10. Parking sensors (Park Assist on page 66)
Keyless Locking and Unlocking

Model S has sensors that can recognize the presence of a key. The sensors have a range of approximately three feet (one meter).

If Model S is equipped with the optional tech package, walking up to Model S when you have your key with you automatically unlocks the doors. Similarly, open the trunk by just walking up to Model S with your key, then pressing the switch located under the trunk’s exterior handle.

Press a door handle, and it extends. Or, if the AUTO-PRESENT HANDLES setting is turned on (see Using Exterior Door Handles on page 6), door handles extend automatically.

If you turn on the walk-away locking setting using the touchscreen, Model S locks when you walk away carrying your key with you (see Walk-away Locking on page 7).

⚠️ Warning: To avoid any possibility of interference between a pacemaker and the keyless system’s antennas, people with implanted pacemakers should ensure their pacemaker is kept at least nine inches (22 cm) away from any keyless drive antenna mounted in Model S. Antenna locations are shown below:

1. Center of the rear bumper.
2. Under the rear seats.
3. Center console.
4. Leftmost side of the dashboard.
5. Rightmost side of the dashboard.
6. Right Hand Drive vehicles only - at the base of the left (passenger side) windshield wiper.
7. Left Hand Drive vehicles only - at the base of the right (passenger side) windshield wiper.
8. Center of the front trunk.

Using the Key

To quickly familiarize yourself with the key, think of the key as a miniature version of Model S, with the Tesla badge representing the front. The key has three buttons that feel like softer areas on the surface.

1. **Trunk**
   - Double-click to open the rear trunk.
   - If Model S is equipped with a powered liftgate, double-click to close the rear trunk. You can also single-click to stop the liftgate when it is moving.
   - Hold the button down for 1-2 seconds to open the charge port door.

2. **Lock/Unlock All**
   - Double-click to unlock doors and the rear trunk. Hazard warning lights flash twice and door handles extend.
   - Single-click to lock doors and trunks (all doors and trunks must be closed). Hazard warning lights flash once and door handles retract.

3. **Front trunk (also called the “frunk”)**
   - Double-click to open the front trunk.

You do not need to point the key at Model S, but you must be within operating range (which varies depending on the strength of the key’s battery). If Model S is unable to detect the key, the touchscreen displays a message indicating that a key is not inside. Place the key where Model S can best detect it, which is below the 12V power socket (see Key Not Inside on page 41).
Radio equipment on a similar frequency can affect the key. If this happens, move the key at least one foot (30 cm) away from other electronic devices (phone, laptop, etc). If the key does not work, you may need to change its battery. If the key’s battery is discharged, you can open Model S by following the unlocking procedure. See Unlocking When the Key Doesn’t Work on page 7.

**Caution:** Remember to bring the key with you when you drive. Although you can drive Model S away from its key, you will be unable to power it back on after it powers off.

**Caution:** Protect the key from impact, high temperatures, and damage from liquids. Avoid contact with solvents, waxes and abrasive cleaners.

### Replacing the Key Battery

The key’s battery lasts for approximately a year. When the battery is low, a message displays on the instrument panel. Follow these steps to replace it:

1. Place the key, button side down, on a soft surface.
2. Release the battery using a small flat bladed tool.
3. Remove the battery by pushing it toward the center of the key to release it from the front retaining clips.
4. Insert the new battery (type CR2032) with the ‘+’ side facing up. Avoid touching the flat surfaces of the battery, and wipe the battery clean before fitting. Finger marks can reduce battery life.
5. Align the battery, then press the key and battery together until they snap into place.

### Getting More Keys

If you lose a key or require an additional one, contact Tesla. Model S can recognize up to three keys.

When ordering a new key for Model S, take all available keys with you for reprogramming.
Using Exterior Door Handles

A light press on a door handle extends it, provided Model S detects a valid key nearby.

If Model S is equipped with the optional tech package, you can set the door handles to extend automatically whenever you approach the driver's side carrying the key. On the touchscreen, touch Controls > Settings > Vehicle > Auto-Present Handles > On.

Insert your hand into the handle and pull to open the door.

Door handles retract if you do not use them within one minute after they extend. Just press a handle to extend it again. Door handles also retract a minute after the last door closes, when Model S begins moving, and when you lock Model S.

Note: To preserve battery life, Model S is designed to temporarily disable the Auto-Present Handles feature when:

- The key has been out of range for more than 48 hours.
- The key remains within range for five minutes after all doors have been closed.

In these cases, extend the handles by touching the driver's door handle or pressing the unlock button on the key. There is no need to reset the setting. The next time you approach Model S, provided the above conditions do not apply, handles automatically extend.

Whenever a door is open, the Door Open indicator displays on the instrument panel. The image of the Model S on the touchscreen Controls window also shows which door or trunk is open.

Using Interior Door Handles

Pull the interior door handle toward you to open the door.

Note: To prevent children from opening rear doors using the interior handles, use the touchscreen, Controls > Settings > Vehicle > Child Protection Lock, to turn on the child-protection locks (see Child-protection Lock on page 7).

Interior Locking and Unlocking

From inside Model S, you can use the touchscreen to lock or unlock doors and trunks, provided a valid key is inside the vehicle. Touch Controls > Lock/Unlock. The current lock status displays on the bottom left of the instrument panel.

Note: If a door or trunk is still open when you lock Model S, it locks when you close it.
Child-protection Lock
Model S has child-protection locks on the rear doors and liftgate to prevent them from being opened using interior handles. Use the touchscreen to turn child protection locks on or off. Touch Controls > Settings > Vehicle > Child Protection Lock.

Note: It is recommended that you turn child-protection locks on whenever children are seated in the rear seats.

Drive-away Locking
Model S can automatically lock all doors (including the trunks) whenever your driving speed exceeds 5 mph (8 km/h). To turn this feature on or off, touch Controls > Settings > Vehicle > Drive-Away Door Lock.

Walk-away Locking
If Model S is equipped with the optional tech package, Model S doors and trunks can automatically lock whenever you walk away carrying the key.

To turn this feature on or off, touch Controls > Settings > Vehicle > Walk-Away Door Lock.

Note: If all doors are closed and you double-click the key to unlock Model S, walk-away locking is temporarily suspended until Model S powers on (such as when you press the Brake pedal to put the car in a driving gear), or until you use the key to lock Model S. This allows you to keep Model S unlocked in your garage.

Unlocking When the Key Doesn’t Work
If Model S does not unlock when you walk up to it, or when you press the unlock button on your key, the key’s battery may be dead. If this is the case, you can still unlock and drive Model S.

To unlock Model S (and disable the security alarm), first position the key near the base of the passenger side windshield wiper, as shown. Then press the passenger door handle. It is important to position the key in the correct position. If Model S doesn’t unlock, try adjusting the position of the key.

To drive Model S, place the key against the center console, immediately below the 12V power outlet, then press and hold the brake pedal to turn Model S on.

Note: Unlocking Model S using this method disables walk-away locking. You must manually re-enable walk-away locking after replacing the key’s battery.

For instructions on how to replace the key’s battery, see Replacing the Key Battery on page 5.
Opening Interior Doors with No Power

If Model S has no electrical power, front doors open as usual using the interior door handles. To open the rear doors, fold back the edge of the carpet below the rear seats to expose the mechanical release cable. Pull the mechanical release cable toward the center.
Opening and Closing
Press down on a switch to lower the associated window all the way down. Window switches operate at two levels. To lower a window partially, hold the switch and release when the window is at the desired position.

Similarly, pull a switch to raise the associated window. This also operates at two levels—when raising, hold the switch and release when the window is at the desired position.

⚠️ Warning: Before closing a power window, it is the driver's responsibility to ensure that all occupants, especially children, do not have any body parts extended through the window's opening. Failure to do so can cause serious injury.

⚠️ Warning: When leaving Model S, always take your key with you. Leaving the key in Model S allows all doors, windows, and controls to be fully operational and can cause hazardous, unauthorized or unintentional use of Model S.

Locking Rear Windows
To prevent passengers from using the rear window switches, press the rear window lock switch. The switch light turns on. To unlock rear windows, press the switch again.

⚠️ Warning: To ensure safety, it is recommended that you lock the rear windows whenever children are seated in the rear seats.

⚠️ Warning: Never leave children unattended in Model S.
Opening
To open the rear trunk, do one of the following:

- Touch Controls > Trunk on the touchscreen.
- Double-click the Trunk button on the key.
- Press the switch located under the exterior handle (if not equipped with the optional tech package, you must first unlock Model S).

When the liftgate is open, the instrument panel displays the Door Open indicator light. The image of the Model S on the touchscreen Controls window also displays the open trunk.

Closing
To close the trunk, pull down on the liftgate and push firmly, ensuring it is fully closed.

If Model S is equipped with the optional tech package, you can close the powered liftgate by:

- Double-clicking the trunk button on the key.
- Touching Controls > Trunk on the touchscreen.
- Pressing the switch located on the underside of the liftgate (see Adjusting the Opening Height on page 10).

If a powered liftgate senses an obstruction when closing, it automatically opens and sounds two chimes. Remove the obstruction and try closing it again. If it cannot close the second time, powered operation is temporarily disabled. Manually closing it restores powered operation.

Note: The power closing feature is also temporarily disabled if you leave the powered liftgate open for more than an hour.

Adjusting the Opening Height
If Model S is equipped with a powered liftgate, you can adjust its opening height to make it easier to reach:

1. Open the liftgate, then lower it to the desired opening height.
2. Press and hold the button on the underside of the liftgate for two seconds until you hear a confirmation beep.
3. Confirm that you have set it to the desired height by closing the liftgate, then reopening it.

To stop a powered liftgate while it is moving, single-click the Trunk button on the key. Then, when you double-click the Trunk button, it moves again, but in the opposite direction (provided it was not almost entirely open or closed when you stopped it). For example, if you single-click to stop the liftgate while it is opening, when you double-click, it closes.

To open the trunk in the unlikely situation in which Model S has no electrical power, see Opening with No Power on page 11.
Interior Release
To open the trunk from inside Model S, press the interior release switch located inside the rear trunk and push the liftgate up.

If Model S is equipped with the optional tech package, you do not need to push it up. When you press the release switch, it opens, and when you pull the switch, it closes.

Note: The interior release switch is disabled if child-protection locks are turned on (see Child-protection Lock on page 7), or if Model S is moving.

Opening with No Power
If Model S has no electrical power, you can open the rear trunk from inside. Use the mechanical release cable located on the underside of the liftgate, next to the interior light.

1. Remove the cover by pulling its lower edge very firmly toward you.
2. Pull the cable to release the latch.
3. Push the liftgate open.
Opening

To open the front trunk:

- Touch Controls > Front Trunk on the touchscreen, or double-click the front trunk button on the key.
- Pull the hood up.

The door open indicator displays on the instrument panel when the front trunk is open. The image of the Model S on the touchscreen Controls window also displays the open trunk.

To open the front trunk in the unlikely situation in which Model S has no electrical power, see Opening with No Power on page 13.

Closing

The Model S body is made of lightweight aluminum. Therefore, the hood is not heavy enough to latch under its own weight and applying pressure on the front edge or center of the hood can cause damage. To close the hood:

- Lower the hood fully until it touches the latch.
- Place both hands on the front of the hood in the areas shown, then press down firmly to engage the latches.
- Lift the front edge of the hood to ensure it is fully closed.

Caution: To prevent damage:

- Apply pressure only to the green areas illustrated above. Applying pressure to the red areas can cause damage.
- Do not close the hood with one hand. Doing so applies concentrated force in one area and can result in a dent or crease.
- Do not apply pressure to the leading edge of the hood because this can crease the edge.
- Do not slam or drop the hood.

Warning: Do not drive with the hood secured by the secondary catch alone.
Interior Emergency Release

An interior release button inside the front trunk allows a person locked inside to get out. This release button is active whenever Model S is stationary.

Press the interior release button to open the front trunk, then push up on the hood.

Note: The button glows for several hours after a brief exposure to ambient light.

Opening with No Power

If Model S has no electrical power, or if you are unable to open the front trunk using the touchscreen or key, pull the mechanical release lever located below the glove box (not available on newer models). This releases the primary catch.

Then push down on the secondary catch lever and lift the hood. You may need to push the hood down slightly to release the pressure against the secondary catch.
Opening and Closing

To open the glove box, press the switch located on the side of the touchscreen. If you leave the glove box open for five minutes, its light automatically turns off.

Note: The glove box locks whenever Model S is locked externally, using the key or walk-away locking. It does not lock when Model S is locked using the touchscreen.

⚠️ **Warning:** When driving, keep the glove box closed to prevent injury to a passenger if a collision or sudden stop occurs.
Opening and Closing

If your Model S is equipped with a sunroof, touch Controls > Sunroof on the touchscreen to operate it. Drag, or tap on, the sunroof slider bar, or touch the image of the sunroof and drag it. The sunroof moves to the selected position.

Touch OPEN once to open the sunroof to its comfort position (75% open to minimize wind noise). Or, move the sunroof to the comfort position by dragging the slider bar to the indent position. If you find wind noise (which varies depending on driving speed) excessive, even with the sunroof in the comfort position, open a window slightly.

Touch OPEN twice to open the sunroof fully.

Touch CLOSE to fully close the sunroof.

If the sunroof’s safety mechanism detects any obstruction, it does not close. If, after removing the obstruction, it still does not close, touch and hold CLOSE to override the sunroof’s anti-trap mechanism.

Touch VENT to open the sunroof slightly.

To stop the sunroof from moving at any time, touch the image of the sunroof.

⚠️ **Warning:** Do not allow occupants to extend any part of their body through the sunroof. Doing so can cause serious injury from flying debris, tree branches, or other obstructions.

⚠️ **Warning:** Before closing the sunroof, ensure that occupants, especially children, do not have any body part extended through the sunroof opening. Failure to do so can cause serious injury.

⚠️ **Caution:** Remove snow and ice before opening the sunroof. Opening a sunroof covered in snow and ice can cause damage.

⚠️ **Caution:** Do not carry an object that protrudes through the sunroof. Doing so can damage the sunroof’s seals and anti-trap mechanism.
Opening and Closing

To expose a cup holder, slide back the armrest.
Correct Driving Position

The seat, head support, seat belt and airbags work together to maximize your safety. Using these correctly ensures greater protection.

Position the seat so you can wear the seat belt correctly, while being as far away from the front airbag as possible:

1. Sit upright with both feet on the floor and the seat back reclined no more than 30 degrees.
2. Make sure you can easily reach the pedals and that your arms are slightly bent when holding the steering wheel. Your chest should be at least 10 inches (25 cm) from the center of the airbag cover.
3. Place the shoulder section of the seat belt mid-way between your neck and your shoulder. Fit the lap section of the belt tightly across your hips, not across your stomach.

Model S seats include integrated head supports that cannot be adjusted or removed.

Adjusting the Driver’s Seat

1. Adjust lumbar support.
2. Adjust backrest.
4. Adjust the seat’s height and tilt angle.

⚠️ Warning: Do not adjust seats while driving. Doing so increases the risk of a collision.

⚠️ Warning: Riding in a moving vehicle with the seat back reclined can result in serious injuries in a collision, as you could slide under the lap belt or be propelled into the seat belt. Ensure your seat back is reclined no more than 30 degrees when the vehicle is moving.
Seat Heaters
The front seats are equipped with heating pads that operate at three levels from 3 (highest) to 1 (lowest). To operate the seat heaters, see Climate Controls on page 80.

If Model S is equipped with the optional cold weather package, you can also control seat heaters in the rear seats, as well as heated wipers by touching Controls > Cold Weather (see Controls on page 74). When equipped with executive seats, you can control the seat and the backrest separately in each second row passenger seat.

Folding Rear Seats
Model S has a split rear seat that can fold forward.

Before folding, remove items from the seats and the rear foot well. To allow the rear seat backs to fold completely flat, you may need to move the front seats forward.

To fold a rear seat, press the corresponding lever and fold the seat forward.
Raising Rear Seats

Before raising a rear seat, make sure that the seat belts are not trapped behind the backrest.

Pull the seat back upward until it locks into place.

To confirm that the seat back is locked in the upright position, try pulling it forward.

⚠️ **Warning:** Always ensure the seat backs are locked in their upright position. Failure to do so increases the risk of injury.

Head Supports

Seats include integrated head supports that cannot be adjusted or removed.

Seat Covers

Do not use seat covers on Model S. Doing so could restrict deployment of the side air bags if an accident occurs. It can also reduce the accuracy of the occupant detection system.
Wearing Seat Belts

Using seat belts and child safety seats is the most effective way to protect occupants if a collision occurs. Therefore, wearing a seat belt is required by law in most jurisdictions.

Both the driver and passenger seats are equipped with three-point inertia reel seat belts. Inertia reel belts are automatically tensioned to allow occupants to move comfortably during normal driving conditions. To securely hold child safety seats, all passenger seating positions are equipped with an automatic locking retractor (ALR) that, by pulling the seat belt beyond the length needed for a typical adult occupant, locks the belt into place until the seat belt is unbuckled (see Installing Seat Belt Retained Child Seats on page 25).

The seat belt reel automatically locks to prevent movement of occupants if Model S experiences a force associated with hard acceleration, braking, cornering, or an impact in a collision.

The seat belt reminder on the instrument panel alerts you if a seat belt for an occupied seat is not fastened. If the belt remains unfastened, the reminder flashes and an intermittent chime sounds. If all occupants are buckled up and the reminder stays on, re-fasten seat belts to ensure they are correctly latched. Also remove any heavy objects (such as a briefcase) from an unoccupied seat. If the reminder light continues to stay on, contact Tesla.

To Fasten a Belt
1. Ensure correct positioning of the seat.
2. Draw the belt out smoothly, ensuring the belt lays flat across the pelvis, chest and mid-point of your collar bone, between the neck and shoulder.
3. Insert the latch plate into the buckle and press together until you hear a click indicating it is locked in place.
4. Pull the belt to check that it is securely fastened.
5. Pull the diagonal part of the belt toward the reel to remove excess slack.

To Release a Belt
Hold the belt near the buckle to prevent the belt from retracting too quickly, then press the button on the buckle. The belt retracts automatically. Ensure there is no obstruction that prevents the belt from fully retracting. The belt should not hang loose. If a seat belt does not fully retract, contact Tesla.

Wearing Seat Belts When Pregnant

Do not put the lap or shoulder sections of the seat belt over the abdominal area. Wear the lap section of the belt as low as possible across the hips, not the waist. Position the shoulder portion of the belt between the breasts and to the side of the abdomen. Consult your doctor for specific guidance.

⚠️ Warning: Never place anything between you and the seat belt to cushion the impact in the event of an accident.
Seat Belt Pre-tensioners

The front seat belts are equipped with pre-tensioners that work in conjunction with the airbags in a severe frontal collision. The pre-tensioners automatically retract both the seat belt anchor and the seat belt webbing, reducing slack in both the lap and diagonal portions of the belts, resulting in reduced forward movement of the occupant.

If the pre-tensioners and airbags did not activate in an impact, this does not mean they malfunctioned. It usually means that the strength or type of force needed to activate them was not present.

⚠️ Warning: Once the seat belt pre-tensioners have been activated, they must be replaced. After any accident, have the airbags, seat belt pre-tensioners and any associated components checked and, if necessary, replaced.

Testing Seat Belts

To confirm that seat belts are operating correctly, perform these three simple checks on each seat belt.

1. With the seat belt fastened, give the webbing nearest the buckle a quick pull. The buckle should remain securely locked.
2. With the belt unfastened, unreel the webbing to its limit. Check that unreeling is free from snags, and visually check the webbing for wear. Allow the webbing to retract, checking that retraction is smooth and complete.
3. With the webbing half unreeled, hold the tongue plate and pull forward quickly. The mechanism should lock automatically and prevent further unreeling.

If a seat belt fails any of these tests, contact Tesla immediately.

Seat Belt Warnings

⚠️ Warning: Seat belts should be worn by all occupants at all times, even if driving for a very short distance. Failure to do so increases the risk of injury or death if an accident occurs.

⚠️ Warning: Secure small children in a suitable child safety seat. Always follow the child safety seat manufacturer’s instructions when installing.

⚠️ Warning: Ensure that all seat belts are worn correctly. An improperly worn seat belt increases the risk of injury or death if an accident occurs.

⚠️ Warning: Do not wear seat belts over hard, fragile or sharp items in clothing, such as pens, keys, eyeglasses, etc. The pressure from the seat belt on such items can cause injury.

⚠️ Warning: Seat belts should not be worn with any part of the strap twisted.

⚠️ Warning: Each seat belt assembly must be used by one occupant only. It is dangerous to put a seat belt around a child being carried on an occupant’s lap.

⚠️ Warning: Seat belts that have been worn in an accident must be inspected or replaced by Tesla, even if damage to the assembly is not obvious.

⚠️ Warning: Seat belts that show signs of wear (such as fraying), or have been cut or damaged in any way, must be replaced by Tesla.
**Warning:** Avoid contaminating a seat belt’s components with any chemicals, liquids, grit, dirt or cleaning products. If a seat belt fails to retract or latch into the buckle, it must be replaced immediately. Contact Tesla.

**Warning:** Do not make modifications or additions that can prevent a seat belt mechanism from taking up slack, or that can prevent a seat belt from being adjusted to remove slack. A slack belt greatly reduces occupant protection.

**Warning:** Do not make modifications that can interfere with the operation of a seat belt, or that can cause a seat belt to become inoperable.

**Warning:** When seat belts are not in use, they should be fully retracted and not hanging loose. If a seat belt does not fully retract, contact Tesla.
Guidelines for Seating Children

Your Model S seat belts in the front and second row seats are designed for adults and larger children. You must restrain infants and small children in the second row seats only, and you must use a suitable child safety seat appropriate for the child’s age, weight, and size. Never use child safety seats in the front row passenger seat. Carefully follow the instructions provided by the manufacturer of the child safety seat.

If your Model S is equipped with the optional Tesla built-in rear facing child seats, these seats are child safety seats and are designed only for children within a specific height and weight range (see Tesla Built-In Rear Facing Child Seats on page 28).
Choosing a Child Safety Seat

All children age 12 and under should ride in the rear (second row) seats. Always use a child safety seat suitable for a young child's age and weight.

* Many child safety seats currently available allow children to ride rear-facing using the child safety seat’s integrated 5-point harness for a longer period of time BASED UPON SPECIFIC HEIGHT AND WEIGHT LIMITS. Keep your child in a rear facing seat for as long as possible. CHECK THE CHILD SAFETY SEAT MANUFACTURER’S INSTRUCTIONS AND CAREFULLY FOLLOW ALL INSTRUCTIONS

** LATCH - Lower Anchors and Tethers for Children. In Canada, this is also called Lower Universal Anchorage System (LUAS), or CANFIX.

*** Subject to instructions provided by the child safety seat manufacturer.

⚠️ **Warning:** Laws that govern how and where children should be carried when traveling in a vehicle are subject to change. It is the driver’s responsibility to keep up to date on, and comply with, all current regulations in the region(s) where Model S is driven. To check the child passenger safety laws for your state, go to: http://www.ghsa.org/html/stateinfo/laws/childsafe_laws.html.
Seating Larger Children

If a child is too large to fit into a child safety seat, but too small to safely fit into the standard seat belts, use a booster seat appropriate for the child’s age and size. Carefully follow the manufacturer’s instructions to secure the booster seat using the seat belts. Do not use the LATCH system to secure booster seats, even in situations where the booster seat is equipped with the LATCH system.

Installing Child Safety Seats

There are two general methods used to install child safety seats:

• Seat belt retained - these seats are secured using the vehicle’s seat belts (see Installing Seat Belt Retained Child Seats on page 25).
• LATCH retained - these seats can attach to anchor bars built into the vehicle’s rear seats (see Installing LATCH Child Seats on page 26).

Check the child safety seat manufacturer’s instructions and the table on Child Safety Seats on page 23 to determine which installation method to use. Some child safety seats can be installed using either method. Always follow the child safety seat manufacturer’s instructions.

Installing Seat Belt Retained Child Seats

First, make sure that the child falls into the correct weight range for the seat.

Avoid dressing the child in bulky clothing and do not place any objects between the child and the restraint system.

Adjust harnesses for every child, every trip.

To securely hold child safety seats, all passenger seating positions are equipped with an automatic locking retractor (ALR) that, by pulling the seat belt beyond the length needed for a typical adult occupant, locks the belt into place until the seat belt is unbuckled and the webbing is fully retracted. The ALR mechanism operates as a ratchet, winding in slack and preventing the seat belt from extending any further until it has been completely rewound. When installing a child safety seat, engage the belt’s automatic locking retractor by pulling the seat belt webbing until it is fully extended. The ALR system engages only when the seat belt is at its maximum extension point.

Note: An automatic locking retractor disengages only when the seat belt is unbuckled and fully retracted. The belt can then be worn as a normal belt, sliding freely in and out and locking tight only in an emergency. Once disengaged, the belt must be fully extended to re-engage the locking mechanism whenever you install a child safety seat.

Always follow the detailed instructions provided by the child safety seat manufacturer. General guidelines are provided below.

1. Place the child safety seat in Model S, and fully extend the seat belt. Route and buckle the seat belt in accordance with the child safety seat manufacturer’s instructions.

2. Allow the seat belt to retract, and remove all slack in the seat belt while firmly pushing the child safety seat into the Model S seat.

3. If the seat belt retained child safety seat has an upper tether, attach it to the back of the seat (see Attaching Upper Tether Straps on page 26).
Installing LATCH Child Seats

Lower LATCH anchor positions are provided in the second-row outboard seating positions and are located between the seat’s back rest and rear cushion. The exact location of each anchor is identified by a child safety seat identification button, illustrated below. The button is located on the seat back, directly above its associated anchor.

Install LATCH seats in the outboard seating positions only. Use only a seat belt retained seat in the center position.

To install a LATCH retained child safety seat, slide the safety seat latches onto the anchor bars until they click into place. Carefully read and follow the instructions provided by the child safety seat manufacturer.

Once installed, test the security of the installation before seating a child. Attempt to twist the child safety seat from side to side and try to pull it away from the seat, then check that the anchors are still securely in place.

Attaching Upper Tether Straps

If an upper tether strap is provided, attach its hook to the anchor point located on the back of the rear seats. Always position single-strap tethers so that it runs over the center of the Model S head support. Tighten dual-strap tethers to run on each side of the head support. Tighten according to the child safety seat manufacturer’s instructions.

