on while the engine is running, it may indicate a problem with the charging system. Turn the engine off and check the generator belt. If the belt is loose, broken, missing or if the light remains on, see an authorized NISSAN dealer immediately.

**CAUTION**

Do not continue driving if the belt is loose, broken or missing.

---

**Low fuel warning light (if so equipped)**

This light comes on when the fuel in the tank is low. Refuel as soon as it is convenient, preferably before the fuel gauge reaches E (Empty).

---

*Instruments and controls  2-9*
There will be a small reserve of fuel remaining in the tank when the fuel gauge needle reaches E (Empty).

Low washer fluid warning light (Canada only)

This light comes on when the washer tank fluid is at a low level. Add washer fluid as necessary. See “Window washer fluid” in the “Do-it-yourself” section of this manual.

4-wheel drive indicator light

This light comes on when the transfer shift control lever is in the 4H or 4L position.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>• When parking the vehicle, apply the parking brake and always make sure to shift the transfer control levers into the 2H, 4H or 4L position.</td>
</tr>
<tr>
<td>• Failure to engage the transfer lever in 2H, 4H or 4L could result in the vehicle moving unexpectedly, which in turn could result in serious personal injury or property damage.</td>
</tr>
</tbody>
</table>

### ATP
Automatic transmission park warning light (4x4 model)

This light indicates that the automatic transmission parking function is not engaged. If the transfer control is not secured in any drive position while the automatic transmission selector lever is in the P position, the transmission will disengage and the wheel will not lock.

Shift the transfer control lever into the 2H or 4L position when the warning light comes on.

- When parking, always make sure that the transfer lever is in H or 4L and the parking brake is set.
- If the ATP light is ON, this indicates that the automatic transmission P position will not function and the transfer lever is in N (neutral).
- Failure to engage the transfer control lever in H or 4L could result in the vehicle moving unexpectedly, resulting in serious personal injury or property damage.

### A/T OIL TEMP
Automatic transmission oil temperature warning light (4x4 model)

This light comes on when the automatic transmission oil temperature is too high. If the light comes on while driving, reduce the vehicle speed as soon as safely possible until the light turns off.

Continued vehicle operation when the A/T oil temperature warning light is on may damage the automatic transmission.

### CRUISE
Cruise indicator light (if so equipped)

This light comes on while the vehicle speed is controlled by the cruise control system. If the CRUISE indicator blinks, have the system checked by an authorized NISSAN dealer.

### ABS
Anti-lock brake warning light

If the light comes on while the engine is running, it may indicate a potential problem with the anti-lock brake system. Have the...
system checked by an authorized NISSAN dealer.

If an abnormality occurs in the system, the anti-lock function ceases but the ordinary brakes continue to operate normally. **If the light comes on while you are driving, contact an authorized NISSAN dealer for repair.**

![Overdrive off indicator light](if so equipped)

This light comes on when the overdrive switch is pushed to the OFF position.

**Key reminder chime**

The chime sounds when the driver’s door is opened and the key is left in the ignition switch. Take the ignition key when you leave the vehicle.

**Light reminder chime**

A chime sounds if the driver’s door is opened with the headlight switch on unless the ignition key is in the ON position. Turn the headlight switch off when you leave the vehicle.

**Brake pad wear warning**

The disc brake pads have audible wear warnings. When a brake pad requires replacement, it makes a high pitched scraping sound when the vehicle is in motion whether or not the brake pedal is depressed. Have the brakes checked as soon as possible if the warning sound is heard.

**Malfunction indicator light (MIL)**

If the malfunction indicator light comes on steady or blinks while the engine is running, it may indicate a potential emission control problem.

The malfunction indicator light may also come on steady or blink if the fuel filler cap has not been closed tightly or if the fuel tank is nearly empty. Check to make sure the fuel cap is secure and that you have at least three gallons (14 liters) of fuel in the fuel tank.

**Operation**

After driving for a while, the light should remain off if no other potential emission control system problem exists.

The malfunction indicator light will come on in one of two ways:

- Malfunction indicator light on steady – An emission control system malfunction has been detected. Have the vehicle inspected by an authorized NISSAN dealer. You do not need to have your vehicle towed to the dealer.

- Malfunction indicator light blinking – An engine misfire has been detected which may damage the emission control system. To reduce or avoid emission control system damage:
  - do not drive at speeds above 45 MPH (72 km/h).
  - avoid hard acceleration or deceleration.
  - avoid steep uphill grades.
  - if possible, reduce the amount of cargo being hauled or towed.

The malfunction indicator light may stop blinking and come on steady.

Have the vehicle inspected by an authorized NISSAN dealer. You do not need to have your vehicle towed to the dealer.
CAUTION
Continued vehicle operation without having the emission control system checked and repaired as necessary could lead to poor driveability, reduced fuel economy, and possible damage to the emission control system.
THEFT WARNING
(if so equipped)

The theft warning system provides visual and audio alarm signals if parts of the vehicle are disturbed.

How to activate the theft warning system

1. Close all windows.
2. Remove the key from the ignition switch.
3. Close the hood and both doors.
4. Push the button on the multi-remote controller. Both doors lock. The hazard lights flash twice and the horn beeps once to indicate both doors are locked.
   - When the button is pushed with both doors locked, the hazard lights flash twice and the horn beeps once as a reminder that the doors are already locked. The horn may or may not beep once. Refer to “silencing the horn beep feature” later in this section.
5. Confirm that the SECURITY indicator light comes on. The SECURITY light glows for about 30 seconds and then begins to flash once every three seconds. The system is now activated. If, during this 30-second time period, the door is unlocked by the key or the multi-remote controller, or the ignition key is turned to ACC or ON, the system will not activate.
   - If the key is turned slowly when locking the door, the system may not activate. Furthermore, if the key is turned excessively to the unlock position, the system may be deactivated when the key is removed. If the indicator light fails to glow for 30 seconds, unlock the door once and lock it again.
   - Even when the driver and/or passengers are in the vehicle, the system will activate with both doors, and hood locked and ignition key off. Turn the ignition key to ACC or ON to turn the system off.

The system can be activated even if the windows are open.

The theft warning system is NOT activated if one of the following occurs:

- A door is unlocked or the ignition key is turned to the ACC or ON position during the 30 seconds in which the SECURITY light stays on.
- The SECURITY light blinks at a steady 1/2 second on - 1/2 second off rate (a door, or the hood is open and the key is not in the ACC or ON position). When the ignition key is turned to the ACC or ON position, the SECURITY light turns off.

Theft warning system operation

The theft warning system emits the following alarm:

- The headlights blink and the horn sounds intermittently. In addition, the starter motor does not operate.
- The alarm automatically turns off after 2 to 3 minutes. However, the alarm reacts...
if the vehicle is tampered with again. The alarm can be shut off by unlocking a door with the key or by pressing the button on the multi-remote controller.

The alarm is activated by:
- opening a door without using the key (even if the door is unlocked by releasing the door inside lock switch).
- opening the hood.

How to stop the alarm

The alarm stops only by unlocking a door with the key or by pressing the button on the multi-remote controller. The alarm does not stop if the ignition switch is turned to ACC or ON position.

Silencing the horn beep feature

If desired, the horn beep feature can be deactivated using the multi-remote controller.

To deactivate: Press and hold the and buttons for at least two seconds.

The hazard lights will quickly flash three times to confirm that the horn beep feature has been deactivated.

To activate: Press and hold the and buttons for at least two seconds once more.

The hazard lights will quickly flash three times to confirm that the horn beep feature has been reactivated.

Deactivating the horn beep feature does not silence the horn if the alarm is triggered.

If the system does not operate as described above, have it checked by an authorized NISSAN dealer.
Lighting

Turn the switch to the \( \text{on} \) position:
The front combination, rear combination, license plate and instrument panel lights come on.

Turn the switch to the \( \text{off} \) position:
The headlights come on and all the other lights remain on.

To select the high beam function, push the lever forward. The high beam lights come on and the \( \text{high beam} \) light illuminates. Pull it back to select the low beam.

**DAYTIME RUNNING LIGHT SYSTEM (Canada only)**

The headlights automatically illuminate at a reduced intensity when the engine is started with the parking brake released. The daytime running lights operate with the headlight switch in the OFF position or in the \( \text{on} \) position. Turn the headlight switch to the \( \text{high beam} \) position for full illumination when driving at night. If the parking brake is applied before the engine is started, the daytime running lights do not illuminate. The daytime running lights illuminate once the parking brake is released. The daytime running lights will remain on until the ignition switch is turned off.

**WARNING**

When the daytime running light system is active, tail lights on your vehicle will not be on. It is necessary at dusk to turn on your headlights. Failure to do so could cause an accident injuring yourself and others.

Passing signal

Pulling the lever toward you turns on the headlight high beam.

**Instruments and controls** 2-15
Turn signal
Move the lever up or down to signal the turning direction. When the turn is completed, the turn signal cancels automatically.

Lane change signal
To indicate a lane change, move the lever up or down to the point where the indicator light begins to flash, but the lever does not latch.

To turn the front fog lights on, rotate the switch to the ** ON ** position.
To turn them off, rotate the switch to the ** OFF ** position.

The headlight switch must be in the ** low beam headlights on ** position (low beam headlights on) for the fog lights to operate. The fog lights automatically turn off whenever the high beam headlight function is selected.
The ignition switch must be in the ON position for the wipers or washer to be activated. Push the lever down to operate the wipers, and pull the lever toward you to operate the washer. Operating the washer automatically cycles the wipers several times. Intermittent wiper operation can be adjusted from 1 to 19 seconds by turning the time control knob (Type C only).

**CAUTION**
- Do not operate the washer continuously for more than 30 seconds.
- Do not operate the washer if the reservoir tank is empty.

**WARNING**
In freezing temperatures the washer solution may freeze on the windshield and obscure your vision which may lead to an accident. Warm the windshield with the defroster before you wash the windshield.

The instrument brightness control operates when the light switch is in the or position. Turn the control to adjust the brightness of the instrument panel lights.
HAZARD WARNING FLASHER SWITCH

Push the switch on to warn other drivers when you must stop or park under emergency conditions. All turn signal lights flash.

WARNING

- When stalled or stopped on the roadway under emergency conditions, move the vehicle well off the road.

- Do not use the hazard warning flashers while moving on the highway unless unusual circumstances force you to drive so slowly that your vehicle might become a hazard to other traffic.

- Turn signals do not work when the hazard warning flasher lights are on.

The hazard warning flashers can be actuated with the ignition switch in any position. Some state laws may prohibit the use of the hazard warning flasher switch while driving.

CIGARETTE LIGHTER (accessory) AND ASH TRAY

The cigarette lighter element is an accessory. A genuine NISSAN cigarette lighter or equivalent can be purchased from an authorized NISSAN dealer.

The cigarette lighter operates when the ignition switch is in the ACC or ON position. Push the lighter in all the way. When the lighter is heated, it springs out. Return the lighter to its original position after use.
WARNING
The cigarette lighter should not be used while driving so that full attention may be given to the driving operation.

CAUTION
The cigarette lighter socket is a power source for the cigarette lighter element only. The use of the cigarette lighter socket as a power source for any other accessory is not recommended.

POWER POINT (if so equipped)
There is a power point for powering accessories mounted in the instrument panel. It is rated at 12 Volts 120 Watts maximum.
CUP HOLDER
(if so equipped)

WARNING
The cup holder should not be used while driving so that full attention may be given to the driving operation.

CAUTION
- Avoid abrupt starting and braking when the cup holder is being used to prevent spilling the drink. If the liquid is hot, it can scald you or your passenger.
- Use only soft cups in the cup holder. Hard objects can injure you in an accident.

Some cup holders have a rubber insert that can be removed for cleaning and for using larger cups.
DOME LIGHT AND CARGO LIGHT

Each dome light has a three-position switch and operates regardless of ignition key position.

- When the switch is in the OFF position, the dome light does not illuminate, regardless of door position.
- When the switch is in the center or DOOR position, the dome light illuminates by opening a door.
- When the switch is in the ON position, the dome light illuminates whether either door is opened or closed.

Cargo light operation

On some King Cab models, the light can be used as a cargo light by simply pulling the light down. This light is convenient at night when loading cargo.

For information regarding dome light bulb replacement, refer to “Bulb replacement” in the “Do-it-yourself” section of this manual.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Leaving the dome light switch in the ON position for extended periods of time will result in a discharged battery.</td>
</tr>
</tbody>
</table>

MAP LIGHTS (if so equipped)

Instruments and controls 2-21
The side windows can be opened or closed by turning the hand crank on each door.

To open a window on the driver side, turn the crank clockwise. To close a window, turn the crank counterclockwise.

To open a window on the passenger side, turn the crank counterclockwise. To close a window, turn the crank clockwise.

**WARNING**

- Make sure that all passengers have their hands, etc. inside the vehicle before closing the windows. Use the window lock switch to prevent unexpected use of the power windows.
- Do not leave children unattended inside the vehicle. They could unknowingly activate switches or controls and become trapped in a window. Unattended children could become involved in a serious accident.

The power window operates when the ignition key is ON.

To open the driver window, press the driver switch and hold it down. To close the window, lift the switch up. The driver side control panel (driver’s switch) also opens or closes the passenger side window.

**Locking passenger’s window**

When the lock button is pushed in, only the driver side window can be opened or closed. Push it in again to cancel the window lock function.
Passenger power window switch

The passenger switch opens or closes the passenger window. To open the window, push the switch and hold it down. To close the window, lift the switch up.

AUTOMATIC POWER WINDOW SWITCH

To fully open the driver window, completely press the driver window switch down and release it; it need not be held. The window automatically opens all the way. To stop the window, lift the switch up while the window is opening.

REAR SLIDING WINDOW
(if so equipped)

Squeeze the handles of the lever, then slide the window open.
SUNROOF
(if so equipped)

Tilting up
Pull the handle down, then push the handle up to the fully tilted position.

- **WARNING**
  - In an accident you could be thrown from the vehicle through an open sunroof. Always use seat belts and child restraints.

- **CAUTION**
  - Do not allow anyone to stand up or extend any portion of their body out of the sunroof opening while the vehicle is in motion or while the sunroof is closing.

- **CAUTION**
  - Remove water drops, snow, ice or sand from the sunroof before opening.
  - Do not place heavy objects on the sunroof or surrounding area.

Closing
Pull the handle forward to unlock, then push the handle up completely to lock the sunroof closed.
**WARNING**

Do not remove or install the sun shade while driving so that full attention may be given to the driving operation.

Removing the sun shade
1. Turn each lock bolt counterclockwise while lifting the sun shade upward.
2. Slide the shade backward to remove it.

Installing the sun shade
1. Insert the two hooks on the front edge of sun shade into holders on the sunroof.
2. Align the two lock bolts on the rear edge of sun shade with the lock nuts, then securely tighten the lock bolts, one quarter turn.
Removing the sunroof

**WARNING**

Do not remove the sunroof while driving so that full attention may be given to the driving operation.

1. Remove the sun shade.
2. Tilt the sunroof up.
3. Push the knobs located on each end of the handle and push the sunroof upwards to disengage the handle linkage.
4. Pull the sunroof up from outside of the vehicle until it is perpendicular to the roof panel.
5. Slide the sunroof to the left and remove it.

Installing the sunroof

1. While placing the sunroof perpendicular to the roof panel, position the sunroof and engage the retainer with the hinge.
2. Slide the sunroof to the right until the red mark on the hinge disappears.
3. Carefully lower the sunroof, making sure it is centered with in the roof opening.
4. Push the knobs located on each end of the handle and engage the handle linkage.

**Be sure the sunroof is securely installed.**
3 Pre-driving checks and adjustments

Key .................................................................3-2
Door locks .......................................................3-2

Fuel filler cap .....................................................3-9
Tailgate latch .....................................................3-10
Tie down hooks ..................................................3-12
Tilting steering wheel (if so equipped) .................3-13
Outside mirror remote control (if so equipped) ....3-13
Outside mirrors ..................................................3-14
Inside mirror .....................................................3-14
Vanity mirror (if so equipped) .........................3-15
A key number is supplied with your key. Record the key number and keep it in a safe place (such as your wallet), NOT IN THE VEHICLE. If you lose your keys, see an authorized NISSAN dealer for duplicates by using the key number. NISSAN does not record key numbers so it is very important to keep track of your key number plate.

A key number is only necessary when you have lost all keys and do not have one to duplicate from. If you still have a key, this key can be duplicated by an authorized NISSAN dealer or locksmith.

### WARNING
- Always have the doors locked while driving. Along with the use of seat belts, this provides greater safety in the event of an accident by helping to prevent persons from being thrown from the vehicle. This also helps keep children and others from unintentionally opening the doors, and will help keep out intruders.
- Before opening the door, always look for and avoid oncoming traffic.
- Do not leave children unattended in a locked vehicle. They could unknowingly activate switches or controls. Unattended children could become involved in serious accidents.

#### Locking doors with key
To lock the door, turn the key towards the front of the vehicle. To unlock, turn it towards the rear.

On power door lock equipped models, locking the driver door simultaneously locks the passenger’s door.
Locking doors without key

To lock the doors without the key, push the inside lock knob to the lock position, then close the door.

When locking the door this way, be certain not to leave the key inside the vehicle.

POWER DOOR LOCK
(if so equipped)

The power door lock system allows you to lock or unlock both doors simultaneously.

Turning the key to the front of the vehicle locks both doors.

Turning the key one time to the rear of the vehicle unlocks that door. From that position, returning the key to neutral (where the key can only be removed and inserted) and turning it to the rear again within 5 seconds unlocks both doors.

To lock from the outside without a key, push the door lock button (driver side only) or the door lock knob (driver or passenger side), then close the door. When locking the door this way, be certain not to leave the key inside the vehicle. If the key is left in the ignition, all doors will unlock automatically.
MULTI-REMOTE CONTROL SYSTEM (if so equipped)

It is possible to lock/unlock both doors, and activate the panic alarm by using the remote controller from outside the vehicle.

Be sure to remove the key from the vehicle before locking the doors.

The remote controller can operate at a distance of approximately 49 ft (15 m) from the vehicle. The effective distance depends on the conditions around the vehicle.

As many as four remote controllers can be used with one vehicle. For information concerning the purchase and use of additional remote controllers, contact an authorized NISSAN dealer.

Listed below are conditions or occurrences which will damage the remote controller:

- Do not allow the remote controller to become wet.
- Do not drop the remote controller.
- Do not strike the remote controller sharply against another object.
- Do not place the remote controller for an extended period in an area where temperatures exceed 140°F (60°C).

Locking doors

1. Close all windows.
2. Remove the key from the ignition switch.
3. Close the hood and both doors.
4. Push the button on the multi-remote controller. Both doors lock. The hazard lights flash twice and the horn beeps once to indicate both doors are locked.

When the button is pushed with both doors locked, the hazard lights flash twice and the horn beeps once as a reminder that the doors are already locked. The horn may or may not beep once. Refer to “silencing the horn beep feature” later in this section.

3-4 Pre-driving checks and adjustments
Unlocking doors

1. Push the button on the multi-
remote controller. Only the driver's side
door unlocks.
2. Push the button on the multi-
remote controller again within five sec-
onds. The passenger door unlocks.
3. The interior light illuminates for 30 sec-
onds when the light switch is in the
DOOR position.

The interior light can be turned off without
waiting 30 seconds by inserting the key into
the ignition or locking the doors with the
multi-remote controller or pushing the
interior light switch to the OFF position.

Using the panic alarm

If you are near your vehicle and feel threat-
ened, you may activate the panic alarm to
call attention as follows:

1. Push the button on the remote con-
troller for longer than 1.5 seconds.
2. The theft warning alarm and headlights
will stay on for 30 seconds.
3. The panic alarm stops when:
   - it has run for 30 seconds, or
   - the or the button is
     pressed, on the multi-remote controller.

Pre-driving checks and adjustments 3-5
Silencing the horn beep feature

If desired, the horn beep feature can be deactivated using the multi-remote control-
er.

**To deactivate:** Press and hold the \( \) and \( \) together for at least two seconds.

The hazard lights will quickly flash three times to confirm that the horn beep feature has been deactivated.

**To activate:** Press and hold the \( \) and \( \) together for at least two seconds once more.

Deactivating the horn feature does not silence the horn if the alarm is triggered.

3-6 Pre-driving checks and adjustments
BATTERY REPLACEMENT

Replace the battery in the multi-remote controller as follows:

1. Open the lid using a coin.
2. Replace the battery with a new one. Recommended battery: Sanyo CR2025 or equivalent.
3. Close the lid securely.
4. Press the button, then the button two or three times to check the multi-remote controller operation.

Each time the button is pressed, the hazard lights flash once.

If the battery is removed for any reason other than replacement, perform step 4 above.

- An improperly disposed battery can hurt the environment. Always confirm local regulations for battery disposal.
- The multi-remote controller is water-resistant; however, if it does get wet, immediately wipe completely dry.
- The operational range of the multi-remote controller extends to approximately 49 ft (15 m) from the vehicle. This range may vary with conditions.

FCC Notice:
Changes or modifications not expressly approved by the manufacturer for compliance could void the user’s authority to operate the equipment.

This device complies with part 15 of the FCC Rules and RSS-210 of Industry Canada.

Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this Pre-driving checks and adjustments 3-7
device must accept any interference received including interference that may cause undesired operation of the device.

**WARNING**

- Make sure the hood is completely closed and latched before driving. Failure to do so could cause the hood to fly open and result in an accident.
- If you see steam or smoke coming from the engine compartment, to avoid injury do not open the hood.

1. Pull the hood lock release handle located below the driver side instrument panel; the hood then springs up slightly.
2. Lift the lever at the front of the hood with your fingertips and raise the hood.
3. Insert the support rod into the slot in the front edge of the hood.
4. When closing the hood, reset the support rod to its original position, lower the hood to approximately 12 inches above the latch and release it. This allows proper engagement of the hood latch.

3-8 Pre-driving checks and adjustments
Open the glove box by pulling the handle.

**WARNING**
Keep glove box lid closed while driving to prevent injury in an accident or a sudden stop.

GLOVE BOX

The fuel filler cap is a screw-on ratcheting type. Tighten the cap clockwise until ratcheting clicks are heard.

**WARNING**
- Gasoline is extremely flammable and highly explosive under certain conditions. You could be burned or seriously injured if it is misused or mishandled. Always stop the engine and do not smoke or allow open flames or sparks near the vehicle when refueling.

**CAUTION**
- If fuel is spilled on the vehicle body, flush it away with water to avoid paint damage.

FUEL FILLER CAP

- Fuel may be under pressure. Turn the cap one-half turn and wait for any “hissing” sound to stop to prevent fuel from spraying out and causing possible personal injury. Then remove the cap.
- Do not attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically. Continued refueling may cause fuel overflow, resulting in fuel spray and possibly fire.
- Use only a genuine NISSAN fuel filler cap as a replacement. It has a built-in safety valve needed for proper operation of the fuel system and emission control system. An incorrect cap can result in a serious malfunction and possible injury.
- Never pour fuel into the throttle body to attempt to start your vehicle.
Tighten until the cap clicks. Failure to tighten the fuel cap properly may cause the malfunction indicator light (MIL) to illuminate. If this occurs, securely close the fuel filler cap. After driving for a while, the light should remain off. If the light remains on, have the vehicle inspected by an authorized NISSAN dealer.