Note: To prevent single-strap tethers from moving from side to side, the top of the head support deforms.
Testing a Child Safety Seat

Before seating a child, always make sure the child safety seat is not loose:

1. Hold the child safety seat by the belt path and try to slide the safety seat from side to side and front to back.
2. If the seat moves more than one inch (2.5 cm), it is too loose. Tighten the belt or reconnect the LATCH retained child safety seat.
3. If you are unable to reduce slack, try a different seat location or try another child safety seat.

Warnings - Child Safety Seats

⚠️ Warning: Extreme hazard! Do not seat a child on the front passenger seat even if you are using a child safety seat. This seat has an airbag in front of it. Although this airbag is disabled when Model S detects a lightweight passenger, do not rely on technology to protect your child.

⚠️ Warning: Do not use a forward facing child safety seat until your child weighs over 20 lbs (9 kg) and can sit independently. Up to the age of two, a child’s spine and neck are not sufficiently developed to avoid injury in a frontal impact.

⚠️ Warning: Do not allow a baby or infant to be held on a lap. All children should be restrained in an appropriate child safety seat at all times.

⚠️ Warning: To ensure children are safely seated, follow all instructions provided in this document and by the manufacturer of the child safety seat.

⚠️ Warning: Children should ride in a rear facing child safety seat using the seat’s integrated 5-point harness for as long as possible.

⚠️ Warning: Do not use seat belt extenders when installing a child safety seat or booster seat.

⚠️ Warning: When seating larger children, make sure the child’s head is supported and the child’s seat belt is properly adjusted and fastened. The shoulder portion of the belt must be away from the face and neck, and the lap portion must not be over the stomach.

⚠️ Warning: Never attach two child safety seats to one anchor point. In a collision, one anchor point may be incapable of securing both seats.

⚠️ Warning: Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used for adult seatbelts, harnesses, or for attaching other items or equipment to the vehicle.

⚠️ Warning: Always check harnesses and tether straps for damage and wear.

⚠️ Warning: Do not use seat belt extenders on a seat belt that is being used to install a child safety seat or booster seat.

⚠️ Warning: Never leave a child unattended, even if the child is secured in a child safety seat.

⚠️ Warning: Never use a child safety seat that has been involved in an accident. Have the seat inspected or replaced as described in the child safety seat manufacturer’s instructions.
Usage Restrictions

The optional Tesla built-in rear facing child seats are child restraint systems and must only be used for children over 37” (94 cm) tall and weighing between 35 and 77 lbs (16.2 to 35.2 kg).

Always ensure the top of the child’s head cannot contact the vehicle and that the child is seated comfortably with the seat belts positioned and latched correctly. The child’s pelvis must be held securely in place by the lap belt. Follow all instructions provided and do not use supplemental child safety seats in these seats.

Note: Whenever a child is seated in the Tesla built-in rear facing child seats, it is recommended that you set the climate control system to draw outside air into Model S instead of recirculating the air. This draws more air into the rear seating areas.

Opening

1. Remove the cover from the trunk floor and pull the strap to lift the seat assembly upward.

2. Push the seat assembly into position.

3. Undo the Velcro strap.

4. Pull the handle to release the head supports from the seat back, then pull the head supports toward you to unfold them.

5. Raise the seat back to the upright position and push until it locks into position. Visually check to ensure that the retaining catches are engaged.

6. Check that the seat back and seat base are securely retained in the upright position by trying to pull the seat back toward you.

Folding

Caution: Before folding the seats, fasten the seat belts to prevent them from getting trapped in the seat mechanism and being damaged.

1. Pull the handle to release the seat back and pull the seat back fully forward.
2. Push the lever to release the head supports from the seat back, then fold back onto the seat.

4. Pull the strap at the rear of the seat to fold the seat assembly into the trunk floor.

5. Replace the cover on the trunk floor.
Seating a Child

The Tesla built-in rear facing child seats are child restraint systems and must only be used for children over 37” (94 cm) tall and weighing between 35 and 77 lbs (16.2 to 35.2 kg).

Always ensure the top of the child’s head cannot contact the vehicle and that the child is seated comfortably with the seat belts positioned and latched correctly. The child’s pelvis must be held securely in place by the lap belt. Follow all instructions provided and do not use supplemental child safety seats in these seats.

Note: Whenever a child is seated in the Tesla built-in rear facing child seats, it is recommended that you set the climate control system to draw outside air into Model S instead of recirculating the air. This draws more air into the rear seating areas.

1. Position the child in the seat with arms through the loops of the seat belts.
2. Connect the two halves of the seat belt tongue.
3. Insert the seat belt tongue into the buckle and ensure it is securely fastened.
4. Adjust the shoulder belts so they run over the top of the child’s shoulders and away from the face.
5. Connect the chest clip and adjust it to be as high as possible without causing the shoulder belts to touch the child’s neck.
6. Pull the lower straps until the child is securely held in the seat.
7. Slide the shoulder clips into place to ensure the upper portion of the belts remain positioned over the child’s shoulders.

To release, press the button on the buckle, release the chest clip, and separate the two halves of the seat restraint.

Warnings - Tesla Child Seats

⚠️ Warning: The Tesla built-in rear facing seats are child restraint systems and must only be used for children over 37”
(94 cm) tall and weighing between 35 and 77 lbs (16.2 to 35.2 kg).

⚠️ **Warning:** Do not use supplemental child restraint systems, including booster seats, in the Tesla built-in rear facing child seats.

⚠️ **Warning:** Always ensure that the top of the child’s head cannot touch the vehicle and that the child is seated comfortably with the seat belts correctly fastened.

⚠️ **Warning:** Follow all instructions and heed all warnings related to the Tesla built-in rear facing child seats. Failure to do so can compromise occupant safety.

⚠️ **Warning:** Read all safety warnings and labels attached to the seats.

⚠️ **Warning:** Do not leave children unattended in Model S, even if the child is secured in a child safety seat or a Tesla built-in rear facing child seat. In hot weather, the interior temperature can reach dangerous levels that can result in dehydration, serious injury or death.

⚠️ **Warning:** Do not remove or replace the fabric on a Tesla built-in rear facing child seat. The covers are an integral part of the restraint’s performance and should not be removed or replaced with any other type than those supplied by Tesla.

⚠️ **Warning:** If the Tesla built-in rear facing child seats have been worn in an accident, they must be inspected or replaced by Tesla, even if damage is not obvious.

⚠️ **Warning:** Before allowing a child to ride in the Tesla built-in rear facing child seats, check that the seat is securely held in the upright position by trying to pull the seat back toward you.

⚠️ **Warning:** Do not remove the built-in rear facing child seats for any reason, including cleaning. To ensure safety of occupants, removal and installation must be performed by qualified Tesla service technicians.

⚠️ **Warning:** Do not make modifications or additions that can interfere with the operation of the Tesla built-in rear facing child seats.

⚠️ **Warning:** To prevent injury, ensure all loose items (bags, luggage, etc.) are secured. In an accident, or during hard braking and sharp turns, loose items could cause injury.
Location of Airbags

Airbags are located in the approximate areas shown here. Airbag warning information is printed on the sun visors.

1. Passenger knee airbag
2. Passenger front airbag
3. Side airbags
4. Curtain airbags
5. Driver’s knee airbag
6. Driver’s front airbag
How the Airbags Work

Inflation of airbags depends on the rate at which the vehicle’s cabin changes speed in a collision. The rate of deceleration determines whether airbags inflate.

Airbags inflate instantly with considerable force accompanied by a loud noise. The inflated bag, together with the seat belts, limits movement of occupants to reduce the risk of injury.

Front airbags are not ordinarily designed to inflate in rear collisions, rollovers, minor front or side collisions, heavy braking, or driving over bumps and potholes. Therefore, significant superficial damage can occur to the vehicle without the airbags inflating or, conversely, a relatively small amount of structural damage can cause airbags to inflate.

If you are planning to modify your vehicle for a person with disabilities in a way that may affect the airbag system, contact Tesla.

Types of Airbags

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Advanced front airbags</td>
<td>The front airbags are advanced airbags designed to reduce airbag related injuries to children or small adults who ride in the front seats. On the driver's side, the front airbag works with a seat position sensor that adjusts the inflation level based on the seating position of the occupant. On the passenger’s side, the airbag responds to a sensing system in the seat that determines whether or not the passenger side front airbag inflates, and optimizes the inflation level based on the weight of the occupant (described below).</td>
</tr>
<tr>
<td>Knee airbags</td>
<td>Knee airbags and the front airbags work together. The knee airbags limit the forward motion of the front seat occupants by restricting leg movement, thereby positioning the occupants so that the front airbags work more effectively.</td>
</tr>
<tr>
<td>Side airbags</td>
<td>Side airbags protect the thorax region of the torso and the pelvis. They inflate only if a severe side impact occurs. Side airbags on the non-impacted side do not inflate.</td>
</tr>
<tr>
<td>Curtain airbags</td>
<td>Curtain airbags help protect the head and typically inflate only if a severe side impact occurs, or if the vehicle rolls over. Curtain airbags on the non-impacted side do not inflate.</td>
</tr>
</tbody>
</table>
Passenger Front Airbag

Model S has an occupancy sensor in the front passenger seat that controls the status of the airbags based on the weight of the occupant. Passenger airbag status displays in the top right corner of the touchscreen to indicate whether the airbag will inflate (on) or not inflate (off) if a collision occurs.

Note: The occupancy sensor system meets the regulatory requirement of FMVSS 208 and automatically detects when inflating the passenger front airbags would be unnecessary or potentially harmful.

<table>
<thead>
<tr>
<th>Front passenger seat occupancy*</th>
<th>Passenger airbag status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty</td>
<td>OFF</td>
</tr>
<tr>
<td>Infant in child safety seat (up to 20 lbs/9kg)</td>
<td>OFF</td>
</tr>
<tr>
<td>Child or small occupant (20-100 lbs/9-45 kg)</td>
<td>ON or OFF</td>
</tr>
<tr>
<td>Heavy object/occupant</td>
<td>ON</td>
</tr>
</tbody>
</table>

*Values are approximate. Occupants whose weight is close to the low weight threshold can cause the status to occasionally turn on and off depending on seating position and physique.

If the status shows the airbag as permanently on, even when the seat is empty and the seat belt is unbuckled, contact Tesla immediately.

To make sure the sensing system can correctly detect occupancy status, eliminate the following:

- Heavy objects sitting on the seat (briefcase, large purse).
- Objects wedged between the seat back and seat cushion.
- Cargo interfering with the seat.
- After market items attached to, or sitting on, the seat (covers, mats, blankets, etc.).

These conditions can interfere with the occupancy sensor. If you have eliminated the above possibilities, and the airbag status is still incorrect, ask passengers to ride in the rear seats and contact Tesla to have the airbag system checked.

Note: The front passenger seat’s sensing system affects the operation of the passenger front and side airbags only. Other passenger curtain airbag is not affected.

⚠️ Warning: Never seat a child in a child safety seat or a booster seat on the front passenger seat when the airbags are activated.

⚠️ Warning: Do not use seat covers on Model S. Doing so could restrict deployment of the side airbags if an accident occurs. It can also reduce the accuracy of the occupant detection system.

• Objects lodged under the seat.
Inflation Effects
When airbags inflate, a fine powder is released. This powder can irritate the skin and should be thoroughly flushed from the eyes and from any cuts or abrasions.

After inflation, the airbags deflate to provide a gradual cushioning effect for the occupants and to ensure the driver’s forward vision is not obscured.

If airbags have inflated, or if your vehicle has been in an accident, always have the airbags, seat belt pre-tensioners and any associated components checked and, if necessary, replaced by Tesla.

In a collision, in addition to the airbags inflating:

- Doors unlock and the door handles extend.
- Hazard warning lights turn on.
- Interior lights turn on.
- High voltage is disabled.

To restore Battery power, use the touchscreen to manually power off Model S, then press the brake to power it back on again.

Airbag Warning Indicator
The airbag indicator on the instrument panel remains lit if the airbag system is malfunctioning. The only time this indicator should light up is briefly when Model S first starts up, in which case it turns off within a few seconds. If it remains lit, contact Tesla immediately and do not drive.

Airbag Warnings

⚠️ Warning: All occupants, including the driver, should always wear their seat belts, whether or not an airbag is also provided at their seating position, to minimize the risk of severe injury or death in the event of a collision.

⚠️ Warning: Front seat occupants should not place their arms over the airbag module, as an inflating bag can cause fractures or other injuries.

⚠️ Warning: Do not use seat covers on Model S. Doing so could restrict deployment of the side air bags if an accident occurs. It can also reduce the accuracy of the occupant detection system.

⚠️ Warning: Airbags inflate with considerable speed and force, which can cause injury. To limit injuries, ensure that occupants are wearing seat belts and are correctly seated, with the seat positioned as far back as possible. The National Highway Traffic Safety Administration (NHTSA) recommends a minimum distance of 10” (25 cm) between an occupant’s chest and an airbag.

⚠️ Warning: Do not use a child safety seat or seat young children on a seat with an operational airbag in front of it. Doing so can cause injury or death if the airbag inflates.

⚠️ Warning: To ensure correct inflation of the side airbags, maintain an unobstructed gap between an occupant’s torso and the side of Model S.

⚠️ Warning: Passengers should not lean their heads against the doors. Doing so can cause injury if a curtain airbag inflates.

⚠️ Warning: Do not allow passengers to obstruct the operation of an airbag by placing feet, knees or any other part of the body on or near an airbag.

⚠️ Warning: Do not attach or place objects on or near the front airbags, the side of the front seats, the headliner at the side of the vehicle, or any other airbag cover that could interfere with inflation of an airbag. Objects can cause serious injury if the vehicle is in a collision severe enough to cause the airbag to inflate.

⚠️ Warning: Following inflation, some airbag components are hot. Do not touch until they have cooled.
Creating a Driver Profile

If Model S is equipped with the optional tech package, you only need to adjust Model S once. When you first adjust the driver’s seat, steering wheel, or driver’s side mirror, the touchscreen prompts you to create a driver profile to save these adjustments. Your profile also saves several other preferences you make using the touchscreen’s Settings window.

A new driver can also add a driver profile by touching Controls > Settings > Driver Profiles (or by touching the driver icon on the touchscreen’s status bar, and touching Create Driver Profile). Enter the driver name and touch Create Profile.

If you change the position of the steering wheel, driver’s seat, or driver’s side mirror after you have saved a profile, the touchscreen prompts you to save the new position or restore the previously saved position (other preferences are automatically saved). To use a setting without saving or restoring, just ignore the prompt.

Restoring a Driver’s Profile

To adjust Model S based on a driver’s profile, touch the driver profile icon, located to the left side of the Tesla “T” on the touchscreen’s status bar. Then choose the driver and the saved adjustments are automatically made.

Saved Driver Settings

To see what settings are associated with your driver profile, touch Controls > Settings > Driver Profiles. Then touch See what’s saved. A popup window lists the settings that are associated with a driver profile. These settings vary depending on the version of software currently running in Model S.
Adjusting Position

Adjust the steering wheel to the desired driving position by moving the control on the left side of the steering column.

⚠️ Warning: Do not make adjustments while driving.

Adjusting Sensitivity

You can adjust the feel and sensitivity of the steering system to suit your personal preference:

1. On the touchscreen, touch Controls.
2. Choose a steering option:
   - Comfort - reduces the effort required to turn the wheel. In town, Model S feels easier to drive and park.
   - Standard - Tesla believes that this setting offers the best handling and response in all conditions.
   - Sport - increases the effort required to turn the wheel. When driving at higher speeds, Model S feels more responsive.

The only way to really know which option you like best is to try them.

Using Left Steering Wheel Buttons

Use the buttons on the left side of the steering wheel to change radio stations, control the media player’s volume, and control what displays on the left side of the instrument panel (whenever the Navigation app is not displaying instructions).

Note: The volume control on the steering wheel does not adjust spoken navigation instructions. To control the volume of navigation instructions, use the navigation window on the touchscreen (see Using Maps on page 90).

1. Next
   - If you are listening to local or satellite radio and you have defined more than one radio preset, press to play the next preset in the radio band that is currently playing. If you have not defined more than one preset, press to go to the next available frequency.
   - If you are listening to Internet radio, or to an audio file on a connected Bluetooth or USB device, press to skip to the next song or station.

2. Scroll Wheel
   - To adjust the media volume, roll up or down.
   - To mute the media volume, or to pause/play an audio file, tap the wheel.
   - To choose what displays on the left side of the instrument panel, press and hold the scroll wheel to display the available options. Then roll the scroll wheel to browse through the options. Tap the scroll wheel when the option you want is highlighted.

3. Previous
   - Same as described above for Next, except it skips to the previous song or station.

Note: Regardless of how you customize the left side of the instrument panel, it automatically changes to display navigation instructions (if applicable), or to let you know if a door or trunk is open when Model S is in a driving gear.
Using Right Steering Wheel Buttons

Use the buttons on the right side of the steering wheel to access call options while on a phone call, to browse the phonebook of a Bluetooth-connected phone, to choose and control a Model S feature, and to use voice commands.

Note: Whenever you receive or make a phone call, the right side of the instrument panel automatically displays call options to help you easily handle phone calls on your Bluetooth-connected phone.

1. Phone Menu or Voice Commands
   During a phone call, press to display the phone menu, which gives you the option to mute, hold, or end the call.
   Press and hold to use voice commands to call a contact, navigate, or listen to Internet music. When you hear the tone, speak your command. Release the button when you finish speaking. For details, see Using Voice Commands on page 38.

2. Scroll Wheel
   - To choose what displays on the right side of the instrument panel, press and hold the scroll wheel to display the available options. Then roll the scroll wheel to browse through the options. Tap the scroll wheel when the option you want is highlighted.
   - When the right side of the instrument panel displays a menu, rolling the wheel highlights the next item in a menu and tapping the wheel selects the highlighted item. When a menu is not displayed, rolling the wheel adjusts your chosen controllable feature (see Item 3 below).

   Note: The option you choose to display using the right scroll wheel is retained until you manually change it. It can also be saved in your driver profile.

3. Customize the Scroll Wheel/Exit a Menu
   Press, then use the scroll wheel to select Phone to browse through and select contacts and recent calls.
   Press, then use the scroll wheel to select Customize to choose the Model S feature that you want to control whenever you roll the wheel when a menu is not displayed. You can choose from:
   - All. Allows you to roll the wheel and choose from all available functions (listed next).
   - Climate Temps. Roll the wheel to change the temperature, or press the wheel to turn the climate control system on and off.
   - Fan Speed. Roll the wheel to adjust the speed of the fan used to cool or heat the cabin.
   - Display Brightness. Roll the wheel to change the brightness level of the displays, or press the wheel to restore default settings.
   - Sunroof (if equipped). Roll the wheel to adjust the position of the sunroof.
   - Media Source. Roll the wheel to control what Media Player is playing, or press the wheel to add/remove the currently playing station or audio track as a Favorite.

Press the lower right button at any time to either exit a menu, or go back one level in the menu structure.

Using Voice Commands

You can use voice commands to call a contact, navigate, or listen to Internet music. Press and hold the voice button on the upper right side of the steering wheel. When you hear the tone, speak your command while continuing to hold down the voice button. Release the button when you finish speaking.

- To call a contact on your Bluetooth-connected phone, say “Call” or “Dial,” followed by the contact’s first and/or last name(s). For example, “Call Eric” or “Call Mike Phillips.”
• To search for, or navigate to, a location, say “Where is,” “Drive,” or “Navigate,” followed by an address, business name, business category, or landmark. For example, “Drive to Tesla in Menlo Park,” “Drive to Starbucks on Homestead in Cupertino,” or “Where is Stanford University?” If you have defined a navigation address for your home or work locations, you can use a voice command to "Navigate home" or "Navigate to work."

• To listen to an Internet music service, say “Listen to,” or “Play,” followed by the name of the song, album, artist or combination. To improve voice recognition accuracy, provide multiple cues in your command, such as artist plus song (for example, “Play Honky Chateau by Elton John” or “Listen to Boogie Wonderland”).

Note: You can also use voice commands to provide feedback to Tesla. Say "Note", "Report", "Bug note", or "Bug report" followed by your brief comments. Model S takes a snapshot of its systems, including screen captures of the touchscreen and instrument panel. Tesla periodically reviews these notes and uses them to continue improving Model S.

Heated Steering Wheel

If Model S is equipped with the optional cold weather package, you can also control a heater in the steering wheel by touching Controls > Cold Weather > . When turned on, a heater in the steering wheel keeps it at a comfortable temperature.

Horn

To sound the horn, press the center pad on the steering wheel.
Adjusting Exterior Side Mirrors

Press the button associated with the mirror you want to adjust (left or right). The button’s light turns on and you can then press the dial to move the mirror to the desired position. Repeat for the other side mirror. If Model S is equipped with the optional tech package, you may need to touch Save on the touchscreen to save the mirror adjustment in your driver profile.

To fold exterior mirrors, press the center button. To set the mirrors to fold automatically whenever you walk away from Model S, touch Controls > Settings > Vehicle > Mirror Auto-Fold > ON.

If Model S is equipped with the optional tech package, the driver’s side mirror automatically dims at night, in proportion to the level of glare from the headlights of a vehicle behind you (except when in Reverse gear). Also, both exterior side mirrors have heaters that turn on and off with the rear window heater.

Mirror Auto-tilt When Reversing

If Model S is equipped with the optional tech package, both exterior mirrors can automatically tilt downward when backing up. To adjust the auto-tilt position, shift into Reverse, then adjust the mirrors as described above (press the button associated with the mirror you want to adjust, then press the dial to move the mirror to the desired position). Touch Save on the touchscreen to save the mirror adjustment in your driver profile.

When you shift back into Drive, the mirrors tilt back to their normal (upward) position. But now that you have adjusted them for backing up, they automatically tilt to the selected downward position whenever you shift into Reverse.

You can turn the auto-tilt feature on or off using the touchscreen, Touch Controls > Settings > Vehicle > Mirror Auto-Tilt.

Rear View Mirror

Except when in Reverse gear, the rear view mirror automatically dims in proportion to the level of glare from the headlights of a vehicle behind you.
Starting Model S

When you open a door, Model S powers on the instrument panel and touchscreen. The center circle on the instrument panel displays the status of doors and the charge level, and you can operate all controls.

To drive:

- PRESS THE BRAKE - the center circle on the instrument panel changes to display the speedometer, power meter, charge level, and selected gear (P, R, N, or D).
- SELECT A GEAR - all the way down for Drive and all the way up for Reverse.

Everything you need to know when driving Model S displays on the instrument panel.

Key Not Inside

If Model S does not detect a key when you press the brake, the instrument panel displays a message telling you that a key was not detected.

Place the key in the center console cup holder where Model S can best detect it.

If Model S still does not detect the key, try holding it against the center console, immediately below the 12V power socket (see 12V Power Socket on page 87). Or try using another key. If another key does not work, contact Tesla.

A number of factors can affect whether Model S can detect the key. These include a low battery in the key, interference from other devices using radio signals, and objects between the key and receiver.

Always keep the key with you. After driving, you need it to restart Model S after it powers off. And when you leave Model S, you must bring it with you to lock Model S, either manually or automatically (see Walk-away Locking on page 7).

Powering Off

When you finish driving, shift into Park by pressing the button on the end of the gear selector. The parking brake automatically engages and all systems keep operating. When you leave Model S with the key, it powers off automatically, turning off the touchscreen and instrument panel.

Model S also powers off automatically after being in Park for 15 minutes, even if you are sitting in the driver’s seat.

Although usually not needed, you can power off Model S while you are still sitting in the driver’s seat. Touch Controls > E-Brake & Power Off > Power Off. Model S automatically powers back on again if you press the brake or touch anywhere on the touchscreen.

Note: Model S automatically shifts into Park whenever you leave the vehicle, even if you shift into Neutral before exiting. To keep Model S in Neutral, see Leaving Model S in Neutral - Tow Mode on page 42.
Shifting Gears

When Model S is in Park, you must press the brake to shift to another gear. Move the lever up or down to change gears.

If you try to shift into a gear that the current driving speed prohibits, you will hear a chime and the gear does not change.

Reverse

Push the lever all the way up and release. You can only shift into Reverse when Model S is stopped or moving less than 5 mph (8 km/h). If moving less than 1 mph (1.6 km/h), you must press the brake.

Neutral

Push the lever up or down to the first position and release to shift into Neutral. Neutral allows Model S to roll freely.

If Model S is in Park and you use the touchscreen to release the parking brake (Controls > E-Brake & Power Off), Model S shifts into Neutral (see Parking Brake on page 53).

Model S automatically shifts into Park whenever you:
- Leave the vehicle.
- Connect a charge cable.

Leaving Model S in Neutral - Tow Mode

Model S automatically shifts into Park whenever you finish driving and leave Model S. To keep Model S in Neutral when you exit, allowing it to roll freely (for example, pulling onto a transporter, etc.), activate Tow mode:

1. Shift into Park.
2. Press the brake pedal.
3. Touch Controls > Settings > Service & Reset > Tow Mode.

Model S beeps, and shifts into Neutral (which releases the parking brake).

When Tow mode is active, Model S displays this indicator light on the instrument panel, along with a message telling you that Model S will remain free rolling.

Note: In Tow mode, Model S does not shift into a driving gear. To cancel Tow mode, shift into Park or touch Tow mode again. Tow mode also cancels if you use the touchscreen to apply the parking brake (Controls > E-Brake & Power Off > Parking Brake).
Instrument Panel Overview

Note: The following illustration is provided for demonstration purposes only. Depending on vehicle options, software version, and market region, the information displayed may be slightly different.

1. The center display changes depending on whether Model S is off or ready to drive. If Model S is off, the center displays shows remaining estimated range and status of doors. Pressing the brake powers Model S on—the indicator lights flash on for a second and the center display shows speed, power, charge level, estimated range (see item 9), and active gear. When Model S is plugged in, the instrument panel displays charging status (see Charging Status on page 107).

2. Use the left steering wheel buttons to operate the audio system. You can also press and roll the scroll wheel to change what displays on the left side of the instrument panel (see Steering Wheel on page 37).

3. Pay attention to important status messages that display here.

4. All indicator lights flash on briefly when you press the brake to prepare to drive. They should then turn off, unless the light applies to a current situation (see Indicator Lights on page 44).

5. Use the right steering wheel buttons for voice commands, to handle telephone calls, and to control some features of Model S. You can customize what features the scroll wheel can control (see Using Right Steering Wheel Buttons on page 38).

6. Door lock status

7. Odometer

8. Outside temperature

9. Total estimated driving distance (or energy) available. Instead of driving distance as shown here, you can display the percentage of battery energy remaining. To do so, touch Controls > Settings > Units & Format > Energy & Charging (see Settings on page 77).

Note: When anticipating when you need to charge, use range estimates as a general guideline only.

Note: In cold weather, some of the stored energy in the Battery may not be available on your drive because the Battery is too cold. When this happens, a portion of the Battery meter is blue and the driving distance value has a snowflake image next to it. If Model S is plugged in, you can heat your Battery using wall power by turning on climate control using the mobile app. When the Battery warms up, the blue portion on the meter and the snowflake image are no longer displayed.
10. Pay attention to alert messages that appear at the bottom center of the instrument panel. If any alerts are in effect, you can view information about them by touching the alert icon (exclamation mark) on the touchscreen's status bar (the topmost area of the touchscreen).

11. Currently selected gear: Park, Reverse, Neutral, or Drive.

12. Dashed lines appear on the power meter if Model S is limiting power. The dashed lines appear on the top portion when power available for acceleration is being limited, and on the bottom portion when power that can be gained by regenerative braking is limited. Model S limits power for many reasons. Here are just a few examples:
   - Acceleration may be limited when the Battery is reaching a low state of charge or if the powertrain is hot.
   - Both acceleration and regenerative braking may be limited when the ambient temperature is either very high or very low.
   - Regenerative braking may be limited when the Battery is fully charged.

13. Date and time

**Indicator Lights**

Indicator lights flash on briefly when you press the brake pedal to prepare for driving. Unless an indicator light applies to a current situation, they should turn off. If an indicator light fails to turn on or off, contact Tesla.

In addition to indicator lights, alerts display on the top or bottom center of the instrument panel. If alerts are in effect, an alert icon (exclamation mark) displays on the top of the touchscreen. Touch this icon to display a description of the alert.

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Airbag Warning]</td>
<td>Airbag safety. If this indicator does not flash on briefly when Model S prepares to drive, or if it remains on, contact Tesla immediately. See Airbag Warning Indicator on page 35.</td>
</tr>
<tr>
<td>![Seat Belt Reminder]</td>
<td>A seat belt for an occupied seat is not fastened. Note: Depending on the date of manufacture, rear seating positions may not be equipped with a seat belt reminder. See Seat Belts on page 20.</td>
</tr>
<tr>
<td>![Parking Lights]</td>
<td>Parking lights (side marker lights, tail lights, and license plate lights) are on. See Lights on page 47.</td>
</tr>
<tr>
<td>![Headlight Low Beams]</td>
<td>Headlight low beams are on.</td>
</tr>
<tr>
<td>![Headlight High Beams]</td>
<td>High beams are turned on, and either the vehicle is not equipped with Auto High Beam, or Auto High-Beam is turned off. See Headlight High Beams on page 49.</td>
</tr>
<tr>
<td>Indicator</td>
<td>Description</td>
</tr>
<tr>
<td>-----------</td>
<td>-------------</td>
</tr>
<tr>
<td><img src="image1.png" alt="High beams" /></td>
<td>High beams are currently turned on, and Auto High Beam will turn off the high beams if light is detected in front of Model S. See Headlight High Beams on page 49.</td>
</tr>
<tr>
<td><img src="image2.png" alt="High beams" /></td>
<td>High beams are temporarily turned off because the Auto High Beam feature is on and Model S detects light. When light is no longer detected, the high beams will automatically turn back on. See Headlight High Beams on page 49.</td>
</tr>
<tr>
<td><img src="image3.png" alt="Electronic stability control systems" /></td>
<td>Electronic stability control systems are applying the brake to the relevant wheel to prevent slippage (light flashes). See Traction Control on page 54.</td>

</tbody>
</table>
Controlling Lights

Touch Controls on the bottom corner of the touchscreen to control most of the lights.

In addition to the lights that you can control from the touchscreen, Model S has convenience lights that turn on and off automatically based on what you are doing. For example, you will notice interior lights, marker lights, tail lights, door handle lights, and puddle lights that turn on when you unlock Model S, when you open a door, and when you shift into Park. They turn off automatically after a minute or two or when you shift into a driving gear or lock Model S.
1. If you turn on DOME lights, interior dome (map) lights turn on when you unlock Model S, open a door upon exiting, or shift into P (Park). They turn off after 60 seconds, when you lock Model S, or when you shift into a driving gear.

You can also turn an individual dome light on or off by pressing its lens. If you manually turn a dome light on, it turns off when Model S powers off. If Model S was already powered off when you manually turned the light on, it turns off after 60 minutes.

2. If you turn on AMBIENT lights, the lights on the door armrests turn on whenever the headlights are on.

3. If you turn on AUTO HIGH BEAM, you can set the headlights to temporarily switch to low beam whenever high beams are on and light is detected in front of Model S (see Headlight High Beams on page 49).

4. DRL (Daytime Running Lights) operate only when driving with the headlights off. In jurisdictions where required by law (Canada), daytime running lights can not be turned off.

5. If Model S is equipped with optional front fog lights, touch to turn them on or off.

The Front Fog indicator displays on the instrument panel whenever the optional front fog lights are on.

The fog lights operate only when the headlights are on. Whenever headlights are turned off, fog lights also turn off.

6. Exterior lights are set to AUTO each time you start Model S. Touch these options to temporarily change the exterior light setting:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>All exterior lights (headlights, tail lights, side marker lights, parking lights, and license plate lights) turn off until you manually turn them back on or until the next time you drive Model S.</td>
</tr>
<tr>
<td>PARKING</td>
<td>Only the side marker lights, parking lights, tail lights and license plate lights turn on.</td>
</tr>
<tr>
<td>ON</td>
<td>All exterior lights (headlights, tail lights, side marker lights, parking lights, and license plate lights) turn on automatically when driving in low lighting conditions. If you change to a different setting, lights always revert to this AUTO setting on your next drive.</td>
</tr>
<tr>
<td>AUTO</td>
<td>All exterior lights (headlights, tail lights, side marker lights, parking lights, and license plate lights) turn on automatically whenever the headlights are on. When headlights are off, fog lights are also off.</td>
</tr>
</tbody>
</table>

**Note:** Optional fog lights operate automatically whenever the headlights are on. When headlights are off, fog lights are also off.
Headlight High Beams

Push the left-hand steering column lever away from you. To cancel, pull the lever toward you.

If Model S is equipped with Driver Assistance features, you can set the headlights to automatically switch to low beam when there is light detected in front of Model S. To turn this feature on, touch Controls > Auto High Beam.

Note: Your chosen setting is retained until you manually change it. It can also be saved in your driver profile.

In situations where high beams are turned off because Auto High Beam is turned on and light is detected in front of Model S, you can temporarily turn high beams on by pulling the lever all the way toward you.

The following indicator lights are visible on the instrument panel when high beams are turned on:

- 🚘 High beams are turned on, and either the vehicle is not equipped with Auto High Beam, or Auto High-Beam is turned off.
- 🚘 High beams are currently turned on, and Auto High Beam is ready to turn off the high beams if light is detected in front of Model S.
- 🚘 High beams are temporarily turned off because Auto High Beam is on and is detecting light in front of Model S. When light is no longer detected, the high beams automatically turn back on.

To flash the headlight high beams, pull the lever fully toward you and release.

⚠️ Warning: Auto High Beam is an aid only and is subject to limitations and system issues. It is the driver’s responsibility to make sure that the headlights are always adjusted as appropriate for the weather conditions and driving circumstances.
**Headlights After Exit**

When you stop driving and park Model S in low lighting conditions, the exterior lights automatically turn on. They automatically turn off after two minutes or when you lock Model S.

You can turn this feature on and off using the touchscreen. Touch Controls > Settings > Vehicle > Headlights After Exit.

**Cornering Lights**

If Model S is equipped with the optional tech package, LED cornering lights broaden the beam of the headlights when you drive through a corner.

**Turn Signals**

Move the left-hand steering column lever up (before turning right) or down (before turning left).

The turn signals stop operating when canceled by the steering wheel, or when you return the lever to the central position.

The corresponding turn signal indicator lights up on the instrument panel when a turn signal is operating. You also hear a clicking sound.

**Warning:** If Model S is equipped with both Autopilot and the Tech Package option, engaging a turn signal can cause Model S to accelerate when using Traffic-Aware Cruise Control in specific situations. See Overtake Acceleration on page 63.

**Lane Change Flash**

To indicate a lane change, quickly press the lever up or down against the spring pressure, then release. The corresponding turn signal flashes three times.

**Hazard Warning Flashers**

To turn on the hazard warning flashers, press the button located on the side of the touchscreen closest to the steering wheel. All turn signals flash. Press again to turn off.

**Note:** Hazard warning flashers operate even without a Model S key nearby.
Wipers

To wipe the windshield, rotate the end of the left-hand steering column lever away from you. You can choose from four levels:

- 1st: Auto with low rain sensitivity.*
- 2nd: Auto with high rain sensitivity.*
- 3rd: Continuous, slow.
- 4th: Continuous, fast.

For a single wipe, press and release the end of the lever.

If the wipers are set to Auto and the sensor detects no water, the wipers do not wipe.

When you operate the wipers, headlights automatically turn on (if they are not on already).

*Model S has a rain sensor located on the inside of the windshield at the base of the interior mirror. When wipers are set to Auto, the frequency at which they wipe depends on how much water the sensor detects. When wipers are set to the 2nd level, the sensor is more sensitive.

To extend the life of wiper blades, remove ice from the windshield before turning wipers on. Ice has sharp edges that can damage the rubber on the blades.

Periodically check and clean the edge of the wiper blade. If damaged, replace the blade immediately. For details on checking and replacing wiper blades, see Wiper Blades and Washer Jets on page 121.

⚠️ Caution: In harsh climates, ensure that the wiper blades are not frozen or adhered to the windshield.

De-icing Wipers

To make wiper blades easy to access so you can remove any ice and snow, shift Model S into Park, then use the touchscreen to move them to the service position. Touch Controls > Settings > Service & Reset > Service Mode > ON. When parking in cold outdoor climates, it is helpful to leave Model S with the wipers in the service position. In this position, they are closer to the defrost vent, allowing you to thaw them by directing air from the climate control system towards the windshield.

Note: Wipers automatically return to their normal position when you shift Model S out of Park.

If Model S is equipped with the cold weather option, you can de-ice wipers by touching Controls > Cold Weather > Heated Wipers. The heated wipers automatically turn off after heating the wipers for 15 minutes.

Washers

Press the button on the end of the left steering column lever to spray washer fluid onto the windshield. You can press this button at two levels. Press partially for a single wipe, without any washer fluid. Press fully for both wipe and wash. When washing the windshield, the wipers will perform two wipes after you release the button, then a third wipe a few seconds later.

Periodically top up washer fluid (see Topping Up Washer Fluid on page 125).

De-icing Washer Nozzles

If Model S is equipped with the cold weather option, washer nozzles have de-icers that turn on whenever the ambient temperature nears freezing, or when you turn on the heated wipers (Controls > Cold Weather > Heated Wipers). The washer de-icers turn off when the heated wipers turn off (after 15 minutes), provided the temperature is warm enough to prevent freezing.
Braking Systems

Model S has an anti-lock braking system (ABS) that prevents the wheels from locking when you apply maximum brake pressure. This improves steering control during heavy braking in most road conditions.

During emergency braking conditions, the ABS constantly monitors the speed of each wheel and varies the brake pressure according to the grip available. The alteration of brake pressure can be felt as a pulsing sensation through the brake pedal. This demonstrates that the ABS is operating and is not a cause for concern. Keep firm and steady pressure on the brake pedal while experiencing the pulsing.

The ABS indicator flashes briefly on the instrument panel when you first start Model S. If this indicator lights up at any other time, an ABS fault has occurred and the ABS is not operating. Contact Tesla. The braking system remains fully operational and is not affected by an ABS failure. However, braking distances may increase.

Emergency Braking

In an emergency, fully press the brake pedal and maintain firm pressure, even on low traction surfaces. The ABS varies the braking pressure to each wheel according to the amount of traction available. This prevents wheels from locking and ensures that you stop as safely as possible.

⚠️ **Warning:** Do not pump the brake pedal. Doing so interrupts operation of the ABS and can increase braking distance.

⚠️ **Warning:** Always maintain a safe distance from the vehicle in front of you and be aware of hazardous driving conditions. While the ABS can improve stopping distance, it cannot overcome the laws of physics. It also does not prevent the danger of hydroplaning (where a layer of water prevents direct contact between the tires and the road).

Brake Wear

Model S brake pads are equipped with wear indicators. A wear indicator is a thin metal strip attached to the brake pad that squeals as it rubs against the rotor when the pad wears down. This squealing sound indicates that the brake pads have reached the end of their service life and require replacement. To stop the squealing, contact Tesla Service.

⚠️ **Warning:** Neglecting to replace worn brake pads results in damage to the braking system and can create a braking hazard.
Regenerative Braking

Whenever Model S is moving and your foot is off the accelerator, regenerative braking slows down Model S and feeds any surplus energy back to the Battery.

By anticipating your stops and simply removing your foot from the accelerator to slow down, you can take advantage of regenerative braking to increase driving range. Of course, this is no substitute for regular braking when needed for safety.

Note: If regenerative braking is aggressively slowing Model S, such as on a steep descent, brake lights turn on to alert other road users that you are slowing down.

The power meter on the instrument panel displays real-time feedback on the amount of energy being gained by regenerative braking.

The amount of energy fed back to the Battery using regenerative braking can depend on the current state of the Battery and the charge level setting that you are using. If regenerative braking is limited, a dashed yellow line displays on the power meter. For example, regenerative braking may be limited if the Battery is already fully charged or if the ambient temperature is low.

To Set the Regenerative Braking Level

You can use the touchscreen to change the level of regenerative braking:

1. Touch Controls > Driving > Regenerative Braking.
2. Choose from two levels:
   - **Standard.** Provides the maximum amount of regenerative braking. When you release the accelerator, Model S slows down faster, reducing the need to use the brakes.
   - **Low.** Limits the amount of regenerative braking. When you release the accelerator, Model S takes longer to slow down and coasts further.

Parking Brake

The parking brake automatically engages whenever you shift Model S into Park, and releases whenever you shift into any other gear.

Note: The parking brake operates on the rear wheels only, and is independent of the foot-operated brake system.

Use the touchscreen to manually release the parking brake (which also shifts Model S into Neutral):

1. Touch Controls > E-Brake & Power Off.
2. Press the brake pedal, then touch Parking Brake. If Model S was previously in Park, it shifts into Neutral.

The parking brake indicator lights up on the instrument panel whenever you use the touchscreen to manually apply the parking brake.

If an electrical issue occurs with the parking brake, an amber parking brake fault message displays at the top center of the touchscreen.

Caution: In the unlikely event that Model S loses electrical power, you cannot release the parking brake.
How It Works

The traction control system constantly monitors the difference in speed between the front and rear wheels. If Model S experiences a loss of traction, the system minimizes wheel spin by controlling brake pressure and motor power. By default, the traction control system is always active. Under normal conditions, it should remain active to ensure maximum safety.

On standard Model S vehicles, traction control can be turned off at any time. Turn it off only in circumstances where you deliberately want the wheels to spin, such as when Model S is stuck in snow or mud.

On a dual motor Model S, you can enable slip start to allow the wheels to spin at a limited speed. Slip start can be enabled only when Model S is moving 20 mph (32 km/h) or slower. Slip start automatically disables when the speed exceeds 40 mph (64 km/h).

This indicator displays on the instrument panel whenever the traction control system is actively controlling brake pressure and motor power to minimize wheel spin.

⚠️ Warning: Traction control can not prevent accidents caused by driving dangerously or turning too sharply at high speeds.

Allowing Wheel Slip

Under normal conditions, the traction control system should remain enabled. Disable it only in circumstances where you deliberately want the wheels to spin, such as:

• Starting on a loose surface, such as gravel or snow.
• Driving in deep snow, sand or mud.
• Rocking out of a hole or deep rut.

To allow the wheels to spin on a standard single motor Model S, touch Controls > Driving > Traction Control > Off.

To allow the wheels to spin on a dual motor Model S, touch Controls > Driving > Traction Control > Slip Start.

Although the traction control system automatically reactivates the next time you start Model S, it is strongly recommended that you enable it immediately after the circumstances that required you to disable it have passed.
How Speed Assist Works

If Model S is equipped with Driver Assistance features, a camera mounted on the windshield behind the interior rear view mirror detects speed limit signs. The signs are then analyzed and compared against GPS data to determine the speed limit at your current driving location. For routes where no signs are present, speed limits are determined using GPS data (if available). Instead of determining the speed limit based on signs and GPS data, you can also manually enter an arbitrary speed limit.

When you turn on Speed Assist, the speedometer displays a gray line to indicate the speed limit. Warnings (described below) take effect when you exceed this limit.

In situations where the system does not have confidence in the acquired speed limit, the speedometer displays a dashed line instead, and warnings do not take effect. The system may be uncertain about a speed limit if a speed, although initially detected, is no longer known or may no longer apply. In some cases, the dashed line displays at the originally detected speed, whereas in other cases it displays at 0 mph.

If you set the speed limit warning to Display (see Controlling Speed Assist below), a speed limit sign displays in the center of the instrumental panel whenever you exceed the speed limit and the speedometer displays the excess speed in gray.

Note: A speed limit sign also displays in the center of the instrumental panel when an automatically detected speed limit changes.

If you set the speed limit warning to Chime (see Controlling Speed Assist) and exceed the speed limit, the speedometer displays excess speed in gray, and you also hear a warning chime.

Note: Speed limit warnings go away automatically after 10 seconds, or when Model S slows down below the specified limit.

⚠️ Warning: Do not rely on Speed Assist to determine the appropriate speed limit.
Always drive at a safe speed based on traffic and road conditions.

**Caution:** If your Model S is equipped with Speed Assist, you must take your vehicle to Tesla Service if a windshield replacement is needed. Failure to do so can cause Speed Assist to malfunction.

### Controlling Speed Assist

To turn Speed Assist on or off, and control how it works, touch **Controls > Settings > Driver Assistance > Speed Assist**, then choose one of these options:

- **Off.** The speed limit is not displayed.
- **Display.** Speed limit information visually displays on the speedometer and when you exceed the limit, a speed limit sign displays in the center of the instrument panel, and the speedometer displays the excess speed in gray.
- **Chime.** In addition to the visual display, an audible chime sounds whenever you exceed the speed limit.

You can also specify how the speed limit is determined:

- **Relative.** The speed limit is determined automatically based on detected traffic signs and GPS data. If desired, you can set a speed limit offset (+ or -) if you want to be alerted only when you exceed the speed limit by a specified amount. For example, you would increase the offset to +10 mph if you only want to be alerted when you exceed the speed limit by 10 mph.
- **Absolute.** Manually specify any speed limit between 20 and 140 mph (30 and 240 km/h).

**Note:** GPS data is not always accurate. The GPS can misjudge the road’s location and provide the speed limit for a directly adjacent road that may have a different speed limit. For example, The GPS can assume Model S is on a freeway when it’s actually on a nearby surface street, and vice versa.

### Limitations and Inaccuracies

Speed Assist may not be fully functional or may provide inaccurate information in these situations:

- Visibility is poor and speed limit signs are not clearly visible (due to heavy rain, snow, fog, etc.).
- Bright light (oncoming headlights or direct sunlight) is interfering with the camera’s view.
- Model S is being driven very close to a vehicle in front of it which is blocking the camera’s view.
- The windshield area in the camera’s field of view is obstructed (fogged over, dirty, covered by a sticker, etc.).
- Speed limit signs are concealed by objects.
- The speed limits stored in the GPS database are incorrect or outdated.
- Model S is being driven in an area where GPS data is not available.
- Traffic signs do not conform to standard recognizable formats.
- A road or a speed limit has recently changed.
How Lane Departure Warning Works

If Model S is equipped with Autopilot, a camera mounted on the windshield behind the interior rear view mirror monitors the markers on the lane you are driving in. If a front wheel passes over a lane marking and the associated turn signal is off, you feel three slight vibrations in the steering wheel.

Lane Departure Warning operates only when Model S is traveling over approximately 30 mph (50 km/h).

⚠️ Warning: Lane Departure Warning is for guidance purposes only. Never depend on Lane Departure Warning to inform you of unintentionally driving outside of the boundaries of the driving lane. Several external factors can reduce the performance of Lane Departure Warning, causing either no readings or false readings. Therefore, depending on this system to stay within the boundaries of the driving lane can result in serious injury or death. Always keep your eyes on the road when driving. It is the driver's responsibility to stay alert, drive safely, ensure the vehicle stays in the traveling lane, and be in control of the vehicle at all times.

⚠️ Warning: Lane Departure Warning is designed to activate when it detects lane markings. It is not designed to detect the edge of a road. It is the driver's responsibility to drive attentively and stay within the boundaries of the driving lane.

⚠️ Caution: If your Model S is equipped with Lane Departure Warning, you must take your vehicle to Tesla Service if a windshield replacement is needed. Failure to do so can cause Lane Departure Warning to malfunction.

Controlling Lane Departure Warning

To turn Lane Departure Warning on or off, touch Controls > Settings > Driver Assistance > Lane Assist.

Limitations and Inaccuracies

Lane Departure Warning can not always clearly detect lane markings and you may experience unnecessary or invalid warnings in these situations:

- Visibility is poor and lane markings are not clearly visible (due to heavy rain, snow, fog, etc.).
- Bright light (oncoming headlights or direct sunlight) is interfering with the camera's view.
- Model S is being driven very close to a vehicle in front of it which is blocking the camera's view.
- The windshield area in the camera's field of view is obstructed (fogged over, dirty, covered by a sticker, etc.).
- Lane markings are excessively worn or have been adjusted due to road construction.
- Lane markings are changing quickly (for example, lanes branching off, crossing over, or merging).
- The road is narrow or winding.
- Objects or landscape features are casting strong shadows on lane markers.
How Forward Collision Warning Works

If Model S is equipped with Autopilot, a camera mounted on the windshield behind the interior rear view mirror and a radar sensor in the center of the front grill monitor the area in front of Model S for the presence of a vehicle, bike or pedestrian. If a collision is considered likely unless you take immediate corrective action, Forward Collision Warning is designed to provide visual and audible warnings.

The cameras and sensors associated with Forward Collision Warning are designed to monitor an approximate area of up to 525 feet (160 meters) in the driving path, as illustrated below.

⚠️ Warning: The area being monitored by Forward Collision Warning can be adversely affected by road and weather conditions (see Limitations on page 58). Use appropriate caution when driving.

Caution: If your Model S is equipped with Forward Collision Warning, you must take your vehicle to Tesla Service if a windshield replacement is needed. Failure to do so can cause Forward Collision Warning to malfunction.

⚠️ Warning: Forward Collision Warning does not operate when Model S is traveling less than 4 mph (7 km/h).

⚠️ Warning: Forward Collision Warning is designed only to provide visual and audible alerts (see Visual and Audible Feedback on page 58). It does not attempt to apply the brakes or decelerate Model S. When seeing and/or hearing a warning (described below), it is the driver’s responsibility to immediately take an appropriate action.

⚠️ Warning: Forward Collision Warning is for guidance purposes only and is not a substitute for attentive driving and sound judgement. Always keep your eyes on the road when driving and never depend on Forward Collision Warning to warn you of a potential collision. Several factors can reduce the performance of Forward Collision Warning, causing either unnecessary, invalid, inaccurate, or missed warnings (see Limitations on page 58). Depending on Forward Collision Warning to warn you of a potential collision can result in serious injury or death.

Visual and Audible Feedback

When a collision with a vehicle, bicycle, or pedestrian is considered likely unless immediate action is taken, Forward Collision Warning is designed to sound an audible alert and display a collision warning in the center of the instrument panel.

Warnings cancel automatically when the risk of a collision has been reduced (for example, you have decelerated or stopped Model S, or a vehicle in front has moved out of your driving path).

⚠️ Warning: Forward Collision Warning may provide a warning in situations where the likelihood of collision may not exist. Stay alert and always pay attention to the area in front of Model S so you can anticipate whether any action is required.

Controlling Forward Collision Warning

To turn Forward Collision Warning off or adjust its sensitivity, touch Controls > Settings > Driver Assistance > Forward Collision Warning. Instead of the default warning level of Medium, you can turn the warning Off, or you can choose to be warned Late or Early.

Note: Your chosen setting is retained until you manually change it. It can also be saved in your driver profile.

Limitations

Forward Collision Warning cannot always detect vehicles, bikes, or pedestrians, and you may experience unnecessary, inaccurate, invalid or missed warnings for many reasons, particularly if:

• The road has sharp curves.
• Visibility is poor (due to heavy rain, snow, fog, etc.).
• Bright light (oncoming headlights or direct sunlight) is interfering with the camera's view.
• The radar sensor in the center of the front grill is obstructed (dirty, covered, etc.).
• The windshield area in the camera's field of view is obstructed (fogged over, dirty, covered by a sticker, etc.).

⚠️ **Warning:** The list above does not represent an exhaustive list of situations that may interfere with proper operation of Forward Collision Warning. Forward Collision Warning may fail to provide warnings for many other reasons. To avoid a collision, stay alert and always pay attention to the area in front of Model S so you can anticipate the need to take corrective action as early as possible.
Traffic-Aware Cruise Control uses a camera mounted on the windshield behind the interior rear view mirror and a radar sensor in the center of the front grill to detect whether there is a vehicle in front of you in the same lane. If the area in front of Model S is clear, Traffic-Aware Cruise Control is designed to drive consistently at a set speed. When a vehicle is detected, Traffic-Aware Cruise Control is designed to slow down Model S if needed to maintain a selected time-based distance from the vehicle in front, up to the set speed. Traffic-Aware Cruise Control does not eliminate the need to watch the road in front of you and to apply the brakes if needed.

Traffic-Aware Cruise Control makes it easy to maintain a consistent time-based distance from a vehicle travelling in front of you in the same lane. Traffic-Aware Cruise Control is primarily intended for driving on dry, straight roads, such as highways and freeways. It should not be used on city streets.

Note: Traffic-Aware Cruise Control is available only if your Model S is equipped with Autopilot hardware and you have purchased the Tech Package.

Operating Traffic Aware Cruise Control

1. Touch the end of the cruise control lever. Unless a vehicle is detected ahead of you, you must be driving at least 18 mph (30 km/h) to initiate Traffic-Aware Cruise Control. If a vehicle is detected in front of you, you can initiate Traffic-Aware Cruise Control at any speed, even when stationary.

The light on the lever turns on. Traffic-Aware Cruise Control is now in standby mode and is not actively controlling your speed until you specify a cruising speed, as described in the next step.

2. Set your cruising speed by accelerating until you reach a desired cruising speed then moving the cruise control lever up or down (or pull briefly toward you), then releasing.