For additional information, see the "Malfunction indicator light (MIL)" in the "Instruments and Controls" section.

Put the fuel filler cap on the cap holder while refueling.

Opening the tailgate
Pull the tailgate handle upward and lower the tailgate. The support cables hold the tailgate open.

When closing the tailgate, make sure the latches are securely locked.
To open the tailgate to the lowest position, lift the tailgate to a 45 degree angle, then release the support cables.

Do not drive the vehicle with the tailgate down.

**WARNING**

- It is extremely dangerous to ride in a cargo area inside a vehicle. In a collision, people riding in these areas are more likely to be seriously injured or killed.

- Do not allow people to ride in any area of your vehicle that is not equipped with seats and seat belts.

- Be sure everyone in your vehicle is in a seat and using a seat belt properly.

**Removing the tailgate**

1. Release the tailgate support cables.
2. Hold the tailgate at a 45 degree angle.
3. Pull the tailgate out from the left side hinge.
4. Remove the tailgate from the right side hinge.

**Installing the tailgate**

1. Insert the tailgate into the right side hinge.
2. Hold the tailgate at a 45 degree angle and insert left side hinge.

**Pre-driving checks and adjustments** 3-11
3. Continue to hold tailgate at a 45 degree angle and attach the tailgate support cables.

4. Close the tailgate securely.

**CAUTION**
The tailgate is heavy. Be careful not to drop it during removal.

For your convenience, tie down hooks are placed at each corner of the truck box. These may be used to help secure cargo loaded into the truck box.

- The weight of the cargo load must be evenly distributed over both the front and rear axles.
- All cargo should be securely fastened with ropes or straps to prevent it from shifting or sliding within the vehicle.

**WARNING**
- Properly secure all cargo with ropes or straps to help prevent it from sliding or shifting. In a sudden stop or collision, unsecured cargo could cause personal injury.
- Do not place cargo higher than the seatbacks. In a sudden stop or collision, unsecured cargo could cause personal injury.

3-12 Pre-driving checks and adjustments
TILTING STEERING WHEEL (if so equipped)

Tilt operation

Pull the lock lever down and adjust the steering wheel up or down to the desired position.

Push the lock lever up firmly to lock the steering wheel in place.

OUTSIDE MIRROR REMOTE CONTROL (if so equipped)

Push the right or left side of the switch to adjust the right or left side mirror, then control the lever.

The ignition switch must be in the ON or ACC position for the power mirrors to operate.

**WARNING**

Objects viewed in the outside mirror on the passenger side are closer than they appear. Be careful when moving to the right. Using only this mirror could cause an accident. Use the inside mirror or glance over your shoulder to properly judge distances to other objects.

**WARNING**

Do not adjust the steering wheel while driving. You could lose control of your vehicle and cause an accident.
Folding outside mirror
Push the mirror backward to fold it.

The night position reduces glare from the headlights of vehicles behind you at night.

WARNING
Use the night position only when necessary because it reduces rear view clarity.

OUTSIDE MIRRORS

INSIDE MIRROR

3-14 Pre-driving checks and adjustments
A vanity mirror is located on the rear side of the passenger sunvisor.
3-16 Pre-driving checks and adjustments

Antenna .................................................................4-23
CB radio or car phone.............................................4-23
Adjust air flow direction by moving the ventilators slides and ventilator assemblies.

4-2 Heater, air conditioner and audio systems
**WARNING**

- The air conditioner cooling function operates only when the engine is running.
- Do not leave children, unreliable adults, or pets alone in your vehicle. On hot sunny days, temperatures in a closed vehicle could quickly become high enough to cause severe or possibly fatal injuries to people or animals.
- Do not use the recirculation mode for long periods as it may cause the interior air to become stale and the windows to fog up.
- Positioning of the heating or air conditioning controls should not be done while driving, so that full attention may be given to the driving operation.

**CONTROLS**

**Fan control lever**
This lever turns the fan on and off, and controls fan speed.

**Air control dial**
This dial allows you to select the air flow outlets.

- Air flows from center and side ventilators.
- Air flows from center and side ventilators and foot outlets.
- Air flows mainly from foot outlets.
- Air flows from defrost outlets and foot outlets.
- Air flows mainly from defrost outlets.

**Temperature control dial**
This dial allows you to adjust the temperature of the outlet air.

**Air intake lever (if so equipped)**
This lever is provided only for vehicles with an air conditioner.
- Outside air is drawn into the passenger compartment and distributed through the selected outlet.

Use this position for normal heater or air conditioner operation.
Interior air is recirculated inside the vehicle.

Move the air intake lever to the \( \infty \) position:
- when driving on a dusty road.
- to prevent traffic fumes from entering the passenger compartment.
- for maximum cooling when using the air conditioner.

Air conditioner switch (if so equipped)
This switch is present only in vehicles equipped with an air conditioner.

Start the engine, push the air conditioner switch and move the fan control lever to the desired speed. The indicator light comes on when the air conditioner is operating.

HEATER OPERATION

Heating
This mode directs heated air from the foot outlets. A small amount of air is also directed from the defrost outlets.
1. Move the air intake lever to the \( \infty \) position for normal heating.
2. Turn the air control dial to the \( \infty \) position.
3. Move the fan control lever to the desired speed.
4. Turn the temperature control dial clockwise until it stops or to the desired position.

Ventilation
This mode directs outside air from the side and center ventilators.
1. Move the air intake lever to the \( \infty \) position.
2. Turn the air control dial to the \( \infty \) position.
3. Move the fan control lever to the desired speed.
4. Turn the temperature control dial to the desired position.

Defrosting/defogging
This mode directs heated air from the defrosting/defogging outlets.
1. Move the air intake lever to the \( \infty \) position.
2. Turn the air control dial to the \( \infty \) position.
3. Move the fan control lever to the desired speed.
4. Turn the temperature control dial clockwise until it stops or to the desired position.

If it is difficult to defog the windshield, push the air conditioner switch (if so equipped) on. This dehumidifies the air, which helps defog the windshield.

To quickly remove ice or fog from the windows, move the fan control lever to 4 and the temperature control dial to the full clockwise position.

Bi-level heating/cooling
This mode directs air from the side and center ventilators and from the foot outlets.
1. Move the air intake lever to the \( \infty \) position.
2. Turn the air control dial to the \( \infty \) position.
3. Move the fan control lever to the desired speed.
4. Turn the temperature control dial to the desired position.

Heating and defrosting/defogging

This mode directs heated air from the foot outlets and defrosts/defogs the windshield.
1. Move the air intake lever to the position.
2. Turn the air control dial to the position.
3. Move the fan control lever to the desired speed.
4. Turn the temperature control dial clockwise until it stops or to the desired position.
   If it is difficult to defog the windshield, push the air conditioner switch (if so equipped) on. This dehumidifies the air, which helps defog the windshield.

Operating tips

Clear snow and ice from the wiper blades and air inlet in front of the windshield. This improves heater and defroster operation.

AIR CONDITIONER OPERATION (if so equipped)

Start the engine, move the fan control lever to the desired (one to four) position, and push in the air conditioner switch to activate the air conditioner. When the air conditioner is on, cooling and dehumidifying functions are added to the heater operation.

The air conditioner cooling function operates only when the engine is running.

Cooling

This mode directs cool, dehumidified air from the side and center ventilators.
1. Move the air intake lever to the position.
2. Turn the air control dial to the position.
3. Move the fan control lever to the desired position.
5. Turn the temperature control dial to the desired position.
   • For quick cooling when the outside temperature is high, move the air intake lever to the position. Be sure to return the air intake lever to the position for normal cooling.

Dehumidified heating

This mode directs heated, dehumidified air from the defrosting/defogging outlets.
1. Move the air intake lever to the position.
2. Turn the air control dial to the position.
3. Move the fan control lever to the desired position.
5. Turn the temperature control dial clockwise until it stops or to the desired position.

Dehumidified defrosting/defogging

This mode directs heated, dehumidified air from the defrosting/defogging outlets.
1. Turn the air intake lever to the position.
2. Move the air control dial to the \( \text{\texttrade} \), \( \text{\texttrade} \), or the position in between.

3. Move the fan control lever to the desired position.

5. Turn the temperature control dial to the desired position.

Operating tips

- Keep windows and sunroof closed while operating the air conditioner.

- After parking in the sun, drive for two or three minutes with the windows open to vent hot air from the passenger compartment. Then, close the windows. This allows the air conditioner to cool the interior more quickly.

- The air conditioning system should be operated for about ten minutes at least once a month, especially in winter. This helps prevent damage to the system due to lack of lubrication.

- If the coolant temperature gauge exceeds the (hot) position, turn the air conditioner off. Have your vehicle inspected by a NISSAN dealer. See “If your vehicle overheats” in the “In case of emergency” section for additional information.

4-6 Heater, air conditioner and audio systems
AIR FLOW CHARTS

The following charts show the switch and lever positions for **MAXIMUM** and **QUICK** heating, cooling or defrosting.

The air intake lever should always be in the ∞ position for heating and defrosting.

Servicing air conditioner

The air conditioner system in your NISSAN is charged with a refrigerant designed with the environment in mind.

This refrigerant does not harm the earth's ozone layer.

Special charging equipment and lubricant is required when servicing your NISSAN air conditioner. Using improper refrigerants or lubricants causes severe damage to your air conditioner system. See “Air conditioner system refrigerant and lubricant recommendations” in the “Technical and consumer information” section of this manual.

An authorized NISSAN dealer will be able to service your environmentally “friendly” air conditioner system.

⚠️ WARNING

The air conditioner system contains refrigerant under high pressure. To avoid personal injury, any air conditioner service should be done by an experienced technician with proper equipment.
AM-FM RADIO WITH CASSETTE PLAYER

RADIO OPERATION

To turn the radio on, turn the ignition key to the ACC or ON position. If you listen to the radio with the engine not running, turn the key to the ACC position.

Radio reception is affected by station signal strength, distance from radio transmitter, buildings, bridges, mountains and other external influences. Intermittent changes in reception quality normally are caused by these external influences.

Using a cellular phone in or near the vehicle may influence radio reception quality.

ON-OFF/VOL control knob

Turn the ignition key to the ACC or ON position, then push the ON-OFF/VOL control knob. If you listen to the radio with the engine not running, turn the key to the ACC position. The mode (radio or cassette) which was playing immediately before the system was turned off resumes playing. When no cassette is loaded, the radio comes on. Pushing the ON-OFF/VOL control knob again turns the system off.

Heater, air conditioner and audio systems  4-11
Turn the ON-OFF/VOL control knob to adjust the volume.

Clock operation
Pressing the CLOCK button alternates the clock and the radio/cassette tape options in the display.

Clock set
Depressing the CLOCK and the buttons together sets hours. Depressing the CLOCK and buttons together sets minutes.

Clock priority mode
In this mode the clock is shown in the display. If any radio or cassette tape functions are activated, the radio (or cassette tape) display illuminates for 10 seconds then returns to the clock mode.

NOTE:
After clock adjustment, the radio is in the clock priority mode.

Radio/Cassette tape priority mode
In this mode, the radio station illuminates in the display during radio operation. During cassette tape operation, TAPE illuminates in the display.

Selecting the desired band
Push the button to change from AM to FM1 or FM2 reception.

The FM stereo indicator, ST, illuminates during FM stereo reception. When the stereo broadcast signal is weak, the radio automatically changes from stereo to monaural reception.

TUNE buttons

**WARNING**
The radio should not be tuned while driving in order that full attention may be given to the driving operation.

Use the and buttons for manual tuning. To move quickly through the channels, hold either of the tune buttons down for more than 1.5 seconds.

SEEK tuning
Push the tuning button for less than 1.5 seconds. SEEK tuning begins from low to high frequencies and stops at the next broadcasting station. Pushing the button again continues the SEEK function. Once the highest broadcasting station is reached, the radio continues in the SEEK mode at the lowest broadcast station.

SCAN tuning
Push the tuning button for more than 1.5 seconds. SCAN illuminates in the display window. SCAN tuning begins from low to high frequencies and stops at each broadcasting station for five seconds. Pushing the button again during this five second period stops SCAN tuning and the radio remains tuned to that station.
Station memory operations

Six stations can be set for the AM band. 12 stations can be set for the FM band (six for FM1, six for FM2).

1. Push \text{TUNER\text{ON} \text{FM/AM}} to select AM, FM1, or FM2. The selected band illuminates in the display.

2. Tune to the desired station.

3. Push the desired station select button for more than 2 seconds. For example, in the illustrations, ch2 is to be memorized. The radio mutes when the select button is pushed.

4. When the sound resumes, memorizing is complete.

5. Other station select buttons can be set in the same manner.

If the battery cable is disconnected, or if the radio fuse opens, the radio memory is cancelled. In that case, reset the desired stations.

Adjusting tone quality and speaker balance

To adjust BASS-TREB-BAL (Bass, Treble, Balance), press the \text{AUDIO} button until the desired mode (BAS, TRE, or BAL) appears in the display.

Press the \text{ \text{\downarrow} or \text{\uparrow}} button to adjust Bass (BAS) and Treble (TRE) to the desired level and to adjust the Balance. Balance (BAL) adjusts the sound level between the right and left speakers.

After 10 seconds, the radio or cassette tape display reappears. Once the sound quality...
is set to the desired level, press the AUDIO button repeatedly until the radio or cassette tape display appears.

CASSETTE TAPE OPERATION

Turn the ignition key to ACC or ON and carefully insert a cassette tape into the tape door. The cassette tape automatically pulls into the player. The word TAPE and moving digital squares illuminate on the right side of the display window. If the radio is already operating it automatically turns off and the cassette tape begins to play.

The cassette tape automatically changes directions to play the other side when the first side is complete. At this time, the moving digital squares illuminate on the left side of the display window.

Precautions on cassette player operations

- To maintain good quality sound, NISSAN recommends using cassette tapes of 60 minutes or shorter in length.
- Cassette tapes should be removed from the player when not in use. Store cassettes in their protective cases and away from direct sunlight, heat, dust, moisture and magnetic sources.
- Direct sunlight can cause the cassette to become deformed. The use of deformed cassettes may cause the cassette to jam in the player.
- Do not use cassettes with labels which are peeling and loose. If used, the label could jam in the player.
- If a cassette has loose tape, insert a pencil through one of the cassette hubs and rewind the tape firmly around the hubs. Loose tape may cause tape jamming and wavering sound quality.
- Over a period of time, the playback head, capstan and pinch roller may collect a tape coating residue as the tape is played. This residue accumulation can cause weak or wavering sound, and should be removed periodically with a head cleaning tape. If the residue is not removed periodically, the player may need to be disassembled for cleaning.

Fast forwarding or rewinding the tape

Push either the 3 ➤ or 1 ❯ button for the desired direction. The FF or REW symbol illuminates in the display.

To stop the FF or REW function, press the 3 ➤ again, or the STOP button.

Automatic Program Search (APS) fast forwarding or APS rewinding the tape

Push either the 6 ➤ or 1 ❯ button while the cassette tape is playing. The tape runs quickly, stops, then plays the next selection from the beginning. Either the FF or REW symbol flashes in the display while searching for the selection.
This system searches at the blank intervals between selections. If there is a blank interval within one selection or there is no interval between selections, the system may not stop in the desired or expected location.

Changing the direction of tape play

Push the 2 PROG (program) select button. The moving digital squares illuminate on either the right or left side of the display window to indicate the side of program play.

Playing and stopping the cassette tape

Push the PLAY STOP button while the cassette tape is playing to stop the tape. Push the button again to play the tape.

Dolby NR (noise reduction)

Push the 5 NR button for Dolby NR encoded tapes to reduce high frequency tape noise. The NR symbol illuminates in the display.

If the display is in the clock priority mode when the 5 NR button is pressed, NR and TAPE illuminate in the display window for about 10 seconds. The clock mode then returns to the display window.

Dolby NR is manufactured under license from Dolby Laboratories Licensing Corporation. DOLBY NR and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

Metal or chrome tape usage

The cassette player is automatically set to high performance play when playing a metal or chrome cassette tape.

Ejecting the cassette tape

Push the EJECT button. The cassette tape automatically comes out.
AM-FM RADIO WITH CASSETTE PLAYER, COMPACT DISC PLAYER AND SUB-WOOFER (if so equipped)

RADIO OPERATION

To turn the radio on, turn the ignition key to the ACC or ON position. If you listen to the radio with the engine not running, turn the key to the ACC position.

Radio reception is affected by station signal strength, distance from radio transmitter, buildings, bridges, mountains, and other external influences. Intermittent changes in reception quality normally are caused by these external influences.

Using a cellular phone in or near the vehicle may influence radio reception quality.

ON-OFF/VOL control knob

Turn the ignition key to the ACC or ON position, then push the ON-OFF/VOL control knob button. If you listen to the radio with the engine not running, turn the key to the ACC position. The mode (radio, tape or CD) which was playing immediately before the system was turned off resumes playing.
When no CD or tape is loaded, the radio comes on. Pushing the ON-OFF/VOL control knob button again turns the system off. Turn the ON-OFF/VOL control knob to adjust the volume.

Clock operation

Pressing the clock button alternates the clock and the radio/cassette/CD player options in the display.

Clock set

Depressing the clock and buttons together sets hours. Depressing the clock and buttons together sets minutes.

Clock priority mode

In this mode the clock is shown in the display. If any radio, cassette or CD functions are activated, the radio, cassette or CD display illuminates for 10 seconds then returns to the clock mode.

NOTE:

After clock adjustment, the radio is in the clock priority mode.

FM-AM band select button

Push the button to change from AM to FM1 or FM2 reception.

The FM stereo indicator, ST, illuminates during FM stereo reception. When the stereo broadcast signal is weak, the radio automatically changes from stereo to monaural reception.

TUNE/DISC buttons

WARNING

The radio should not be tuned while driving in order that full attention may be given to the driving operation.

Use the and buttons for manual tuning. To move quickly through the channels, hold either of the tuning buttons down.

SEEK/SCAN buttons

SEEK tuning

Push the SEEK/SCAN tuning button or for less than 1.5 seconds. SEEK tuning begins from low to high frequencies or high to low frequencies, depending on which button is pressed, and stops at the next broadcasting station. If using the button once the highest broadcasting station is reached, the radio continues in the SEEK mode at the lowest broadcasting station. If using the button once the lowest broadcasting station is reached, the radio continues in the SEEK mode at the highest broadcasting station.

SCAN tuning

Push the SEEK/SCAN tuning button or for more than 1.5 seconds. SCAN illuminates in the display window, and the radio station blinks. SCAN tuning begins from low to high frequencies or from high to low frequencies, depending on which button is pressed. SCAN tuning stops at each broadcasting station for five seconds. Pushing the button again during this five second period stops SCAN tuning and the radio remains tuned to that station.
Station memory operations

Six stations can be set for the AM band. 12 stations can be set for the FM band (six for FM1, six for FM2).

1. Push AM to select AM, FM1, or FM2.

The selected band illuminates in the display.

2. Tune to the desired station.

3. Push the desired station select button for more than 3 seconds. For example, in the illustrations ch2 is to be memorized.

4. When the indicator illuminates in the display and the sound resumes, memorizing is complete.

5. Other station select buttons can be set in the same manner.

If the battery cable is disconnected, or if the radio fuse opens, the radio memory is cancelled. In that case, reset the desired stations.
Adjusting tone quality and speaker balance

To adjust the audio levels for bass, treble, balance, push the audio button and adjust the level with the TUNE/DISC buttons. Press the audio button once for BAS (bass), twice for TRE (treble), and three times for BAL (balance). Once the audio level is set the display will return back to radio, cassette or CD display mode after 7 seconds or the audio button can be pressed again within 7 seconds to set the next audio level. Pressing the audio button a fourth time will return the display back to radio, cassette or CD display mode.

Balance adjusts the sound level between the right and left speakers.
CASSETTE TAPE OPERATION

Turn the ignition key to the ACC or ON position, and carefully insert a cassette tape into the tape door. The cassette tape automatically pulls into the player. The word TAPE illuminates in the display.

**CAUTION**

Do not force the cassette tape into the tape door. This could cause player damage.

- To maintain good quality sound, NISSAN recommends using cassette tapes of 60 minutes or shorter in length.
- Cassette tapes should be removed from the player when not in use. Store cassettes in their protective cases and away from direct sunlight, heat, dust, moisture or magnetic sources.
- Direct sunlight can cause the cassette to become deformed. The use of deformed cassettes may cause the cassette jam in the player.
- Do not use cassettes that have peeling or loose labels. If used, the label could jam in the player.
- If a cassette has loose tape, insert a pencil through one of the cassette hubs and rewind the tape firmly. Loose tape may cause jamming and wavering sound quality.
- Over a period of time, the playback head, capstan and pinch roller may gather a tape coating residue as the tape is played. This residue accumulation can cause a weak or wavering sound and should be removed periodically with a head cleaning tape. If the residue is not removed periodically, the player may need to be disassembled for cleaning.

**PLAY/STOP TAPE button** [TAPE]

When the TAPE button is pushed with the system turned off and a tape loaded, the system comes on and the tape plays. The word tape illuminates.

When the TAPE button is pushed with either the radio or compact disc turned on and a tape loaded, the compact disc or the radio turns off and the tape plays.

While the tape is playing, pushing the TAPE button stops tape play. Pushing the button again resumes tape play.

**FF (fast forward) andREW (rewind) buttons**

Push the button to fast forward the tape. Push the button to rewind the tape. Either REW or FF illuminates in the display. To stop the FF or REW function, press the TAPE, PLAY/STOP TAPE, FF, orREW buttons.

**Automatic Program Search (APS) FF andREW buttons**

When the button is pushed while the tape is being played, the tape runs quickly, stops, then plays the next selection from the beginning. Push the button several times to skip several selections. Each time the button is pushed, the tape fast forwards one additional selection. This number appears in the display window. The tape can be fast forwarded through up to nine selections. (for example: 7 in the display indicates that the button has been pushed seven times to skip forward through seven selections).

When the button is pushed, the selection being played starts again from the...
beginning. Push the button several times to rewind several selections. Each time the button is pushed, the tape rewinds back one additional selection. The number of selections skipped appears in the display window as a negative number (for example: -7 in the display indicates that the button has been pushed seven times to rewind back through seven selections).

Either the FF or REW illuminates in the display when the or button is pushed.

The system searches for the blank intervals between selections. If there is a blank interval within one selection or there is no interval between selections, the system may not stop in the desired or expected location.

PROG (Program) button
Push the button to change the tape side while the tape is being played. The cassette tape automatically changes directions to play the other side when the first side is complete.

Dolby NR (noise reduction)
Push the button for Dolby NR encoded tapes to reduce high frequency tape noise. The indicator illuminates in the display.

Dolby NR is manufactured under license from Dolby Laboratories Licensing Corporation. DOLBY NR and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

Metal or chrome tape usage
The cassette player is automatically set to high performance play when playing a metal or chrome cassette tape.

Cassette EJECT button
Push the button to eject the cassette an inserted tape.

Precautions on cassette player operation

COMPACT DISC (CD) PLAYER OPERATION

Turn the ignition key to the ACC or ON position and carefully insert the compact disc into the slot with the label side up. The compact disc is automatically pulled into the slot and starts to play.

If the radio or cassette tape is already operating, it automatically turns off and the compact disc begins to play.

CAUTION
Do not force the compact disc into the slot. This could damage the player.

CD button
When the button is pushed with the compact disc loaded and the tape or the radio playing, the tape or radio turns off and compact disc starts to play.

FF (fast forward) REW (rewind) buttons
When the or button is pushed while the compact disc is playing, the compact disc plays at an increased speed while fast forwarding or rewinding. When the button is released, the compact disc returns to normal play speed.

Automatic Program Search (APS) APS FF, APS REW buttons
When the button is pushed while the compact disc is playing, the selection fol-
lowing the present one starts to play from
the beginning. Push the \( \text{\textbullet} \) button several
times to skip several selections. Each
time the button is pushed, the CD advances
one additional selection. The number ap-
ppears in the display window. (When the last
selection on the compact disc is skipped,
the first selection is played.)

When the \( \text{\textbullet} \) button is pushed, the se-
lection being played returns to the begin-
nning. Push the \( \text{\textbullet} \) button several times
to skip back several selections. Each time
the button is pushed, the CD moves back
one selection.

PROG (program) button

When the \( \text{PROG} \) button is pushed while the
compact disc is playing, the play pattern
changes as follows.

1. The current selection is repeated.

RANDOM: Selections are played at ran-
dom, not following the sequence on the
compact disc. The same program may be
repeated twice.

Blank (no symbol): All selections are played
repeatedly in sequence.

When a new compact disc is inserted,

the play pattern automatically changes
to ALL.

CD EJECT button \( \text{\textbullet} \)

When the \( \text{\textbullet} \) button is pushed with a com-
 pact disc loaded, the compact disc ejects.

When the \( \text{\textbullet} \) button is pushed while the
compact disc is playing, the compact disc
ejjects and the system turns off.

If the compact disc ejects and is not
removed within 10 seconds, it is pulled
back into the slot.

CD (DISC) indicator light

This light comes on when a compact disc is
loaded into the player.

CAUTION

- During cold weather or rainy days,
  the player may malfunction due to
  the humidity. If this occurs, remove
  the CD and dehumidify or ventilate
  the player completely.
- The player may skip while driving on
  rough roads.
- The CD player sometimes cannot
  function when the compartment tem-
  perature is extremely high. Decrease
  the temperature before use.
- Do not expose the CD to direct sun-
  light.
ANTENNA

The antenna cannot be shortened, but it can be removed. When you need to remove the antenna, turn the antenna rod counterclockwise.

To install the antenna rod, turn the antenna clockwise. Tighten the antenna rod to specification using a suitable tool such as a open-end wrench. The antenna rod tightening specification is 3.4 - 3.6 N·m (30 - 32 in-lb). Do not use pliers to tighten the antenna as they can leave marks on the antenna surface. The antenna rod can not be hand tightened to the proper specification.

CAUTION
Always properly tighten the antenna rod during installation or the antenna rod may break during vehicle operation.

CB RADIO OR CAR PHONE

Microphone installed model
If equipped with a genuine NISSAN cellular phone, your NISSAN features a non-directional microphone in the steering column cover, so it is not necessary to look at or speak directly into the microphone when calling. To do so could detract from the driving operation and cause an accident. See the manual for car phone operation.

Pre-wired and antenna for phone installed model
Some models are pre-wired to accept the genuine NISSAN cellular phone. In addition, the same model has the phone antenna built into the rear glass window.

When installing a CB, ham radio or car phone in your NISSAN, be sure to observe the following cautions, otherwise the new equipment may adversely affect the MFI (Multiport Fuel Injection) system and other electronic parts.

CAUTION
- Keep the antenna as far as possible away from the Engine Control Module.
- Also keep the antenna wire more than 8 inches (20 cm) away from the MFI harness. Do not route the antenna wire next to any harness.
- Adjust the antenna standing-wave ratio as recommended by the manufacturer.
- Connect the ground wire from the CB radio chassis to the body.
- For details, consult an authorized NISSAN dealer.

PRECAUTIONS WHEN STARTING AND DRIVING

WARNING
Do not leave children, unreliable adults, or pets alone in your vehicle. They could accidentally injure themselves or others through inadvertent operation of the vehicle. Also, on hot, sunny days, temperatures in a closed vehicle could quickly become high enough to cause severe or possibly fatal injuries to people or animals.

EXHAUST GAS (carbon monoxide)

WARNING
Do not breathe exhaust gases; they contain colorless and odorless carbon monoxide. Carbon monoxide is a dangerous gas, and can cause unconsciousness or death.

If you suspect that exhaust fumes are entering the vehicle, drive with all windows fully open, and have the vehicle inspected immediately.

Do not run the engine in closed spaces such as a garage.

Do not park the vehicle with the engine running for any extended length of time.

If a special body, camper, or other equipment is added for recreational or other usage, follow the manufacturer’s recommendation to prevent carbon monoxide entry into the vehicle. Do not occupy these areas while the engine is running even if the vehicle is parked. (Some recreational vehicle appliances such as stoves, refrigerators, heaters, etc. may also generate carbon monoxide.)

The exhaust system and body should be inspected by a qualified mechanic whenever:

a. The vehicle is raised for service.
b. You suspect that exhaust fumes are entering into the passenger compartment.
c. You notice a change in the sound of the exhaust system.
d. You have had an accident involving damage to the exhaust system, underbody, or rear of the vehicle.

THREE-WAY CATALYST

The three-way catalyst is an emission control device installed in the exhaust system. Exhaust gases in the converter are burned at high temperatures to help reduce pollutants.

WARNING

- The exhaust gas and the exhaust system are very hot. Keep people or flammable materials away from the exhaust pipe.
- Do not stop or park the vehicle over flammable materials such as dry grass, waste paper or rags. They may ignite and cause a fire.

CAUTION

- Do not use leaded gasoline. Deposits from leaded gasoline will seriously reduce the three-way catalyst’s ability to help reduce exhaust pollutants.
- Keep your engine tuned up. Malfunctions in the ignition, fuel injection, or electrical systems can cause over-rich fuel flow into the converter, causing it to overheat.
Do not keep driving if the engine misfires, or if noticeable loss of performance or other unusual operating conditions are detected. Have the vehicle inspected promptly by an authorized NISSAN dealer.

- Avoid driving with an extremely low fuel level. Running out of fuel could cause the engine to misfire, damaging the three-way catalyst.
- Do not race the engine while warming it up.
- Do not push or tow your vehicle to start the engine.

ON-PAVEMENT AND OFF-ROAD DRIVING PRECAUTIONS

Utility vehicles have higher ground clearance than passenger cars in order to make them capable of performing in a wide variety of off-road applications. Specific design characteristics give them a higher center of gravity than ordinary cars. Higher ground clearance is necessary for off-road operation, and it also provides a better view of the road, allowing you to anticipate problems. Utility vehicles are not designed for cornering at the same speeds as conventional two-wheel drive vehicles any more than low-slung sports cars are designed to perform satisfactorily under off-road conditions. If at all possible, avoid sharp turns or abrupt maneuvers. As with other vehicles of this type, failure to operate this vehicle correctly may result in loss of control or vehicle rollover.

AVOIDING COLLISION AND ROLLOVER

**WARNING**

Failure to operate this vehicle in a safe and prudent manner may result in loss of control or an accident.

Be alert and drive defensively at all times. Obey all traffic regulations. Avoid excessive speed, high speed cornering, or sudden steering maneuvers, because these driving practices could cause you to lose control of your vehicle. As with any vehicle, loss of control could result in a collision with other vehicles or objects, or cause the vehicle to roll over, particularly if the vehicle slides sideways. Be attentive at all times, and avoid driving when tired. Never drive when under the influence of alcohol or drugs (including prescription or over-the-counter drugs which may cause drowsiness). Always wear your seat belt as outlined in the “Seat belts” section of this manual, and instruct your passengers to do the same.
DRINKING ALCOHOL/DRUGS AND DRIVING

WARNING

Never drive under the influence of alcohol or drugs. Alcohol in the bloodstream reduces coordination, delays reaction time and impairs judgement. Driving after drinking alcohol increases the likelihood of being involved in an accident, injuring yourself and others. Additionally, if you are injured in the accident, alcohol can increase the severity of injury.

NISSAN is committed to safe driving. However, you must choose not to drive under the influence of alcohol. Every year thousands of people are injured or killed in alcohol related accidents. Although the local laws vary on what is considered to be legally intoxicated, the fact is that alcohol affects all people differently and most people underestimate the effects of alcohol.

Remember, drinking and driving don’t mix!
And that’s true for drugs, too (over the counter, prescription, and illegal drugs). Don’t drive if your ability to operate your vehicle is impaired by alcohol, drugs, or some other physical condition.

5-4 Starting and driving

IGNITION SWITCH

MANUAL TRANSMISSION

The ignition switch includes an anti-theft steering lock device.

The key can only be removed when the ignition switch is in the LOCK position.

On manual transmission models, to turn the ignition key to LOCK from ACC or ON, turn the key to OFF, push the key in, then turn the key to LOCK.

To lock the steering wheel, remove the key. In order for the steering wheel to be locked, it must be turned about 1/8 of a turn clockwise from the straight up position. To unlock the steering wheel, insert the key and turn it gently while rotating the steering wheel slightly right and left.

WARNING

Never remove the key while driving. If the key is removed, the steering wheel will lock. This may cause the driver to lose control of the vehicle and could result in serious vehicle damage or personal injury.
AUTOMATIC TRANSMISSION

On automatic transmission models, the ignition lock is designed so the key cannot be turned to LOCK and removed until the shift selector lever is moved to the P (Park) position.

When removing the key from the ignition, make sure the shift selector lever is in the P (Park) position.

If the key cannot be turned to the LOCK position, proceed as follows to remove the key:

1) Move the shift selector lever into the P (Park) position.

2) Turn the ignition key slightly in the ON direction.

3) Turn the key toward the LOCK position.

4) Remove the key.

The shift lever is designed so it cannot be moved out of P (Park) and into any of the other gear positions if the ignition key is turned to OFF or if the key is removed from the switch. The shift lever can be moved if the ignition switch is in the ACC position. This allows the vehicle to be moved if the battery is discharged. The shift lever can also be moved if the ignition switch is in the ON position and the foot brake pedal is depressed.

There is an OFF position between the LOCK and ACC positions. The OFF position is indicated by a “1” on the key cylinder. When the ignition is in OFF, the steering wheel is not locked.

To lock the steering wheel, remove the key. In order for the steering wheel to be locked, it must be turned about 1/8 of a turn clockwise from the straight up position. To unlock the steering wheel, insert the key and turn it gently while rotating the steering wheel slightly right and left.

**WARNING**

Never remove the key while driving. If the key is removed, the steering wheel will lock. This may cause the driver to lose control of the vehicle and could result in serious vehicle damage or personal injury.

Key positions

LOCK Normal parking position (0)
OFF (Manual transmission model) (1)
ACC (Accessories) (2)
ON (Normal operating position) (3)

The engine can be turned off without locking the steering wheel.

This position activates electrical accessories such as the radio when the engine is not running. The shifter can be moved if the ignition switch is in ACC position.

This position turns on the ignition system and electrical accessories.
This position starts the engine. As soon as the engine has started, release the key. It automatically returns to the ON position.

- Make sure the area around the vehicle is clear.
- Check fluid levels such as engine oil, coolant, brake and clutch fluid, and window washer fluid as frequently as possible, at least whenever you refuel.
- Check that all windows and lights are clean.
- Visually inspect tires for their appearance and condition. Also check tires for proper inflation.
- Lock all doors.
- Position seat and adjust head restraints.
- Adjust inside and outside mirrors.
- Fasten seat belts and ask all passengers to do likewise.
- Check the operation of warning lights when key is turned to the ON (3) position. See “Warning/Indicator lights and chimes” in the “Instruments and controls” section.

**BEFORE STARTING THE ENGINE**

**DRIVING WITH AUTOMATIC TRANSMISSION (if so equipped)**

### WARNING

- Do not depress the accelerator pedal while shifting from P (Park) or N (Neutral) to R (Reverse), D (Drive), 2 or 1. Always depress the brake pedal until shifting is completed. Failure to do so could cause you to lose control and have an accident.
- Cold engine idle speed is high, so use caution when shifting into a forward or reverse gear before the engine has warmed up.
- Never shift to P (Park) or R (Reverse) while the vehicle is moving. This could cause an accident.

### CAUTION

- When stopping the vehicle on an uphill grade, do not hold the vehicle by depressing the accelerator pedal. The foot brake should be used for this purpose.
- On slippery roads, do not downshift. This may cause a loss of control.
The automatic transmission in your vehicle is electronically controlled by a transmission control module to produce maximum power and smooth operation.

The recommended operating procedures for this transmission are shown on the following pages. Follow these procedures for maximum vehicle performance and driving enjoyment.

Starting the vehicle

- After starting the engine, fully depress the foot brake pedal to ensure the vehicle is at a complete stop before attempting to shift the selector lever.
- Keep the foot brake pedal depressed and shift the selector lever into a driving gear.
- Release the foot brake, then gradually start the vehicle in motion.

This automatic transmission is designed so the foot brake pedal MUST be depressed before shifting from P (Park) to any drive position while the ignition switch is ON.

The shift lever cannot be moved out of P (Park) and into any of the other gear positions if the ignition key is turned to LOCK or if the key is removed.

If the battery charge is low, the shift lever can be moved if the ignition switch is in the ACC position.

Starting and driving

Pull the selector lever rearward to shift into P (Park), or R (Reverse) or from D (Drive) to 2 or 1.

P (Park):

Use this position when the vehicle is parked or when starting the engine. Always be sure the vehicle is at a complete stop. For maximum safety, depress the brake pedal, then move the selector lever to the P (Park) position. Apply the parking brake. When parking on a hill, apply the parking brake first, then shift the...
selector lever into the P (Park) position.

Shifting from P (Park)

If the ignition switch is in the ON position and the foot brake pedal is depressed, but the shift lever still cannot be moved out of P (Park), use the following procedure:

1. Shut the engine off and remove the key.
2. Apply the parking brake.
3. Reinsert the key and turn it clockwise to the ACC position.
4. Depress the brake pedal, move the shift selector lever to N (Neutral).
5. Start the engine.

These instructions for starting the vehicle in N (Neutral) should only be used until service can be obtained at an authorized NISSAN dealership.

R (Reverse):

Use this position to back up. Shift into this position only after the vehicle has completely stopped.

N (Neutral):

Neither forward or reverse gear is engaged. The engine can be started in this position. You may shift to N (Neutral) and restart a stalled engine while the vehicle is moving.

D (Drive):

Use this position for normal forward driving.

2 (Second gear):

Use for moderate uphill grades engine braking on downhill grades or starting on slippery surfaces. Do not downshift into the 2 position at speeds above 62 MPH (100 km/h), and do not exceed 62 MPH (100 km/h) in the 2 position.

1 (Low gear):

Use this position for steep uphill grades, driving slowly through deep snow, sand or mud, or for maximum engine braking on steep downhill grades. Do not downshift into the 1 position at speeds above 30 MPH (48 km/h), and do not exceed 30 MPH (48 km/h) in the 1 position.
Shifting with automatic transmission (VG33E engine)

Push the button to shift into P (Park), R (Reverse) or from D (Drive) to 2. All other positions can be selected without pushing the button.

P (Park):

Use this selector position when the vehicle is parked or when starting the engine. Always be sure the vehicle is at a complete stop. For maximum safety, depress the brake pedal, then push in the shift lever button and move the lever to the P (Park) position. Apply the parking brake. When parking on a hill, apply the parking brake first, then shift the lever into the P (Park) position.

Shifting from P (Park)

If the ignition switch is in the ON position and the foot brake pedal is depressed, but the shift selector lever still cannot be moved out of P (Park), follow these instructions.

1. Turn the ignition key to the LOCK position.
2. Apply the parking brake.
3. Reinsert the key and turn it to the ACC position.
4. Depress the foot brake pedal and move the shift selector lever to N (Neutral).
5. Start the engine.

These instructions for starting the vehicle in N (Neutral) should only be used until service can be obtained at an authorized NISSAN dealership.

R (Reverse):

Use this position to back up. Always be sure the vehicle is at a complete stop before shifting into the R (Reverse) position. For maximum safety, check to ensure the area behind the vehicle is clear. With the brake pedal depressed, push in the shift selector lever button and move the shift selector lever to the R (Reverse) position.

N (Neutral)

Neither forward nor reverse gear is engaged. The engine can be started in this position. You may shift to N (Neutral) and restart a stalled engine while the vehicle is moving.
D (Drive):
Use this position for all normal forward driving.

2 (Second gear):
Use this position for hill climbing or engine braking on downhill grades.
Do not shift into the 2 position at speeds above 68 MPH (110 km/h). Do not exceed 68 MPH (110 km/h) in the 2 position.

1 (Low gear):
Use this position when climbing steep hills slowly or slow driving through deep snow, sand or mud, or for maximum engine braking on steep downhill grades.
Do not shift into the 1 position at speeds above 34 MPH (55 km/h). Do not exceed 34 MPH (55 km/h) in the 1 position.

Selector lever lock release
If the battery charge is low, the selector lever may not be moved from the P position even with the brake pedal depressed and the selector lever button pushed.

To move the selector lever, push the shift lock release and selector lever button. The selector lever can be moved to N (Neutral).

To push the shift lock release, follow the following procedure:
1. Turn the ignition key to the lock position and remove the key.
2. Apply the parking brake.
3. Remove the shift lock release cap.
4. Insert a small screwdriver in the shift lock release slot, and push down.
5. Push the selector lever button and move the selector lever to N (Neutral) position while holding down the shift lock release.
6. Start the engine.

If there is any problem moving the selector lever out of P (Park), take your vehicle to an authorized NISSAN dealership as soon as possible.
Accelerator downshift
In D position
For rapid passing or hill climbing, while driving fully depress the accelerator pedal to the floor. This shifts the transmission down into second gear or first gear, depending on the vehicle speed.

OVERDRIVE SWITCH
(KA24DE engine)

ON: For typical driving, push the overdrive switch ON with the selector lever in the D (Drive) position. The transmission is upshifted into OVERDRIVE as the vehicle speed increases.

OVERDRIVE does not engage until the engine has reached operating temperature.

OFF: For driving up and down long slopes where engine braking is necessary, push the switch OFF. The indicator light in the instrument panel comes on at this time. When cruising at a low speed or climbing a gentle slope, you may feel uncomfortable shift shocks as the transmission repeatedly shifts between 3rd and overdrive. In this case, set the overdrive switch in the OFF position.

When driving conditions change, reset the overdrive switch in the ON position to turn the overdrive on. The indicator light goes out at this time.

Remember not to drive at high speeds for extended periods of time with the overdrive switch set in the OFF position. This reduces fuel economy.
OVERDRIVE SWITCH (VG33E engine)

ON: With the engine running and the selector lever in the D (Drive) position, the transmission upshifts into OVERDRIVE as vehicle speed increases.

OVERDRIVE does not engage until the engine has reached operating temperature.

OFF: For driving up and down long slopes where engine braking is necessary push the OVERDRIVE switch once. The O/D OFF indicator light in the instrument panel comes on at this time.

When cruising at a low speed or climbing a gentle slope, you may feel uncomfortable shift shocks as the transmission shifts between third gear and overdrive repeatedly. In this case, depress the OVERDRIVE switch to turn the OVERDRIVE off. The O/D OFF indicator light in the instrument panel comes on at this time.

When driving conditions change, depress the overdrive switch to turn the OVERDRIVE off.

Remember not to drive at high speeds for extended periods of time with the OVERDRIVE off. This reduces fuel economy.

DRIVING WITH MANUAL TRANSMISSION

WARNING
- Do not downshift abruptly on slippery roads. This may cause a loss of control.
- Do not over-rev the engine when shifting to a lower gear. This may cause a loss of control or engine damage.

CAUTION
- Do not rest your foot on the clutch pedal while driving. This may cause clutch damage.
- Stop your vehicle completely before shifting into R (Reverse).
- When the vehicle is stopped for a duration, for example at a stop light, shift to N (Neutral) and release the clutch pedal with the foot brake applied.
Shifting with manual transmission

To change gears, fully depress the clutch pedal, then move the gearshift lever. After shifting, slowly release the clutch.

You cannot shift directly from 5th gear into R (Reverse). First shift into the N (Neutral) position, then into R (Reverse).

If it is difficult to move the shift lever into R (Reverse) or 1st, shift into N (Neutral), then release the clutch pedal. Depress the clutch pedal and shift into R (Reverse) or 1st again.

If your vehicle is equipped with 4-wheel drive, see “Transfer case shifting procedures for four-wheel drive vehicles” later in this section.

Suggested up-shift speeds

The following table provides suggested speed ranges for shifting into a higher gear. These suggestions relate to fuel economy and vehicle performance. Actual shift ranges should be adjusted for specific road conditions, weather conditions and individual driving habits.

- Two-wheel drive models and four-wheel drive models (2H and 4H position):

<table>
<thead>
<tr>
<th>Shift from</th>
<th>MPH (km/h)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st to 2nd</td>
<td>15 (24)</td>
</tr>
<tr>
<td>2nd to 3rd</td>
<td>25 (40)</td>
</tr>
<tr>
<td>3rd to 4th</td>
<td>40 (64)</td>
</tr>
<tr>
<td>4th to 5th</td>
<td>45 (72)</td>
</tr>
</tbody>
</table>

- 4-wheel drive model (4L position):

<table>
<thead>
<tr>
<th>Shift from</th>
<th>MPH (km/h)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st to 2nd</td>
<td>8 (13)</td>
</tr>
<tr>
<td>2nd to 3rd</td>
<td>12 (19)</td>
</tr>
<tr>
<td>3rd to 4th</td>
<td>20 (32)</td>
</tr>
<tr>
<td>4th to 5th</td>
<td>22 (35)</td>
</tr>
</tbody>
</table>

Suggested maximum speed in each gear

Downshift to a lower gear if the engine is not running smoothly, or if you need to accelerate.

Do not exceed the maximum suggested speed (shown below) in any gear. For level road driving, use the highest gear suggested for that speed. Always observe posted speed limits, and drive according to the road conditions, which will ensure safe operation.

Allowable maximum speed in each gear:

2-wheel drive models  MPH (km/h)
1st                   30 (48)
2nd                   55 (88)
3rd                   80 (129)
4th & 5th             − (−)

4-wheel drive models  MPH (km/h)
2H/4H position
1st                   25 (40)
2nd                   43 (69)
3rd                   68 (109)
4th & 5th             − (−)
4L position
1st                   12 (19)
2nd                   22 (35)
3rd                   30 (48)
4th & 5th             − (−)

Starting and driving  5-13
STARTING THE ENGINE

1. Apply the parking brake.

2. **Automatic transmission:**
   
   Move the selector lever to P (Park) or N (Neutral). P (Park) is preferred.
   
   The shift lever cannot be moved out of P (Park) and into any of the other gear positions if the ignition key is turned to OFF or if the key is removed from the switch.
   
   The starter is designed not to operate if the selector lever is in one of the driving positions.

   **Manual transmission:**
   
   Move the gearshift lever to N (Neutral), and fully depress the clutch pedal to the floor while starting the engine.
   
   The starter is designed not to operate unless the clutch pedal is fully depressed.

3. **With your foot off the accelerator pedal,** turn the ignition key to START. Release the key when the engine starts. If the engine starts, but fails to run, repeat the above procedure.

   - If the engine is very hard to start in extremely cold or hot weather, depress the accelerator pedal fully and hold it to help start the engine.
   