Once you’ve initially set a cruising speed, you can adjust the speed to cruise at the speed limit that is currently being determined by Speed Assist (see Speed Assist on page 55). To do so, pull the cruise control lever toward you and hold momentarily (about half a second). When you release, your cruising speed is set to the speed that is automatically or manually being determined by Speed Assist, taking into consideration any offset you may have specified.

Note: When you adjust the cruising speed based on the speed limit, the set speed does not change when the speed limit changes. You will need to pull the lever again. You can also manually adjust your cruising speed at any time (see Changing the Set Speed on page 62).

Warning: Do not rely on Speed Assist to determine an accurate or appropriate cruising speed. Always cruise at a safe speed based on traffic and road conditions.

3. To set the distance you want to maintain between Model S and a vehicle travelling ahead of you, rotate the cruise control lever to choose a setting from 1 (the closest following distance) to 7 (the longest following distance). Each setting corresponds to a time-based distance that represents how long it takes for Model S, from its current location, to reach the location of the rear bumper of the vehicle ahead.

As you rotate the cruise control lever, the instrument panel displays the current setting. Release the lever when the desired setting is displayed.
The instrument panel displays the Cruise message above the speedometer (see Instrument Panel Indicator Lights on page 62) and a tick mark at the edge of the speedometer indicates the set speed.

You can now release the accelerator pedal and allow Traffic-Aware Cruise Control to maintain your set speed. When no vehicle is detected ahead, Traffic-Aware Cruise Control maintains the set speed. If a vehicle is detected, Traffic-Aware Cruise Control maintains your chosen following distance, up to the set speed, decelerating Model S as needed. When the vehicle you are following is no longer detected, Traffic Aware Cruise Control accelerates back to the set speed.

You can accelerate at any time when driving at a set speed using Traffic-Aware Cruise Control. But when you release the accelerator, Model S returns to the set speed.

When following a vehicle, Traffic-Aware Cruise Control remains active at low speeds. If Model S comes to a standstill and remains stationary for approximately three seconds (slightly longer when driving on highway conditions), you will need to resume Traffic-Aware Cruise Control by pressing the accelerator pedal or pulling the cruise control lever toward you (see Canceling and Resuming on page 64). A message displays on the instrument panel that you need to resume Traffic-Aware Cruise Control.

When Traffic-Aware Cruise Control is actively slowing down Model S to maintain the selected distance from the vehicle ahead, brake lights turn on to alert other road users that you are slowing down. You may also notice slight movement of the brake pedal.

**Warning:** Do not depend on Traffic-Aware Cruise Control to adequately and appropriately slow down Model S. Always watch the road in front of you and stay prepared to brake at all times. Traffic-Aware Cruise Control does not eliminate the need to apply the brakes as needed, even at slow speeds.

**Warning:** Traffic-Aware Cruise Control can not detect all objects and may not detect a stationary vehicle or other object in the lane of travel. There may be situations in which Traffic-Aware Cruise Control does not detect a vehicle, bicycle, or pedestrian. Depending on Traffic-Aware Cruise Control to avoid a collision can result in serious injury or death.

**Warning:** Traffic-Aware Cruise Control may react to vehicles or objects that either do not exist or are not in the lane of travel, causing Model S to slow down unnecessarily or inappropriately.

**Warning:** Traffic-Aware Cruise Control may misjudge the distance from a vehicle ahead. Always watch the road in front of you. It is the driver's responsibility to maintain a safe distance from a vehicle ahead of you.

**Warning:** When you enable Traffic-Aware Cruise Control in a situation where you are closely following the vehicle in front of you, Model S may apply the brakes to maintain the selected distance.

**Warning:** Traffic-Aware Cruise Control has limited deceleration ability and may be unable to apply enough braking to avoid a collision if a vehicle in front slows suddenly, or if a vehicle enters your driving lane in front of you. Never depend on Traffic-Aware Cruise Control to slow down the vehicle enough to prevent a collision. Always keep your eyes on the road when driving and be prepared to take corrective action as needed. Depending on Traffic-Aware Cruise Control to slow the vehicle down enough to prevent a collision can result in serious injury or death.

**Warning:** Driving downhill can increase driving speed, causing Model S to exceed your set speed. Hills can also make it more difficult for Model S to slow down enough to maintain the chosen following distance from the vehicle ahead.

**Warning:** Traffic-Aware Cruise Control may occasionally brake Model S when not required based on the distance from a vehicle ahead. This can be caused by vehicles in adjacent lanes (especially on curves), or by stationary objects.
### Instrument Panel Indicator Lights

- Traffic-Aware Cruise Control is operating and is maintaining the set speed because it is not actively tracking a vehicle in front.
- Traffic-Aware Cruise Control is actively tracking a vehicle and will decelerate/accelerate as needed to maintain your chosen following distance.
- Traffic-Aware Cruise Control is in a Hold state because Model S came to a standstill behind a vehicle in front. You will need to resume cruise.
- Traffic-Aware Cruise Control is in a Hold state because Model S came to a standstill but a vehicle is not detected in front. You will need to resume cruise.

### Changing the Set Speed

To change the set speed while using Traffic-Aware Cruise Control, move the cruise control lever up (increase) or down (decrease) until your desired speed is reached.

Move the lever up or down to the first position and release to increase/decrease speed by 1 mph (1 km/h). Move the lever up/down to the second position and release to increase/decrease speed to the next multiple of 5 mph (5 km/h). For example, if you are travelling at 54 mph (86 km/h) and move the lever up to the second position and release, the speed increases to 55 mph (90 km/h).

You can also hold the lever up or down to increase/decrease the speed in 2 mph (2 km/h) increments, then release when you reach the desired speed.

**Note:** It may take a few seconds for Model S to reach the new cruising speed.
Overtake Acceleration

When following a vehicle with Traffic-Aware Cruise Control operating, engaging the turn signal to indicate a move into the passing lane briefly accelerates Model S towards the vehicle ahead. By engaging or momentarily holding the turn signal, you can quickly accelerate up to your set speed without having to press the accelerator pedal. The turn signal accelerates Model S only when the following conditions are met:

• Traffic-Aware Cruise Control is operating and detecting a vehicle in front.
• Model S is travelling below the set speed, but over 45 mph (72 km/h).
• The turn signal indicates a move into the passing lane.
• The Overtake Acceleration setting is turned ON (Controls > Settings > Driver Assistance > Overtake Acceleration).

Overtake Acceleration is intended as an aid when passing a vehicle ahead of you. When the turn signal is engaged, Traffic Aware Cruise Control continues to maintain distance from the vehicle ahead, but allows you to drive slightly closer than your selected distance.

Acceleration cancels when:

• You reach your set cruising speed.
• Changing lanes takes too long.
• Model S gets too close to the vehicle ahead.
• You disengage the turn signal.

To turn Overtake Acceleration on or off, touch Controls > Settings > Driver Assistance > Overtake Acceleration. When Overtake Acceleration is turned off, engaging a turn signal when Traffic-Aware Cruise Control is active does not increase your driving speed.

Note: Overtake Acceleration occurs when you either fully engage the turn signal, or you hold the turn signal in the momentary position (partially engaged). When you release or disengage the turn signal, Model S stops accelerating (in the same way as when you release the accelerator pedal) and resumes the set speed.

Note: Model S automatically determines whether the turn signal indicates a move into a passing lane based on if you are driving in a region with right or left hand traffic. When driving in right hand traffic, only the left turn signal (moving the turn signal lever down) provides acceleration. In left hand traffic, only the right turn signal (moving the turn signal lever up) provides acceleration.

⚠️ Warning: Overtake acceleration can cancel for many unforeseen reasons in addition to those listed above. Stay alert and never depend on Overtake Acceleration to increase your driving speed.

⚠️ Warning: Overtake Acceleration increases your driving speed whenever the appropriate turn signal is engaged, even when it may not be your intention to overtake the vehicle you are following. Although Traffic-Aware Cruise Control maintains a safe driving distance from the vehicle ahead, it is the driver’s responsibility to drive safely and stay in control of the vehicle at all times.

⚠️ Warning: Model S uses its onboard GPS (Global Positioning System) to determine if you are currently driving in a region with right hand or left hand traffic. GPS data is not always accurate and may not always be available. It is the driver’s responsibility to stay in control of the vehicle at all times. Never depend on Overtake Acceleration to appropriately increase your driving speed. Conversely, when using Traffic-Aware Cruise Control, never assume that using a turn signal will not increase your driving speed. Depending on this feature can result in serious injury or death.
Canceling and Resuming

To manually cancel Traffic-Aware Cruise Control, briefly push the cruise control lever away from you. The message on the instrument panel turns off, but the set speed remains displayed until Model S powers off.

To resume cruising at the previously set speed, briefly pull the cruise control lever toward you.

Note: When Traffic-Aware Cruise Control cancels, Model S does not coast. Instead, regenerative braking slows down Model S in the same way as when you move your foot off the accelerator when driving without cruise control (see Regenerative Braking on page 53).

⚠️ Warning: Traffic-Aware Cruise Control may immediately cancel, or may not be available, in the following situations:

- You press the brake pedal.
- Your driving speed drops below 18 mph (30 km/h) in situations when Model S does not detect a vehicle ahead within the specified distance.
- You shift Model S out of Drive.
- The driver's seat belt is unbuckled.
- A door is opened.
- The view from the radar sensor or camera is obstructed. This could be caused by dirt, mud, ice, snow, fog, etc.
- The traction control setting is manually disabled or is repeatedly engaging to prevent wheels from slipping.
- The wheels are spinning while at a standstill.

- The cruise control system is failing and requires service.

When Traffic-Aware Cruise Control is unavailable or cancels, all cruise control functionality is unavailable. Model S no longer drives consistently at a set speed and no longer maintains a specified distance from the vehicle ahead.

⚠️ Warning: Traffic-Aware Cruise Control can cancel unexpectedly at any time for unforeseen reasons. Always watch the road in front of you and stay prepared to take appropriate action. It is the driver’s responsibility to be in control of Model S at all times.

Limitations

Traffic-Aware Cruise Control is particularly unlikely to operate as intended in the following types of situations:

- The road has sharp curves.
- Visibility is poor (due to heavy rain, snow, fog, etc.).
- Bright light (oncoming headlights or direct sunlight) is interfering with the camera’s view.
- The radar sensor in the center of the front grill is obstructed (dirty, covered, etc.).
- The windshield area in the camera’s field of view is obstructed (fogged over, dirty, covered by a sticker, etc.).

⚠️ Caution: If your Model S is equipped with Traffic-Aware Cruise Control, you must take your vehicle to Tesla Service if a windshield replacement is needed. Failure to do so can cause Traffic-Aware Cruise Control to malfunction.

⚠️ Warning: Many unforeseen circumstances can impair the operation of Traffic-Aware Cruise Control. Always keep this in mind and remember that as a result, Traffic-Aware Cruise Control may not slow down or may brake or accelerate Model S inappropriately. Always drive attentively and be prepared to take immediate action.

⚠️ Warning: Traffic-aware cruise control may not brake/decelerate for stationary vehicles, especially in situations when you are driving over 50 mph (80 km/h) and a vehicle you are following moves out of your driving path and a stationary vehicle or object is in front of you instead. Always pay attention to the road ahead and stay prepared to take immediate action.
corrective action. Depending on Traffic-Aware Cruise Control to avoid a collision can result in serious injury or death.
How Park Assist Works

If Model S is equipped with the Park Assist option, Model S has several sensors designed to detect the presence of objects nearby. When moving slowly in Drive or Reverse, the sensors alert you if an object is detected close to the front or rear bumper, respectively.

⚠️ Warning: The Park Assist images provided below are representative only. The exact number and location of sensors may vary depending on the date your Model S was manufactured.

The sensors are activated when driving less than 5 mph (8 km/h).

⚠️ Warning: Never depend on Park Assist to inform you if an area you are approaching is free of objects and/or people. Several external factors can reduce the performance of Park Assist, causing either no readings or false readings (see Limitations and False Warnings on page 67). Therefore, depending on Park Assist to determine if Model S is approaching an obstruction can result in damage to the vehicle and/or objects, and can potentially cause serious injury. Always inspect the area with your own eyes. When reversing, perform shoulder checks and use all mirrors. Park assist does not detect children, pedestrians, bicyclists, animals, or objects that are moving, protruding, located too far above or below the sensors, or too close or too far from the sensors. Park Assist is for guidance purposes only and is not intended to replace your own direct visual checks. It is not a substitute for careful driving.

Visual and Audio Feedback

When you shift to Reverse, the Park Assist view displays on the left side of the instrument panel, showing any objects that are in close proximity to the front and rear of Model S. This view closes when you shift into Drive unless objects are detected close to the front of the Model S, in which case the Park Assist view closes automatically when your driving speed exceeds 5 mph (8 km/h). When reversing, visual feedback also displays on the touchscreen, immediately below the camera view (see Rear View Camera on page 71). You can close this view manually by touching the X in the upper left corner.

When driving with the Camera app displayed on the touchscreen, you can switch to the Park Assist view when driving at speeds below 5 mph (8 km/h). Touch the button located in the upper left corner of the Camera app window. This is useful if you need assistance with parallel parking.

If chimes are turned on (see Controlling Audible Feedback on page 67), an audible beep sounds as you approach an object. You can temporarily mute the chime by pressing the scroll wheel on the left side of the steering wheel or by touching the mute button located on the in the bottom left corner of the Park Assist view.

Note: If your vehicle is equipped with software version 6.1 or newer, and you are driving with the camera app displayed on the touchscreen, you can switch to the Park Assist view by touching the icon in the upper left corner of the camera app window. You must be driving at speeds below 5 mph (8 km/h).

Note: If a sensor is unable to provide feedback, the instrument panel displays an alert message.
Caution: Keep sensors clean from dirt, debris, snow, and ice. Avoid using a high pressure power washer on the sensors and do not clean a sensor with a sharp or abrasive object that can scratch or damage its surface.

Caution: Do not install accessories or stickers on or near the parking sensors.

Controlling Audible Feedback

You can use Park Assist with or without audible feedback. To turn chimes on or off, touch Controls > Settings > Safety & Security > Park Assist Chimes.

You can also mute the chimes temporarily by pressing the scroll wheel on the left side of the steering wheel or by touching the mute button in the bottom left corner of the Park Assist view. The chimes are muted until you shift into a different gear or drive over 5 mph (8 km/h).

Limitations and False Warnings

The parking sensors may not function correctly in these situations:

- One or more of the parking sensors is damaged, dirty, or covered (such as mud, ice, or snow).
- Object is located below approximately 8 inches (20 cm) (such as a curb or low barrier).
- Weather conditions (heavy rain, snow, or fog) are interfering with sensor operation.
- Object is thin (such as a sign post).
- A sensor’s operating range has been exceeded.
- Object is sound-absorbing or soft (such as powder snow).
- Object is sloped (such as a sloped embankment).
- Model S has been parked in, or being driven in, extremely hot or cold temperatures.
- The sensors are affected by other electrical equipment or devices that generate ultrasonic waves.
- Object is located too close to the bumper.
- A bumper is misaligned or damaged.
- An object that is mounted to Model S is interfering with and/or obstructing the sensor (such as a bike rack or a bumper sticker).

Other Parking Aids

In addition to Park Assist, when shifted into Reverse gear, the backup camera displays a view of the area behind Model S. See Rear View Camera on page 71.
Hill Start Assist automatically engages the brakes for approximately one second when on a hill. This prevents Model S from rolling during the time it takes for you to move your foot from the brake pedal to the accelerator pedal. Hill Start Assist engages the brakes only if Model S is in Drive and facing uphill, or in Reverse and facing downhill.

⚠️ **Warning:** After approximately one second, Hill Start Assist no longer brakes your vehicle and it could roll. Therefore, quickly move your foot from the brake pedal to the accelerator pedal. Never rely on Hill Start Assist to prevent Model S from rolling for more than one second. Failure to do so can result in a collision.
Displaying Trip Information

Trip information displays on the touchscreen when you touch **Controls > Trips**. There are two trip meters available, A and B. To reset a particular trip meter, touch its associated **RESET**.

**Note:** You can also display range and trip information on the instrument panel (see *Using Left Steering Wheel Buttons* on page 37).
Driving Tips to Maximize Range

You can maximize your driving range using the same driving habits that you use to conserve fuel in a gasoline-powered vehicle. In addition to driving habits, energy consumption depends on environmental conditions (such as cold weather and hilly roads). To get the maximum mileage from a charge:

- Avoid frequent and rapid acceleration.
- Instead of using the brake to slow down, move your foot off the accelerator. Whenever Model S is moving and your foot is off the accelerator, regenerative braking slows down Model S and feeds surplus energy back to the Battery (see Regenerative Braking on page 53).
- Keep tires at the recommended inflation pressures (see Tire Care and Maintenance on page 109).
- Lighten your load by removing any unnecessary cargo.
- Limit the use of resources such as heating and air conditioning. Using seat heaters to keep warm is more efficient than heating the cabin. To automatically limit the amount of power that the climate control system uses to maintain the temperature of the Battery and the cabin area, touch Controls > Driving > Range Mode > ON.

Note: On Dual Motor vehicles, you can turn on Range Mode only when acceleration is set to Sport (if you change Acceleration to Insane, Range Mode automatically turns off).

The power meter on the instrument panel and the Energy app (described next) provide feedback on energy usage. With this feedback, you will soon become familiar with how driving habits and environmental conditions impact how much energy Model S is using.

Energy App

Use the energy app to view real-time and projected energy usage. Choose from two types of charts:

- Consumption Chart: - display how much energy Model S has consumed over the past 5, 15 or 30 miles (10, 25 or 50 kms).
- Trip Chart - If your Model S is equipped with the navigation option, you can track the amount of energy being consumed while navigating to a destination. The gray line represents predicted usage and the green line represents actual usage. Touch the zoom icon in the top right corner to change the zoom level.

Note: The Trip Chart displays energy usage only if you are currently navigating to a destination.

Note: In some situations, values and distances on the Trip chart may be inaccurate. For example, when charging Model S during an active navigation route. To resolve inaccuracies, cancel and reinitiate navigation to the destination.

Saving Energy

Model S has an energy-saving feature that reduces the amount of energy being consumed when Model S is not in use. Touch Controls > Displays > Energy Saving and choose from the following options:

- OFF. All display systems remain powered when Model S is not in use, providing the most responsive experience. More energy is consumed.
- NIGHTLY. Model S shifts to the energy-saving mode at night (10 pm to 5 am).
- ON. Significantly less energy is consumed whenever Model S is not in use. The start-up time of the instrument panel and Bluetooth could be slower.
- Always Connected. Preserves cell connectivity when energy saving is active. This allows the mobile app to connect to Model S more quickly, and provides immediate 3G internet access when entering the car. Slightly more energy is consumed.
Camera Location

Model S is equipped with a rear view camera located above the rear license plate.

Whenever you shift into Reverse, the touchscreen displays the view from the camera.

Note: If Model S is equipped with the optional Park Assist feature, visual feedback from the parking sensors displays below the camera image. See Park Assist on page 66.

Warning: Never depend on the rear view camera to inform you if the area behind you is free of objects and/or people when reversing. The camera may not detect objects or barriers that can potentially cause damage or injury. In addition, several external factors can reduce the performance of the camera, including a dirty or obstructed lens. Therefore, depending on the rear view camera to determine if Model S is approaching an obstruction can result in damage to the vehicle and/or objects, and can potentially cause serious injury. Always inspect the area with your own eyes. When reversing, perform shoulder checks and use all mirrors. Use the camera for guidance purposes only. It is not intended to replace your own direct visual checks and is not a substitute for careful driving.

Cleaning the Camera

To ensure a clear picture, keep the camera lens clean, and free of obstructions. Remove any buildup of dirt by occasionally wiping the camera lens with a soft damp cloth.

Caution: Do not use chemical-based or abrasive cleaners. Doing so can damage the surface of the camera lens.
The Big Picture

The main components of the touchscreen are shown here. To manually control the brightness and contrast, touch Controls > Displays. When set to Auto, the touchscreen changes between the Day (light background) and Night (dark background) setting depending on ambient lighting conditions.

**Note:** The following illustration is provided for demonstration purposes only. Depending on vehicle options, software version and market region, your touchscreen may appear slightly different.
1. Status bar
   The top line displays provides shortcuts to Charging, HomeLink, Driver Profiles, vehicle information (the Tesla “T”), software updates, Bluetooth®, and Wi-Fi settings. The status symbols show outside temperature, network signal strength, Bluetooth, Wi-Fi settings, passenger airbag status, and time. If an alert icon (exclamation mark) is displayed, touch it to see warning messages that are in effect.

   **Note:** The airbag status symbol displays only when Model S is powered on.

2. Apps
   There are several ways to display an app in the main viewing area:
   - Tap the app’s icon to display it in the top viewing area. If the app is already displayed, a second tap displays it in full-screen view (only some apps have a full-screen mode).
   - Drag the app’s icon directly onto the top or bottom viewing area.
   - Touch and hold the app’s icon to display a popup that lets you choose whether to display the app in the top or bottom of the main viewing area.

   - **Maps and Navigation (if equipped).** See Using Maps on page 90.
   - **Calendar.** See Calendar on page 93.
   - **Energy.** See Getting Maximum Range on page 70.
   - **Web.** Access the Internet using the web browser (if equipped).
   - **Camera.** Display the area behind Model S. This area also displays automatically whenever you shift into Reverse. See Rear View Camera on page 71.
   - **Phone.** See Phone on page 88.

3. Main viewing area
   The main viewing area changes depending on the app you have chosen (in the example, the Nav and Media apps are displayed). For some apps (such as Nav and Web), you can zoom in and out using standard touchscreen finger gestures.

4. Maximize/minimize app
   Touch the small rectangle to expand the associated app to fill the entire main viewing area (some apps are not expandable). Touch again to display two apps in half-screen view.

5. Controls
   Touch to access all Model S controls and settings (doors, locks, lights, etc).

6. Climate controls (see Climate Controls on page 80).

7. Volume control
   Touch the up and down arrows to increase or decrease the volume of the speakers. You can also adjust the volume using the scroll wheel on the left side of the steering wheel.

8. Reverse the position of the two currently displayed apps.

**Warning:** Paying attention to road and traffic conditions must always be the driver’s highest priority. To ensure the safety of vehicle occupants as well as other road users, using the touchscreen should be done only when road and traffic conditions permit.
Controlling Model S Features

Touch Controls on the bottom corner of the touchscreen to control and customize all main features of Model S.

Note: The following illustration is provided for demonstration purposes only. Depending on vehicle options, software version and market region, the options available on the Controls screen may be different.
1. **Close**
   Touch the circled X in the top left corner of a window to close it (or you can touch anywhere outside the window).

2. **Sunroof**
   If Model S is equipped with a sunroof, touch to adjust its position (see **Sunroof** on page 15).

3. **Suspension**
   If Model S is equipped with Smart Air Suspension, touch to manually raise or lower Model S, or to remove a previously saved auto-raising location (see **Smart Air Suspension** on page 83). Model S must be powered on and you must press the brake pedal before you can change suspension settings. Smart Air Suspension causes Model S to self-level, even when powered off. Therefore, when towing or lifting, you must disable self-leveling (see **Instructions for Transporters** on page 150 and **Jacking and Lifting** on page 132).

4. **Driving**
   - **Steering mode**
     Adjust the amount of effort required to turn the steering wheel. Sport feels more responsive whereas Comfort feels easier to drive and park (see **Steering Wheel** on page 37).
   - **Acceleration (Dual Motor vehicles only)**
     Choose an acceleration level. Sport is the standard level of acceleration and allows you to maximize driving range (see the **Range Mode** setting below). Choose Insane if you want to increase peak torque by approximately 50 per cent. If you choose Insane, the Range mode setting, if on, automatically turns off.
   - **Creep**
     When on, Model S slowly moves forward when in Drive and backward in Reverse when you release the brake (similar to a conventional vehicle with an automatic transmission). You can adjust this setting only when Model S is in Park.
   - **Traction Control**
     To allow the wheels to spin on a standard single motor Model S, you can turn off traction control. On a dual motor Model S, you can enable Slip Start. If you turn off Traction Control (or enable Slip Start), a warning message displays on the instrument panel. Traction control turns off for the current drive only. On dual motor vehicles, traction control is automatically turned on again when the speed exceeds 40 mph (64 km/h). See **Traction Control** on page 54.
   - **Regenerative braking**
     When you release the accelerator when driving, regenerative braking slows Model S and feeds any surplus energy back to the Battery. If set to Low, Model S does not slow down as quickly, but you may experience less range (see **Regenerative Braking** on page 53).
     **Note:** Regardless of the setting, the energy gained by regenerative braking is reduced if the Battery is full, or if it is extremely cold or hot (the surplus energy is used to heat or cool the Battery).
   - **Range Mode**
     If on, Model S conserves energy by limiting the power of the climate control system. Cabin heating and cooling may be less effective, but seat heaters turn on to compensate. In Dual Motor vehicles, Range Mode can be turned on only when acceleration is set to Sport (see above).

5. **Cold Weather**
   If Model S is equipped with the cold weather option, you can control all seat heaters as well as the heated wipers and steering wheel. Heaters that are turned on are displayed in red. To turn off all seat heaters, touch **All Off**. Note that you can also control the front driver and passenger seats using the main climate control panel located on the bottom of the touchscreen (see **Climate Controls** on page 80).

6. **Trips**
   View and reset the trip meters that summarize how far you have driven (see **Trip Information** on page 69).

7. **Displays**
Manually control the touchscreen’s brightness and control its day (light background) or night (dark background) setting. When set to Auto, the touchscreen automatically changes between Day and Night brightness depending on the ambient lighting conditions. To disable the touchscreen momentarily for cleaning purposes, touch Clean Mode. You can also put Model S into an energy saving mode so it consumes less energy when not in use (see Getting Maximum Range on page 70). Note that the Displays settings can also be accessed from the Settings screen.

8. E-Brake & Power Off

You can manually:

• Apply and release the parking brake (see Parking Brake on page 53).
• Power off (see Powering Off on page 41).

9. Doors & Locks (see Using Interior Door Handles on page 6)

10. Lights (see Lights on page 47)

⚠️ Warning: Do not read the touchscreen while driving. Doing so increases the likelihood of a collision. Everything you need to know when driving is displayed on the instrument panel.
Customizing Model S

Touch the Settings tab on the Controls window to adjust Model S to suit your preferences.

**Note:** The following illustration is provided for demonstration purposes only. Depending on vehicle options, software version, and market region, the options available on the Settings screen may be different. For example, in many regions, the “Language & Units” tab is called “Units & Format.”
1. Adjust settings associated with installed apps (applications). Settings associated with apps that are either unavailable on your Model, or have no settings that you can adjust at this time, are grayed out.

2. Manage driver profiles (see Driver Profiles on page 36).

3. Units & Format
   Adjust how Model S displays:
   • Distance: Miles or km can be shown on the range display, speedometer, energy chart, trip meters, Google map searches and navigation routes.
   • Time Format: 12 or 24 hour.
   • Temperature: °C or °F.
   • Energy & Charging: Display remaining energy and charging units as either a percentage of battery energy remaining, or as an estimate of the distance that you can drive. When you choose Distance, you can display mileage based on either:
     • Rated - based on EPA testing.
     • Ideal - assumes ideal driving conditions based on driving at a steady speed of 55 mph (89 km/h) on a flat road, and using no additional energy (seat heaters, air conditioning, etc).

   Note: When anticipating when you need to charge, use range estimates as a general guideline only.

4. Vehicle
   • Drive-away Door Lock: If on, all doors automatically lock whenever you drive Model S over 5 mph (8 km/h) (see Drive-away Locking on page 7).
   • Walk-away Door Lock: If on, all doors automatically lock when you walk away from Model S, carrying the key with you (see Walk-away Locking on page 7). Available only if Model S is equipped with the optional tech package.
   • Child-Protection Lock: If on, safety locks prevent the rear doors and the liftgate from being opened from inside Model S.

   • Auto-Present Handles: If on, door handles extend automatically whenever you approach Model S carrying a key, whether locked or unlocked (see Using Exterior Door Handles on page 6). Note that to preserve battery life, Model is designed to temporarily disable the Auto-Present Handles feature when the key has been out of range for more than 48 hours, or if the key remains within range for five minutes after all doors have been closed.
   • Headlights After Exit: If on, headlights stay on for two minutes after you exit, or until you lock Model S (see Headlights After Exit on page 50).
   • Mirror Auto-Tilt: If on, exterior mirrors tilt downward when reversing (see Mirrors on page 40). Available only if Model S is equipped with the optional tech package.
   • Mirror Auto-Fold: If on, exterior mirrors fold when you lock Model S with the key or walk-away locking. They extend automatically when you return to Model S. Available only if Model S is equipped with both folding mirrors (newer models) and the optional tech package. For newer Model S vehicles, you can also fold mirrors manually by touching the center mirror control button (see Mirrors on page 40).
   • Ionizer: If on, the air ionizer freshens the air in the cabin.
   • Smart Preconditioning: If on, Model S predicts your driving schedule and adjusts the temperature of the cabin and the Battery so the vehicle is comfortable and ready to drive. It may take some time for Model S to learn your driving habits.

5. Safety & Security
   Turn various safety and security features on and off:
   • Active safety devices Model S is equipped with, such as Park Assist Chimes (see Park Assist on page 66).
   • Alarm, and security options Model S is equipped with (see Security Settings on page 95).
   • Remote access by Tesla’s mobile applications (see Mobile App on page 100).

6. Displays
Manually control the touchscreen’s brightness and control its day (light background) or night (dark background) setting. When set to Auto, the touchscreen automatically changes between Day and Night brightness depending on the ambient lighting conditions. To disable the touchscreen momentarily for cleaning purposes, touch Clean Mode. You can also put Model S into an energy saving mode so it consumes less energy when not in use (see Getting Maximum Range on page 70). Note that the Displays settings can also be accessed from the Controls window.

7. HomeLink

If the HomeLink feature is available in your region, use it to control RF-enabled garage doors, lights, or security systems (see HomeLink® Universal Transceiver on page 96).

8. Driver Assistance

If your vehicle is equipped with Driver Assistance features, you can control features that can provide a safer driving experience

• Lane Departure Warning: If on, the steering wheel vibrates if a front wheel passes over a lane marking and the associated turn signal is off (see Lane Departure Warning on page 57).
• Overtake Acceleration: If on when Traffic-Aware Cruise Control is operating, Model S accelerates when you engage the turn signal to indicate a move into the passing lane (see Traffic-Aware Cruise Control on page 60).
• Speed Assist: Control how speed limits are determined and how warnings are issued when you exceed the speed limit (see Speed Assist on page 55).
• Forward Collision Warning: Control when warnings display on the instrument panel if Model S detects a vehicle, bike, or pedestrian ahead and a collision is considered likely unless you take immediate corrective action (see Forward Collision Warning on page 58).

9. Service & Reset

Turn various service-related features on and off:

• Service Mode: If on, moves wiper blades to the service position to make them easier to access when replacing them. Model S must be in Park. See Wiper Blades and Washer Jets on page 121.
• Tire Pressure Monitor: Touch Reset Sensors to reset the TPMS sensors after replacing a wheel (see Resetting the TPMS Sensors on page 113).
• Tow Mode: Activate Tow Mode to keep Model S in Neutral (see Leaving Model S in Neutral - Tow Mode on page 42).
• Factory Reset: Touch Erase & Reset to erase all personal data (saved addresses, music favorites, etc.) and restore all customized settings to their factory defaults.

10. Manual

Display this owners manual.

⚠️ Warning: Do not read the touchscreen while driving. Doing so increases the likelihood of a collision.

Naming Model S

To further personalize your Model S, you can name it. The name you give your Model S will appear in the mobile app. To name your Model S, touch the Tesla “T” at the top center of the touchscreen, then touch Name Your Vehicle.

When you save, Name Your Vehicle is replaced by the name you provided. You can touch the name at any time to rename your Model S.

Erasing Personal Data

You can erase all personal data (saved addresses, music favorites, imported contacts, HomeLink programming, etc.) and restore all customized settings to their factory defaults. This is useful when transferring ownership of Model S. Touch Settings > Service & Reset > Factory Reset > Erase & Reset. Before erasing, Model S verifies your credentials by prompting you to enter the user name and password associated with your MY TESLA account.
Overview of Climate Controls

The climate controls are always available at the bottom of the touchscreen. By default, climate control is set to Auto On, which maintains optimum comfort in all but the most severe weather conditions. When you adjust the temperature, the system automatically adjusts the heating, air conditioning, air distribution, air circulation, and fan speed to maintain your selected temperature. To override these settings, touch Auto On (see Customizing Climate Control on page 81).

The fan, heating, and air conditioning systems are powered by the Battery. Therefore, prolonged use decreases driving range.

Note: The following illustration is provided for demonstration purposes only. Depending on vehicle options, software version, market region, and settings, the information displayed may be slightly different.

1. The front seats are equipped with heating pads that operate at three levels from 3 (highest) to 1 (lowest).

   When operating, the indicator turns red and displays the setting number.

   Note: If Model S is equipped with the optional cold weather package, you can also control seat heaters in the rear seats as well as heated wipers by touching Controls > Cold Weather (see Controls on page 74). When equipped with executive seats, you can control the seat and the backrest separately in each second row passenger seat.

2. Touch the up or down arrow to set the cabin temperature (from LO, 63° F to HI, 90° F/LO, 17° C to HI, 32° C). To apply a temperature setting to both the driver and passenger side at the same time, touch SYNC TEMP on the temperature popup that appears when you touch an arrow.

3. Automatic/Manual climate control (see Customizing Climate Control on page 81).

4. The windshield defroster distributes air flow to the windshield and operates the heating and fan at their maximum level. Touch once for Normal Defrost and twice for Max Defrost. When on, touch again to turn off and restore the air distribution, heating, and fan to their previous settings.

5. Turn climate control system on/off.

6. The rear window defroster warms up the rear window* for 15 minutes, then automatically shuts off.

   *If Model S is equipped with the optional tech package, exterior side mirrors are also heated.

Warning: To avoid burns resulting from prolonged use, individuals who have peripheral neuropathy, or whose capacity to feel pain is limited because of diabetes, age, neurological injury, or some other condition, should exercise caution when using the climate control system and seat heaters.
Customizing Climate Control

The climate control system is designed to automatically provide optimum comfort in most situations. All you need to do is set the desired temperature, and the air conditioning, air recirculation, air distribution, and fan speed automatically maintain your selected temperature.

To override the automatic setting, touch AUTO ON to view the individual settings. Then touch the setting you want to change. When you change a setting, the AUTO ON icon turns from blue to gray and RESET AUTO displays instead.

1. Touch RESET AUTO to change all settings back to their default values.
2. Touch A/C ON or A/C OFF to turn the air conditioning on and off, respectively. Turning it off reduces cooling, but saves energy.

Because Model S runs much quieter than a gasoline-powered vehicle, you may notice the sound of the compressor as it is operating. To minimize noise, reduce the fan speed or recirculate the air.

3. Choose how air is drawn into Model S:

<table>
<thead>
<tr>
<th>Outside air is drawn into Model S (see Ventilation on page 82). Although less efficient than recirculating the air in very hot or low climate conditions, this setting draws more air into the rear seating areas, and is recommended when occupants are seated in the Tesla built-in rear facing child seats.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Air inside Model S is recirculated. This prevents outside air (traffic fumes) from entering but reduces dehumidifying and cooling performance. Recirculating the air is the most efficient way to cool the front cabin area but it is also the loudest. To prevent the windshield from fogging in some conditions, briefly change the setting every hour to draw in outside air.</td>
</tr>
</tbody>
</table>

4. Choose where air flows into the cabin. You can choose more than one location:

| Foot-level vents |
| Face-level vents |
| Windshield vents |

5. Drag the slider to set the speed of the fan.
Ventilation

Outside air is drawn into Model S through the grill in front of the windshield. Keep the grill clear of obstructions such as leaves and snow.

To direct the flow of air inside Model S, move the interior vents up, down, or from side to side.

Note: You can direct the outer face level vents toward the side windows to help defrost or defog them.

Cabin Air Filter

Model S has an air filter that prevents pollen, industrial fallout, road dust and other particles from entering through the vents. Tesla replaces the air filter at the regularly scheduled maintenance intervals of every 12 months, or every 12,500 miles (20,000 km).

Climate Control Operating Tips

• To conserve energy, you can limit the power of the climate control system by turning on Range Mode. Cabin heating and cooling may be less effective, but seat heaters turn on to compensate. Touch Controls > Driving > Range Mode.

• If the climate control system operates more loudly than you prefer, reduce the fan speed or adjust the air flow to draw in outside air (instead of recirculating).

• In addition to cooling the interior, the air conditioning system also cools the Battery. Therefore, in hot weather, the air conditioning system can turn on even if you turned it off. This is normal because the system’s priority is to cool the Battery to ensure it stays within an optimum temperature range to support long life and optimum performance.

• To ensure the climate control system operates efficiently, close all windows and ensure that the exterior grill in front of the windshield is free of ice, snow, leaves, and other debris.

• To reduce the time it takes to reach a comfortable temperature in hot weather, drive with the windows slightly open for a few minutes when you first start driving.

• In very humid conditions, it is normal for the windshield to fog slightly when you first turn on the air conditioning. This fog clears within a few seconds.

• It is normal for a small pool of water to form under Model S when parked. Extra water produced by the dehumidifying process is drained underneath.
Note: If Model S is equipped with Smart Air Suspension, you may hear the sound of the compressor when Model S starts, as the system’s reservoir fills with air.

Smart Air Suspension has both manual and automatic modes of operation.

**Manual Height Adjustments**

**Caution:** Before adjusting the suspension height, ensure Model S is clear of all obstacles, above and below.

Manually raising the height of Model S is useful when you need extra ground clearance, such as steep driveways or ramps, deep snow, speed bumps, etc.

With Model S powered on, or the brake pedal pressed, use the touchscreen to manually change the ride height. Touch **Controls > Suspension**, then choose from:

- **Very High.** When set to Very High, the suspension automatically lowers to High when driving speed reaches 22 mph (35 km/h).
- **High.** When set to High, the suspension automatically lowers to Standard when driving speed reaches 34 mph (55 km/h).
- **Standard.** The Standard setting ensures optimum comfort and handling under all loading conditions.
- **Low.** Lowering the height can make it easier to load or unload cargo and passengers.

Note: Available settings depend on your driving speed and other conditions. For example, the suspension does not lower if a door is open.

**Location-Based Suspension**

Location-Based suspension saves you from manually having to raise the suspension every time you arrive at a frequently-used location where a higher suspension is needed (steep driveways or ramps, deep snow, speed bumps, etc).

Whenever you raise the suspension to **High** or **Very High**, Model S saves the location. A status message displays to indicate that an auto-raising location is being saved:

![Location-Based Suspension](image)

Then, when you return to the saved location, Model S raises the suspension and the instrument panel displays this message:

![Raising Suspension](image)

**Note:**

- To raise the suspension to High, you must be driving slower than 34 mph (55 km/h). To raise it to Very High, you must be driving slower than 22 mph (35 km/h). If you are driving faster than these speeds when returning to a saved location, the suspension does not raise until Model S slows down.
- After leaving a saved location, the suspension may not lower based on an automatic lowering speed that you have set (**Controls > Suspension > Automatic Lowering**).
Lowering) until you are driving faster than the auto-raising speed thresholds described above.

- If Model S reaches a saved location and the existing suspension setting is higher than the level that has been saved for that location, the suspension is not adjusted.

To remove an auto-raising location

If you do not want the suspension to auto-raise at a saved location, touch the X in the touchscreen message that displays at a saved location. Doing so removes the auto-raise location and the suspension no longer raises automatically when you arrive at the location.

You can adjust the speed at which the Air Suspension automatically transitions to the LOW ride height by touching Controls > Suspension > Automatic Lowering on the touchscreen. This setting is saved to your Driver Profile.

Note: You can temporarily override the ride height by pressing the brake pedal, touching an air suspension control in Controls > Suspension, and then manually choosing a ride height. Your suspension’s automatic lowering setting is restored the next time you drive.

If a fault is detected with the air suspension system, a yellow indicator lights up on the instrument panel. If the problem persists, contact Tesla.

Jack Mode

Before jacking or lifting, set the suspension to Jack mode to prevent the self-leveling that occurs even when Model S is powered off.

Press the brake pedal, then touch Controls > Suspension > Jack.

When Model S is in Jack mode, a red air suspension indicator lights up on the instrument panel.

To deactivate, touch Jack again.

Note: Jack mode automatically cancels when you drive over 4.5 mph (7 km/h).

Automatic Lowering

When Model S is moving above typical driveway or parking lot speeds, Smart Air Suspension automatically lowers ride height to improve aerodynamics and handling. For most average speed driving, the suspension is automatically set to Standard. As described above, when you make manual height adjustments, the suspension automatically lowers at increased driving speeds.

When carrying loads, Smart Air Suspension also maintains a level height between the front and rear.

Note: Manually lowering the suspension to Standard or Low while at a saved location also removes the auto-raising location.
Overview

Touch the **Media** icon to listen to the radio or play audio files. The touchscreen displays the Media Player. Media Player has two tabs. Use the **Browse** tab to select what you want to play and use the **Now Playing** tab to view and control what is currently playing. You can play AM and FM radio (including HD), and XM satellite radio (if Model S is equipped with the optional sound package). You can also play Internet radio (such as TuneIn), and audio files from a Bluetooth-connected device or a USB-connected flash drive.

To adjust the media volume, roll the scroll wheel on the left side of the steering wheel up or down. To mute the volume, tap the wheel.

AM and FM Radio

Model S provides AM and FM radio services. These can be selected from the Browse tab or using the Source Picker, located in the upper right corner of the Media Player window.

You can manually tune the radio to any frequency by touching and dragging the channel selector bar on the Now Playing screen. The channel selector bar allows you to move from one available radio station to the next.

XM Radio

If Model S is equipped with the optional sound studio package, you can listen to XM radio, a subscription-based satellite radio service. To receive XM radio channels, you must provide the radio service provider with the radio ID for your touchscreen.

To view the radio ID:

1. Select the XM radio source.
2. Tune it to channel 0.
3. The Radio ID displays in the station information area.

To select an XM radio channel, you can either manually scroll through the channel numbers, or you can browse the channels by category. To browse by category, touch **Browse > Radio > XM Satellite Radio**.

**Note:** On newer models, XM radio is available only if Model S is equipped with both the optional sound studio package and the panoramic roof. To optimize aerodynamics, Model S does not have an external antenna. The internal antenna is compatible only with the transparent panoramic roof.

Internet Radio

Internet radio services are accessed over a data connection. To use Internet radio, touch **Media > Browse > Internet**.

Choose your desired Internet radio service (for example, TuneIn), then browse through the available categories and/or stations. When you select a specific station or episode, Media Player starts playing it and displays the Now Playing screen.

To play the next (and in some cases previous) available station, episode, or track being provided by the Internet radio service, touch the arrows on the Now Playing screen, or use the buttons on the left side of the steering wheel (see Using Left Steering Wheel Buttons on page 37). The exact function of these controls vary depending on the specific Internet service you are listening to.

You can also use voice commands to play a specific song, artist, or album from an Internet radio service. For details, see Using Voice Commands on page 38.

Internet Radio Account Registration

Model S provides you with one or more Internet radio services. To enter your log in information, touch **Controls > Settings > Apps > Media Player**. Enter the email and password associated with the Internet radio account(s) you want to use, then touch *Log In*.

**Slacker**

You can use your own Slacker account or the one that Tesla has already set up for you. To use your own account, log in as described above.

**Note:** If you have a Slacker Premium account, you can shuffle tracks in a playlist or repeat any track using the shuffle/repeat icons displayed below the album cover art on the **Now Playing** tab.

**TuneIn**

TuneIn does not require an account for it to work. But if you have a TuneIn account (go to www.tunein.com), you can log in as described above.

When playing a TuneIn podcast, you can rewind or fast forward to any location in the podcast by dragging the slider bar on the **Now Playing** tab.
Media Settings

To adjust settings for your radio stations, and to log into your Internet radio account(s), touch Controls > Settings > Apps > Media Player.

Favorites

To add a currently playing radio station or audio file to your Favorites list, touch the Favorites icon on the Now Playing screen. The icon turns blue to show that it is a favorite. To remove a favorite, touch the icon again.

Note: Adding a radio station to your Favorites list also assigns it to one of the six presets, if an empty preset is available.

Note: To select a favorite radio station or audio file, you can browse your list of Favorites by touching Browse > Favorites. As shown below, the Favorites are sorted by their source.

To play the previous or next song or station in your Favorites list, touch the previous or next icon on the Now Playing screen, or use the buttons on the left side of the steering wheel (see Using Left Steering Wheel Buttons on page 37).

To remove a favorite from the list, touch the associated X.

Note: If you remove a favorite radio station or channel that is assigned to a preset, it is also removed from the preset.

My Music & Devices

To play audio files from a USB-connected flash drive or a Bluetooth-connected device, touch Media > Browse > My Music & Devices. The name of the device will be displayed. Touch the song, album, or playlist you want to play and Media Player starts playing and displays the Now Playing screen.

To play the next song in the selected playlist or album, touch the previous or next arrows on the Now Playing tab, or use the buttons on the left side of the steering wheel (see Using Left Steering Wheel Buttons on page 37). You can also shuffle tracks in a playlist or repeat any track using the shuffle/repeat icons displayed below the album cover art.

USB Connected Flash Drives

Connect a flash drive to one of the USB connections (see USB Connections on page 87). Touch Media > Browse > My Music & Devices, then touch the name of the flash drive and the song you want to play.

Note: To play media from a USB connection, Model S recognizes flash drives only. To play media from other types of devices (such as an iPod), connect using Bluetooth (if supported by the device).

Bluetooth® Connected Devices

If you have a Bluetooth-capable device such as a phone, that is paired and connected to Model S (see Pairing a Bluetooth Phone on page 88), you can play audio files stored on it, and you can stream a music service (for example, Pandora or Spotify). Touch Media > Browse > My Music & Devices, then touch the name of your Bluetooth-connected device.

Your Bluetooth device begins playing the audio file that was currently active on your device, and the touchscreen displays the Now Playing screen.

To change the track playing, touch the previous or next icons on the touchscreen, or use the buttons on the left side of the steering wheel.

Note: To play media from a Bluetooth-connected device, ensure that access to the device’s media is turned on. See Phone on page 88.
USB Connections

Your Model S has two USB connections located on the front of the center console that you can use to connect USB devices. You can also use these connections to charge USB devices.

To play audio files stored on a connected USB drive, see My Music & Devices on page 86.

Note: Do not connect multiple devices using a USB hub. This can prevent connected devices from charging or from being recognized by the touchscreen.

12V Power Socket

Your Model S has a power socket located on the front of the center console. Power from the socket is available whenever the instrument panel and touchscreen are on.

The 12V power socket is suitable for accessories requiring up to 15A or a maximum of 180 watts.

Note: In situations where Model S is unable to detect the key (low battery, interference, etc), place it immediately below the 12V power socket where Model S can best detect it.

⚠️ Warning: The power socket and an accessory’s connector can become hot.
Bluetooth® Compatibility

You can use your Bluetooth-capable phone hands-free in Model S provided your phone is within operating range. Although Bluetooth typically supports wireless communication over distances of up to approximately 30 feet (9 meters), performance can vary based on the phone you are using.

Before using your phone with Model S, you must pair it. Pairing sets up Model S to work with your Bluetooth-capable phone (see Pairing a Bluetooth Phone on page 88).

You can pair up to ten Bluetooth phones. Model S always automatically connects to the last phone that was used (provided it is within range). If you want to connect to a different phone, see Connecting to a Paired Phone on page 89.

**Note:** On many phones, Bluetooth turns off if the phone’s battery is low.

**Note:** In addition to phones, you can also pair Bluetooth-enabled devices with Model S. For example, you can pair an iPod Touch or an iPad or Android tablet to stream music.

Pairing a Bluetooth Phone

Pairing sets up Model S to work with your Bluetooth-capable phone. Once a phone is paired, Model S can connect to it whenever the phone is within range.

To pair a phone, follow these steps while sitting inside Model S:

1. Ensure both the touchscreen and the phone are powered on.
2. On the touchscreen’s status bar, touch the Bluetooth icon.
3. On your phone, enable Bluetooth and set it to discoverable.
4. On the Model S touchscreen, touch Start Search. The touchscreen searches then displays the list of all available Bluetooth devices within operating distance.
5. On the Model S touchscreen, touch the phone with which you want to pair. Within a few seconds, the touchscreen displays a randomly generated number, and your phone should display the same number.
6. Check that the number displayed on your phone matches the number displayed on the touchscreen. Then, on your phone, confirm that you want to pair.

When paired, Model S automatically connects to the phone, and the touchscreen displays the Bluetooth symbol next to the phone’s name to show that the connection is active.

Importing Contacts

Once paired, you can use the Bluetooth settings screen to specify whether you want to allow access to your phone’s contacts and recent calls.

If access is turned on, you can see your list of contacts on the Model S touchscreen. Touch Phone > Contacts. You can then touch a contact to dial its phone number or navigate to its address.

**Note:** Before contacts can be imported, you may need to either set your phone to allow syncing, or respond to a popup on your phone to confirm that it is OK to sync contacts. This varies depending on the type of phone you are using. For details, refer to the owner documentation provided with your phone.

If access is turned on, imported information is displayed when you touch the contacts tab on the Phone app.

Unpairing a Bluetooth Phone

If you want to disconnect your phone and use it again later, simply touch Disconnect on the Bluetooth settings screen. If you do not want to use your phone with Model S again, touch Forget This Device. Once you forget a device, you need to pair it again if you want to use it with Model S (see Pairing a Bluetooth Phone on page 88).

**Note:** Your phone automatically disconnects whenever you leave Model S.
Connecting to a Paired Phone

Model S automatically connects with the last phone to which it was connected, provided it is within operating range and has Bluetooth turned on. If the last phone is not within range, it attempts to connect with the next phone that it has been paired with.

To connect to a different phone, touch the Bluetooth icon on the touchscreen's status bar. The Bluetooth window displays a list of paired phones. Choose the phone you want to connect to, then touch Connect. If the phone you want to connect to is not listed, follow the instructions on Pairing a Bluetooth Phone on page 88.

When connected, the Model S touchscreen displays the Bluetooth symbol next to the phone name to show that the connection is active.

Making a Phone Call

You can make a phone call by:

- Speaking a voice command. For details, see Using Voice Commands on page 38.
- Choosing a contact from your contact list (described above).
- Using the Model S on-screen dialer.

To make a phone call using the on-screen dialer:

1. Touch the Phone app on the touchscreen, then touch Dialer.
2. Enter the phone number on the dialer.
3. Touch Call. The touchscreen displays the call screen and the number you are calling.

To make a phone call by choosing a contact:

1. Touch the Phone app on the touchscreen, then touch Contacts.
   
   **Note:** Ensure that access to the phone’s contacts is turned on.
2. Touch the name of the contact you want to call to display details about the contact.
3. Touch the number you want to dial (there may be more than one). The touchscreen displays the call screen and the name of the contact you are calling.

   **Note:** If it is safe and legal to do so, you can also initiate a call by dialing the number or selecting the contact directly from your phone.

Receiving a Phone Call

When your phone receives an incoming call, both the instrument panel and the touchscreen display the caller’s number or name (if the caller is in your phone’s contact list and Model S has access to your contacts).

Touch one of the options on the touchscreen, or use the scroll wheel on the right side of the steering wheel to Answer or Ignore the call (see Using Right Steering Wheel Buttons on page 38).

In Call Options

When a call is in progress, you can display the call menu on the instrument panel by pressing the top button on the right side of the steering wheel. Then use the right scroll wheel to scroll through and choose an option (see Using Right Steering Wheel Buttons on page 38).
Overview

Touch the Map (or Nav) icon to view and search for a location on Google Maps™. If Model S is equipped with the navigation option, the app is labeled Nav and onboard maps are available. Onboard maps allow you to navigate to any location, even if a data connection is not available. When you specify a location, the touchscreen displays the route and provides turn-by-turn instructions. If Model S is not equipped with the navigation option, onboard maps are not available, but if you have a data connection, you can find and display any location.

Using Maps

Touch the search field, or speak a voice command to specify a location (for details on how to use voice commands, see Using Voice Commands on page 38). You can enter or speak an address, landmark, business, etc. You can also touch PLACES and choose from a list of recent locations and searches, favorite destinations, charging locations, and charging stations you’ve visited. To mark a destination as a Favorite, select its “pin” (from search results or “Recents”), and then touch the heart icon.

Touch the North/Heading Up icon to the right of the search bar to center the map on your car and have the map track your position as you drive. The icon is blue when the map is tracking your position and by touching the icon, you can change the orientation of the map:

- North Up - North is always at the top of the screen.
- Heading Up - The direction you are heading is always at the top of the screen. The map rotates when you change direction.

You can rotate the map in any direction. When you rotate the map you'll notice the icon turn gray, indicating the map is no longer tracking your position. Touch the icon again to track your position.