   - In the summer, when restarting the engine within 30 minutes after it has been stopped, keep the accelerator pedal fully depressed while starting.

   **CAUTION**
   
   Do not operate the starter for more than 15 seconds at a time. If the engine does not start, turn the key off and wait 10 seconds before cranking again, otherwise the starter could be damaged.

4. **Warm-up**
   
   Always allow the engine to idle for at least 30 seconds after starting. Drive at a moderate speed for a short distance first, especially in cold weather.

   **WARNING**
   
   - Be sure the parking brake is fully released before driving. Failure to do so can cause brake failure and lead to an accident.
   
   - Do not release the parking brake from outside the vehicle.
   
   - Do not use the gear shift in place of the parking brake. When parking, be sure the parking brake is fully engaged.
   
   - Do not leave children unattended in a vehicle. They could release the parking brake and cause an accident.
To apply: pull the lever out.

To release:
1. Firmly apply foot brake.
2. Manual transmission models:
   Place the gearshift in the N (Neutral) position.
   Automatic transmission models:
   Move the shift selector lever to the P (Park) position.
3. While pulling out on the parking brake lever slightly, turn the lever and push it in completely.
4. Before driving, be sure the brake warning light goes out.
Precautions

- The cruise indicator light in the instrument panel may blink when the cruise control main switch is turned ON while pushing the RES/ACCEL, COAST/SET, or CANCEL switch. To properly set the cruise control system, perform the following steps in the order indicated.
- If the cruise control system malfunctions, it cancels automatically. The CRUISE light in the instrument panel then blinks to warn the driver.
- If the cruise light blinks, turn the cruise control main switch off and have the system checked by an authorized NISSAN dealer.

**WARNING**

Don’t use the cruise control when driving under the following conditions:
- it is not possible to keep the vehicle at a set speed.
- in heavy traffic or in traffic that varies in speed.
- on winding or hilly roads.

**CAUTION**

On manual transmission models, do not shift into neutral without depressing the clutch pedal when the cruise control is on. Should this occur, depress the clutch pedal and turn the main switch off immediately. Failure to do so may cause engine damage.

The cruise control allows driving at a fixed speed between 30 and 90 MPH (48 and 145 km/h) without keeping your foot on the accelerator pedal.

To turn on the cruise control, push the main switch on. The CRUISE CONT indicator light comes on.

To set at cruising speed, accelerate your vehicle to the desired speed, push the COAST/SET switch and release it. The CRUISE light in the instrument panel comes on.
Take your foot off the accelerator pedal. Your vehicle maintains the set speed.

**To pass another vehicle,** depress the accelerator pedal. When you release the pedal, the vehicle returns to the previously set speed.

- The vehicle may not maintain the set speed when going up or down steep hills. If this happens, drive without the cruise control.

**To cancel the preset speed,** use one of the following three methods:

a) Push the CANCEL button; the CRUISE light in the instrument panel goes out.
b) Tap the brake pedal; the CRUISE light goes out.
c) Turn the main switch off. Both the CRUISE CONT and CRUISE lights go out.

The cruise control is automatically cancelled and the CRUISE light goes out if:

- you depress the brake pedal while pushing the RES/ACCEL set switch.
- the vehicle slows down more than 8 MPH (13 km/h) below the set speed.
- you depress the clutch pedal (manual transmission), or move the shift lever to the N (Neutral) position (automatic transmission).

**To reset at a faster cruising speed,** use one of the following three methods:

a) Depress the accelerator pedal. When the vehicle attains the desired speed, push and release the COAST/SET switch.
b) Push and hold the RES/ACCEL set switch. When the vehicle attains the speed you desire, release the switch.
c) Push, and release the RES/ACCEL set switch. Each time you do this, the set speed increases by about 1 MPH (1.6 km/h).

**To reset at a slower cruising speed,** use one of the following three methods:

a) Lightly tap the brake pedal. When the vehicle attains the desired speed, push the COAST/SET switch and release it.
b) Push and hold the COAST/SET switch. Release the switch when the vehicle slows down to the desired speed.
c) Push, and release the COAST/SET switch. Each time you do this, the set speed decreases by about 1 MPH (1.6 km/h).

**To resume the preset speed,** push and release the RES/ACCEL switch. The vehicle returns to the last set cruising speed when the vehicle speed is over 30 MPH (48 km/h).
During the first 1,000 miles (1,609 km), follow these recommendations for the future reliability and economy of your new vehicle. Failure to follow these recommendations may result in vehicle damage or shortened engine life.

- Do not run the engine over 4,000 rpm.
- Do not drive over the following speed limits:
  - two-wheel drive models: 55 MPH (88 km/h)
  - four-wheel drive models (2H or 4H position): 55 MPH (88 km/h)
  - four-wheel drive models (4L position): 30 MPH (48 km/h)
- Do not accelerate at full throttle in any gear.
- Avoid quick starts.
- Avoid hard braking as much as possible.
- Do not tow a trailer for the first 500 miles (805 km).

5-18 Starting and driving

### INCREASING FUEL ECONOMY

- Keep your engine tuned up.
- Follow the recommended periodic maintenance schedule.
- Keep the tires inflated to the correct pressure. Low tire pressure increases tire wear and wastes fuel.
- Keep the front wheels in correct alignment. Improper alignment increases tire wear and lowers fuel economy.
- Air conditioner operation lowers fuel economy. Use the air conditioner only when necessary.
- When cruising at highway speeds, it is more economical to use the air conditioner and leave the windows closed to reduce drag.
- Use 4H or 4L position only when necessary. Four-wheel drive operation lowers fuel economy.

![Abrupt starts and stops waste fuel and money.](SD0001)
CAUTION
Do not drive on dry hard surface roads in four-wheel drive.

Driving on dry hard surfaces in 4H or 4L may cause unnecessary noise and tire wear. We recommend driving in the 2H position under these conditions.

WARNING
When parking the vehicle, apply the parking brake and always make sure to shift the transfer control lever into the 2H, 4H or 4L position.

Do not leave the transfer control lever in the N (Neutral) position. Otherwise, the vehicle could roll unexpectedly even if the manual transmission is in gear or the automatic transmission is in the P (Park) position.

Failure to engage the transfer control lever in 2H, 4H, or 4L could result in the vehicle moving unexpectedly, which in turn could result in serious personal injury or property damage.

2H — (2WD, high range) Only the rear wheels are driven. Use when driving under the same conditions as standard 2WD vehicle.

4H — (4WD, high range) Four wheels are driven. Use when driving on roads where it is difficult to drive in the 2H position (i.e., driving at normal speeds on snow covered, icy, wet, muddy or sandy roads).

4L — (4WD, low range) Four wheels are driven. Use when climbing or descending steep hills, or during hard driving in sand, mud or deep snow. The 4L position provides maximum power and traction. Avoid raising vehicle speed excessively, as the maximum speed is approximately 30 MPH (48 km/h).

N — No wheels are driven. Always keep the transfer lever out of the N (Neutral) position. Shift the lever quickly and smoothly when moving across the N (Neutral) position with the vehicle stopped.

Your NISSAN is equipped with one of two 4WD systems, auto-lock free-running hubs or manual-lock free-running hubs.
The auto-lock free-running hub is designed to allow for automatic four-wheel drive engagement when the shift lever is moved to the 4H or 4L position. If your vehicle is equipped with this system, follow these operational cautions:

**CAUTION**

- The auto-locking hubs will make a clicking noise when engaging and disengaging. This is normal.
- Accelerating quickly from a stop after shifting from two-wheel drive to four-wheel drive may not allow engagement of the auto-locking free-running hubs and may cause a clattering noise. Continued use of the vehicle with this noise may damage the hub lock. In such a case, release the accelerator pedal to reduce the engine speed or stop the vehicle.
- If the auto-locking hubs make a clattering noise after shifting from four-wheel drive to two-wheel drive, stop and move the vehicle about 7 to 10 feet (2 to 3 m) in reverse.
- Under extremely cold conditions [below 5°F (-15°C)], the front axle shafts may rotate even with the transfer lever in the 2H position. If this occurs, the auto-locking hubs may make a clattering noise. To avoid this, drive first in four-wheel drive to warm up the vehicle and differential gear oil. Then, shift to two-wheel drive.
- In cold weather, it may be necessary to reduce speed or stop the vehicle in order to shift from two-wheel drive to four-wheel drive.
- When shifting into or out of four-wheel drive while driving, do not stop shift lever movement midway. An incomplete shift may cause a clattering noise from the auto-locking hubs. Continued use of the vehicle with this noise may damage the hub lock. Drive in four-wheel drive to stop the noise. Shift to two-wheel drive as described.

In cold weather, it may be necessary to reduce speed or stop the vehicle in order to shift from two-wheel drive to four-wheel drive.

5-20 Starting and driving

<thead>
<tr>
<th>TO SHIFT TRANSFER CASE:</th>
<th>SHIFT PROCEDURE FOR AUTO-LOCK FREE-RUNNING HUBS</th>
</tr>
</thead>
<tbody>
<tr>
<td>From 2H to 4H</td>
<td>Move the transfer lever to 4H at speeds below 25 MPH (40 km/h). It is not necessary to depress the clutch pedal. Perform this operation when driving straight.</td>
</tr>
</tbody>
</table>
| From 4H to 2H          | Move the transfer lever to 2H. This can be done at any speed, and it is not necessary to depress the clutch pedal. Perform this operation when driving straight. **NOTE:** AUTO-LOCK hubs will not disengage until the vehicle is moved about 3 feet (1 m) in the opposite direction of travel:  
  - When driving forward, stop and move the vehicle 3 feet (1 m) in reverse.  
  - When backing up, stop and move 3 feet (1 m) forward, then move the vehicle about 3 feet (1 m) in reverse. Disengaging the AUTO LOCK hubs will allow for better fuel economy, quieter ride and less component wear. |
| From 4H to 4L or 4L to 4H | 1. Stop the vehicle.  
  2. Depress the clutch pedal, or place the selector lever in the P (Park) position.  
  3. Depress the transfer lever and move it to the 4L or 4H position. Change gears quickly and smoothly. |
| From 2H to 4L          | 1. Stop the vehicle.  
  2. Depress the clutch pedal, or place the selector lever in the P (Park) position.  
  3. Depress the transfer lever and move it to 4L. Change gears quickly and smoothly. |
| From 4L to 2H          | 1. Stop the vehicle.  
  2. Depress the clutch pedal, or place the selector lever in the P (Park) position.  
  3. Depress the transfer lever and move it to 2H. Change gears quickly and smoothly. **NOTE:** Follow the NOTE shown in shifting from 4H to 2H. |
The manual-lock free-running hubs are designed to allow you to engage or disengage the front drive shaft to the front wheels. Before driving, set the free-running hub to the desired position:

- two-wheel operation — Turn the knob to the FREE position.
- four-wheel operation — Turn the knob to the LOCK position.

Be certain to align the ◦ mark on the knob with the ● mark on the wheel hub.
**TO SHIFT TRANSFER CASE:**

**SHIFT PROCEDURE FOR MANUAL-LOCK FREE-RUNNING HUBS**

| From 2H to 4H | 1. Stop the vehicle.  
| 2. Set both free-running hubs in the LOCK position.  
| 3. Move the transfer lever to 4H. It is not necessary to depress the clutch pedal. |
| From 4H to 2H | Move the transfer lever to 2H. This can be done at any speed, and it is not necessary to depress the clutch pedal. Perform this operation when driving straight.  
| NOTE: For two-wheel drive operation, set the free-running hubs in the FREE position. Disengaging the MANUAL LOCK hubs will allow for better fuel economy, quieter ride and less component wear. |
| From 4H to 4L or 4L to 4H | 1. Stop the vehicle.  
| 2. Depress the clutch pedal, or place the selector lever in the P (Park) position.  
| 3. Depress the transfer lever and move it to the desired 4L or 4H position. Change gears quickly and smoothly. |
| From 2H to 4L | 1. Stop the vehicle.  
| 2. Set free-running hubs in the LOCK position.  
| 3. Depress the clutch pedal, or place the selector lever in the P (Park) position.  
| 4. Depress the transfer lever and move it to 4L. Change gears quickly and smoothly. |
| From 4L to 2H | 1. Stop the vehicle.  
| 2. Depress the clutch pedal, or place the selector lever in the P (Park) position.  
| 3. Depress the transfer lever and move it to 2H. Change gears quickly and smoothly.  
| NOTE: Follow the NOTE shown in shifting from 4H to 2H. |
DRIVING YOUR FOUR-WHEEL DRIVE SAFELY

Your NISSAN is designed for both normal and off-road use. It has a higher ground clearance and a narrower track to make it suitable for off-road use. These characteristics give the vehicle a higher center of gravity than ordinary passenger cars. An advantage of the higher ground clearance is a better view of your surroundings, allowing you to anticipate problems. However, avoid driving in deep water or mud as your NISSAN is mainly designed for leisure use, unlike a conventional off-road vehicle. Please observe the following precautions:

**WARNING**

- Drive carefully when off the road and avoid dangerous areas. Always wear your seat belts to help keep you and your passengers in position when driving over rough terrain.
- Do not drive across steep slopes. Instead drive either straight up or straight down the slopes. Off-road vehicles can tip over sideways much more easily than they can forward or backward.
- Many hills are too steep for any vehicle. If you drive up them, you may stall. If you drive down them, you may not be able to control your speed. If you drive across them, you may roll over.
- Stay alert when driving to the top of a hill. At the top there could be a drop-off or other hazard that could cause an accident.
- If your engine stalls or you cannot make it to the top of a steep hill, never attempt to turn around. Your vehicle could tip or roll over. Always back straight down in reverse gear. Never back down in N (neutral) or with the clutch depressed, using only the brake, as this could cause loss of control.
- Heavy braking going down a hill could cause your brakes to overheat and fade, resulting in loss of control and an accident. Apply brakes lightly and use a low gear to control your speed.
- If at all possible, avoid sharp turning maneuvers, particularly at high speeds. Your NISSAN four-wheel drive vehicle has a higher center of gravity than a two-wheel drive vehicle and can tip over more easily. The vehicle is not designed for cornering at the same speeds as conventional two-wheel drive vehicles any more than low-slung sports cars are designed to perform satisfactorily under off-road conditions. Failure to operate this vehicle correctly could result in loss of control and/or a rollover accident.
- Unsecured cargo can be thrown around when driving over rough terrain. Properly secure it so that it will not be thrown forward and cause injury to you or your passengers.
- Avoid raising the center of gravity by loading things on the roof or equipping the vehicle with tires larger than specified in this manual. This could cause your vehicle to roll over. Put heavy loads in the cargo area as far forward and as low as possible.
- Do not grip the inside or spokes of the steering wheel when driving off-road. The steering wheel could jerk and injure your hands. Instead drive with your fingers and thumbs on the outside of the rim.
Before operating the vehicle, ensure that the driver and all passengers have their seat belts fastened.

Always drive with the floor mats in place as the floor may become very hot. Particular care should be taken if you are barefoot.

Lower your speed when encountering strong crosswinds. With its higher center of gravity, your NISSAN is more affected by gusty side winds. Slower speeds ensure better vehicle control.

Do not drive beyond the performance of the tires even with 4WD.

Accelerating quickly, steering or braking may cause loss of control.

Install the same size of winter tires on all four (four) wheels (such as studless tires) or install tire chains to the rear wheels when driving on slippery roads (e.g., after a snow) and drive carefully using 4WD.

Be sure to check the brakes immediately after driving in mud or water as specified in “Wet brakes” under the heading “Brake system,” later in this section.

Avoid parking your vehicle on steep hills. If you get out of the vehicle and it rolls forward, backward or sideways, you could be injured.

Whenever you drive off-road through sand, mud or water as deep as the wheel hub, more frequent maintenance may be required. For details, refer to "Maintenance for off-road driving" in the "Maintenance" section of this manual.

Checking water entry

If you have driven in deep water or mud, check water entry in the clutch housing by removing the blind plug at the bottom of the transmission case. After checking, be sure to reinstall the plug.
CAUTION

Always use tires of the same size, brand, construction (bias, bias-belted or radial), and tread pattern on all four wheels. A spare tire of the same size, brand, construction and tread pattern must also be used. Failure to do so may result in a circumference difference between tires on the front and rear axles which will cause excessive tire wear and may damage the transmission, transfer case and differential gears.

If excessive tire wear is found, it is recommended that all four tires be replaced with tires of the same size, brand, construction and tread pattern. The tire pressure and wheel alignment should also be checked and corrected as necessary. Contact an authorized NISSAN dealer.

Snow tires
If you install snow tires, they must also be the same size, brand, construction and tread pattern on all four wheels.

Tire inflation pressure
Periodically check the pressure in all tires, including the spare, with a gauge. Adjust to the specified pressure if necessary. Tire pressures are shown on the tire placard affixed to the glove box.

Tire chain
Tire chains must be installed only on the rear wheels and not on the front wheels.

Do not drive with tire chains on paved roads which are clear of snow. Driving with chains in such conditions can cause damage to the various mechanisms of the vehicle due to some overstress. When driving on clear paved roads, be sure to change to 2WD.
WARNING

- Do not park the vehicle over flammable materials such as dry grass, waste paper or rags. They may ignite and cause a fire.
- The transfer control lever must be in the 2H, 4H or 4L position and the parking brake set to prevent the vehicle from rolling.
- Never place the transfer control lever in the N (Neutral) position. Otherwise, the vehicle could roll unexpectedly even if the manual transmission is in gear or the automatic transmission is in the P (Park) position. This could result in serious personal injury or property damage.
- Safe parking procedures require that both the parking brake be set and the transmission placed into P (Park) position (automatic) or in the appropriate gear (manual). Failure to do so could cause the vehicle to move unexpectedly or roll away and result in an accident. Make sure the gear lever has been pushed as far forward as it can go and cannot be moved without depressing the button at the end of the lever.
- Never leave children unattended in the vehicle.
- Do not leave children unattended inside the vehicle. They could unknowingly activate switches or controls. Unattended children could become involved in serious accidents.
- If the ATP lamp is ON, this indicates that the automatic transmission P (park) position will not function and the transfer shift lever is in the N position. Failure to engage the transfer shift lever in H or 4LO could result in the vehicle moving unexpectedly, resulting in serious personal injury or property damage.

1. Firmly apply the parking brake.
2. Manual transmission models:
   Place the gearshift lever in the R (Reverse) position. When parking on an up-
hill grade, place the gearshift lever in the 1st position.

**Automatic transmission models:**
Move the gearshift lever to the P (Park) position.

3. To help prevent the vehicle from rolling into the street when parked on an incline, it is a good practice to turn the wheels as illustrated.

- **HEADED DOWNHILL WITH CURB:**
  Turn the wheels into the curb and move the vehicle forward until the curb side wheel gently touches the curb.

- **HEADED UPHILL WITH CURB:**
  Turn the wheels away from the curb and move the vehicle back until the curb side wheel gently touches the curb.

- **HEADED UPHILL OR DOWNHILL, NO CURB:**
  Turn the wheels toward the side of the road so the vehicle will move away from the center of the road if it moves.

4. Turn the ignition key to the LOCK position and remove the key.

---

**POWER STEERING SYSTEM**

The power assisted steering is designed to use a hydraulic pump, driven by the engine, to assist steering.

If the engine stops or drive belt breaks, you will still have control of the vehicle. However, much greater steering effort is needed, especially in sharp turns and at low speeds.

**WARNING**

If the engine is not running or is turned off while driving, the power assist for the steering will not work. Steering will be much harder to operate.

**BRAKE SYSTEM**

The brake system has two separate hydraulic circuits. If one circuit develops a problem, you will still have braking at two wheels.

**Vacuum assisted brakes**

The brake booster aids braking by using engine vacuum. If the engine stops, you can stop the vehicle by depressing the brake pedal. However, greater foot pressure on the brake pedal will be required to stop the vehicle and stopping distance will be longer.

**Wet brakes**

When the vehicle is washed or driven through water, the brakes may get wet. As a result, your braking distance will be longer and the vehicle may pull to one side during braking.

To dry the brakes, drive the vehicle at a safe speed while lightly pressing the brake pedal to heat the brakes. Do this until the brakes return to normal. Avoid driving the vehicle at high speeds until the brakes function correctly.

---

5-28  **Starting and driving**
Using the brakes

Avoid resting your foot on the brake pedal while driving. This will overheat the brakes, wear out the brake linings and pads faster, and reduce gas mileage.

To help reduce brake wear, and to prevent the brakes from overheating, reduce speed and downshift to a lower gear before going down a slope or long grade.

WARNING

- While driving on a slippery surface, be careful when braking, accelerating or downshifting. Abrupt braking actions or sudden acceleration could cause the wheels to skid and result in an accident.
- If the engine is not running or is turned off while driving, the power assist for the brakes will not work. Braking will be harder.

ANTI-LOCK BRAKE SYSTEM (ABS)

Normal Operation

The anti-lock brake system does not operate at speeds below 3 to 6 MPH (5 to 10 km/h). (The speeds vary according to road conditions.)

When driving, the anti-lock brake system controls the wheels so they will not lock when braking abruptly or when braking on a slippery road. Thus, difficult steering and swerving of the vehicle due to locked wheels is minimized. The system detects the wheel rotation rate and electronically controls the pressure applied to each brake. Slight vibration on the brake pedal accompanied by noise usually occurs while the ABS system is operating. Such vibration and noise encountered during abrupt braking is not a problem, but indicates that the system is functioning.

Self-test feature

The anti-lock brake system consists of electronic sensors and hydraulic solenoids controlled by a computer. The computer has a built-in diagnostic feature that tests the system each time you start the engine and move the vehicle at a low speed in forward or reverse. When the self-test occurs, you may hear a “clunk” noise and/or feel a pulsation in the brake pedal. This is normal and is not an indication of any malfunction. If the computer senses any malfunction, it switches the anti-lock brake system off and turns on the ABS brake warning light in the dashboard. The brake system then operates normally, but without anti-lock assistance.

If an abnormality occurs in the system, the anti-lock function will cease but the ordinary brakes will continue to operate normally. The ABS brake warning light will then come on.

If the light comes on while you are driving, contact an authorized NISSAN dealer for repair.

Using the System, 4WD Vehicles (4 wheel ABS)

Depress the brake pedal and hold it down.

WARNING

Do not pump the brake pedal. Doing so may result in increased stopping distances.
Using the system, 2WD Vehicles (2 wheel rear ABS)

Depress the brake pedal and hold it down. With the rear anti-lock brake system, the front wheels can still lock. If this happens, release the brake pedal slightly and then reapply pressure.

**WARNING**

The anti-lock brake system is a sophisticated device. But it cannot prevent accidents resulting from careless or dangerous driving techniques. It can help maintain vehicle control under some conditions, but remember that the stopping distance on slippery surfaces will be longer than on normal surfaces even with ABS. Stopping distances may also be longer on rough, gravel, or snow covered roads, or if you are using tire chains. Always maintain a safe distance from the vehicle in front of you. Ultimately, the responsibility for safety of self and others rests in the hands of the driver.

Tire type and condition may also affect braking effectiveness.
- When replacing tires, install the specified size of tires on all four wheels.
- When installing a spare tire, make sure it is the proper size and type as specified on the tire placard. See “Tire placard” in the “Technical and consumer information” section.

Freeing a frozen door lock

To prevent a door lock from freezing, apply de-icer or glycerin through the key hole. If the lock becomes frozen, heat the key before inserting it in the key hole.