Whenever the map is in the Heading Up orientation (where North is not at the top), a compass appears on the map. The arrow on the compass points North and the text on the compass indicates the direction you are driving. You can touch the compass to switch to North Up (described above).

Starting Navigation

1. Touch the Nav icon to display the map.
2. Touch the search bar to enter the destination, then touch GO. You can also use voice commands to specify the destination (for details, see Using Voice Commands on page 38). If you have a data connection, you can start entering the destination, then choose one of the auto-complete entries that appear. For example, you can enter just the street, business name, or category (such as hotels, coffee, etc). If you don’t have a data connection, you must enter complete and exact location information.

   A list of matching destinations appears on the left, and their corresponding pins (with letters A, B, C, etc) appear on the map.

   Note: You can also touch PLACES and choose a location from the list of Recent locations and searches, Favorite locations, Supercharger locations, or Visited Chargers.

3. Touch any destination in the list to immediately start navigation, or touch the lettered pin on the map to view the destination popup, which also allows you to place a phone call to the destination (in situations where a phone number is available).

   Note: If you have set up your phone’s calendar to work with Model S, and a calendar event includes a specific location, you are given the option to navigate to the location (see Calendar on page 93).
During Navigation

During navigation, the touchscreen displays the navigation route on the map. Depending on the map’s zoom level, you might not be able to see the entire route. But as you drive, the map shows your location on the map. Whenever a navigation route is active, you can display an overview of the route by touching the route overview icon:

The route overview icon is available on the right side of the search bar whenever a navigation route is active. You can toggle between North Up, Heading Up and Route Overview (see Using Maps on page 90). As you travel on your navigation route, the zoom level adjusts to display an overview of the route between your current location and your destination.

The touchscreen also displays a turn-by-turn direction list that includes estimated driving time, arrival time, and an estimate of how much energy will remain when you arrive at your destination (see Predicting Energy Usage on page 91).

During navigation, the instrument panel also displays the turn-by-turn directions and you will hear spoken instructions.

Model S detects real-time traffic conditions and automatically adjusts the estimated driving and arrival times based on traffic conditions. In situations where traffic conditions will delay your estimated time of arrival and an alternate route is available, Model S reroutes you to your destination. You can turn this feature off by touching Controls > Settings > Apps > Maps & Navigation > Traffic-Based Routing > Off.

Note: Traffic-based navigation is a BETA feature in Release 6.0.

When you display the traffic layer on the map, green traffic lines display under the route line, whereas yellow and red traffic lines display on top of the route line to ensure that heavy traffic areas are easy to identify.

Model S can also monitor traffic to your work location (on weekday mornings) and to your home location (on weekday evenings) and advise you if there is a better route in situations where traffic conditions will cause a delay. You can set the time savings required before the advice is given by touching Controls > Settings > Apps > Maps & Navigation > Min Improvement for Commute Advice.

Note: Commute advice is available only if you have saved a Home and Work Location (see Favorite Destinations on page 92).

Predicting Energy Usage

When navigating to a destination, Model S helps you anticipate your charging needs by calculating the amount of energy that will remain when you reach your destination. The calculation is an estimate based on driving and environmental factors such as predicted speed and elevation changes. The touchscreen displays this calculation in the lower right corner of the turn-by-turn direction list.

Throughout your route, Model S monitors energy usage and updates the calculation as needed. A popup warning displays above the calculated amount advising you when:

- A yellow warning displays when you should drive slowly to conserve energy. Model S predicts that you will have very little energy remaining when you reach your destination. For tips on conserving energy, see Getting Maximum Range on page 70.
- A red warning displays when you must charge Model S to reach your destination. Model S also lets you know if you have enough energy for a round trip. Tap the battery icon at the bottom of the turn-by-turn navigation list to determine if Model S has enough energy to get to your destination and then return back to your starting point.

When navigating, the energy app displays real-time energy usage for the current trip. See Getting Maximum Range on page 70.
Favorite Destinations

Add any destination to your list of Favorites by either touching its flag while navigating to it, or by displaying it on the map then touching its pin. Then, in the popup dialog that appears, touch the Favorites icon. When a destination is on your Favorites list, the icon is blue. To remove a favorite destination, touch the Favorites icon again.

If you frequently navigate to a destination, you may want to add it as a Favorite to avoid having to enter the location’s name or address each time. When you add a destination as a Favorite, you can easily navigate to it by touching PLACES, then selecting it from the list of Favorites. The Favorites list has placeholders for your Home and Work locations. In fact, Model S may prompt you to save a current location as Home or Work based on your usage pattern.

Updated Maps

To receive updated maps, periodically connect Model S to a Wi-Fi network (see Connecting to Wi-Fi on page 98). As updated maps become available, they are sent to Model S over Wi-Fi only. The touchscreen displays a message informing you when new maps have been installed.
Overview

**Note:** Calendar is a BETA feature in Release 6.0.

The Calendar app allows you to view your phone’s (iPhone or Android) calendar for the current and next day. The Calendar app requires that:

- The Tesla Model S mobile app is running and you are logged in. When prompted on your phone, you must grant calendar access to the mobile app. The mobile app can then periodically (and automatically) send calendar data from your phone to Model S. Also, whenever you display the mobile app on your phone, updated calendar data is sent to Model S.
- Your phone is connected to Model S via Bluetooth (for privacy reasons, calendar data displays only from a phone that is connected via Bluetooth).
- Remote access to Model S is turned on (touch **Controls > Settings > Safety & Security > Remote Access > On**).
- Both your phone and Model S have good connectivity.

When you enter Model S, the touchscreen can display a reminder of the day’s events. You can customize if and when your calendar events are displayed by touching **Controls > Settings > Apps > Calendar > Show Calendar Upon Entry**.

To view scheduled events for the next 48 hours, choose the Calendar app from the main touchscreen window. The Calendar app displays events in chronological order.

1. If the calendar event includes an address, a navigation arrow displays to indicate that you can touch the address to navigate to the event’s location (if your Model S is equipped with the Navigation option).
2. If the calendar event includes a phone number, you can touch the number to initiate a phone call.
3. In situations where events are displayed from multiple calendars, you can filter to show only events from one or more specific calendars.
4. If the calendar event has notes associated with it, touch the information icon to display the notes in a pop up window.
5. If an event’s notes include one or more phone numbers, a phone symbol displays with the information icon and the first phone number found in the notes is shown on the event list and you can use this number to initiate a phone call (as described in item 2 above). But you can also initiate a call from within the notes pop up window by referencing other numbers that are included in the notes (this is particularly useful for conference calls). If the notes contain a web link, you can touch the link to open it in the Web Browser app.

**Calendar and Navigation**

If Model S is equipped with the navigation feature, and a calendar event has a location specified, you will be given the option to navigate to that location. Also, when an event on your Calendar takes place within the next hour and has a uniquely specified location, the Model S navigation system notifies you if there is a better route due to traffic, even if you’re not using navigation.
About the Security System

If Model S does not detect a key nearby and a locked door or trunk is opened, an alarm sounds and headlights and turn signals flash. To deactivate the alarm, press any button on the key.

To manually enable or disable the alarm system, touch Controls > Settings > Safety & Security > Alarm. When set to on, Model S activates its alarm one minute after the doors lock and a recognized key is no longer detected nearby.
About HomeLink

If Model S is equipped with the optional tech package, you can program the HomeLink® Universal Transceiver to operate up to three garage doors, gates, lights, and security systems that can transmit Radio Frequency (RF) signals.

Programming HomeLink

1. Park Model S in front of the device you want to program, and have the device’s remote control ready.
2. Touch Controls > Settings > HomeLink on the touchscreen.
3. Touch Add New HomeLink, then use the onscreen keyboard to enter a name for your HomeLink device.
4. Touch Program.
5. Follow the onscreen instructions.

Once programmed, you can operate the device by touching its corresponding HomeLink icon on the touchscreen’s status bar. HomeLink remembers the location of your programmed devices. When you approach a known location, the HomeLink control on the touchscreen automatically drops down. When you drive away, it disappears.

Note: For security reasons, erase your HomeLink settings if you sell Model S.

Warning: Your device might open or close during programming. Before programming, make sure that the device is clear of any people or objects.

Warning: Do not use the HomeLink Universal Transceiver with a garage door that does not meet safety standards. A garage door opener that cannot detect an object in its path and then automatically stop and reverse, does not meet these standards. Using a garage door opener without these features increases the risk of injury or death.

Troubleshooting HomeLink

When programming a HomeLink device, the touchscreen steps you through a two-part programming process:

• First, Model S records the signal from the remote. The touchscreen instructs you to stand in front of the car, point the remote at the front bumper and press and hold the button until the headlights flash. When headlights flash, Model S has learned the remote and you can touch Continue on the touchscreen. If the headlights do not flash, refer to the guidelines below.

• Next, the device’s receiver learns Model S. The touchscreen instructs you to press the LEARN button on the garage door or gate’s receiver. If training the receiver does not work, refer to the guidelines below.

NOTE: Only devices that are equipped with a “rolling code” remote need to learn Model S. If you have a very old device that is not equipped with a rolling code remote, the device does not need to learn Model S and you can skip this part. You can also skip this step if your receiver is Quick-Train compatible. The opener should work.

Headlights do not flash

• Check the batteries in the remote. It is a good idea to replace the batteries before you start programming.

• Hold the remote against the nose cone, with the button pressed, about 6 inches to the left of the Tesla emblem. In some cases you must hold the remote for up to three minutes.

• Check compatibility of the remote by contacting the HomeLink manufacturer (www.homelink.com).

After programming, the device does not work

• Park Model S with its front bumper as close as possible to the HomeLink device (garage door, gate, etc).

• Make sure you haven’t reached the device receiver’s limit of learned remotes/cars. Most receivers can learn up to five remotes/cars. If the receiver’s memory is full, you must clear the memory and restart the programming process. For instructions on how to clear the receiver’s memory, refer to the owner documentation provided with the HomeLink device.

• Make sure you are pressing the receiver’s LEARN button. Most receivers have two buttons and a LED. One button is a RESET button and the other is a LEARN button. Pressing the LEARN button usually causes the LED to flash. For instructions on how to put the receiver into learning mode, refer to the owner documentation provided with the HomeLink device.
• Most devices stay in learning mode for only three to five minutes. Immediately after pressing the device’s LEARN button, follow the instructions displayed on the touchscreen.
Wi-Fi is available as a data connection method and is often faster than cellular data networks. Connecting to Wi-Fi is especially useful in areas with limited or no cellular connectivity. To ensure fast, reliable delivery of Model S updates (see Software Updates on page 99), Tesla recommends leaving Wi-Fi turned on and connected to a Wi-Fi network. To connect to a Wi-Fi network:

1. Touch the 3G icon in the touchscreen status bar. Model S will start scanning and display the Wi-Fi networks that are within range.
2. Select the Wi-Fi network you want to use, enter the password (if necessary), then touch Connect.

You can also connect to a hidden network that isn’t shown on the list of scanned networks. Just touch Wi-Fi Settings and enter the name of the network in the resulting dialog box.

Once you have connected to a network, Model S auto-connects whenever the network is within range. If more than one previously connected network is within range, Model S connects to the one most recently used.

Note: You can also use a mobile hotspot or your phone’s Internet connection via Wi-Fi tethering.

Note: At Tesla service centers, Model S automatically connects to a Tesla Service Wi-Fi access point.
Loading New Software

Model S updates its software wirelessly, providing new features throughout your term of ownership. The first time you enter Model S after an update is made available, a scheduling window displays on the touchscreen.

**Note:** Some software updates can take from two to three hours to complete. Model S must be in P (Park) when the new software is being installed. To ensure the fastest and most reliable delivery of software updates, leave the Wi-Fi turned on and connected whenever possible (see Connecting to Wi-Fi on page 98).

When a software update is available, a yellow clock icon appears on the touchscreen’s status bar.

1. Touch the up and down arrows to change the time you want the update to begin (if necessary). Then touch Set For This Time to schedule the update. Once scheduled, the yellow clock icon on the touchscreen’s status bar becomes white.

2. Touch Install Now to immediately start the update process.

You can reschedule the update any time before it begins. To do so, touch the clock icon on the touchscreen’s status bar to display the update window.

If Model S is charging when the software update begins, charging stops. Charging resumes automatically when the update is complete. If you are driving Model S at the scheduled update time, the update is canceled and you need to reschedule.

If the touchscreen displays a message indicating that a software update was not successfully completed, contact Tesla.

Viewing Release Notes

When a software update is complete, learn about the new features by displaying the release notes. To display release notes at any time touch the Tesla “T” at the top center of the touchscreen, then touch Release Notes.
Model S Mobile App

The Tesla Model S mobile app allows you to communicate with Model S remotely using your iPhone or Android™ phone. With this app, you can:

- Check charging progress and receive notifications when charging has started, has been interrupted, or is complete.
- Heat or cool Model S before driving (even if it's in a garage).
- Locate Model S with directions, or track its movement across a map.
- Flash lights or honk the horn to find Model S when parked.
- Vent or close the sunroof.
- Lock or unlock Model S from afar.
- Start Model S.
- Support the Model S Calendar app by allowing the mobile app to send your phone's calendar data to Model S.
- Receive notifications when the car alarm has been triggered, or a new Model S software update is available.

Simply download the Tesla Model S mobile app to your phone and enter your MY TESLA login credentials. You must also ensure that Model S is ready to communicate with the mobile app by turning on its remote access setting. Touch Controls > Settings > Safety & Security > Remote Access > On (see Settings on page 77).
High Voltage Components

1. Battery
2. DC-DC converter and junction box
3. High voltage cabling (colored orange)
4. 10 kW on-board master charger
5. OPTIONAL: 10 kW on-board charger
6. Charge port
7. Drive unit

⚠️ **Warning:** The high voltage system has no user serviceable parts. Do not disassemble, remove or replace high voltage components, cables or connectors. High voltage cables are colored orange for easy identification.

⚠️ **Warning:** Read and follow all instructions provided on the labels that are attached to Model S. These labels are there for your safety.

⚠️ **Warning:** In the unlikely event that a fire occurs, immediately contact your local fire emergency responders.
Charging Equipment

Charging equipment designed specifically to charge your Model S is available from Tesla. A Tesla Wall Connector, which installs in your garage, is the fastest way to charge Model S at home.

In several market regions, Model S is equipped with a Mobile Connector and the adapter(s) you need to plug into commonly used power outlets. When using the Mobile Connector, first plug the Mobile Connector into the power outlet, then plug in Model S. For more information about your Mobile Connector, see the Mobile Connector Owner's Manual. Additional adapters can be purchased from Tesla.

Tesla also provides various types of adapters (including J1772, Mennekes Type 2, and CHAdeMO) that allow you to plug Model S into the most commonly used public charging stations in your region. Connect the adapter to the charging station's charge cable, open the charge port door using the touchscreen (see Charging Model S on page 104), then plug in Model S.

For more information on the charging equipment available for your region, go to www.teslamotors.com, choose your region, then view the available charging options.
About the Battery

Model S has one of the most sophisticated battery systems in the world. The most important way to preserve the Battery is to LEAVE YOUR MODEL S PLUGGED IN when you are not using it. This is particularly important if you are not planning to drive Model S for several weeks. When plugged in, Model S wakes up when needed to automatically maintain a charge level that maximizes the lifetime of the Battery.

There is no advantage to waiting until the Battery’s level is low before charging. In fact, the Battery performs best when charged regularly.

Note: If the Model S Battery becomes completely discharged in a situation in which towing is required, the owner is responsible for towing expenses. Discharge-related towing expenses are not covered under the Roadside Assistance policy.

Battery Care

Never allow the Battery to fully discharge. Even when Model S is not being driven, its Battery discharges very slowly to power the onboard electronics. On average, the Battery discharges at a rate of 1% per day. Situations can arise in which you must leave Model S unplugged for an extended period of time (for example, at an airport when traveling). In these situations, keep the 1% in mind to ensure that you leave the Battery with a sufficient charge level. For example, over a two week period (14 days), the Battery discharges by approximately 14%.

Discharging the Battery to 0% may permanently damage the Battery. To protect against a complete discharge, Model S enters a low-power consumption mode when the charge level drops to 5%. In this mode, the Battery stops supporting the onboard electronics to slow the discharge rate to approximately 4% per month. Once this low-power consumption mode is active, it is important to plug in Model S within two months to avoid Battery damage.

Note: When the low-power consumption mode is active, the auxiliary 12V battery is no longer being charged and can completely discharge within 12 hours. In the unlikely event that this occurs, you may need to jump start or replace the 12V battery before you can charge. In this situation, contact Tesla.

Temperature Limits

For better long-term performance, avoid exposing Model S to ambient temperatures above 140° F (60° C) or below -22° F (-30° C) for more than 24 hours at a time.

Energy Saving Feature

Model S has an energy-saving feature that reduces the amount of energy being consumed when Model S is not in use. Touch Controls > Displays > Energy Saving. For more information on maximizing range and saving energy, see Getting Maximum Range on page 70.

Battery Warnings and Cautions

⚠️ Warning: The Battery has no parts that an owner or a non-Tesla authorized service technician can service. Under no circumstances should you open or tamper with the Battery. Always contact Tesla to arrange for Battery servicing.

⚠️ Caution: If the Battery’s charge level falls to 0%, you must plug it in. If you leave it unplugged for an extended period, it may not be possible to charge Model S or use the vehicle without jump starting or replacing the 12V battery. Leaving Model S unplugged for an extended period can also result in permanent Battery damage. If you are unable to charge Model S, contact Tesla immediately.

⚠️ Caution: The Battery requires no owner maintenance. Do not remove the filler cap and do not add fluid. If the instrument panel warns you that the fluid level is low, contact Tesla immediately.
Opening the Charge Port

The charge port is located on the driver’s side of Model S, behind a door that is part of the rear tail light assembly.

Park Model S so that the charge cable easily reaches the charge port.

With Model S unlocked, or a recognized key nearby, press and release the button on a Tesla charge cable to open the charge port door. If the cable you are using does not have this button, you can also open the charge port door using any of these methods:

• Touch Controls > Charge Port on the touchscreen.
• Touch the battery icon at the top of the touchscreen to display the Charging screen, then touch Open Charge Port.
• Hold down the rear trunk button on the key for 1-2 seconds.

Note: If you do not insert the charge cable into the charge port within a few minutes after opening the charge port door, the latch closes. If this happens, use the touchscreen to open the charge port door.

Caution: The connector end of the charge cable can damage the paint if dropped onto Model S.

Caution: Do not attempt to force the charge port door open. Doing so can damage the latch. A damaged latch cannot hold the door closed.

Plugging In

If desired, use the touchscreen to change the charge limit and the charging current.

If you are using the Mobile Connector, plug it into the power outlet before plugging it into Model S.

Align the connector to the charge port and insert fully. When the connector is properly inserted, charging begins automatically after Model S:

• Engages a latch that holds the connector in place.
• Shifts into Park (if it was in any other gear).
• Heats or cools the Battery, if needed. If the Battery requires heating or cooling, you may notice a delay before charging begins.

Note: Whenever Model S is plugged in but not actively charging, it draws energy from the wall instead of using energy stored in the Battery. For example, if you are sitting in Model S and using the touchscreen while it’s is parked and plugged in, the energy being used is drawn from the power outlet instead of the Battery.

To charge at a public charging station, attach an adapter to the station’s charging connector. The most commonly used adapter(s) for each market region are supplied with Model S. Depending on the charging equipment you are using, you may need to start and stop charging using a control on the charging equipment.

Note: The charge port lights up white when you open the charge port door. If you do not connect a charge cable, the light eventually turns off.
During Charging

During charging, the charge port pulses green and charging status displays on the instrument panel. The frequency at which the charge port’s light pulses slows down as the charge level approaches full. When charging is complete, the light stops pulsing and is solid green.

Note: If Model S is locked, the light around the charge port does not light up.

If the light around the charge port lights up red while charging, a fault is detected. Check the instrument panel or touchscreen for a message describing the fault. A fault can occur due to something as common as a power outage. If a power outage occurs, charging resumes automatically when power is restored.

Note: When charging, particularly at high currents, the refrigerant compressor and the fan operate as needed to keep the Battery cool. Therefore, it is normal to hear sounds during charging.

Stopping Charging

You can stop charging at any time by disconnecting the charge cable or touching Stop Charging on the touchscreen.

To disconnect the charge cable:

1. Press and hold the button on a Tesla connector to release the latch.
2. Pull the connector from the charge port.
3. Push the charge port door closed.

Note: To prevent unauthorized unplugging of the charge cable, Model S must be unlocked or able to recognize a key before you can disconnect the charge cable.

Note: Model S stops charging whenever you double-click the key. If you do not unplug within 60 seconds, charging resumes.

Caution: Tesla strongly recommends leaving Model S plugged in when not in use. This maintains the Battery at the optimum level of charge.

Charge Port Light

<table>
<thead>

Changing Charge Settings

The charge settings screen displays on the touchscreen whenever the charge port door is open.

To display charge settings at any time, touch the Battery icon on the top of the touchscreen, or touch Controls > Charging (located in the upper right portion of the Controls screen).

**Note:** The following illustration is provided for demonstration purposes only and may vary slightly depending on the software version and market region of your Model S.

1. Charge status messages (such as Charging Scheduled, Charging In Progress) display here.

2. To adjust the charge limit, touch Set Charge Limit, then drag the slider bar. You can charge to any level from 50% to 100% based on your driving needs. The setting you choose applies to both immediate and scheduled charging sessions.

3. Location-specific schedule. With Model S in Park, set a specific time when you want Model S to begin charging at the current location. If, at the scheduled time, Model S is not plugged in at the location, it will start charging as soon as you plug it in as long as you are plugging it in within six hours of the scheduled time. If you plug in after six hours, Model S does not start charging until the scheduled time on the next day. To override this setting, touch Start Charging or Stop Charging (see item 4). When you set a scheduled charging time, Model S displays the set time on the instrument panel and the touchscreen.

4. Touch to open the charge port door or to start (or stop) charging.

5. The current automatically sets to the maximum current available from the attached charge cable, unless it was previously reduced to a lower level.

   If needed, touch the up/down arrows to change the current (for example, you may want to reduce the current if you are concerned about overloading a domestic wiring circuit shared by other equipment). It is not possible to set the charging current to a level that exceeds the maximum available from the attached charge cable.

   When you change the current, Model S remembers the location. So if you subsequently charge at the same location, you do not need to change it again.

   **Note:** If Model S automatically reduced a charging location’s current because of fluctuations in input power (see the note in Charging Status on page 107), Tesla recommends charging at the lower current until the underlying problem is resolved and the charging location can provide consistent power.
Charging Status

The following illustration is provided for demonstration purposes only and may vary slightly depending on the software version and market region of your Model S.

1. Charging rate per hour.
2. Total estimated driving distance (or energy) available. Instead of driving distance as shown here, you can display the percentage of battery energy remaining. To do so, touch Controls > Settings > Units & Format > Energy & Charging.
   
   **Note:** A portion of the battery image may appear blue. This indicates that a small portion of the energy stored in the battery is not available on your drive because the battery is cold. This is normal and no reason for concern. When the battery warms up, the blue portion is no longer displayed.

3. Current being supplied/Total current available from the connected power supply (see Changing Charge Settings on page 106).
4. Estimated increase in driving distance (or energy) achieved so far in this charging session. Instead of driving distance as illustrated above, you can change settings to display the amount of energy achieved. To do so, touch Controls > Settings > Units & Format > Energy & Charging.
5. Charging status information displays here. For example, if Model S is charging, it displays the time remaining until fully charged at the currently selected charge level. When scheduled charging is set for a location, it displays when charging will start.
6. Voltage being supplied by the charge cable.

**Note:** If Model S is charging and detects unexpected fluctuations in the input power, it automatically reduces the charging current by 25%. For example, a 40 amp current is reduced to 30 amps. This automatic current reduction increases robustness and safety in situations when a problem exists outside of Model S or its charging electronics. For example, a home wiring system, receptacle, adapter or cord is unable to meet its rated current capacity. When Model S automatically reduces a location’s charging current, it retains the reduced current for that location as a precaution. Although you can manually increase it, Tesla recommends charging at the lower current until the underlying problem is resolved and the charging location can provide consistent power.
Service Intervals

Regular maintenance is the key to ensuring the continued reliability and efficiency of your Model S.

Rotate the tires every 5000 miles (8000 km), maintain the correct tire pressures, and take Model S to Tesla at the regularly scheduled maintenance intervals of every 12 months, or every 12,500 miles (20,000 km), whichever comes first. It is also important to perform the daily and monthly checks described below.

Model S must be serviced by Tesla-certified technicians. Damages or failures caused by maintenance or repairs performed by non-Tesla certified technicians are not covered by the warranty.

Daily Checks

- Check the Battery’s charge level, displayed on the instrument panel.
- Check that all exterior lights, horn, turn signals, and wipers and washers are working.
- Check the operation of the brakes, including the parking brake.
- Check the operation of the seat belts (see Seat Belts on page 20).
- Look for fluid deposits underneath Model S that might indicate a leak. It is normal for a small pool of water to form (caused by the air conditioning system’s dehumidifying process).

Monthly Checks

- Check the mileage to determine if the tires need to be rotated (every 5000 miles/8000 km), and check the condition and pressure of each tire (see Tire Care and Maintenance on page 109).
- Check washer fluid level and top up if necessary (see Topping Up Washer Fluid on page 125).
- Check that the air conditioning system is operating (see Climate Controls on page 80).

⚠️ Warning: Contact Tesla immediately if you notice any significant or sudden drop in fluid levels or uneven tire wear.

Fluid Replacement Intervals

Do not change or top up Battery coolant and brake fluid yourself. Tesla service technicians replace fluids at the regularly scheduled service intervals:

- Brake fluid. Every 2 years or 25,000 miles (40,000 km), whichever comes first.
- Battery coolant. Every 5 years or 62,500 miles (100,000 km), whichever comes first.

Note: Any damage from opening the Battery coolant reservoir is excluded from the warranty.

High Voltage Safety

Your Model S has been designed and built with safety as a priority. However, be aware of these precautions to protect yourself from the risk of injury inherent in all high-voltage systems:

- Read and follow all instructions provided on the labels that are attached to Model S. These labels are there for your safety.
- The high voltage system has no user-serviceable parts. Do not disassemble, remove or replace high voltage components, cables or connectors. High voltage cables are colored orange for easy identification.
- If an accident occurs, do not touch any high voltage wiring, connectors, or components connected to the wiring.
- In the unlikely event that a fire occurs, immediately contact your local fire emergency responders.