Anti-freeze

In the winter when it is anticipated that the temperature will drop below 32°F (0°C), check anti-freeze (ethylene glycol base) to assure proper winter protection. For details, see “Engine cooling system” in the “Do-it-yourself” section of this manual.

Battery

If the battery is not fully charged during extremely cold weather conditions, the battery fluid may freeze and damage the battery. To maintain maximum efficiency, the battery should be checked regularly. For details, see “Battery” in the “Do-it-yourself” section of this manual.

Draining of coolant water

If the vehicle is to be left outside without anti-freeze, drain the cooling system by opening the drain valves located under the radiator and on the engine block. Refill
before operating the vehicle. For details, see “Changing engine coolant” in the “Do-it-yourself” section of this manual.

Tire equipment

1. SUMMER tires have a tread designed to provide superior performance on dry pavement. However, the performance of these tires will be substantially reduced in snowy and icy conditions. If you operate your vehicle on snowy or icy roads, NISSAN recommends the use on all four wheels of MUD & SNOW or ALL SEASON tires. Please consult your NISSAN dealer for the tire type, size, speed rating and availability information.

2. For additional traction on icy roads, studded tires may be used. However, some U.S. states and Canadian provinces prohibit their use. Check local, state and provincial laws before installing studded tires.

Skid and traction capabilities of studded snow tires on wet or dry surfaces may be poorer than that of non-studded snow tires.

3. Tire chains may be used. Use of tire chains may be prohibited according to location. Check the local laws before installing tire chains. When installing tire chains, make sure they are of proper size for the tires on your vehicle and are installed according to the chain manufacturer’s suggestions. Use only SAE Class “S” chains. Other types may damage your vehicle. Use chain tensioners when recommended by the tire chain manufacturer to ensure a tight fit. Loose end links of the tire chain must be secured or removed to prevent the possibility of whipping action damage to the fenders or undercarriage. If possible, avoid fully loading your vehicle when using tire chains. In addition, drive at a reduced speed, otherwise, your vehicle may be damaged and/or vehicle handling and performance may be adversely affected. Never install tire chains on a TEMPORARY USE ONLY spare tire. Do not use tire chains on dry roads.

Special winter equipment

It is recommended that the following items be carried in the vehicle during winter:

1. A scraper and stiff-bristled brush to remove ice and snow from the windows and wiper blades.

2. A sturdy, flat board to be placed under the jack to give it firm support.

3. A shovel to dig the vehicle out of snow-drifts.

4. Extra window washer fluid to refill the reservoir tank.

Driving on snow or ice

**WARNING**

- Wet ice (32°F, 0°C and freezing rain), very cold snow, or ice can be slick and very hard to drive on. The vehicle will have a lot less traction or “grip” under these conditions. Try to avoid driving on wet ice until the road is salted or sanded.

- Whatever the condition, drive with caution. Accelerate and slow down with care. If accelerating or down-shifting too fast, the drive wheels will lose even more traction.

- Allow more stopping distance under these conditions. Braking should be started sooner than on dry pavement.

- Allow greater following distances on slippery roads.
Watch for slippery spots (glare ice). These may appear on an otherwise clear road in shaded areas. If a patch of ice is seen ahead, brake before reaching it. Try not to brake while actually on the ice, and avoid any sudden steering maneuvers.

- Do not use the cruise control on slippery roads.
- Snow can trap dangerous exhaust gases under your vehicle. Keep snow clear of the exhaust pipe and from around your vehicle.

Engine block heater (if so equipped)

An engine block heater to assist extreme cold temperature starting is available through an authorized NISSAN dealer.

**WARNING**

Do not use your heater with an ungrounded electrical system or two-pronged (cheater) adapters. You can be injured by an electrical shock if you use an ungrounded connection.
6 In case of emergency

- Flat tire ...............................................................6-2
- Pantograph type jack ..........................................6-5
- Jump starting .......................................................6-8
- Push starting .......................................................6-9
- If your vehicle overheats ......................................6-10
- Tow truck towing ................................................6-11
- Two-wheel drive models ......................................6-12
- Four-wheel drive models .....................................6-12
- Vehicle recovery (freeing a stuck vehicle) .............6-13
If you have a flat tire, follow the instructions below:

Stopping the vehicle
1. Safely move the vehicle off the road and away from traffic.
2. Turn on the hazard warning flashers.
3. Park on a level surface and apply the parking brake. Shift the manual transmission into R (Reverse), or the automatic transmission into P (Park).

**WARNING**
- The transfer control lever must be in the 2H, 4H or 4L position.
- Never place the transfer control lever in the N (Neutral) position. Otherwise, the vehicle could roll unexpectedly even if the manual transmission is in gear or the automatic transmission is in the P (Park) position. This could result in serious personal injury or property damage.

4. Turn off the engine.
5. Raise the hood to warn other traffic and to signal professional road assistance personnel that you require assistance.
6. Have all passengers get out of the vehicle and stand in a safe place away from traffic and clear of the vehicle.

**WARNING**
- Make sure that the parking brake is securely applied and the manual transmission is shifted into R (Reverse), or the automatic transmission into P (Park).
- Never change tires when the vehicle is on a slope, ice or a slippery area. This is hazardous.
- Never change tires if oncoming traffic is close to your vehicle. Wait for professional road assistance.

Blocking wheels
Place suitable blocks at both the front and back of the wheel diagonally opposite the flat tire to prevent the vehicle from rolling when it is jacked up.

**WARNING**
Be sure to block the wheel as the vehicle may move and could cause personal injury.
Getting the spare tire and tools

1. **For King Cab models:**
   a. Move the driver’s seat back fully forward.
   b. Remove the jack and wheel nut wrench from the tool case from behind the driver’s seat.
   c. Remove the jack rod from behind the driver’s seat.

2. **For standard cab models:**
   a. Move the bench seat back fully forward.
   b. Remove the jack, jack rod, and wheel nut wrench from behind the driver’s side of the bench seat.

2. Fit the square end of the jack rod into the square hole of the wheel nut wrench to form a handle.

3. Find the oval shaped opening under the middle of the tailgate. Pass the T-shaped end of the jack rod through the opening and direct it towards the spare tire winch, located directly above the spare tire.

4. Seat the T-shaped end of the jack rod into the T-shaped opening of the spare tire winch, and turn the jack rod counterclockwise to lower the spare tire.

5. Once the spare tire is completely lowered, reach under the vehicle, remove the retainer chain, and carefully slide the tire from under the rear of the vehicle.

*In case of emergency 6-3*
Removing wheel cover

**CAUTION**
Do not use your hands to pry off wheel covers. Doing so could result in personal injury.

Use caution not to scratch the wheel cover or wheel surface.

6-4 In case of emergency
Jacking up the vehicle and removing the wheel

Always refer to the proper illustrations for the correct placement and jack-up points for your specific vehicle model and jack type.

**WARNING**

- Never get under the vehicle while it is supported only by the jack.
- Use the jack provided with your vehicle. Do not use the jack provided with your vehicle on other vehicles.
- The jack is designed only for lifting your vehicle during a tire change.
- Use the correct jack up points; never use any other part of the vehicle for jack support.

- Never jack up the vehicle more than necessary.
- Never use blocks on or under the jack.
- Do not allow passengers to stay in the vehicle while it is on the jack.
- Never run the engine with the wheels off the ground. It may cause the vehicle to move. This is especially true for vehicles with limited slip differential carriers.
WARNING

Incorrect wheel nuts or improperly tightened wheel nuts can cause the wheel to become loose or come off. This could cause an accident.

Do not use oil or grease on the wheel studs or nuts. This could cause the nuts to become loose.

Installing the spare tire

The spare tire is designed for emergency use. See specific instructions under the heading "Wheels and tires" in the "Do-
it-yourself” section of this owner’s manual.

1. Clean any mud or dirt from the surface between the wheel and hub.

2. Carefully put the spare tire on and tighten the wheel nuts finger tight.

3. With the wheel nut wrench, tighten the wheel nuts alternately and evenly until they are tight.

4. Lower the vehicle slowly until the tire touches the ground. Then, with the wheel nut wrench, tighten the wheel nuts securely in the sequence as illustrated. Lower the vehicle completely.

As soon as possible, tighten the wheel nuts to the specified torque with a torque wrench.

Wheel nut tightening torque: 87 to 108 ft-lb (118 to 147 N·m)

The wheel nuts must be kept tightened to specification at all times. It is recommended that wheel nuts be tightened to specification at each lubrication interval.

Adjust tire pressure to the COLD pressure.

COLD pressure:
After vehicle has been parked for three hours or more or driven less than 1 mile (1.6 km).

COLD tire pressures are shown on the tire placard affixed to the inside of the glove box lid.

- Retighten the wheel nuts when the vehicle has been run for 600 miles (965 km).

5. Securely store the flat tire and jacking equipment in the vehicle.

WARNING
- Always make sure that the spare tire and jacking equipment are properly secured after use. Such items can become dangerous projectiles in an accident or sudden stop.
- The spare tire is designed for emergency use. See specific instructions under the heading “Wheels and tires” in the “Do-it-yourself” section of this manual.

In case of emergency 6-7
To start your engine with a booster battery, the instructions and precautions below must be followed.

**WARNING**

- If done incorrectly, jump starting can lead to a battery explosion, resulting in severe injury or death. It could also damage your vehicle.
- Explosive hydrogen gas is always present in the vicinity of the battery. Keep all sparks and flames away from the battery.
- Do not allow battery fluid to come into contact with eyes, skin, cloth or painted surfaces. Battery fluid is a corrosive sulphuric acid solution which can cause severe burns. If the fluid should come into contact with anything, immediately flush the contacted area with water.
- Keep battery out of the reach of children.
- The booster battery must be rated at 12 volts. Use of an improperly rated battery can damage your vehicle.

1. If the booster battery is in another vehicle, position the two vehicles to bring their batteries into close proximity to each other. **Do not allow the two vehicles to touch.**

2. Apply the parking brake. Move the shift selector lever to N (Neutral) (on automatic transmission models, move the lever to P (Park)). Switch off all unnecessary electrical systems (lights, heater, air conditioner, etc.).

3. Remove vent caps on the battery (if so equipped). Cover the battery with an old cloth to reduce explosion hazard.

**Always follow the instructions exactly. Failure to do so could result in damage to the charging system and cause personal injury.**
4. Connect jumper cables in the sequence as illustrated.

**CAUTION**
- Always connect positive (+) to positive (+) and negative (−) to body ground (e.g., strut mounting bolt, etc.—not to the battery).
- Make sure that cables do not touch moving parts in the engine compartment and that clamps do not contact any other metal.

5. Start the engine of the booster vehicle and let it run for a few minutes.

6. Keep the engine speed of the booster vehicle at about 2,000 r/min, and start the engine of the vehicle being jump started.

**CAUTION**
Do not keep the starter motor engaged for more than 10 seconds. If the engine does not start right away, turn the key off and wait 3 to 4 seconds before trying again.

7. After starting your engine, carefully disconnect the negative cable and then the positive cable.

8. Replace the vent caps (if so equipped). Be sure to dispose of the cloth used to cover the vent holes as it may be contaminated with corrosive acid.

**PUSH STARTING**

**CAUTION**
- Automatic transmission models cannot be started by pushing. This may cause transmission damage.
- Three-way catalyst equipped models should not be started by pushing since the three-way catalyst may be damaged.
- Never try to start the vehicle by towing it. When the engine starts, the forward surge could cause the vehicle to collide with the tow vehicle.

In case of emergency 6-9
IF YOUR VEHICLE OVERHEATS

If your vehicle is overheating (indicated by an extremely high temperature gauge reading), or if you feel a lack of engine power, or detect abnormal noise, etc., take the following steps:

**WARNING**

- Do not continue to drive if your vehicle overheats. Doing so could cause a vehicle fire.
- To avoid the danger of being scalded, never remove the radiator cap while the engine is still hot. When the radiator cap is removed, pressurized hot water will spurt out, possibly causing serious injury.
- Do not open the hood if steam is coming out.

1. Move the vehicle safely off the road, apply the parking brake and move the gearshift lever to N (Neutral), or the automatic transmission into P (Park). Do not stop the engine.

2. Turn off the air conditioner (if so equipped). Open all of the windows, move the heater or air conditioner temperature control to maximum hot and fan control to high speed.

3. If engine overheating is caused by climbing a long hill on a hot day, run the engine at a fast idle (approximately 1,500 r/min) until the temperature gauge indicator returns to normal.

4. Get out of the vehicle. Look and listen for steam or coolant escaping from the radiator before opening the hood. Wait until no steam or coolant can be seen before proceeding.

5. Open the hood.

**WARNING**

If steam or water is coming from the engine, stand clear to prevent getting burned.

6. Visually check drive belts for damage or looseness. Also check if the cooling fan is running. The radiator hoses and radiator should not leak water. If coolant is leaking, or the water pump belt is missing or loose, or the cooling fan does not run, stop the engine.

7. After the engine cools down, check the coolant level in the reservoir tank with the engine running. Add coolant to the reservoir tank if necessary. Have your vehicle repaired at an authorized NISSAN dealer.
When towing your vehicle, U.S. States, Canadian provinces and local regulations for towing must be followed. Incorrect towing equipment could damage your vehicle. Towing instructions are available from an authorized NISSAN dealer. Local service operators are generally familiar with the applicable laws and procedures for towing. To assure proper towing and to prevent accidental damage to your vehicle, NISSAN recommends having a service operator tow your vehicle. It is advisable to have the service operator carefully read the following precautions:

**WARNING**
- Never ride in a vehicle that is being towed.
- Never get under your vehicle after it has been lifted by a tow truck.

**CAUTION**
- When towing, make sure that the transmission, axles, steering system and powertrain are in working condition. If any unit is damaged, a dolly must be used.
- When towing with the front wheels on the ground:
  - Turn the ignition key to the OFF position and secure the steering wheel in a straight-ahead position with a rope or similar device. Never place the ignition key in the LOCK position. This will result in damage to the steering lock mechanism.
- When towing with the rear wheels on the ground:
  - Release the parking brake and move the gearshift lever to the N (Neutral) position.
  - On automatic transmission models, to move the shift lever to N (Neutral), turn the ignition key to the ACC position. After moving the shift lever to N (neutral), be sure to turn the ignition key to the OFF position.
- For four-wheel drive models:
  - Set the free-running hubs to the free position. See “Auto-lock free-running hubs” or “Manual-lock free-running hubs” as appropriate in the “Starting and driving” section.
- Move the transfer case shift lever into the 2H position and the transmission shift lever into the N (Neutral) position.
- Attach safety chains for all towing.

In case of emergency 6-11
NISSAN recommends that your vehicle be towed with the driving (rear) wheels off the ground as illustrated.

**CAUTION**

If you have to tow your vehicle with four wheels on the ground or with front wheels raised (with rear wheels on the ground), observe the following restricted towing speeds and distances:

- **Automatic transmission model:**
  - Speed: Below 30 MPH (48 km/h)
  - Distance: Less than 40 miles (64 km)

- **Manual transmission model:**
  - Speed: Below 60 MPH (97 km/h)
  - Distance: Less than 500 miles (805 km)

If the speed or distance must necessarily be greater, remove the propeller shaft beforehand to prevent damage to the transmission.

**CAUTION**

Never tow your vehicle from the rear (i.e., backward) with four wheels on the ground, as this may cause serious and expensive damage to the transmission.

NISSAN recommends that a dolly be used as illustrated when towing your vehicle.

---

6-12 In case of emergency
CAUTION

If you have to tow your vehicle with four wheels on the ground or with front or rear wheels raised, observe the following restricted towing speeds and distances:
- Speed: Below 60 MPH (97 km/h)
- Distance: Less than 500 miles (805 km)

If the speed or distance must necessarily be greater, remove the front and rear propeller shafts beforehand to prevent damage to the transmission.

CAUTION

- Never tow your vehicle from the rear (i.e., backward) with four wheels on the ground as this may cause serious and expensive damage to the transmission.
- Be sure to place the transfer case shift lever into the 2H position and the transmission shift lever into the N (Neutral) position.

VEHICLE RECOVERY (freeing a stuck vehicle)

- Tow chains or cables must be attached only to the main structural members of the vehicle.
- Pulling devices should be routed so they do not touch any part of the suspension, steering, brake or cooling systems.
- Always pull the cable straight out from the front or rear of the vehicle. Never pull the vehicle at an angle.
- Pulling devices such as ropes or canvas straps are not recommended for use in vehicle towing or recovery.
- Stand clear of a stuck vehicle.

WARNING

Do not spin your tires at high speed. This could cause them to explode and result in serious injury. Parts of your vehicle could also overheat and be damaged.

In case of emergency 6-13
MEMO

6-14  In case of emergency
7 Appearance and care

Cleaning exterior and interior ..............................................7-2
Corrosion protection ..........................................................7-4
In order to maintain the appearance of your vehicle, it is important to take proper care of it. In the following cases, please wash your vehicle as soon as possible to protect the paint surface:

- after a rainfall to prevent possible damage from acid rain.
- after driving on coastal roads.
- when contaminants such as soot, bird droppings, tree sap, metal particles or bugs get on the paint surface.
- when dust or mud builds up on the surface.

Whenever possible, store or park your vehicle inside a garage or in a covered area.

When it is necessary to park outside, park in a shady area or protect the vehicle with a body cover.

Be careful not to scratch the paint surface when putting on or removing the body cover.

**Washing**

Wash dirt off with a wet sponge and plenty of water. Clean the vehicle thoroughly using a mild soap, a special vehicle soap or general purpose dishwashing liquid mixed with clean, lukewarm (never hot) water.

**CAUTION**

- Do not use strong household soap, strong chemical detergents, gasoline or solvents.
- Do not wash the vehicle in direct sunlight or while the vehicle body is hot, as the surface may become water-spotted.

Rinse the vehicle thoroughly with plenty of clean water.

Inside flanges, seams and folds on the doors, hatches and hood are particularly vulnerable to the effects of road salt. Therefore, these areas must be regularly cleaned. Take care that the drain holes in the lower edge of the door are open. Spray water under the body and in the wheel wells to loosen the dirt and wash away road salt.

A damp chamois can be used to dry the vehicle to avoid water spots.

**Waxing**

Regular waxing protects the paint surface and helps retain new vehicle appearance.

After waxing, polishing is recommended to remove built-up residue and to avoid a “weathered” appearance.

An authorized NISSAN dealer can assist...
you in choosing the proper product.

- Wax your vehicle only after a thorough washing. Follow the instructions supplied with the wax.
- Do not use a wax containing any abrasives, cutting compounds or cleaners that may damage the vehicle finish.
- If the surface does not polish easily, use a “road tar” remover and wax again.

Machine compounding or aggressive polishing on a base coat/clear coat paint finish may dull the finish or leave swirl marks.

Only apply black wax or black shoe polish to the black urethane or polypropylene bumper.

Removing spots

Remove tar and oil spots, industrial dust, insects and tree sap as quickly as possible from the surface of the paint to avoid permanent damage or staining. Special cleaning products are available at an authorized NISSAN dealer or any automotive accessories store.

Underbody

In areas where road salt is used in winter, it is necessary to clean the underbody regularly in order to prevent dirt and salt from building up and causing corrosion on the underbody and suspension. Before the winter period and again in the spring, the underseal must be checked and, if necessary, retreated.

Cleaning glass

Use glass cleaner to remove smoke and dust film from the glass surfaces. It is normal for glass to be coated with a film after the vehicle is parked in the hot sun. Glass cleaner and a soft cloth easily remove this film.

**CAUTION**

When cleaning the inside of the window, do not use any sharp-edged tools or abrasive cleaners or chlorine-based disinfectant cleaners. They could damage the electrical conductors, radio antenna elements or rear window defogger elements.

Cleaning aluminum alloy wheels

Wash regularly, especially during winter months in areas where road salt is used. Salt could discolor the wheel if not removed.

Chrome parts

Clean all chrome parts regularly with a non-abrasive chrome polish to maintain the finish.

Cleaning interior

Occasionally remove loose dust from the interior trim, plastic parts and seats using a vacuum cleaner or soft brush. Wipe the vinyl and leather surfaces with a clean, soft cloth dampened in mild soap solution, then wipe clean with a dry soft cloth. Before using any fabric protector, read the manufacturer’s recommendations. Some fabric protectors contain chemicals that stain or bleach the seat material.

**CAUTION**

- Never use benzine, thinner or any similar material.
- Never use fabric protectors unless recommended by the manufacturer.

Appearance and care 7-3
Floor mat positioning aid
(Driver side only)

Some models include a floor mat pin to act as a floor mat positioning aid. NISSAN floor mats have been specially designed for your vehicle model. The driver’s side floor mat has a grommet hole incorporated in it. Position the mat by placing the floor mat pin through the floor mat grommet hole while centering the mat in the footwell. Periodically check to make certain that the mats are properly positioned.

Floor mats
The use of genuine NISSAN floor mats can extend the life of your vehicle carpet and make it easier to clean the interior. **No matter what mats are used, be sure they are fitted for your vehicle and are properly positioned in the footwell to prevent interference with pedal operation.** Mats should be maintained with regular cleaning and replaced if they become excessively worn.

Seat belts
The seat belts can be cleaned by wiping them with a sponge dampened in a mild soap solution. Allow the belts to dry completely before using them.

**WARNING**

Do not allow wet belts to roll up in the retractor. NEVER use bleach, dye or chemical solvents since these may severely weaken the seat belt webbing.

---

**CORROSION PROTECTION**

Most common factors contributing to vehicle corrosion.

1. The accumulation of moisture-retaining dirt and debris in body panel sections, cavities, and other areas.
2. Damage to paint and other protective coatings caused by gravel and stone chips or minor traffic accidents.

Environmental factors influence the rate of corrosion.

**Moisture**
The accumulation of sand, dirt and water on the underside of the body accelerates corrosion. Floor sections which have snow and ice trapped under the floor matting will not dry.

**Relative humidity**
Corrosion will be accelerated:
- in areas of high relative humidity.
- in areas where the temperatures stay above freezing.
- where atmospheric pollution exists.
- where road salt is used.
**Temperature**

A temperature increase accelerates the rate of corrosion to those parts which are not well ventilated.

**Air pollution**

Industrial pollution, the presence of salt in the air in coastal areas, or heavy road salt use will accelerate the corrosion process. Road salt will also accelerate the disintegration of paint surfaces.

To protect your vehicle from corrosion:

- wash and wax your vehicle often to keep the vehicle clean.
- always check for minor damage to the paint and repair it as soon as possible.
- keep drain holes at the bottom of the doors and tailgate open to avoid water accumulation.
- check the underbody and inside the pick-up box. If any sand, dirt or salt is accumulated, wash it off with water as soon as possible.

---

**CAUTION**

- NEVER remove dirt, sand or other debris from the passenger compartment by washing with a hose. Remove dirt with a vacuum cleaner or broom.
- Never allow water or other liquids to come in contact with electronic components inside the vehicle.

---

Chemicals used for road surface de-icing are extremely corrosive. They accelerate corrosion and deterioration of underbody components such as the exhaust system, fuel and brake lines, brake cables, floor pan and fenders.

**In winter, the underbody must be cleaned periodically.**

For additional protection against rust and corrosion, which may be required in some areas, consult an authorized NISSAN dealer.

MAINTENANCE PRECAUTIONS

When performing any inspection or maintenance work on your vehicle, always take care to prevent serious accidental injury to yourself or damage to the vehicle. The following are general precautions which should be closely observed.

**WARNING**

- Park the vehicle on a level surface, apply the parking brake securely and block the wheels to prevent the vehicle from moving. For a manual transmission, move the shift lever to N (Neutral). For an automatic transmission, move the shift lever to P (Park).
- Be sure the ignition key is OFF when performing any parts replacement or repairs.
- If you must work with the engine running, keep your hands, clothing, hair and tools away from moving fans, belts, and any other moving parts.
- It is advisable to remove ties and any jewelry, such as rings, watches, etc., before working on your vehicle.
- Always wear eye protection whenever you work on your vehicle.
- If you must run the engine in an enclosed space such as a garage, be sure there is proper ventilation for exhaust gases.
- Never get under the vehicle while it is supported only by a jack. If it is necessary to work under the vehicle, support it with safety stands.
- Keep smoking materials, flame and sparks away from fuel and battery.
- On gasoline engine models with the Multiport Fuel Injection (MFI) system, the fuel filter or fuel lines should be serviced by an authorized NISSAN dealer because the fuel lines are under high pressure even when the engine is off.
- Never connect or disconnect either the battery or any transistorized component connector while the ignition is on.
- Avoid contact with used motor oil. Improperly disposed motor oil and/or other vehicle fluids can hurt the environment. Always conform to local regulations for disposal of vehicle fluid.

**CAUTION**

- Do not work under the hood while the engine is hot. Turn the engine off and wait until it cools down.
- This “Do-it-yourself” section gives instructions regarding only those items which are relatively easy for an owner to perform. You should be aware that incomplete or improper servicing may result in operating difficulties or excessive emissions, and could affect your warranty coverage. If in doubt about any servicing, have it done by an authorized NISSAN dealer.
The engine cooling system is filled at the factory with a high-quality, year-round, genuine NISSAN anti-freeze coolant solution. The anti-freeze solution contains rust and corrosion inhibitors, therefore additional engine cooling system additives are not necessary.

⚠️ CAUTION

When adding or replacing coolant, be sure to use only a genuine NISSAN anti-freeze coolant or equivalent with the proper mixture ratio of 50% anti-freeze and 50% demineralized water or distilled water. The use of other types of coolant solutions may damage the engine cooling system.

⚠️ WARNING

- Never remove the radiator cap when the engine is hot. Wait until the engine and radiator cool down. Serious burns could be caused by high pressure fluid escaping from the radiator. See precautions in “If your vehicle overheats” found in the “In case of emergency” section of this manual.
- The radiator is equipped with a pressure cap. Use only a genuine NISSAN cap as it’s replacement.

CHECKING ENGINE COOLANT LEVEL

Check the coolant level in the reservoir tank when the engine is cold. If the coolant level is below the MIN level, add coolant to the MAX level. If the reservoir tank is empty, check the coolant level in the radiator when the engine is cold. If there is insufficient coolant in the radiator, fill the radiator with coolant up to the filler opening and also add it to the reservoir tank up to the MAX level.

Do-it-yourself 8-5
If the cooling system frequently requires coolant, have it checked by an authorized NISSAN dealer.

CHANGING ENGINE COOLANT
- Major cooling system repairs should be performed by an authorized NISSAN dealer. The service procedures can be found in the appropriate NISSAN Service Manual.
- Improper servicing can result in reduced heater performance and engine overheating.

WARNING
- To avoid the danger of being scalded, never change the coolant when the engine is hot.
- Never remove the radiator cap when the engine is hot. Serious burns could be caused by high pressure fluid escaping from the radiator.

1. Open the radiator drain valve. Open the drain plugs on the engine block.
2. Open the radiator cap to drain the coolant.
3. Flush the cooling system by running fresh water through the radiator.
4. Close the radiator drain valve and drain plug on the engine block securely.
5. See “Capacities and recommended fuel/lubricants” in the “Technical and consumer information” section for cooling system capacity. Fill the radiator slowly with the proper mixture of coolant and water. Fill the reservoir tank slowly up to the MAX level.
6. Remove the splash shield.
   - Remove the six push pins.
   - Remove the six bolts and the splash shield.

7. Open and close the air release plug to release air. Then fill the radiator again and install the radiator cap.
8. Start the engine and warm it up until it reaches normal operating temperature. Then race the engine two or three times under no load. Watch the engine coolant temperature gauge for signs of overheating.

9. Stop the engine. After it completely cools down, refill the radiator up to the filler opening. Fill the reservoir tank up to the MAX level.

10. Open and close the air release plug to release air. Then fill the radiator again and install the radiator cap.
11. Check the drain valve on the radiator and drain plugs on the engine block for any sign of leakage.

CHECKING ENGINE OIL LEVEL

1. Park the vehicle on a level surface and apply the parking brake.
2. Start the engine and let it idle until it reaches operating temperature.
3. Turn off the engine. Wait a few minutes for the oil to drain back into the oil pan.
4. Remove the dipstick and wipe it clean. Reinsert it all the way.
5. Remove the dipstick again and check the oil level. It should be between the H (High) and L (Low) marks. If the oil level is below the L (Low) mark, remove the oil filler cap and pour recommended oil through the opening. **Do not overfill.**

6. Recheck oil level with dipstick. **It is normal to add some oil between oil maintenance intervals or during the break-in period, depending on the severity of operating conditions.**

**CAUTION**

Oil level should be checked regularly. Operating with insufficient amount of oil can damage the engine, and such damage is not covered by warranty.

---

**CHANGING ENGINE OIL**

1. Park the vehicle on a level surface and apply the parking brake.
2. Start the engine and let idle until it reaches operating temperature, and then turn it off.
3. Remove the oil filler cap.
4. Place a large drain pan under the drain plug.
5. Remove the drain plug with a wrench and completely drain the oil.

If the oil filter is to be changed, remove and replace it at this time. See “Changing engine oil filter” later in this section.

**WARNING**

- Prolonged and repeated contact with used engine oil may cause skin cancer.
- Try to avoid direct skin contact with used oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
- Keep used engine oil out of reach of children.

**CAUTION**

Be careful not to burn yourself, as the engine oil is hot.

Waste oil must be disposed of properly. Check your local regulations.

6. Clean and reinstall the drain plug and washer. Securely tighten the drain plug with a wrench. Do not use excessive force.

   **Drain plug tightening torque:**
   
   22 to 29 ft-lb (29 to 39 Nm)

7. Refill engine with a recommended oil through the oil filler opening then install the oil filler cap securely.

   See “Capacities and recommended fuel/lubricants” in the “Technical and consumer information” section for drain and refill capacity.

   The drain and refill capacity depends on the oil temperature and drain time. Use these specifications for reference only. Always use the dipstick to determine when the proper amount of oil is in the engine.

8. Start the engine. Check for leakage around the drain plug and oil filter. Correct as required.

9. Turn the engine off and wait several minutes. Check the oil level with the dipstick. Add engine oil if necessary.
CHANGING ENGINE OIL FILTER

1. Park the vehicle on a level surface and apply the parking brake.
2. Turn the engine off.
3. Remove the splash shield.
   - Remove the six push pins.
   - Remove the six bolts and the splash shield.
4. Place a large drain pan under the oil filter.
5. Loosen the oil filter with an oil filter wrench. Then remove the oil filter by turning it by hand.

   **CAUTION**
   Be careful not to burn yourself, as the engine oil may be hot.

6. Wipe the engine oil filter mounting surface with a clean rag.
   Be sure to remove any old rubber gasket remaining on the mounting surface of the engine.
7. Coat the rubber gasket on the new filter with engine oil.
8. Screw in the oil filter until a slight resistance is felt, then tighten an additional 2/3 turn.
9. Start the engine and check for leakage around the oil filter. Correct as required.
10. Turn the engine off and wait several minutes. Check the oil level. Add engine oil if necessary.

8-12  Do-it-yourself
**WARNING**

- When engine is running, keep hands, jewelry and clothing away from any moving parts such as cooling fan and drive belts.
- Automatic transmission fluid is poisonous and should be stored carefully in marked containers out of the reach of children.

**TEMPERATURE CONDITIONS FOR CHECKING ATF**

- The fluid level should be checked using the HOT range on the dipstick after the following conditions have been met:
  - The engine should be warmed up to operating temperature.
  - The vehicle should be driven at least 5 minutes.
  - The ATF should be warmed to between 122 and 176°F (50 and 80°C).
- The ATF can be checked at fluid temperatures of 86 to 122°F (30 to 50°C) using the COLD range on the dipstick after the engine is warmed up and before driving. However, the fluid should be re-checked using the HOT range.

1. Park the vehicle on a level surface and set the parking brake.
2. Start the engine and then move the selector lever through each gear range, ending in P (Park).
3. Check the fluid level with the engine idling.
4. Remove the dipstick and wipe it clean with lint-free paper.
5. Re-insert the dipstick into the charging pipe as far as it will go.
6. Remove the dipstick and note the reading. If the level is on the low side of either range, add fluid through the charging pipe.
**POWER STEERING FLUID**

**CAUTION**

- **DO NOT OVERFILL.**
- Use ONLY NISSAN Matic 'D' (Continental U.S. and Alaska) or genuine NISSAN Automatic Transmission Fluid (Canada). Dexron™ III/Mercon™ or equivalent may also be used. Outside the continental United States and Alaska contact an authorized NISSAN dealership for more information regarding suitable fluids, including recommended brands of Dexron™ III/Mercon™.

**NOTE:**

If the vehicle has been driven for a long time at high speeds, or in city traffic in hot weather, or if it is being used to pull a trailer, the fluid level cannot be read accurately. You should wait until the fluid has cooled down (about 30 minutes).

**CAUTION**

- Do not overfill.
- The recommended fluid is Genuine NISSAN PSF2.
Check the brake fluid level in the reservoir. If the fluid level is below the MIN line or the brake warning light comes on, add DOT 3 fluid up to the MAX line.

Check the clutch fluid level in the reservoir (manual transmission only). If the fluid level is below the MIN line, add DOT 3 fluid up to the MAX line.

If fluid must be added frequently, the system should be thoroughly checked by an authorized NISSAN dealer.

For further brake and clutch fluid specification information, refer to “Capacities and recommended fuel/lubricants” in the “Technical and consumer information” section of this manual.

**WARNING**

Use only new fluid from a sealed container. Old, inferior or contaminated fluid may damage the brake and clutch systems. The use of improper fluids can damage the brake system and affect the vehicle’s stopping ability.

**CAUTION**

Do not spill the fluid on any painted surfaces. This will damage the paint. If fluid is spilled, wash with water.

---

USA Only

Check the window washer fluid level in the reservoir tank and add fluid if necessary. Add a washer solvent to the water for better cleaning. In the winter season, add a windshield washer anti-freeze. Follow the manufacturer’s instructions for the mixture ratio.

Canada Only

Add fluid when the low washer fluid warning light comes on. Add windshield washer solvent to the water for better cleaning. In the winter season, add windshield washer anti-freeze.

Do-it-yourself  8-15
Follow the manufacturer’s instructions for the mixture ratio.

**CAUTION**
Do not substitute engine anti-freeze coolant for window washer solution. This may result in damage to the paint.

- Keep the battery surface clean and dry. Any corrosion should be washed off with a solution of baking soda and water.
- Make certain the terminal connections are clean and securely tightened.
- If the vehicle is not to be used for 30 days or longer, disconnect the negative (−) battery terminal cable to prevent discharge.

**WARNING**
- Do not expose the battery to flames or electrical sparks. Hydrogen gas generated by battery action is explosive. Do not allow battery fluid to contact your skin, eyes, fabrics, or painted surfaces. After touching a battery or battery cap, do not touch or rub your eyes. Thoroughly wash your hands. If the acid contacts your eyes, skin or clothing, immediately flush with water for at least 15 minutes and seek medical attention.
- When working on or near a battery, always wear suitable eye protection and remove all jewelry.
- Keep the battery out of the reach of children.

1. Gently pry between the battery cap and cover as illustrated to remove the cap.
   - Use a cloth to protect the battery case.
2. Check the fluid level in each cell.
   - If it is necessary to add fluid, add only distilled water to bring the level up to the level indicator in each filler opening. **Do not overfill.**
JUMP STARTING

If jump starting is necessary, see “Jump starting” in the “In case of emergency” section. If the engine does not start by jump starting, the battery may have to be replaced. Contact an authorized NISSAN dealer.
Be sure the ignition key is OFF. The engine could rotate unexpectedly.

1. Visually inspect each belt for signs of unusual wear, cuts, fraying or looseness. If the belt is in poor condition or loose, have it replaced or adjusted by an authorized NISSAN dealer.

2. Have the belts checked regularly for condition and tension in accordance with the maintenance schedule found in the "Maintenance" section of this manual.

8-18 Do-it-yourself
WARNING
Be sure the engine and ignition switch are off and that the parking brake is engaged securely.

CAUTION
Be sure to use the correct socket to remove the plugs. An incorrect socket can cause damage.

SPARK PLUG REPLACEMENT

KA24DE Engine

Platinum-tipped spark plug

It is not necessary to replace platinum-tipped spark plugs as frequently as conventional type spark plugs because they last much longer. Follow the maintenance schedule, but do not reuse the spark plugs by cleaning or regapping.

- Always replace spark plugs with recommended or equivalent ones.
VG33E Engine

It is not necessary to replace platinum-tipped spark plugs as frequently as conventional type spark plugs because they last much longer.

Follow the maintenance schedule, but do not reuse the spark plugs by cleaning or regapping.

- **Always replace spark plugs with recommended or equivalent ones.**

1. Disconnect spark plug cables. Keep track of the original cable locations.

When disconnecting, always hold the boots — not the cables. Mark all cables to identify their original location.

8-20 Do-it-yourself
2. Remove spark plugs with a spark plug wrench, (type A or B) supplied in the vehicle's tool bag.

3. Install spark plugs. When installing a plug, turn it two or three turns by hand and then tighten with a spark plug socket. Be careful not to overtighten it.
   
   **Tightening torque:**
   
   14 to 22 ft-lb (20 to 29 N·m)

4. Reconnect the spark plug cables to their original positions.

The filter element should not be cleaned and reused as it is given a special treatment. We recommend it be replaced according to the maintenance intervals shown in the "Maintenance" section of this manual. When replacing the filter, wipe the inside of the air cleaner housing and the cover with a damp cloth.
WARNING

- Operating the engine with the air cleaner off can cause you or others to be burned. The air cleaner not only cleans the air, it stops flame if the engine backfires. If it isn’t there and the engine backfires, you could be burned. Don’t drive with it off, and be careful working on the engine with the air cleaner off.

- Never pour fuel into the throttle body or attempt to start the engine with the air cleaner removed. Doing so could result in serious injury.
CAUTION

- After wiper blade replacement, return the wiper arm to its original position. Otherwise it may be damaged when the engine hood is opened.
- Make sure the wiper blade contacts the glass. Otherwise, the arm may be damaged from wind pressure.

If your windshield is not clear after using the windshield washer or if a wiper blade chatters when running, wax or another material may be on the blade or windshield.

Clean the outside of the windshield with a washer solution or a mild detergent. Your windshield is clean if beads do not form when rinsing with clear water.

Clean the blade by wiping it with a cloth soaked in a washer solution or a mild detergent. Then rinse the blade with clear water. If your windshield is still not clear after cleaning the blades and using the wiper, replace the blades.

1. Lift the wiper arm away from the windshield.
2. Push the release tab, then move the wiper blade down the wiper arm to remove.
3. Remove the wiper blade.
4. Insert the new wiper blade onto the wiper arm until it clicks into place.

WIPER BLADES
If you wax the surface of the hood, be careful not to let wax get into the washer nozzle. This may cause clogging or improper windshield washer operation. If wax gets into the nozzle, remove it with a needle or small pin.

Pull the parking brake lever up. If the number of clicks is out of the range listed above, see an authorized NISSAN dealer.

With the engine running, check distance A between the upper surface of the pedal and the metal floor.

<table>
<thead>
<tr>
<th>Distance A:</th>
<th>Manual Transmission</th>
<th>Automatic Transmission</th>
</tr>
</thead>
<tbody>
<tr>
<td>2WD Rear Wheel ABS</td>
<td>4 1/8 in. (105mm)</td>
<td>4 1/2 in. (115mm)</td>
</tr>
<tr>
<td>4WD Four Wheel ABS</td>
<td>4 in. (100mm)</td>
<td>4 1/4 in. (110mm)</td>
</tr>
</tbody>
</table>

If it is out of the range shown above, see an authorized NISSAN dealer.
Self-adjusting brakes

Your vehicle is equipped with self-adjusting brakes.

The front disc-type brakes self-adjust every time the brake pedal is applied. The rear drum-type brakes on two-wheel drive trucks self-adjust every time the parking brake is applied. The rear drum-type brakes on four-wheel drive trucks self-adjust every time the brake pedal is applied. If the brake pedal goes down farther than normal, it may be due to a lack of adjustment of the rear drum brakes. Apply the parking brake several times.

WARNING
If the brake pedal height does not return to normal, see an authorized NISSAN dealer and have it checked.

Brake pad wear indicators

The disc brake pads on your vehicle have audible wear indicators. When a brake pad requires replacement, it will make a high pitched scraping or screeching sound when the vehicle is in motion whether or not the brake pedal is depressed. Have the brakes checked as soon as possible if the wear indicator sound is heard.

Under some driving or climate conditions, occasional brake squeak, squeal or other noise may be heard. Occasional brake noise during light to moderate stops is normal and does not affect the function or performance of the brake system.

The rear drum brakes (if so equipped) do not have audible wear indicators. Should you ever hear an unusually loud noise from the rear drum brakes, have them inspected as soon as possible by an authorized NISSAN dealer.

Proper brake inspection intervals should be followed. For more information regarding brake inspections, see the appropriate maintenance schedule information in the “Maintenance Schedule” section of this manual.

BRAKE BOOSTER

Check the brake booster function with the following steps:

1. With the engine off, press and release the brake pedal several times. When brake pedal movement (distance of travel) remains the same from one pedal application to the next, continue on to next step.

2. While depressing the brake pedal, start the engine. The pedal height should drop a little.

3. With the brake pedal depressed, stop the engine. Keeping the pedal depressed for about 30 seconds, the pedal height should not change.

4. Run the engine for one minute without depressing the brake pedal, then turn it off. Depress the brake pedal several times. The pedal travel distance will decrease gradually with each depression as the vacuum is released from the booster.

If the brakes do not operate properly, have the brakes checked by an authorized NISSAN dealer.
Press the pedal by hand and be sure the free travel is within the above limit. If free travel is out of the range shown above, see an authorized NISSAN dealer.
FUSES

Passenger compartment

⚠️ CAUTION

Never use a fuse of higher amperage rating than that specified on the fuse box cover. This could damage the electrical system or cause a fire.

If the electrical equipment does not operate, check for an open fuse.

1. Be sure the ignition key and the headlight switch are OFF.
2. Remove the fuse box cover.
3. Remove the fuse with the fuse puller.
4. If the fuse is open, replace it with a new fuse.
5. If a new fuse opens again, have the electrical system checked and repaired by an authorized NISSAN dealer.
HEADLIGHTS

The headlight is a semi-sealed beam type which uses a replaceable headlight (halogen) bulb.

Replacing the headlight bulb
1. Open the engine hood.
2. Disconnect the negative (−) battery cable.
3. Disconnect the electrical connector from the rear end of the bulb.
4. Push down the spring retainer.
5. Remove the headlight bulb. Do not shake or rotate the bulb when removing it.
6. Install the new bulb in the reverse order of removal.

- Be sure the lip of the rubber cap contacts the headlight body.

DO NOT TOUCH THE BULB.

CAUTION
- High pressure halogen gas is sealed inside the halogen bulb. The bulb may break if the glass envelope is scratched or the bulb is dropped.
- When handling the bulb, do not touch the glass envelope.

CAUTION
- Use the same number and wattage as originally installed:
  Wattage 65/45
  Bulb No. HB1
- Aiming is not necessary after replacing the bulb.
- Do not leave the bulb out of the headlight reflector for a long period of time as dust, moisture, and smoke may enter the headlight body and affect the performance of the headlight.

- When aiming adjustment is necessary, contact an authorized NISSAN dealer.

Replacing procedures

All other lights are either type A, B, C or D. When replacing a bulb, first remove the lens and/or cover.
FRONT FOG LIGHT BULB REPLACEMENT (if so equipped)

**CAUTION**

- High pressure halogen gas is sealed inside the halogen bulb. The bulb may break if the glass envelope is scratched or the bulb is dropped.
- When handling the bulb, do not touch the glass envelope.

1. Unclip the two metal clips on the side of the fog lamp.
2. Pull out and support the fog lamp assembly.
3. Disconnect the fog lamp bulb connector.
4. Lift the spring retainer.
5. Remove the fog lamp bulb.

- The fog lamp bulb can not be separated from the wire and is serviced as an assembly.

6. Install the new bulb in the reverse order of removal. DO NOT TOUCH THE BULB.

Do-it-yourself  8-31
If you have a flat tire, see the “In case of emergency” section of this manual.

Maximum inflation pressure
Do not exceed the maximum inflation pressures shown on the side wall of the tire.

Tire inflation pressure
Periodically check the tire pressure (including the spare). Tire pressure should be checked when tires are COLD. COLD tire pressures are shown on the tire placard affixed to the inside of the glove box lid.

Incorrect tire pressure may adversely affect tire life and vehicle handling.

COLD pressure:
After vehicle has been parked for three hours or more or driven less than 1 mile (1.6 km).

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
</table>
| - Improperly inflated tires can fail suddenly and cause an accident
- The vehicle weight capacity is indicated on the tire placard. Do not load your vehicle beyond this capacity. Overloading your vehicle may result in reduced tire life, unsafe operating conditions due to premature tire failure, or unfavorable handling characteristics and could also lead to a serious accident. Loading beyond the specified capacity may also result in failure of other vehicle components.
- Before taking a long trip, or whenever you have loaded your vehicle heavily, use a tire pressure gauge to ensure that the tire pressure is at the specified level.
- Do not drive your vehicle over 85 MPH (137 km/h) unless it is equipped with high capability tires. Driving faster than 85 MPH (137 km/h) may result in tire failure, loss of control and possible injury.

Types of tires

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
</table>
| When changing or replacing tires, be sure all four tires are of the same type (i.e., Summer, All Season or Snow) and construction. An authorized NISSAN dealer may be able to help you with information about tire type, size, speed rating and availability. Replacement tires may have a lower speed rating than the factory equipped tires, and may not match the potential maximum vehicle speed. Never exceed the maximum speed rating of the tire.

All season tires
NISSAN specifies All Season tires on some models to provide good performance for use all year around, including snowy and icy road conditions. All Season Tires are identified by “ALL SEASON” and/or “M&S” on the tire sidewall. Snow tires have better
snow traction than All Season tires and may be more appropriate in some areas.

Summer tires

NISSAN specifies summer tires on some models to provide superior performance on dry roads. Summer tire performance in snow and ice will be substantially reduced. Summer tires do not have the tire traction rating “M&S” on the tire sidewall.

If you plan to operate your vehicle in snowy or icy conditions, NISSAN recommends the use of “SNOW” or “ALL SEASON” tires on all four wheels.