⚠️ Warning: Always disconnect the charge cable before working underneath Model S, even if charging is not in progress.

⚠️ Warning: Keep your hands and clothing away from cooling fans. Some fans operate even when Model S is powered off.

⚠️ Caution: Some fluids (battery acid, Battery coolant, brake fluid, windshield washer additives, etc.) used in motor vehicles are poisonous and should not be inhaled, swallowed, or brought into contact with open wounds. For your safety, always read and follow instructions printed on fluid containers.
Maintaining Tire Pressures

Keep tires inflated to the pressures shown on the Tire and Loading Information label, even if it differs from the pressure printed on the tire itself. The Tire and Loading Information label is located on the center door pillar and is visible when the driver’s door is open.

The Tire Pressure indicator light on the instrument panel alerts you if one or more tires is under- or over-inflated.

The Tire Pressure indicator light does not immediately turn off when you adjust tire pressure. After inflating the tire to the recommended pressure, you must drive over 25 mph (40 km/h) for more than 10 minutes to activate the Tire Pressure Monitoring System (TPMS), which turns off the Tire Pressure indicator light.

If the indicator light flashes for one minute whenever you power on Model S, a fault with the Tire Pressure Monitoring System (TPMS) is detected (see TPMS Malfunction on page 113).

Checking and Adjusting Tire Pressures

Follow these steps when tires are cold and Model S has been stationary for over three hours:

1. Remove the valve cap.
2. Firmly press an accurate tire pressure gauge onto the valve to measure pressure.
3. If required, add air to reach the recommended pressure.
4. Re-check pressure by removing and re-attaching the tire gauge.
5. If you added too much air, release air by pressing the metal stem in the center of the valve.
6. Recheck the pressure with the tire gauge and adjust if necessary.
7. Replace the valve cap to prevent dirt from entering. Periodically check the valve for damage and leaks.

⚠️ Warning: Under-inflation is the most common cause of tire failures and can cause a tire to overheat, resulting in severe tire cracking, tread separation, or blowout, which causes unexpected loss of vehicle control and increased risk of injury. Under-inflation also reduces Battery range and tire tread life.

⚠️ Warning: Check tire pressures using an accurate pressure gauge when tires are cold. It takes only about one mile (1.6 km) of driving to warm up the tires sufficiently to affect tire pressures. Parking the vehicle in direct sunlight or in hot weather can also affect tire pressures. If you must check warm tires, expect increased pressures. Do not let air out of warm tires in an attempt to match recommended cold tire pressures. A hot tire at or below the recommended cold tire inflation pressure is dangerously under-inflated.

⚠️ Warning: Do not use any tire sealant other than the type provided in a Tesla tire repair kit. Other types can cause tire pressure sensors to malfunction. If your Model S did not include a tire repair kit, you can purchase one from Tesla Motors.
Inspecting and Maintaining Tires

Regularly inspect the tread and side walls for any sign of distortion (bulges), cuts or wear.

⚠️ Warning: Do not drive Model S if a tire is damaged, excessively worn, or inflated to an incorrect pressure. Check tires regularly for wear, and ensure there are no cuts, bulges or exposure of the ply/cord structure.

Tire Wear

Adequate tread depth is important for proper tire performance. Tires with a tread depth less than 4/32” (3 mm) are more likely to hydroplane in wet conditions and should not be used. Tires with a tread depth less than 5/32” (4 mm) do not perform well in snow and slush and should not be used when driving in winter conditions.

Model S is originally fitted with tires that have wear indicators molded into the tread pattern. When the tread has been worn down to 2/32” (1.6 mm), the indicators start to appear at the surface of the tread pattern, producing the effect of a continuous band of rubber across the width of the tire. For optimal performance and safety, Tesla recommends replacing tires before the wear indicators are visible.

Tire Rotation, Balance, and Wheel Alignment

Tesla recommends rotating the tires every 5000 miles (8000 km).

Unbalanced wheels (sometimes noticeable as vibration through the steering wheel) affect vehicle handling and tire life. Even with regular use, wheels can get out of balance. Therefore, they should be balanced as required.

If tire wear is uneven (on one side of the tire only) or becomes abnormally excessive, check the alignment of wheels.

Note: When replacing only two tires, always install the new tires on the rear.

Punctured Tires

A puncture eventually causes the tire to lose pressure, which is why it is important to check tire pressures frequently. Permanently repair or replace punctured or damaged tires as soon as possible. Do not drive with a punctured tire, even if the puncture has not caused the tire to deflate. A punctured tire can deflate suddenly at any time.

Your tubeless tires may not leak when penetrated, provided the object remains in the tire. If, however, you feel a sudden vibration or ride disturbance while driving, or you suspect a tire is damaged, immediately reduce your speed. Drive slowly, while avoiding heavy braking or sharp steering and, when safe to do so, stop the vehicle. Arrange to have Model S transported to a Tesla service center, or to a nearby tire repair center.

Note: In some cases, you can temporarily repair small tire punctures (under 1/4”/6 mm) using an optional tire repair kit available from Tesla. This allows you to slowly drive Model S to Tesla or to a nearby tire repair facility.

⚠️ Warning: Do not drive Model S with a punctured tire. Even if the punctured tire has not deflated, it can suddenly deflate at any time.

Flat Spots

If Model S is stationary for a long period in high temperatures, tires can form flat spots. When Model S is driven, these flat spots cause a vibration which gradually disappears as the tires warm up and regain their original shape.

To minimize the flat spots during storage, inflate tires to the maximum pressure indicated on the tire wall. Then, before driving, release air to adjust tire pressure to the recommended levels.

Improving Tire Mileage

To improve the mileage you get from your tires, maintain tires at the recommended tire pressures, observe speed limits and advisory speeds, and avoid:

- Pulling away quickly, or hard acceleration.
- Fast turns and heavy braking.
- Potholes and objects in the road.
- Hitting curbs when parking.
- Contaminating tires with fluids that can cause damage.
Replacing Tires and Wheels

Tires degrade over time due to the effects of ultraviolet light, extreme temperatures, high loads, and environmental conditions. It is recommended that tires are replaced every six years, or sooner if required.

Wheel rims and tires are matched to suit the handling characteristics of the vehicle. Replacement tires must comply with the original specification. If tires other than those specified are used, ensure that the load and speed ratings marked on the tire equal or exceed those of the original specification.

Ideally, you should replace all four tires at the same time. If this is not possible, replace the tires in pairs (both front or both rear). When replacing tires, always re-balance and check the alignment of wheels.

If you replace a wheel, the TPMS (Tire Pressure Monitoring System) sensors need to be reset to ensure they provide accurate warnings when tires are under- or over-inflated (see Resetting the TPMS Sensors on page 113).

⚠️ Warning: For your safety, use only tires and wheels that match the original specification (see Wheels and Tires on page 143). Tires that do not match the original specification can affect the operation of the Tire Pressure Monitoring System (TPMS).

⚠️ Warning: Never exceed the speed rating of your vehicle's tires. The speed rating is shown on the sidewall of your tires (see Understanding Tire Markings on page 145).

Asymmetric Tires

Model S tires are asymmetric and must be mounted on the wheel with the correct sidewall facing outward. The sidewall of the tire is marked with the word OUTSIDE. When new tires are installed, make sure that the tires are correctly mounted on the wheels.

⚠️ Warning: Road holding is seriously impaired if the tires are incorrectly installed on the wheels.

Tire Types

Summer Tires

Your Model S may be originally equipped with high performance summer tires. These tires are designed for maximum dry and wet road performance. Summer tires do not perform well in winter conditions. Tesla recommends using winter tires if driving in cold temperatures or on roads where snow or ice may be present. Contact Tesla for winter tire recommendations.

⚠️ Warning: In cold temperatures or on snow or ice, summer tires do not provide adequate traction. Selecting and installing the appropriate tires for winter conditions is important to ensure the safety and optimum performance of your Model S, even when equipped with dual motors.

All-Season Tires

Your Model S may be originally equipped with all-season tires. These tires are designed to provide adequate traction in most conditions year-round, but may not provide the same level of traction as winter tires in snowy or icy conditions. All-season tires can be identified by “ALL SEASON” and/or “M+S” (mud and snow) on the tire sidewall.
Winter Tires

Your Model S is not originally equipped with winter tires. In snowy and icy conditions, consider installing winter tires. Winter tires are designed to increase traction in snowy or icy conditions. When installing winter tires, always install a complete set of four tires at the same time. Winter tires must be the same size, brand, construction and tread pattern on all four wheels. Contact Tesla for winter tire recommendations.

Winter tires can be identified by a mountain/snowflake symbol on the tire's sidewall.

When driving with winter tires, you may experience more road noise, shorter tread life, and less traction on dry roads.

Driving in Low Temperatures

Tire performance is reduced in low ambient temperatures, resulting in reduced grip and an increased susceptibility to damage from impacts. Performance tires can temporarily harden when cold, causing you to hear rotational noise for the first few miles (kms) until the tires warm up.

Using Tire Chains

Tesla has tested and approved Security Chain Company (SCC) Model Z-563 chains for use on the rear wheels. These chains must only be used if your Model S has 245/45R19 rear tires installed. Do not use chains on 21 inch tires.

When installing tire chains, follow the instructions provided by the tire chain manufacturer. Mount them as tightly as possible.

When using tire chains:

- Drive slowly. Do not exceed 30 mph (48 km/h).
- Avoid heavily loading Model S (heavy loads can reduce the clearance between the tires and the body).
- Remove the tire chains as soon as conditions allow.

Note: Tire chains are prohibited in some jurisdictions. Check local laws before installing tire chains.

Caution: Using non-recommended tire chains, or using tire chains on other sized tires, can damage the suspension, body, wheels, and/or brake lines. Damage caused by using non-recommended tire chains is not covered by the warranty.

Caution: Ensure that tire chains cannot touch suspension components or brake lines. If you hear the chains making unusual noises that would indicate contact with Model S, stop and investigate immediately.

Tire Pressure Monitoring

Each tire should be checked monthly when cold and inflated to the recommended pressures that are printed on the Tire and Loading Information label located on the driver’s door pillar (see Maintaining Tire Pressures on page 109). If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, determine the proper tire inflation pressure for those tires.

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that displays a tire pressure telltale (Tire Pressure Warning) on the instrument panel when one or more of your tires is significantly under- or over-inflated. Accordingly, when the Tire Pressure indicator light displays on the instrument panel alerting of tire pressure, stop and check your tires as soon as possible, and inflate them to the proper pressure (see Maintaining Tire Pressures on page 109). Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

If Model S detects a fault with the Tire Pressure Monitoring System (TPMS), this indicator flashes for one minute whenever you power on Model S.

Note: Installing accessories that are not approved by Tesla can interfere with the TPMS system.

Warning: The TPMS is not a substitute for proper tire maintenance, including manually checking tire pressures and regularly inspecting the condition of tires. It is the driver’s responsibility to maintain correct tire pressure, even if under- or over-inflation has not reached the level...
for the TPMS to trigger the Tire Pressure Warning on the instrument panel.

### Resetting the TPMS Sensors

After replacing one or more wheels, the TPMS sensors must be reset to ensure tire pressure warnings are accurate. However, note that the TPMS sensors do not need to be reset after replacing a tire or rotating wheels.

**Note:** When changing to 21” wheels (Performance Plus models), the TPMS may generate false tire pressure warnings. Bring Model S to a Tesla Service center for further adjustment.

**Note:** Do not reset the TPMS sensors in an attempt to clear tire pressure warnings.

To reset TPMS sensors:

1. Inflate all tires to their recommend pressures, as indicated on the Tire and Loading Information label located on the driver’s door pillar.
2. Get ready to drive for ten minutes, then, on the Model S touchscreen, touch Controls > Settings > Service & Reset > Tire Pressure Monitor > Reset Sensors.
3. Follow the onscreen instructions.

### Replacing a Tire Sensor

If the Tire Pressure warning indicator displays frequently, contact Tesla to determine if a tire sensor needs to be replaced. Tire sensors must be replaced by a Tesla service technician who can perform a brief setup procedure. If a non-Tesla service center repairs or replaces a tire, the tire sensor will not work until Tesla performs the setup procedure.

### TPMS Malfunction

Model S has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly.

The TPMS malfunction indicator is combined with the tire pressure indicator light. When the system detects a malfunction, the indicator flashes for approximately one minute after Model S powers on, and then remains continuously lit. This sequence continues upon subsequent vehicle start-ups as long as the malfunction exists. When the TPMS malfunction indicator is on, the system might not be able to detect or signal under- and over-inflated tires as intended.

TPMS malfunctions can occur for a variety of reasons, including installing replacement or alternate tires or wheels that prevent the TPMS from functioning properly. Always check the TPMS malfunction indicator light after replacing one or more tires or wheels on your vehicle to ensure that the replacement tires or wheels allow the TPMS to continue to function properly.

**Note:** If a tire has been replaced or repaired using a different tire sealant than the one available from Tesla, and a low tire pressure is detected, it is possible that the tire sensor has been damaged. Contact Tesla to have the fault repaired as soon as possible.
Tire Repair Kit

Your Model S has no spare tire. Depending on the legislations that apply to the region in which you purchased Model S, a tire repair kit may or may not be included. If a tire repair kit was not provided in Model S upon delivery, you can purchase one from Tesla.

Note: Although Model S does not have a spare tire, in the event of a flat tire, Roadside Assistance provides towing coverage for up to 50 miles.

The tire repair kit consists of a compressor and a canister of tire sealant (enough to repair one tire). When injected into a tire, the sealant can penetrate a small puncture up to 1/4” (6 mm) to form a temporary repair.

Note: For punctures larger than 1/4” (6 mm), severe tread damage, a damaged sidewall, ripped tires or tires that have come off the rim, call Roadside Assistance.

⚠️ Warning: The tire repair kit is a temporary repair only. You must repair or replace a damaged tire as soon as possible.

⚠️ Warning: Do not exceed 30 mph (48 km/h) when driving with a tire that has been temporarily repaired with sealant.

⚠️ Warning: Follow all directions and warnings on the tire repair kit before starting a repair.

⚠️ Caution: Do not drive on a deflated tire as this can cause serious damage.

Tire Sealant Canister

The tire sealant provided in the Tesla tire repair kit is approved for use with Model S and is designed not to damage the TPMS (Tire Pressure Monitoring System) sensors. Therefore, you must replace it only with one of the same type and capacity (see Replacing the Sealant Canister on page 117). Tire sealant canisters can be purchased from Tesla.

The tire sealant has an expiration date printed on the outside of the canister. If the expiration date has passed, the sealant might not work as expected. Always replace an expired tire sealant canister.

⚠️ Warning: Do not use any tire sealant other than the one available from Tesla. Doing so could cause tire pressure sensors to malfunction.

⚠️ Warning: Always read and follow the safety and handling instructions printed on the sealant canister.

⚠️ Warning: Keep tire sealant out of the reach of children.

⚠️ Warning: Tire sealant can be harmful if it contacts the eyes or if swallowed or inhaled. If the sealant comes into contact with your eyes, immediately flush with water and seek medical attention if irritation persists. If swallowed, do not induce vomiting and seek medical assistance immediately. If inhaled, breathe fresh air. Inhalation can cause drowsiness and dizziness. If breathing is affected, seek medical assistance immediately.
Inflating with Sealant and Air

If you have a Tesla tire repair kit, follow these steps to temporarily repair a small tire puncture (less than 1/4” (6 mm)).

1. Stop Model S in a safe place away from traffic and ask passengers to wait in a safe area.
2. Turn on the hazard warning flashers to alert other road users.
3. If possible, position the wheel with the puncture at the bottom.
4. Detach the power supply connector from the back of the compressor and plug it into the 12V power socket located on the front of center console.
5. Release the clear plastic hose from the tire compressor.
6. Remove the red cap and screw the end of the hose onto the tire’s valve.
7. Attach the sealant kit’s black air hose to the sealant valve and press the lever down to secure it in place.
8. Ensure the compressor is lying on a level surface with the pressure gauge facing to the side as shown in Step 5.
9. Turn on the compressor.
10. Inflate the tire to the recommended pressure.
11. Turn off the compressor and disconnect the hose from the tire’s valve. Wipe any excess sealant from the tire valve and wheel rim.
12. Immediately drive for 5 miles (8 km) to distribute the sealant around the tire. Do not exceed 30 mph (48 km/h).
13. Stop and check the tire’s pressure. If necessary, inflate using the black air hose.
14. Have the tire repaired or replaced as soon as possible.
15. Replace the tire repair sealant canister (see Replacing the Sealant Canister on page 117).
Inflating with Air Only
If you have a Tesla tire repair kit, follow these steps to inflate a tire with air:

1. Detach the power supply connector from the rear of the compressor and plug it into the 12V power socket located in Model S on the front of center console.

2. Release the black air hose from the compressor.
3. Attach the air hose to the valve and press the lever down to secure it in place.

4. Ensure the compressor is lying on a level surface with the pressure gauge facing to the side where you can read it.
5. To add air, turn on the compressor and inflate until the desired pressure is reached.
6. To release air, turn off the compressor, then press and hold the red button until the desired pressure is reached.

Note: For your convenience, the tire repair kit includes a selection of adapters that allow you to inflate other items. These adapters are located in a compartment on the back of the compressor.

Caution: To avoid overheating, do not use the compressor continuously for more than eight minutes. Allow the compressor to cool for 15 minutes between uses.

Caution: The compressor runs slowly when overheated from excessive use. Turn it off and allow it to cool.
Replacing the Sealant Canister

If you have a Tesla tire repair kit, you can purchase additional or replacement canisters of tire sealant from Tesla.

Follow these steps to replace the canister in your Tesla tire repair kit:

1. Unwrap the clear hose from the compressor. This hose is included with the tire repair sealant canister.
2. Remove the canister cover by sliding it upward to release it from the compressor.
3. Remove the canister.
4. Insert the new canister and replace the cover.
Cleaning the Exterior

To prevent damage to the paint, immediately remove corrosive substances (bird droppings, tree resin, dead insects, tar spots, road salt, industrial fallout, etc). Do not wait until Model S is due for a complete wash. If necessary, use denatured alcohol to remove tar spots and stubborn grease stains, then immediately wash the area with water and a mild, non-detergent soap to remove the alcohol.

Follow these steps when washing the exterior of Model S:

1. Rinse Thoroughly

Before washing, flush grime and grit from the bodywork using a hose. Flush away accumulations of mud in areas where debris easily collects (such as wheel arches and panel seams). If salt has been used on the highways (such as during winter months), thoroughly rinse all traces of road salt from the underside of the vehicle.

2. Hand Wash

Hand wash Model S using a soft cloth and cold or lukewarm water containing a mild, good quality car shampoo.

3. Rinse with Clean Water

After washing, rinse with clean water to prevent soap from drying on the surfaces.

4. Dry Thoroughly and Clean Exterior Glass

After washing and rinsing, dry thoroughly with a chamois.

Clean windows and mirrors using an automotive glass cleaner. Do not scrape, or use any abrasive cleaning fluid on glass or mirrored surfaces.

Cautions for Exterior Cleaning

⚠️ Caution: Do not use windshield treatment fluids. Doing so can interfere with wiper friction and cause a chattering sound.

⚠️ Caution: Do not use hot water and detergents.

⚠️ Caution: In hot weather, do not wash in direct sunlight.

⚠️ Caution: If using a pressure washer, maintain a distance of at least 12" (30 cm) between the nozzle and the surface of Model S. Keep the nozzle moving and do not concentrate the water jet on any one area.

⚠️ Caution: Do not aim water hoses directly at window, door or hood seals, or through wheel apertures onto brake components.

⚠️ Caution: Avoid using tight-napped or rough cloths, such as washing mitts.

⚠️ Caution: If washing in an automatic car wash, use Touchless car washes only. These car washes have no parts (brushes, etc.) that touch the surfaces of Model S. Using any other type of car wash could cause damage that is not covered by the warranty.

⚠️ Caution: Do not used chemical based wheel cleaners. These can damage the finish on the wheels.

⚠️ Caution: Avoid using a high pressure power washer on the rear view camera or parking sensors (if equipped) and do not clean a sensor or camera lens with a sharp or abrasive object that can scratch or damage its surface.
Cleaning the Interior

Frequently inspect and clean the interior to maintain its appearance and to prevent premature wear. If possible, immediately wipe up spills and remove marks. For general cleaning, wipe interior surfaces using a soft cloth (such as micro fiber) dampened with a mixture of warm water and mild non-detergent cleaner (test all cleaners on a concealed area before use). To avoid streaks, dry immediately with a soft lint-free cloth.

Interior Glass

Do not scrape, or use any abrasive cleaning fluid on glass or mirrored surfaces. This can damage the reflective surface of the mirror and the heating elements in the rear window.

Airbags

Do not allow any substance to enter an airbag cover. This could affect correct operation.

Dashboard and Plastic Surfaces

Do not polish the upper surfaces of the dashboard. Polished surfaces are reflective and could interfere with your driving view.

Leather Seats

Leather is prone to dye-transfer which can cause discoloration, particularly on light colored leather. White and tan leather is coated with an anti-soiling treatment. Wipe spills as soon as possible using a soft cloth moistened with warm water and non-detergent soap. Wipe gently in a circular motion. Then wipe dry using a soft, lint-free cloth. Using detergents or commercially available leather cleaners and conditioners is not recommended because they can discolor or dry out the leather.

Cloth Seats

Wipe spills as soon as possible using a soft cloth moistened with warm water and non-detergent soap. Wipe gently in a circular motion. Then wipe dry using a soft, lint-free cloth. Vacuum the seats as needed to remove any loose dirt.

Carpets

Avoid over-wetting carpets. For heavily soiled areas, use a diluted upholstery cleaner.

Seat Belts

Extend the belts to wipe. Do not use any type of detergent or chemical cleaning agent. Allow the belts to dry naturally while extended, preferably away from direct sunlight.

Tesla Built-In Rear Facing Child Seats

Vacuum the seats to remove any loose dirt. Wipe the seats with a soft cloth dampened with warm water. You can also use an upholstery cleaner designed for automotive use. Extend the belts to wipe. Allow the belts to dry naturally, preferably away from direct sunlight.

Touchscreen and Instrument Panel

Clean the touchscreen and instrument panel using a soft lint-free cloth specifically designed to clean monitors and displays. Do not use cleaners (such as a glass cleaner) and do not use a wet wipe or a dry statically-charged cloth (such as a recently washed microfiber). To wipe the touchscreen without activating buttons and changing settings, you can enable clean mode. Touch Controls > Displays > Clean Mode. The display darkens to make it easy to see dust and smudges.

Chrome and Metal Surfaces

Polish, abrasive cleaners or hard cloths can damage the finish on chrome and metal surfaces.

Cautions for Interior Cleaning

⚠️ Warning: If you notice any damage on an airbag or seat belt, contact Tesla immediately.

⚠️ Warning: Do not allow any water, cleaners, or fabric to enter a seat belt mechanism.

⚠️ Caution: Using solvents (including alcohol), bleach, citrus, naphtha, or silicone-based products or additives on interior components can cause damage.
Polishing, Touch Up, and Body Repair

To preserve the cosmetic appearance of the body, you can occasionally treat the paint surfaces with an approved polish containing:

- Very mild abrasive to remove surface contamination without removing or damaging the paint.
- Filling compounds that fill scratches and reduce their visibility.
- Wax to provide a protective coating between the paint and environmental elements.

Regularly inspect the exterior paint for damage. Treat minor chips and scratches using a paint touch up pen (available for purchase from Tesla). Use the touch-up pen after washing but before polishing or waxing.

Repair rock chips, fractures or scratches. Body repairs should be performed only by a Tesla approved body shop. Contact Tesla for a list of approved body shops.

⚠️ **Caution:** Do not use cutting pastes, color restoration compounds, or polishes containing harsh abrasives. These can scour the surface and permanently damage the paint.

⚠️ **Caution:** Do not use chrome polish or other abrasive cleaners.

Using a Car Cover

To preserve the cosmetic appearance of the body when Model S is not being used, use a genuine Tesla car cover. Car covers can be purchased from Tesla.

⚠️ **Caution:** Use only a Tesla-approved car cover when Model S is plugged in. Using a non-Tesla car cover can prevent the Battery from being adequately cooled during charging.

Floor Mats

To extend the life of your carpet and make them easier to clean, use genuine Tesla floor mats. Maintain mats by cleaning them regularly and replacing them if they become excessively worn.

⚠️ **Warning:** To avoid potential interference with a foot pedal, ensure that the driver’s floor mat is securely fastened, and never place an additional floor mat on top of it.
Checking and Replacing Wiper Blades

**Caution:** Wiper blades do not lock into a lifted position. When cleaning or replacing a wiper blade, lift the wiper arm only a short distance from the windshield, just far enough to access the blade. Do not lift a wiper arm beyond its intended position. Doing so can cause damage that is not covered by the warranty.

To make wiper blades easy to access, turn off the wipers, shift Model S into Park, then use the touchscreen to move them to the service position. Touch Controls > Settings > Service & Reset > Service Mode > ON.

**Note:** Wipers automatically return to their normal position when you shift Model S out of Park.

Periodically check and clean the edge of the wiper blade and check the rubber for cracks, splits and roughness. If damaged, replace the blade immediately to prevent damage to the glass.

Contaminants on the windshield, or on the wiper blades, can reduce the effectiveness of the wiper blades. Contaminants include ice, wax spray from car washes, washer fluid with bug and/or water repellent, bird droppings, tree sap, and other organic substances. Follow these guidelines for cleaning:

- Clean the windshield using non-abrasive glass cleaner.
- Lift the wiper arm a short distance away from the windshield, just far enough to access the wiper blade, then wipe the blade clean using isopropyl (rubbing) alcohol or washer fluid.

If the wipers remain ineffective after cleaning, replace the wiper blades.

For optimum performance, replace wiper blades at least once a year.

To replace wiper blades:

1. Turn off the wipers, shift Model S into Park, then use the touchscreen to move the wipers to the service position. Touch Controls > Settings > Service & Reset > Service Mode > ON.

   **Note:** Wipers must be OFF to turn on Service Mode.

2. Lift the wiper arm a short distance away from the windshield, just far enough to access the wiper blade.

3. Hold the wiper arm (the wiper arm does not lock into a lifted position) and press the locking tab while sliding the blade down the arm.

4. Align the new blade on the wiper arm and slide it toward the hooked end of the arm until it locks into place.

5. Place the wiper arm against the windshield.

If the problem persists with new blades, clean the windshield and wiper blades by wiping with a soft cloth or sponge moistened with warm water and non-detergent soap. Then, rinse the windshield and wiper blades with clean water. The windshield is clean when water beads do not form.