Snow tires

If snow tires are needed, it is necessary to select tires equivalent in size and load rating to the original equipment tires. If you do not, it can adversely affect the safety and handling of your vehicle.

Generally, snow tires will have lower speed ratings than factory equipped tires and may not match the potential maximum vehicle speed. Never exceed the maximum speed rating of the tire.

For additional traction on icy roads, studded tires may be used. However, some U.S. States and Canadian provinces prohibit their use. Check local, state and provincial laws before installing studded tires. Skid and traction capabilities of studded snow tires on wet or dry surfaces may be poorer than that of non-studded snow tires.

Four-wheel drive model

If you install snow tires, they must be the same size, brand, construction and tread pattern on all four wheels.

CAUTION

ONLY use spare tires specified for each four-wheel drive model.

Tire chains

Use of tire chains may be prohibited according to location. Check the local laws before installing tire chains. When installing tire chains, make sure they are the proper size for the tires on your vehicle and are installed according to the chain manufacturer’s suggestions. Use only SAE class “S” chains. Other types may damage your vehicle. Use chain tensioners when recommended by the tire chain manufacturer to ensure a tight fit. Loose end links of the tire chain must be secured or removed to prevent the possibility of whipping action damage to the fenders or undercarriage. If possible, avoid fully loading your vehicle when using tire chains. In addition, drive at a reduced speed. Otherwise, your vehicle may be damaged and/or vehicle handling and performance may be adversely affected.

Never install tire chains on a TEMPORARY USE ONLY spare tire.

Tire chains must be installed only on the rear wheels and not on the front wheels.

Do not use tire chains on dry roads. Driving with chains in such conditions can cause damage to the various mechanisms of the vehicle due to some overstress. When driving on clear paved roads, be sure to change to 2WD.
Tire rotation

NISSAN recommends rotating the tires every 7,500 miles (12,000 km) for 2WD vehicles and every 3,750 miles (6,000 km) for 4WD vehicles.

See “Flat tire” in the “In case of emergency” section for tire replacing procedures.

Wheel nut tightening torque:
87 to 108 ft-lb (118 to 147 N·m)

WARNING

- After rotating the tires, adjust the tire pressure.
- Retighten the wheel nuts after the wheels have been run for the first 600 miles (1,000 km) (also in cases of a flat tire, etc.).
- Do not include the TEMPORARY USE ONLY spare tire in the tire rotation.

Tire wear and damage

WARNING

- Tires should be periodically inspected for wear, cracking, bulging or objects caught in the tread. If excessive wear, cracks, bulging or deep cuts are found, the tire should be replaced.
- The original tires have a built-in tread wear indicator. When the wear indicator is visible, the tire should be replaced.
Improper service for a TEMPORARY USE ONLY spare tire may result in serious personal injury. If it is necessary to repair the TEMPORARY USE ONLY spare tire, contact an authorized NISSAN dealer.

Changing tires and wheels

When replacing a tire, use the same size, tread design, speed rating and load carrying capacity as originally equipped. Recommended types and sizes are shown in “Wheel/tire size” in the “Technical and consumer information” section of this manual.

**WARNING**

- Improper service for a TEMPORARY USE ONLY spare tire may result in serious personal injury. If it is necessary to repair the TEMPORARY USE ONLY spare tire, contact an authorized NISSAN dealer.

- If the wheels are changed for any reason, always replace with wheels which have the same offset dimension. Wheels of a different offset could cause early tire wear, poor vehicle handling characteristics and/or interference with the brake discs/drums. Such interference can lead to decreased braking efficiency and/or early brake pad/shoe wear.

- Do not install a deformed wheel or tire even if it has been repaired. Such wheels or tires could have structural damage and could fail without warning.

- The use of retread tires is not recommended.

**FOUR-WHEEL DRIVE MODELS**

**CAUTION**

Always use tires of the same size, brand, construction (bias, bias-belted or radial), and tread pattern on all four wheels. A spare tire of same size, brand, construction and tread pattern must also be used.

Failure to do so may result in a circumference difference between tires on the front and rear axles which will cause excessive tire wear and may damage the transmission, transfer case and differential gears.

If excessive tire wear is found, it is recommended that all four tires be replaced with tires of the same size, brand, construction and tread pattern. The tire pressure and wheel alignment should also be checked and corrected as necessary. Contact an authorized NISSAN dealer.

Wheel balance

Unbalanced wheels may affect vehicle handling and tire life. Even with regular use, wheels can get out of balance. Therefore, they should be balanced as required.

Wheel balance service should be performed with the wheels off the vehicle. Spin balancing the front wheels on the vehicle could lead to transmission damage.

Care of wheels

- Wash the wheels when washing the vehicle to maintain their appearance.
- Clean the inner side of the wheels when the wheel is changed or the underside of the vehicle is washed.
- Do not use abrasive cleaners when washing the wheels.
- Inspect wheel rims regularly for dents or corrosion. This may cause loss of pressure or damage the tire bead.
- NISSAN recommends waxing the road wheels to protect against road salt in areas where it is used during winter.

Spare tire
Your vehicle may be equipped with a TEMPORARY USE ONLY spare tire.

To avoid property damage or personal injury when using the TEMPORARY USE ONLY spare tire, observe the following cautions:

⚠️ WARNING
- The spare tire should be used for emergency use only. It should be replaced by the standard tire at the first opportunity to avoid possible tire or differential damage.
- Drive carefully while the TEMPORARY USE ONLY spare tire is installed. Avoid sharp turns and abrupt braking while driving.
- Periodically check spare tire inflation pressure. Always keep the pressure of the T135/70R16 spare tire at 60 psi (420 kPa, 4.2 bar). For the full size spare tire pressure, check the tire placard located on the inside of the glovebox lid.
- Do not drive the vehicle at speeds faster than 50 MPH (80 km/h).
- When driving on roads covered with snow or ice, the TEMPORARY USE ONLY spare tire should be used on the front wheels and the original tire used on the rear wheels (drive wheels). Use tire chains only on the two rear original tires.
- Tire tread of the TEMPORARY USE ONLY spare tire will wear at a faster rate than the standard tire. Replace the TEMPORARY USE ONLY spare tire as soon as the tread wear indicators appear.
- Do not use the TEMPORARY USE ONLY spare tire on other vehicles.
- Do not use more than one TEMPORARY USE ONLY spare tire at the same time.
- Do not tow a trailer when the TEMPORARY USE ONLY T135/70R16 spare is installed.

⚠️ CAUTION
- The transfer control lever must be in the 2H position to prevent the transfer case and differential gears from being damaged.
- Do not use tire chains on a TEMPORARY USE ONLY spare tire. Tire chains will not fit properly on a TEMPORARY USE ONLY spare tire and may cause damage to the vehicle.
- Because the TEMPORARY USE ONLY spare tire is smaller than the original tire, ground clearance is reduced. To avoid damage to the vehicle, do not drive over obstacles. Also, do not drive the vehicle through an automatic car wash since it might get caught.
Checking water entry

If you have driven in deep water or mud, check water entry in the clutch housing by removing the blind plug at the bottom of the transmission case. After checking, be sure to reinstall the plug.

Under the hood and vehicle.................................9-4

Periodic maintenance schedules ...............................9-5
Schedule one ...........................................................9-5
Schedule two ............................................................9-5
Explanation of maintenance items .........................9-10
Your new NISSAN has been designed to have minimum maintenance requirements with longer service intervals to save you both time and money. However, some day-to-day and regular maintenance is essential to maintain your NISSAN's good mechanical condition, as well as its emission and engine performance.

It is the owner's responsibility to make sure that the specified maintenance, as well as general maintenance, is performed.

As the vehicle owner, you are the only one who can ensure that your vehicle receives proper maintenance. You are a vital link in the maintenance chain.

General maintenance

General maintenance includes those items which should be checked during normal day-to-day operation of the vehicle. They are essential if your vehicle is to continue to operate properly. It is your responsibility to perform these maintenance procedures regularly as prescribed.

These checks or inspections can be done by yourself, a qualified technician or, if you prefer, an authorized NISSAN dealer.

Periodic maintenance

The maintenance items listed under periodic maintenance in this section are required to be serviced at regular intervals. However, under severe driving conditions, additional or more frequent maintenance will be required.

Where to go for service

If maintenance service is required or your vehicle appears to malfunction, have the systems checked and tuned by an authorized NISSAN dealer.

NISSAN technicians are well-trained specialists who and are kept up to date with the latest service information through technical bulletins, service tips, and in-dealership training programs. They are completely qualified to work on NISSAN vehicles before they work on your vehicle, rather than after they have worked on it.

You can be confident that an authorized NISSAN dealer's service department performs the best job to meet the maintenance requirements on your vehicle — in a reliable and economic way.

During the normal day-to-day operation of the vehicle, general maintenance should be performed regularly as prescribed in this section. If you detect any unusual sounds, vibrations or smells, be sure to check for the cause or have an authorized NISSAN dealer do it promptly. In addition, you should notify an authorized NISSAN dealer if you think that repairs are required.

When performing any checks or maintenance work, closely observe the precautions in the "Do-it-yourself" section of this manual.

OUTSIDE THE VEHICLE

The maintenance items listed here should be performed from time to time, unless otherwise specified.

Additional information on the following items with "*" is found in the "Do-it-yourself" section of this manual.

Tires* Check the pressure with a gauge periodically when at a service station, including the spare, and adjust to the specified pressure if necessary. Check carefully for damage, cuts or excessive wear.

Wheel nuts* When checking the tires, make
sure no wheel nuts are missing, and check for any loose wheel nuts. Tighten if necessary.

**Tire rotation** Tires should be rotated every 7,500 miles (12,000 km) for 2WD vehicles and 3,750 miles (6,000 km) for 4WD vehicles.

**Wheel alignment and balance** If the vehicle should pull to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment.

If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed.

**Windshield wiper blades** Check for cracks or wear if they do not wipe properly.

**Doors and hood** Check that all doors and the hood operate properly. Also ensure that all latches lock securely. Lubricate hinges, latches, rollers and links if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released.

When driving in areas using road salt or other corrosive materials, check lubrication frequently.

**Lights** Make sure that the headlights, stop lights, tail lights, turn signal lights, and other lights are all operating properly and installed securely. Also check headlight aim.

**INSIDE THE VEHICLE**

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.

**Additional information on the following items with an "*" is found in the "Do-it-yourself" section of this manual.**

**Warning lights and chimes** Make sure all warning lights and chimes are operating properly.

**Windshield wiper and washer** Check that the wipers and washer operate properly and that the wipers do not streak.

**Windshield defroster** Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioner.

**Steering wheel** Check for changes in the steering conditions, such as excessive free-play, hard steering or strange noises.

**Seats** Check seat position controls such as seat adjusters, seatback recliner, etc. to ensure they operate smoothly and all latches lock securely in every position. Check that the head restraints move up and down smoothly and the locks (if so equipped) hold securely in all latched positions.

**Seat belts** Check that all parts of the seat belt system (e.g., buckles, anchors, adjusters and retractors) operate properly and smoothly, and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.

**Accelerator pedal** Check the pedal for smooth operation and make sure the pedal does not catch or require uneven effort. Keep the floor mat away from the pedal.

**Clutch pedal** Make sure the pedal operates smoothly and check that it has the proper free travel.

**Brakes** Check that the brakes do not pull the vehicle to one side when applied.

**Brake pedal and booster** Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster func-
tion. Be certain to keep the floor mat away from the pedal.

Parking brake* Check that the lever has the proper travel and confirm that your vehicle is held securely on a fairly steep hill with only the parking brake applied.

Automatic transmission Park position mechanism Check that the lock release button on the selector lever operates properly and smoothly. On a fairly steep hill check that your vehicle is held securely with the selector lever in the P position without applying any brakes.

UNDER THE HOOD AND VEHICLE

The maintenance items listed here should be checked periodically (e.g., each time you check the engine oil or refuel).

Additional information on the following items with an * is found in the “Do-it-yourself operations” section.

Windshield washer fluid* Check that there is adequate fluid in the reservoir.

Engine coolant level* Check the coolant level when the engine is cold.

Radiator and hoses Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the hoses have no cracks, deformation, rot or loose connections.

Brake and clutch fluid levels* Make sure that the brake and clutch fluid level is between the MIN and MAX lines on the reservoir.

Battery* Check the fluid level in each cell. It should be between the MAX and MIN lines.

Engine drive belts* Make sure the drive belts are not frayed, worn, cracked or oily.

Engine oil level* Check the level after parking the vehicle on a level surface with the engine off. Wait a few minutes for the oil to drain back into the oil pan.

Power steering fluid level* and lines Check the level when the fluid is cold, with the engine off. Check the lines for proper attachment, leaks, cracks, etc.

Automatic transmission fluid level* Check the level after putting the selector lever in P with the engine idling at operating temperature.

Exhaust system Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a smell of exhaust fumes, immediately have the exhaust system inspected by an authorized NISSAN dealer. See the carbon monoxide warning in the “Starting and driving” section of this manual.

Underbody The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances from the underbody, otherwise rust may form on the floor pan, frame, fuel lines and exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, in those areas where mud and dirt may have accumulated. See the “Appearance and care” section of this manual.

Fluid leaks Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or if gasoline fumes are evident, check for the cause and have it corrected immediately.
To ensure smooth, trouble-free, safe and economical driving, NISSAN provides two periodic maintenance schedules that may be used, depending upon the conditions in which you usually drive. These schedules contain both distance and time intervals, up to 60,000 miles (96,000 km)/48 months. For most people, the odometer reading will indicate when service is needed. However, if you drive very little, your vehicle should be serviced at the regular time intervals shown in the schedule.

After 60,000 miles (96,000 km)/48 months, continue periodic maintenance at the same mileage/time intervals.

SCHEDULE ONE
Follow Periodic Maintenance Schedule one if your driving habits frequently include one or more of the following driving conditions:

- Repeated short trips of less than 5 miles (8 km).
- Repeated short trips of less than 10 miles (16 km) with outside temperatures below freezing.
- Operating the vehicle in hot weather during stop-and-go “rush hour” traffic.
- Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use.
- Driving in dusty conditions.
- Driving on rough, muddy, or salt spread roads.
- Towing a trailer, using a camper or a car-top carrier.

SCHEDULE TWO
Follow Periodic Maintenance Schedule two if none of the driving conditions shown in Schedule one apply to your driving habits.

Maintenance for off-road driving (only)
Whenever you drive off-road through sand, mud or water as deep as the wheel hub, more frequent maintenance may be required of the following items:

- Brake pads and rotors
- Brake linings and drums
- Brake lines and hoses
- Wheel bearing grease and free-running hub grease
- Differential, transmission and transfer oil
- Steering linkage
- Propeller shafts and front drive shafts
- Air cleaner filter

These items should be checked frequently to assure safe and proper operation of your vehicle.

</tbody>
</table>

#### Emission control system maintenance

| Drive belts                                      | I* |
| Air cleaner filter                              | I* |
| Positive crankcase ventilation (PCV) filter     | I* |
| (KA24DE only) See NOTE (1)                      | R |
| EVAP vapor lines                                | I* |
| Fuel lines                                      | I* |
| Fuel filter                                     | I* |
| Engine coolant See NOTE (2)                     | R |
| Engine oil                                      | R |
| Engine oil filter                               | R |
| Spark plugs (Use PLATINUM-TIPPED type)          | R |
| Intake and exhaust valve clearance (KA24DE only) | Replace every 105,000 miles (168,000 km) |

#### NOTE:

1. If operating mainly in dusty conditions, more frequent maintenance may be required.
2. If vehicle is operated under extremely adverse weather conditions or in areas where ambient temperatures are either extremely low or extremely high, the filters might become clogged. In such an event, replace them immediately.
3. After 60,000 miles (96,000 km) or 48 months, replace every 30,000 miles (48,000 km) or 24 months.
4. If valve noise increases, inspect valve clearance.

* Maintenance items and intervals with an "*" are recommended by NISSAN for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

### Supplemental air bag system

See NOTE (1)

**NOTE:** (1) Inspect the supplemental air bag system 10 years after the date of manufacture noted on the FMVSS certification label.

**Maintenance**  
9-9
EXPLANATION OF MAINTENANCE ITEMS

Additional information on the following items with an "*" is found in the "Do-it-yourself" section of this manual.

Emission control system maintenance

Drive belts* Check drive belts for wear, fraying or cracking and also for proper tension. Replace any damaged drive belts.

Air cleaner filter Under normal driving conditions, the air cleaner filter should be replaced in accordance with the maintenance schedule. However, driving the vehicle in dusty areas may cause rapid clogging of the element. Consequently, the element may have to be replaced more frequently.

Positive crankcase ventilation (PCV) filter Under normal driving conditions, the filter should be replaced in accordance with the maintenance schedule. If the vehicle is operated under extremely adverse weather conditions or in areas where ambient temperatures are either extremely low or extremely high, the filter may become clogged more rapidly. In such an event, replace the filter immediately.

EVAP Vapor lines Check vapor lines and connections for leaks, looseness, or deterioration. If leaks are found, replace the lines.

Fuel lines (hoses, piping, connections, etc.) Check the fuel hoses, piping and connections for leaks, looseness or deterioration. Replace any damaged parts.

Fuel filter If the vehicle is operated under extremely adverse weather conditions or in areas where ambient temperatures are either extremely low or extremely high, the filter might become clogged. In such an event, replace the filter immediately.

Engine coolant* Flush and refill the cooling system.

Engine oil and oil filter* Under normal driving conditions, the engine oil and oil filter should be replaced in accordance with the maintenance schedule. However, under severe driving conditions, they may have to be replaced more frequently.

Spark plugs* Replace with new plugs having the correct heat range.

Chassis and body maintenance

Brake lines and cables Check the brake lines and hoses (including brake booster vacuum hoses, connections & check valve) and parking brake cables for proper attachment, leaks, cracks, chafing, abrasion, deterioration, etc.

Brake pads, rotors, drums and linings Check these and the other brake components for wear, deterioration and leaks. Under severe driving conditions, they may have to be inspected more frequently.

Manual and automatic transmission, transfer and differential gear oil Visually inspect for signs of leakage and replace oil for limited-slip differential. Under severe driving conditions, the oil should be replaced at the specified interval.

Steering gear (box) and linkage, axle and suspension parts and drive shaft boots Check for damage, looseness and leakage of oil or grease. Under severe driving conditions, they may have to be inspected more frequently.
**Propeller shaft(s)** Check the propeller shaft(s) for damage, looseness and grease leakage under severe driving conditions (only).

**Front wheel bearing grease and free-running hub grease** Check the wheel bearing for grease leakage around grease seals, axial end play and smooth turning. Repack these in accordance with the maintenance schedule (4x2).

Check the wheel bearing and free running hub for grease leakage around grease seals, axial end play and smooth turning. Repack these in accordance with the maintenance schedule. In case of frequent driving in muddy water, the bearing grease and free-running hub grease inspection should be performed more frequently (only).

**Exhaust system** Visually check the exhaust pipes, muffler, and hangers for proper attachment, leaks, cracks, chafing, abrasion, deterioration, etc. Under severe driving conditions, inspection should be performed more frequently.

**Supplemental air bag system** Check the supplemental air bag system components for proper attachment, damage, deformities, cracks, rust, etc. Work around and on the supplemental air bag system should be done by an authorized NISSAN dealer.

**Automatic transmission fluid**

Refill to the proper oil level according to the instructions in the “Do-it-yourself” section.

**Power steering fluid**

Genuine Nissan PSF2

**Brake and clutch fluid**

Genuine Nissan Brake Fluid⁵ or equivalent DOT 3 (US FMVSS No. 116)

**Multi-purpose grease**

NLGI No. 2 (Lithium Complex)

**Air conditioning system refrigerant**

lb (kg) 1.32 - 1.54 (0.60 - 0.70) HFC-134a (R-134a)⁶

**Air conditioning system lubricant**

6.8 oz 7.0 oz 200 ml Nissan A/C System Oil Type R or equivalent⁶

¹: For further details, see “Recommended SAE gear oil viscosity”.
²: SAE 90 is acceptable in temperatures above 0°F (-18°C).
³: Contact your NISSAN dealer for a list of approved oils.
⁴: Dexron™ III/Mercon™ or equivalent may also be used. Outside the Continental United States and Alaska contact an authorized Nissan dealership for more information regarding suitable fluids, including recommended brand(s) of Dexron™ III/Mercon™ Automatic Transmission Fluid.
⁵: Available in mainland U.S.A. through an authorized NISSAN dealer.
⁶: For further details, see “Air conditioner specification label”.

---

**Technical and consumer information** 10-3
FUEL RECOMMENDATION

Your vehicle is designed to operate on unleaded gasoline with an octane rating of at least 87 AKI (Anti-Knock Index) (Research octane number 91).

⚠️ CAUTION

- Using a fuel other than that specified could adversely affect the emission control devices and systems, and could also affect the warranty coverage.
- Under no circumstances should a leaded gasoline be used, since this will damage the three-way catalyst.

Reformulated Gasoline

Some fuel suppliers are now producing reformulated gasolines. These gasolines are specially designed to reduce vehicle emissions. NISSAN supports efforts towards cleaner air and suggests that you use reformulated gasoline when available.

Gasoline containing oxygenates

Some fuel suppliers sell gasoline containing oxygenates such as ethanol, MTBE and methanol with or without advertising their presence. Nissan does not recommend the use of fuels of which the oxygenate content and the fuel compatibility for your NISSAN cannot be readily determined. If in doubt, ask your service station manager.

If you use oxygenate-blend gasoline, please take the following precautions as the usage of such fuels may cause vehicle performance problems and/or fuel system damage.

- The fuel should be unleaded and have an octane rating no lower than that recommended for unleaded gasoline.
- If an oxygenate-blend, excepting a methanol blend, is used, it should contain no more than 10% oxygenate. (MTBE may, however, be added up to 15%.)
- If a methanol blend is used, it should contain no more than 5% methanol (methyl alcohol, wood alcohol). It should also contain a suitable amount of appropriate cosolvents and corrosion inhibitors. If not properly formulated with appropriate cosolvents and corrosion inhibitors, such methanol blends may cause fuel system damage and/or vehicle performance problems. At this time, sufficient data is not available to ensure that all methanol blends are suitable for use in NISSAN vehicles.

If any driveability problems such as engine stalling and hard hot starting are experienced after using oxygenate-blend fuels, immediately change to a non-oxygenate fuel or a fuel with a low blend of MTBE.

Take care not to spill gasoline during refueling. Gasoline containing oxygenates can cause paint damage.

After Market Fuel Additives

NISSAN does not recommend the use of any fuel additives (i.e., fuel injector cleaner, octane booster, intake valve deposit removers, etc.) which are sold commercially. Many of these additives intended for gum, varnish or deposit removal may contain active solvents or similar ingredients that can be harmful to the fuel system and engine.
Octane rating tips

In most parts of North America, you should use unleaded gasoline with an octane rating of at least 87 AKI (Anti-Knock Index). However, you may use unleaded gasoline with an octane rating as low as 85 AKI in high altitude areas (over 4,000 ft [1,219 m]) such as: Colorado, Montana, New Mexico, Utah, Wyoming, northeastern Nevada, southern Idaho, western South Dakota, western Nebraska, and the part of Texas which is directly south of New Mexico.

Using unleaded gasoline with an octane rating lower than stated above can cause persistent, heavy “spark knock.” (“Spark knock” is a metallic rapping noise.) If severe, this can lead to engine damage. If you detect a persistent heavy spark knock even when using gasoline of the stated octane rating, or if you hear steady spark knock while holding a steady speed on level roads, have an authorized NISSAN dealer correct the condition. Failure to correct the condition is misuse of the vehicle, for which NISSAN is not responsible.

Incorrect ignition timing may result in spark knock, after-run and/or overheating, which may cause excessive fuel consumption or engine damage. If any of the above symptoms are encountered, have your vehicle checked at an authorized NISSAN dealer.

However, now and then you may notice light spark knock for a short time while accelerating or driving up hills. This is no cause for concern, because you get the greatest fuel benefit when there is light spark knock for a short time under heavy engine load.
ENGINE OIL AND OIL FILTER RECOMMENDATION

Selecting the correct oil

It is essential to choose engine oil with the correct quality and viscosity to ensure satisfactory engine life and performance. NISSAN recommends the use of a low-friction oil (energy conserving oil) in order to improve fuel economy and conserve energy. Oils which do not have the specified quality label should not be used as they could cause engine damage.

Mineral-based or synthetic type oils may be used in your NISSAN vehicle. These oils must however, meet the API quality and SAE viscosity ratings specified for your vehicle. Do not mix mineral-based and synthetic type oils in the engine.

Oil additives

NISSAN does not recommend the use of oil additives. The use of an oil additive is not necessary when the proper oil type is used and maintenance intervals are followed. Oil which may contain foreign matter or has been previously used should not be used.

Oil viscosity

The engine oil viscosity or thickness changes with temperature. Because of this, it is important that the engine oil viscosity be selected based on the temperatures at which the vehicle will be operated before the next oil change. The chart “Recommended SAE viscosity number” shows the recommended oil viscosities for the expected ambient temperatures. Choosing an oil viscosity other than that recommended
could cause serious engine damage.

Selecting the correct oil filter

Your new NISSAN vehicle is equipped with a high-quality genuine NISSAN oil filter. When replacing, use a genuine NISSAN oil filter or its equivalent for the reason described in “Change intervals”.

Change intervals

The oil and oil filter change intervals for your engine are based on the use of the specified quality oils and filters. Oil and filter other than the specified quality, or oil and filter change intervals longer than recommended could reduce engine life. Damage to the engine caused by improper maintenance or use of incorrect oil and filter quality and/or viscosity is not covered by the new NISSAN vehicle warranties.

Your engine was filled with a high quality engine oil when it was built. You do not have to change the oil before the first recommended change interval. Oil and filter change intervals depend upon how you use your vehicle. Operation under the following conditions may require more frequent oil and filter changes:

- repeated short distance driving at cold outside temperatures,
- driving in dusty conditions,
- extensive idling,
- towing a trailer.

RECOMMENDED SAE VISCOSITY NUMBER

GASOLINE ENGINE OIL

- SAE 5W-30 viscosity oil is preferred for all temperatures. SAE 10W-30 viscosity oil may be used if the ambient temperature is above 0°F (-18°C).

Technical and consumer information  10-7
AIR CONDITIONER SYSTEM REFRIGERANT AND LUBRICANT RECOMMENDATIONS

The air conditioner system in this NISSAN vehicle must be charged with the refrigerant HFC-134a (R-134a) and the lubricant, NISSAN A/C system lubricant Type R or the exact equivalents.

**CAUTION**

Use of any other refrigerant or lubricant will cause severe damage and you will need to replace your vehicle’s entire air conditioner system.

The refrigerant HFC-134a (R-134a) in your NISSAN vehicle does not harm the earth’s ozone layer. Although this refrigerant does not affect the earth’s atmosphere, certain government regulations require the recovery and recycling of any refrigerant during automotive air conditioner system service. An authorized NISSAN dealer has the trained technicians and equipment needed to recover and recycle your air conditioner system refrigerant.

Contact an authorized NISSAN dealer when servicing your air conditioner system.

- 80W-90 for the differential and 75W-90 for the transfer case are preferable for ambient temperatures below 104°F (40°C).

**Gross vehicle weight rating**

lb (kg)

**Gross axle weight rating**

Front lb (kg)

Rear lb (kg)

*See the “F.M.V.S.S. certification label” on the driver side lock pillar.

*1: On step bumper equipped models, the bumper adds 6.6 in (168 mm) to the overall length.
When planning to drive your NISSAN vehicle in another country, you should first find out if the fuel available is suitable for your vehicle’s engine.

Using fuel with too low an octane rating may cause engine damage. All gasoline vehicles can be operated with unleaded gasoline. Therefore, avoid driving your vehicle in areas where appropriate fuel is not available.

When transferring the registration of your vehicle to another country, state, province or district, it may be necessary to modify the vehicle to meet local laws and regulations.

The laws and regulations for motor vehicle emission control and safety standards vary according to the country, state, province or district; therefore, vehicle specifications may differ.

When any vehicle is to be taken into another country, state, province or district and registered, its modifications, transportation and registration are the responsibility of the user. NISSAN is not responsible for any inconvenience that may result.

VEHICLE IDENTIFICATION NUMBER (VIN) PLATE

The vehicle identification number plate is attached to the top of the instrument panel on the driver’s side. This number is the identification for your vehicle and is used in the vehicle registration.

VEHICLE IDENTIFICATION NUMBER (Chassis number)
ENGINE SERIAL NUMBER
The number is stamped on the engine as shown.

FMVSS CERTIFICATION LABEL
The Federal Motor Vehicle Safety Standard (FMVSS) certification label is attached as shown. This label contains valuable vehicle information, such as: Gross Vehicle Weight Rating (GVWR), Gross Axle Weight Rating (GAWR), month and year of manufacture, Vehicle Identification Number (VIN), etc. Review it carefully.

Technical and consumer information 10-13
EMISSION CONTROL INFORMATION LABEL
The emission control information label is attached to the underside of the hood as shown.

TIRE PLACARD
The cold tire pressure is shown on the tire placard affixed to the inside of the glove box lid.

AIR CONDITIONER SPECIFICATION LABEL
The label is attached to the underside of the hood as shown.
Use the following steps to mount the license plate:

1. Remove the two screw grommets from the glove box.
2. Carefully drill a hole using a 0.39 inch (10 mm) drill bit at each location mark (small dimple) on the bumper fascia.
3. Insert one grommet into each hole.
4. Insert a small screwdriver into the grommet to turn the plastic insert.
5. Install the license plate with two M5 x 25 mm bolts.

VEHICLE LOADING INFORMATION

CAUTION
- It is extremely dangerous to ride in a cargo area inside of a vehicle. In a collision, people riding in these areas are more likely to be seriously injured or killed.
- Do not allow people to ride in any area of your vehicle that is not equipped with seats and seat belts.
- Be sure everyone in your vehicle is in a seat and using a seat belt properly.

Terms
- It is important to familiarize yourself with the following terms before loading your vehicle:
  - Curb Weight (actual weight of your vehicle) – vehicle weight including: standard and optional equipment, fluids, emergency tools, and spare tire assembly. This weight does not include passengers and cargo.
  - GVW (Gross Vehicle Weight) – curb weight plus the combined weight of passengers and cargo.
• GVWR (Gross Vehicle Weight Rating) – maximum total weight (load) limit specified for the vehicle.
• GAWR (Gross Axle Weight Rating) – maximum weight (load) limit specified for the front or rear axle.

Determining Vehicle Load Capacity

The load capacity of this vehicle is determined by weight, not by available cargo space. For example, a luggage rack, bike carrier, cartop carrier or similar equipment does not increase load carrying capacity of your vehicle.

To determine vehicle load capacity:

Vehicle weight can be determined by using a commercial-grade scale, found at places such as a truck stop, gravel quarry, grain elevator, or a scrap metal recycling facility.

1) Determine the curb weight of your vehicle.

2) Compare the curb weight amount to the GVWR specified for your vehicle to determine how much more weight your vehicle can carry.

3) After loading (cargo and passengers), reweigh your vehicle to determine if either GVWR or GAWR for your vehicle is exceeded. If GVWR is exceeded, remove cargo as necessary. If either the front or rear GAWR is exceeded, shift the load or remove cargo as necessary.

Loading Tips

• The GVW must not exceed GVWR or GAWR as specified on the FMVSS Certification Label.
• Do not load the front and rear axle to the GAWR. Doing so will exceed the GVWR.
• Loads should be spread out, and cargo should be properly secured. Large or heavy objects should be placed toward the front of the trunk box to help prevent sliding or shifting.

SECURING THE LOAD

For your convenience, tie down hooks are placed at each corner of the truck box. These may be used to help secure cargo loaded into the truck box.

**WARNING**

• Properly secure all cargo with ropes or straps to help prevent it from sliding or shifting. In a sudden stop or collision, unsecured cargo could cause personal injury.
Do not place cargo higher than the seatbacks. In a sudden stop or collision, unsecured cargo could cause personal injury.

Do not load your vehicle any heavier than the GVWR or the maximum front and rear GAWR's. If you do, parts on your vehicle can break, or it can change the way your vehicle handles. This could result in loss of control and cause personal injury.

**CAUTION**

Overloading can shorten the life of your vehicle. Failures caused by overloading are not covered by your warranty.

TRUCK-CAMPER LOADING

This information is provided for you to properly install a slide-in camper and is based on the National Highway Traffic Safety Administration regulations. It is recommended that, before installing the camper, you carefully read the following information and ensure that the camper meets the specifications.

This information may not apply to some Canada model vehicles.

Special body vehicles

Some vehicles are equipped with commercial or camper bodies. However, this Owner's Manual does not cover these options. For further information, please refer to the body manufacturer’s instruction manual.

Location for center of gravity

The illustration indicates the recommended cargo center of gravity location zone.

Regular cab:
- L1 = 950.0 mm (37.4 in), L2 = 1,077.0 mm (42.4 in)

King cab:
- L1 = 960.1 mm (37.8 in), L2 = 1,087.1 mm (42.8 in)

**Technical and consumer information 10-17**
**WARNING**

Improper loading may be dangerous. If a load is too far back, it can affect handling characteristics. If a load is too far forward, the front axle may be overloaded.

---

When the truck is used to carry a slide-in camper, the total cargo load of the truck consists of the camper manufacturer’s weight figure, plus:

- the weight of installed additional camper equipment not included in the camper manufacturer’s weight figure,
- the weight of camper cargo,
- and the weight of occupants in the camper.

The total cargo load should not exceed the truck’s cargo weight rating and the camper’s center of gravity should fall within the truck’s recommended center of gravity location zone when installed.

---

**WARNING**

Overloading or improper loading can adversely affect vehicle handling, braking and performance and may lead to accidents.

Measurement of weights

Secure loose items to prevent weight shifts that could affect the balance of your vehicle. When the truck camper is loaded, drive to a scale and weigh the front and the rear wheels separately to determine axle loads. Individual axle loads should not exceed either of the gross axle weight ratings (GAWR). The total of the axle loads should not exceed the gross vehicle weight rating (GVWR). These ratings are given on the vehicle certification label that is located on the driver’s door lock pillar. If weight ratings are exceeded, move or remove items to bring all weights below the ratings.
Your new vehicle was designed to be used primarily to carry passengers and cargo. Remember that towing a trailer will place additional loads on your vehicle's engine, drive train, steering, braking and other systems.

A Nissan Trailer Towing Guide is available from an authorized NISSAN dealer. This guide includes information on trailer towing ability and the special equipment required for proper towing.

### Maximum load limits

**Maximum trailer loads**

Never allow the total trailer load to exceed the value specified in the following Towing Load/Specification Chart. The total trailer load equals trailer weight plus its cargo weight.

- When towing a trailer load of 1,000 lb (454 kg) or more, trailers with a brake system MUST be used.

The maximum GCWR (Gross Combined Weight Rating) should not exceed the value specified in the following Towing Load/Specification Chart.

The GCWR equals the combined weight of the towing vehicle (including passengers and cargo) plus the total trailer load. Towing loads greater than these or using improper towing equipment could adversely affect vehicle handling, braking and performance.

### WARNING

Vehicle damage and/or personal injury resulting from improper towing procedures is not covered by NISSAN warranties. Information on trailer towing and required towing equipment should be obtained from dealers who specialize in providing trailers or other towing equipment.

**Tongue load**

Keep the tongue load between 9 to 11 percent of the total trailer load within the maximum tongue load limits shown in the following Towing Load/Specification Chart. If the tongue load becomes excessive, rearrange cargo to allow for proper tongue load.
Maximum gross vehicle weight/maximum gross axle weight

The gross vehicle weight of the towing vehicle must not exceed the gross vehicle weight rating (GVWR) shown on the FMVSS certification label. The gross vehicle weight equals the combined weight of the unloaded vehicle, passengers, luggage, hitch, trailer tongue load and any other optional equipment. In addition, front or rear gross axle weight must not exceed the gross axle weight rating (GAWR) shown on the FMVSS certification label.

Technical and consumer information 10-23
Trailer hitch

Check the towing capacity of your bumper hitch or receiver-type frame mounted hitch. Choose a proper hitch for your vehicle and trailer. A genuine Nissan trailer hitch is available from your NISSAN dealer (Canada only). Make sure the trailer hitch is securely attached to the vehicle to help avoid personal injury or property damage due to sway caused by crosswinds, rough road surfaces or passing trucks.

**CAUTION**
- Special hitches which include frame reinforcements are required for towing above 2,000 lb (907 kg). Suitable genuine NISSAN hitches for pickup trucks are available at an authorized NISSAN dealer.
- Do not use axle-mounted hitches.
- Do not modify the vehicle exhaust system, brake system, etc. when the hitch is installed.
- To reduce the possibility of additional damage if your vehicle is struck from the rear, where practical, remove the hitch when not in use. Remove receiver when not in use. After the hitch is removed, seal the bolt holes to prevent exhaust fumes, water or dust from entering the passenger compartment.
- Check regularly to make sure that all trailer hitch mounting bolts are securely fastened.

Tire pressures

- When towing a trailer, inflate the vehicle tires to the recommended cold tire pressure indicated on the tire placard (affixed to the inside of the glove box lid).
- Trailer tire condition, size, load rating and proper inflation pressure should be in accordance with the trailer and tire manufacturers’ specifications.

Safety chain

Always use suitable safety chains between your vehicle and the trailer. Safety chains should be crossed and should be attached to the hitch, not to the vehicle bumper or axle. Be sure to leave enough slack in the chain to permit turning corners.

Trailer lights

Trailer lights should comply with Federal and/or local regulations. For assistance in hooking up trailer lights, contact an authorized NISSAN dealer.

Trailer brakes

If your trailer is equipped with a braking system, make sure it conforms to Federal and/or local regulations and that it is properly installed.

**WARNING**

Never connect a trailer brake system directly to the vehicle brake system.

Pre-towing tips

- Be certain your vehicle maintains a level position when a loaded and/or unloaded trailer is hitched. Do not drive the vehicle if it has an abnormal nose-up or nose-down condition; check for improper tongue load, overload, worn suspension or other possible causes of either condition.
- Always secure items in the trailer to
prevent load shift while driving.

- Be certain your outside mirrors conform to all federal, state or local regulations. If not, install any mirrors required for towing before driving the vehicle.

**Trailer towing tips**

In order to gain skill and an understanding of the vehicle's behavior, you should practice turning, stopping and backing up in an area which is free from traffic. Steering, stability and braking performance will be somewhat different than under normal driving conditions.

- Always secure items in the trailer to prevent load shift while driving.
- Avoid abrupt starts, acceleration or stops.
- Avoid sharp turns or lane changes.
- Always drive your vehicle at a moderate speed.
- Always block the wheels on both vehicle and trailer when parking. Parking on a slope is not recommended; however, if you must do so, and if your vehicle is equipped with automatic transmission, first block the wheels and apply the parking brake, and then move the transmission shift selector lever into the P (Park) position. If you move the shift lever to the P (Park) position before blocking the wheels and applying the parking brake, transmission damage could occur.
- When going down a hill, shift into a lower gear and use the engine braking effect. When ascending a long grade, downshift the transmission to a lower gear and reduce speed to reduce chances of engine overloading and/or overheating. However, for long steep grades, do not stay in 1st or 2nd gear when driving above 35 MPH (56 km/h).
- If the engine coolant rises to an extremely high temperature when the air conditioning system is on, turn off the air conditioner. Coolant heat can be additionally vented by opening the windows, switching the fan control to high and setting the temperature control to the HOT position.
- Trailer towing requires more fuel than normal circumstances.
- Avoid towing a trailer for your vehicle's first 500 miles (805 km).
- Have your vehicle serviced more often than at intervals specified in the recommended Maintenance Schedule.
- When making a turn, your trailer wheels will be closer to the inside of the turn than your vehicle wheels. To compensate for this, make a larger than normal turning radius during the turn.
- Crosswinds and rough roads adversely affect vehicle/trailer handling, possibly causing vehicle sway. When being passed by larger vehicles, be prepared for possible changes in crosswinds that could affect vehicle handling. If swaying does occur, firmly grip the steering wheel, steer straight ahead, and immediately (but gradually) reduce vehicle speed. This combination helps to stabilize the vehicle. Never increase speed.
- Be careful when passing other vehicles. Passing while towing a trailer requires considerably more distance than normal passing. Remember the length of the trailer must also pass the other vehicle before you can safely change lanes.
To maintain engine braking efficiency and electrical charging performance, do not use fifth gear (manual transmission) or overdrive (automatic transmission).

Avoid holding the brake pedal down too long or too frequently. This could cause the brakes to overheat, resulting in reduced braking efficiency.

When towing a trailer, change oil in the transmission more frequently. For additional information see the “Maintenance” section earlier in this manual.

UNIFORM TIRE QUALITY GRADING

DOT Quality Grades: All passenger car tires must conform to Federal Safety Requirements in addition to these grades.

Treadwear
Treadwear grade is a comparative rating based on tire wear rate when tested under controlled conditions on specified government test courses. For example, a tire graded 150 would wear one and a half (1-1/2) times as well on the government course as a tire graded 100. However, relative tire performance depends on actual driving conditions, and may vary significantly due to variations in driving habits, service practices and differences in road characteristics and climate.

Traction AA, A, B and C
The traction grades from highest to lowest are AA, A, B, and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

WARNING
The traction grade assigned to your vehicle tires is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

Temperature A, B and C
Temperature grades are A (the highest), B, and C. They represent a tire’s resistance to heat build-up, and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause tire material to degenerate, reducing tire life. Excessive temperatures can lead to sudden tire failure. Grade C corresponds to a performance level which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades A and B represent higher levels of performance on laboratory test wheels than the minimum required by law.
WARNING
The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, under inflation, or excessive loading, either separately or in combination, can cause heat build-up and possible tire failure.

EMISSION CONTROL SYSTEM WARRANTY
Your NISSAN is covered by the following emission warranties.
For US:
1) Emission Defects Warranty
2) Emission Performance Warranty
For Canada
Emission Control System Warranty
Details of these warranties may be found with other vehicle warranties in your Warranty Information and Maintenance Log Booklet which comes with your NISSAN. If you did not receive a Warranty Information and Maintenance Log Booklet, or it becomes lost, you may obtain a replacement by writing to:
- Nissan Motor Corporation USA
  Consumer Affairs Department
  P.O. Box 191
  Gardena, CA 90248-0191
- Nissan Canada Inc.
  5290 Orbitor Drive
  Mississauga, Ontario L4W 4Z5

REPORTING SAFETY DEFECTS (US only)
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying NISSAN.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or NISSAN.

To contact NHTSA, you may either call the Auto Safety Hotline toll-free at 1-800-424-9393 (or 366-0123 in the Washington, D.C. area) or write to: NHTSA, U.S. Department of Transportation, Washington, D.C. 20590. You can also obtain other information about motor vehicle safety from the Hotline.

You may notify NISSAN by contacting our Consumer Affairs Department, toll-free, at 1-800-NISSAN-1.

In Hawaii call (808) 836-0888.
READINESS FOR INSPECTION/MAINTENANCE (I/M) TEST (US only)

Due to legal requirements in some states and Canadian provinces, your vehicle may be required to be in the ready condition for an Inspection/Maintenance (I/M) test of the emission control system.

The vehicle is set to the ready condition when it is driven through certain driving patterns. Usually, the ready condition can be obtained by ordinary usage of the vehicle.

If a powertrain system component is repaired or the battery is disconnected, the vehicle may be reset to a not ready condition. Before taking the I/M test, drive the vehicle through the following pattern to set the vehicle to the ready condition. If you cannot or do not want to perform the driving pattern, an authorized NISSAN dealer can conduct it for you.

1. Start the engine when the engine coolant temperature gauge needle points to C. Allow the engine to idle until the gauge needle points between the C and H (normal operating temperature).
2. Accelerate the vehicle to 55 mph (88 km/h), then quickly release the accelerator pedal completely and keep it released for at least 6 seconds.
3. Quickly depress the accelerator pedal for a moment, then drive the vehicle at a speed of 53 to 60 mph (85 to 97 km/h) for at least 5 minutes.
4. Stop the vehicle.
5. Accelerate the vehicle to 35 mph (55 km/h) and maintain the speed for 20 seconds.
6. Repeat steps four through five least three times.
7. Accelerate the vehicle to 55 mph (88 km/h) and maintain the speed for at least 3 minutes.
8. Stop the vehicle and turn the engine off.
9. Repeat steps one through eight at least one more time.

If step one through seven interrupted, repeat the preceding step. Any safe driving mode is acceptable between steps. Do not stop the engine until step seven is completed.

WARNING
Always drive the vehicle in a safe manner according to traffic conditions and obey all traffic laws.
A genuine NISSAN Service Manual is the best source of service and repair information for your vehicle. Filled with wiring diagrams, illustrations and step-by-step diagnostic and adjustment procedures, this manual is the same one used by the factory trained technicians working at your NISSAN dealership. Also available are genuine NISSAN Owner’s Manuals. For current pricing and availability of a genuine NISSAN Service Manual or genuine NISSAN Owner’s Manual, contact:

In the USA:
See your NISSAN dealer or contact:
Dyment Distribution Services
20770 Westwood Dr.
Strongsville OH 44136
In a hurry? Call 1-800-247-5321 and charge your purchase to Visa/Master Card.

In Canada:
To purchase a copy of a genuine NISSAN Service Manual or Owner’s Manual please contact your nearest NISSAN dealer. For the phone number and location of a NISSAN Dealer in your area call the NISSAN Satisfaction Center at 1-800-387-0122 and a bilingual NISSAN representative will assist you. Also available are Genuine NISSAN Service and Owner’s Manuals for older NISSAN models.

Recommended fuel:
Unleaded gasoline, at least 87 AKI number (RON 91)
For further details such as gasohol or diesel fuel grade, see “Fuel recommendation” in the “Technical and consumer information” section.

Recommended engine oil:
- API Certification Mark
- API grade SG/SH Energy Conserving II or API grade SJ Energy Conserving
- ILSAC grade GF-II
See “Engine oil and filter recommendation” in the “Technical and consumer information” section.

Tire cold pressure:
See the tire placard affixed to the inside of the glove box lid.

Recommended new vehicle break-in procedure:
During the first 1,000 miles (1,600 km) of vehicle use, follow the recommendations outlined in the “BREAK-IN SCHEDULE” found in the “Starting and Driving” section of this Owner’s Manual. Follow these recommendations for the future reliability and economy of your new vehicle. Failure to follow these recommendations may result in vehicle damage or shortened engine life.