**Caution:** Only use cleaning products approved for use on automotive glass and rubber. Inappropriate products can cause damage or smears, and create glare on the windshield.

**Caution:** Only install replacement blades that are identical to the original blades. Using inappropriate blades can damage the wiper system and affect the operation of the rain sensor.

Cleaning Washer Jets

The position of the windshield washers is set at the factory and should never need adjusting.

If a windshield washer becomes blocked, use a thin strand of wire to clear any blockages from the nozzle.
Warning: Do not operate the washers while cleaning Model S. Windshield washer fluid can irritate eyes and skin. Read and observe the washer fluid manufacturer's instructions.
Removing the Maintenance Panel

To access fuses and check fluid levels, remove the maintenance panel:

1. Pull the rear edge of the maintenance panel upward to release the five clips that hold the panel in place.
2. Maneuver the maintenance panel toward the windshield to remove.

**Caution:** The maintenance panel protects the front trunk from water. When reattaching, make sure it is fully seated.

Checking Battery Coolant

If the quantity of fluid in the cooling system drops below the recommended level, the instrument panel displays a warning message. Stop Model S as soon as safety permits and contact Tesla.

**Fluid Level Check**

Tesla checks the Battery coolant level at the regularly scheduled maintenance intervals. To check it yourself, park Model S on level ground. When Model S is cool, remove the maintenance panel (see Removing the Maintenance Panel on page 123).

Check the fluid level visually by looking at the outside marks on the side of the reservoir. **DO NOT REMOVE THE FILLER CAP AND DO NOT ADD FLUID.** Doing so can result in damage not covered by the warranty.

The fluid level should be between the **MIN** and the **MAX** marks. If you notice that the fluid level has dropped significantly, contact Tesla before using Model S.

**Topping Up the Battery Coolant**

Under no circumstances should you add coolant. If the instrument panel warns you that the fluid level is low, contact Tesla immediately.

To maximize the performance and life of the Battery, the cooling system uses a specific type of G-48 ethylene-glycol coolant (HOAT). Contact Tesla for more specific information about the coolant.
Checking Brake Fluid

**Warning:** Contact Tesla immediately if you notice increased movement of the brake pedal or a significant loss of brake fluid. Driving under these conditions can result in extended stopping distances or complete brake failure.

The Brake indicator on the instrument panel alerts you if the quantity of fluid in the brake reservoir drops below the recommended level. If it displays while driving, stop as soon as safety permits by gently applying the brakes. Do not continue driving. Contact Tesla immediately.

Fluid Level Check

Tesla checks the brake fluid level at the regularly scheduled maintenance intervals. To check it yourself, park Model S on level ground. When Model S is cool, remove the maintenance panel (see Removing the Maintenance Panel on page 123).

Check the fluid level visually by looking at the outside marks on the side of the reservoir without removing the filler cap.

The brake fluid level should always be between the MIN and the MAX marks.

**Note:** Although brake fluid level drops slightly during normal use as a result of brake pad wear, it should not drop below the MIN mark.

Topping Up the Brake Fluid

Do not top up your brake fluid. Tesla service does this when you bring Model S in for regular servicing. The following instructions are provided for information purposes and future reference only:

1. Clean the filler cap before removing to prevent dirt from entering the reservoir.
2. Unscrew the cap and remove.
3. Top up the reservoir to the MAX mark using brake fluid meeting DOT3 or DOT4 specifications.
4. Replace the filler cap.

**Warning:** Only use new fluid from a sealed air-tight container. Never use previously used fluid or fluid from a previously opened container—fluid absorbs moisture which decreases braking performance.

**Warning:** Brake fluid is highly toxic. Keep containers sealed and out of the reach of children. In the event of accidental consumption, seek medical attention immediately.

**Caution:** Brake fluid damages painted surfaces. Immediately soak up any spills with an absorbent cloth and wash the area with a mixture of car shampoo and water.
Topping Up Washer Fluid

The only reservoir into which you can add fluid is the washer fluid reservoir located under the front trunk. When the level is low, a message displays on the instrument panel.

Do not use formulated washer fluids that contain water repellent or bug wash. These fluids can cause streaking, smearing, and squeaking or other noises.

Operate the washers periodically to check that the nozzles are clear and properly directed.

To top up washer fluid:

1. Clean the filler cap before opening to prevent dirt from entering the reservoir.
2. Open the filler cap.
3. Fill the reservoir until the fluid level is visible just below the filler neck.
4. Replace the filler cap.

Note: Some national or local regulations restrict the use of Volatile Organic Compounds (VOCs). VOCs are commonly used as antifreeze in washer fluid. Use a washer fluid with limited VOC content only if it provides adequate freeze resistance for all climates in which you drive Model S.

Caution: Under no circumstances do you need to inspect or top up other fluid reservoirs. Two additional fluid reservoirs are located next to the washer fluid, but underneath the maintenance panel. In the unlikely event that you see a message on the instrument panel that one of these fluid levels is low, stop Model S as soon as safe to do so, and contact Tesla.

Caution: Do not spill washer fluid on body panels. Doing so can cause damage. Wipe up spills immediately and wash the affected area with water.

Warning: In temperatures below 40° F (4° C), use a washer fluid with antifreeze. In cold weather, using a washer fluid without antifreeze can impair visibility through the windshield.
Fuse Box Locations

Three fuse boxes are located under the maintenance panel, located in the front trunk. For instructions on how to remove this panel, see Removing the Maintenance Panel on page 123.

1. Fuse box 1 (see Fuse Box 1 on page 127). DO NOT replace these fuses. If one of them fails, contact Tesla.
2. Fuse box 2 (see Fuse Box 2 on page 129).
3. Fuse box 3 (see Fuse Box 3 on page 131).

Replacing a Fuse

To remove a fuse box cover, press the plastic tabs on either side.

Identify the fuse protecting the affected circuit. Refer to the label on the inside of the fuse box cover or the fuse tables provided in this section.

Pull the fuse to remove it. A break in the wire inside the fuse indicates that the fuse has blown.

**Note:** Do not replace fuses in fuse boxes 1 and 4, and do not remove or replace any relays. If one of these fails, contact Tesla.

⚠ **Warning:** Always manually power Model S off before replacing a fuse (see Powering Off on page 41).

⚠ **Caution:** Only use Tesla-approved replacement fuses of the same rating and specification. Using an incorrect fuse can damage the electrical system and result in a fire.

⚠ **Caution:** If a replacement fuse blows after installation, contact Tesla to have the electrical system checked.
Fuse Box 1

**Note:** Access to fuse box 1 requires removal of components that must be performed by a Tesla service technician. The following fuse list is provided only to assist you in determining if a fuse in this box needs to be replaced. Contact Tesla Service if one of these fuses needs to be replaced.

Jacking Procedure

Follow the steps below to lift Model S. Ensure that any non-Tesla repair facility is aware of these lifting points.

1. Position Model S centrally between the lift posts.

2. If your Model S is equipped with Smart Air Suspension, it automatically self-levels, even when power is off. Use the touchscreen to set the suspension as follows:
   - Touch Controls > Suspension.
   - Press the brake pedal, then touch Very High to maximize the height of the suspension.
   - Touch Jack to disable self-leveling.

   When Jack mode is active, Model S displays this indicator light on the instrument panel, along with a message telling you that active suspension is disabled.

3. Position the lift arm pads under the body rails at the locations illustrated. DO NOT position the lift arm pads under the Battery.

4. Adjust the height and position of the lift arm pads to ensure they are correctly located.

5. With assistance, raise the lift, ensuring the lift arm pads remain in their correct positions.

Note: Jack mode cancels when Model S is driven over 4.5 mph (7 km/h).

⚠️ Warning: If your Model S is equipped with Smart Air Suspension, it automatically self-levels, even when power is off. You MUST disable this system by engaging Jack mode before lifting or jacking. If you do not disable Smart Air Suspension, Model S can attempt to self-level, causing serious damage, bodily injury, or death.

⚠️ Warning: Never raise Model S when the charge cable is connected, even if charging is not in progress.

⚠️ Warning: Do not work on an incorrectly supported vehicle. Doing so can cause serious damage, bodily injury, or death.

⚠️ Caution: DO NOT lift from under the Battery. Place the lift arm pads under the body rails only. The locations illustrated are the only approved lifting points for Model S. Lifting at any other points can cause damage. Damage caused by lifting Model S is not covered by the warranty.
Parts, Accessories, and Modifications

Use only genuine Tesla parts and accessories. Tesla performs rigorous testing on parts to ensure their suitability, safety, and reliability. Purchase these parts from Tesla, where they are professionally installed and where you can receive expert advice about modifications to Model S.

Tesla is unable to assess parts manufactured by other distributors and therefore accepts no responsibility if you use non-Tesla parts on Model S.

⚠️ Warning: Installing non-approved parts and accessories, or performing non-approved modifications, can affect the performance of Model S and the safety of its occupants. Any damage caused by using or installing non-approved parts, or by performing non-approved modifications, is not covered by the warranty.

⚠️ Warning: Tesla does not accept liability for death, personal injury or damage that occurs if you use or install non-approved accessories or make non-approved modifications.

Body Repairs

If Model S is in a collision, contact Tesla to ensure that it is repaired with genuine Tesla parts. Tesla has selected and approved body shops that meet strict requirements for training, equipment, quality, and customer satisfaction.

Some repair shops and insurance companies might suggest using non-original equipment or salvaged parts to save money. However, these parts do not meet Tesla's high standards for quality, fit and corrosion resistance. In addition, non-original equipment and salvaged parts (and any damage or failures they might cause) are not covered by the warranty.
Vehicle Identification Number

You can find the VIN at the following locations:

- Stamped on a plate located at the top of the dashboard. Can be seen by looking through the windshield.
- Stamped on the chassis. Can be seen by removing the maintenance panel (see Removing the Maintenance Panel on page 123).
- Printed on the Vehicle Certification label, located on the driver's side door pillar. Can be seen when the driver's door is open.

Emission Control Label

The emission control label is located on the opening face of the liftgate.
Load Capacity Labeling

It is important to understand how much weight your Model S can safely carry. This weight is called the vehicle capacity weight and includes the weight of all occupants, cargo and any additional equipment added to your Model S since it was manufactured.

There are two labels attached to Model S that state how much weight it can safely carry. These labels are located on the center door pillar and are visible when the driver’s door is open:

1. Tire and Loading Information label
2. Vehicle Certification label

**Warning:** Overloading Model S has an adverse effect on braking and handling, which can compromise your safety or damage Model S.

**Caution:** Never load more than 300 lbs (136 kg) in the front trunk. Doing so can cause damage.

**Caution:** Never store large amounts of liquid in Model S. A significant spill can cause electrical components to malfunction.

Tire and Loading Information Label

The Tire and Loading Information label provides:

- The maximum number of occupant seating positions.
- The maximum vehicle capacity weight.
- The size of the original tires.
- The cold inflation pressures for the original front and rear tires. These pressures are recommended to optimize ride and handling characteristics.

**United States:**

![Tire and Loading Information Label](image)

**Canada:**

![Tire and Loading Information Label](image)

Never change this label, even if you use different tires in the future.

**Note:** If Model S is loaded to its full capacity, double check all tires to ensure they are inflated to their recommended pressure levels.
Vehicle Certification Label

The Vehicle Certification label provides:

- GVWR - Gross Vehicle Weight Rating. The maximum allowable total mass of Model S. This is calculated as the weight of Model S, all passengers, fluids, and cargo.
- GAWR FRT and GAWR RR - Gross Axle Weight Rating for the front and rear axles. The GAWR is the maximum distributed weight that each axle can support.

United States:

Canada:

⚠ Caution: To prevent damage, never load Model S so that it is heavier than GVWR or exceeds the individual GAWR weights.

Calculating Load Limits

1. Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs” on your vehicle’s “Tire and Loading Information” label.
2. Determine the combined weight of the driver and passengers that will be riding in the vehicle.
3. Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs (see Step 1).
4. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the “XXX” amount equals 1400 lbs (635 kg) and there will be five 150 lb (68 kg) passengers in the vehicle, the amount of available cargo and luggage capacity is 650 lbs (1400 - 750 (5 x 150) = 650 lbs) or 295 kg (635 - 340 (5 x 68) = 295 kg).
5. Determine the combined weight of cargo and luggage being loaded on the vehicle. That weight must not exceed the available cargo and luggage load capacity calculated in Step 4.

⚠ Warning: The front and rear trunks are the preferred places to carry objects. In an accident, or during hard braking and sharp turns, loose items in the cabin could injure occupants.

Example Load Limit Calculations

How much cargo you can carry in Model S depends on the number and weight of passengers. The following are typical examples of calculated load limits. These examples assume passengers weighing 150 lbs (68 kg). If the passengers weigh more or less, the available cargo and luggage load capacity decreases or increases respectively.

Driver and one passenger

<table>
<thead>
<tr>
<th>Description</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vehicle capacity weight</td>
<td>954 lbs (433 kg)</td>
</tr>
<tr>
<td>Subtract occupant weight</td>
<td>300 lbs (136 kg)</td>
</tr>
<tr>
<td>(2 x 150 lbs/68 kg)</td>
<td></td>
</tr>
<tr>
<td>Available cargo weight</td>
<td>654 lbs (297 kg)</td>
</tr>
</tbody>
</table>
Driver and four passengers

<table>
<thead>
<tr>
<th>Description</th>

<tr>
<td>Subtract occupant weight (5 x 150 lbs/68 kg)</td>
<td>750 lbs (340 kg)</td>
</tr>
<tr>
<td>Available cargo weight</td>
<td>204 lbs (93 kg)</td>
</tr>
</tbody>
</table>

The available cargo or luggage weight should then be distributed between the front and rear trunks.

⚠️ **Caution:** Do not exceed the maximum front trunk load weight of 300 lbs (136 kg).

### Towing a Trailer

⚠️ **Warning:** Do not use Model S for towing purposes. Model S does not support a trailer hitch. Installing one could cause damage and increase the risk of an accident.

⚠️ **Caution:** Using Model S for towing may void the warranty.

### Roof Racks

If Model S is equipped with the all glass panoramic roof, you can carry up to 75 kg using a Tesla-approved roof rack (see Parts and Accessories on page 133). A Model S equipped with a solid aluminum roof is incompatible with roof racks.

⚠️ **Caution:** Damage caused by roof racks is not covered by the warranty.

⚠️ **Caution:** Do not use roof racks, or place any load, on the roof of a Model S that is equipped with a solid aluminum roof. Doing so can cause significant damage.

Tire pressures vary depending on the type of tires fitted on Model S. Refer to the tire pressures printed on the Tire and Loading Information label. This label is located on the driver’s door pillar and is visible when the driver’s door is open (see Maintaining Tire Pressures on page 109).

Winter tires (Pirelli P245/45R19) can be purchased from a Tesla store.
Understanding Tire Markings

Laws require tire manufacturers to place standardized information on the sidewall of all tires. This information identifies and describes the fundamental characteristics of the tire. It also provides the tire identification number (TIN) for safety standard certification and in case of a recall.
<table>
<thead>
<tr>
<th></th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Tire category. P indicates that the tire is for passenger vehicles.</td>
</tr>
<tr>
<td>2</td>
<td>Tire width. This 3-digit number is the width (in millimeters) of the tire from sidewall edge to sidewall edge.</td>
</tr>
<tr>
<td>3</td>
<td>Aspect ratio. This 2-digit number is the sidewall height as a percentage of the tread width. So, if the tread width is 205 mm, and the aspect ratio is 50, the sidewall height is 102 mm.</td>
</tr>
<tr>
<td>4</td>
<td>Tire construction. R indicates that the tire is of Radial ply construction.</td>
</tr>
<tr>
<td>5</td>
<td>Wheel diameter. This 2-digit number is the diameter of the wheel rim in inches.</td>
</tr>
<tr>
<td>6</td>
<td>Load index. This 2 or 3-digit number is the weight each tire can support. This number is not always shown.</td>
</tr>
<tr>
<td>7</td>
<td>Speed rating. When stated, indicates the maximum speed (in mph) at which the tire can be used for extended periods. Q=99 mph (160 km/h), R=106 mph (170 km/h), S=112 mph (180 km/h), T=118 mph (190 km/h), U=124 mph (200 km/h), H=130 mph (210 km/h), V=149 mph (240 km/h), W=168 mph (270 km/h), Y=186 mph (300 km/h).</td>
</tr>
<tr>
<td>8</td>
<td>Tire composition and materials. The number of plies in both the tread area and the sidewall area indicates how many layers of rubber coated material make up the structure of the tire. Information is also provided on the type of materials used.</td>
</tr>
<tr>
<td>9</td>
<td>Maximum tire load. The maximum load which can be carried by the tire.</td>
</tr>
<tr>
<td>10</td>
<td>Maximum permissible inflation pressure. This pressure should not be used for normal driving.</td>
</tr>
<tr>
<td>11</td>
<td>U.S. DOT Tire Identification Number (TIN). Begins with the letters DOT and indicates that the tire meets all federal standards. The next 2 digits/letters represent the plant code where it was manufactured, and the last 4 digits represent the week and year of manufacture. For example, the number 1712 is used to represent the 17th week of 2012. The other numbers are marketing codes used at the manufacturer's discretion. This information can be used to contact consumers if a tire defect requires a recall.</td>
</tr>
<tr>
<td>12</td>
<td>Treadwear grade. This number indicates the tire's wear rate. The higher the treadwear number is, the longer it should take for the tread to wear down. A tire rated at 400, for example, lasts twice as long as a tire rated at 200.</td>
</tr>
<tr>
<td>13</td>
<td>Traction grade. Indicates a tire's ability to stop on wet roads. A higher graded tire should allow you to stop your vehicle in a shorter distance than a tire with a lower grade. Traction is graded from highest to lowest as AA, A, B, and C.</td>
</tr>
<tr>
<td>14</td>
<td>Temperature grade. The tire's resistance to heat is grade A, B, or C, with A indicating the greatest resistance. This grading is provided for a correctly inflated tire, which is being used within its speed and loading limits.</td>
</tr>
</tbody>
</table>
Uniform Tire Quality Grading

The following information relates to the tire grading system developed by the National Highway Traffic Safety Administration (NHTSA), which grades tires by tread wear, traction and temperature performance. Tires that have deep tread, and winter tires, are exempt from these marking requirements.

Where applicable, quality grades are found on the tire’s sidewall between the tread shoulder and maximum section width. For example:

• TREADWEAR 180
• TRACTION AA
• TEMPERATURE A

The quality grades are described next.

Note: In addition to the marking requirements, passenger car tires must conform to Federal Safety Requirements.

Treadwear

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course.

For example, a tire graded 150 wears one and a half times better on a government test course than a tire graded 100. The relative performance of tires depends on the actual conditions of their use, however, and can depart significantly from the norm due to variations in driving habits, service practices, road characteristics, and climate.

Traction

The traction grades, from highest to lowest, are: AA, A, B, and C. These grades represent a tire’s ability to stop on wet pavement as measured under controlled conditions on test surfaces of asphalt and concrete. A tire marked C might have poor traction performance.

⚠️ Warning: Defective tires are dangerous. Do not drive if a tire is damaged, excessively worn, or is inflated to an incorrect pressure. The safety of the vehicle and occupants can be adversely affected. Check tires regularly for wear and to ensure there are no cuts, bulges or exposure of the ply/cord structure.

⚠️ Warning: The traction grade assigned to the tire is based on straight-ahead braking tests, and doesn’t include:

Temperature

The temperature grades are A (the highest), B, and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure.

The grade C corresponds to the minimum level of performance that all passenger car tires must meet under the Federal Motor Safety Standard No. 109. Grades B and A represent levels of performance on the laboratory test wheel that exceed the minimum requirements.

⚠️ Warning: A tire’s temperature grade is established for a tire that is properly inflated and not overloaded. Excessive speed, under-inflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.
## Wheels and Tires Glossary

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accessory Weight</td>
<td>The combined weight (in excess of those items replaced) of items available as factory installed equipment.</td>
</tr>
<tr>
<td>Bead</td>
<td>The inner edge of a tire that is shaped to fit to the rim and form an air tight seal. The bead is constructed of steel wires which are wrapped, or reinforced, by the ply cords.</td>
</tr>
<tr>
<td>Cold Tire Pressure</td>
<td>The air pressure in a tire that has been standing in excess of three hours, or driven for less than one mile.</td>
</tr>
<tr>
<td>Curb Weight</td>
<td>The weight of a standard vehicle, including any optional equipment fitted, and with the correct fluid levels.</td>
</tr>
<tr>
<td>Gross Vehicle Weight</td>
<td>The maximum permissible weight of a vehicle with driver, passengers, load, luggage, and equipment.</td>
</tr>
<tr>
<td>kPa (kilo pascal)</td>
<td>A metric unit used to measure pressure. One kilo pascal equals approximately 0.145 psi.</td>
</tr>
<tr>
<td>Maximum Inflation Pressure</td>
<td>The maximum pressure to which the tire should be inflated. This pressure is given on the tire side wall in psi (lbf/in). <strong>Caution:</strong> This pressure marked on the tire is the maximum allowed by the tire manufacturer. It is not the pressure Tesla recommends using for Model S.</td>
</tr>
<tr>
<td>Maximum Loaded Vehicle Weight</td>
<td>The sum of curb weight, accessory weight, vehicle capacity weight, and production options weight.</td>
</tr>
<tr>
<td>Production Options Weight</td>
<td>The combined weight of options installed which weigh in excess of 3 lb more than the standard items that they replaced, and are not already considered in curb or accessory weights.</td>
</tr>
<tr>
<td>PSI (lbf/in)</td>
<td>Pounds per square inch (the unit used to measure tire pressure).</td>
</tr>
<tr>

Tesla Roadside Assistance is available to you, 24 hours a day, 365 days a year, for the duration of your warranty period.

To contact Roadside Assistance, call:

**1-877-79TESLA (1-877-798-3752)**

Advise the representative of the vehicle identification number (VIN), license plate number, mileage, your location, and the nature of the problem. The VIN is on the upper dashboard on the driver’s side of your vehicle and is visible through the windshield.

Roadside Assistance covers transportation of Model S for up to 50 miles (80 kms) in the event of a flat tire. However, owners are responsible for transportation expenses if the Battery is over-discharged. For a complete description of the terms and conditions of the Tesla Roadside Assistance Program, refer to the policy that was provided to you by Tesla when you purchased Model S.

It is your responsibility to provide vehicle transporters with instructions on how to transport Model S (see Instructions for Transporters on page 150).
Use a Flatbed Only

Use a flatbed trailer only, unless otherwise specified by Tesla. Do not transport Model S with the tires directly on the ground.

**Caution:** Damage caused by transporting is not covered by the warranty.

**Caution:** To transport Model S, follow the instructions exactly as described next.

Disable Self-Leveling (air suspension vehicles only)

If Model S is equipped with Smart Air Suspension, it automatically self-levels, even when power is off. To prevent damage, you must activate Jack mode to disable self-leveling:

1. Touch Controls > Suspension on the touchscreen.
2. Press the brake pedal, then touch Very High to maximize height.
3. Touch Jack.

When Jack mode is active, Model S displays this indicator light on the instrument panel, along with a message telling you that active suspension is disabled.

**Note:** Jack mode cancels when Model S is driven over 4.5 mph (7 km/h).

**Warning:** Failure to activate Jack mode on a Model S equipped with Smart Air Suspension can result in the vehicle becoming loose during transport, which may cause significant damage.

Activate Tow Mode

Model S may automatically shift into Park when it detects the driver leaving the vehicle, even if it has previously been shifted into Neutral. To keep Model S in Neutral (which disengages the parking brake), you must use the touchscreen to activate Tow mode:

1. Shift into Park.
2. Press the brake pedal, then on the touchscreen, touch Controls > Settings > Service & Reset > Tow Mode.

When Tow mode is active, Model S displays this indicator light on the instrument panel, along with a message telling you that Model S is free-rolling.

**Note:** Tow mode cancels when Model S is shifted into Park.

**Caution:** If the electrical system is not working, and you therefore cannot release the electric parking brake, attempt to quick start the 12V battery. For instructions, call Tesla. If a situation occurs where you cannot disengage the parking brake, use tire skids or transport Model S for the shortest possible distance using wheeled dollies. Before doing so, always check the dolly manufacturer’s specifications and recommended load capacity.
**Connect the Tow Chain**

The method used to connect the tow chain depends on whether Model S is equipped with a towing eye (located in the front trunk).

**If not equipped with a towing eye:**

1. Attach the tow chains to the large hole on each of the rearmost lower suspension arms underneath the front of the vehicle.

2. To protect the underbody from any damage that could be caused by the tow chains, place a 2” x 4” piece of wood between the tow chains and the underbody.

⚠️ **Caution:** Before pulling, position the wood between the tow chain and the underbody to ensure the underbody is protected from any damage that could be caused by the tow chain.

**If equipped with a towing eye:**

1. Remove the nose cone.

   Insert a plastic pry tool into the top right corner, and gently pry the nose cone toward you. When the clip releases, pull the nose cone toward you, without twisting or bending, to release the three remaining clips.

2. Insert the towing eye.

   Fully insert the towing eye (found in the front trunk) into the opening on the right side, then turn it counter-clockwise until securely fastened.

3. Attach the tow chain to the towing eye.

⚠️ **Caution:** Before pulling, make sure the towing eye is securely tightened.
Pull Onto the Trailer and Secure the Wheels

Secure wheels using chocks and tie-down straps:

- Ensure any metal parts on the tie-down straps do not contact painted surfaces or the face of the wheels.
- Do not place straps over body panels or through the wheels.

⚠️ **Caution:** Attaching straps to the chassis, suspension or other parts of the vehicle's body may cause damage.

⚠️ **Caution:** To prevent damage, do not transport Model S with the tires directly on the ground.
Illustrations

Illustrations are provided for demonstration purposes only. Depending on vehicle options, software version, region of purchase, and specific vehicle settings, your Model S may appear slightly different.

Although the owner information is applicable to both right-hand drive and left-hand drive vehicles, many illustrations show only left-hand drive vehicles. However, the essential information that the illustrations are providing is correct.

Errors or Inaccuracies

All specifications and descriptions are known to be accurate at time of publishing. However, because continuous improvement is a goal at Tesla, we reserve the right to make product modifications at any time. To communicate any inaccuracies or omissions, or to provide general feedback or suggestions regarding the quality of this owner information, send an email to:

ownersmanualfeedback@teslamotors.com

Location of Components

The owner information may specify the location of a component as being on the left or right side of the vehicle. As shown here, left (1) and right (2) represent the side of the vehicle when sitting inside Model S in a front-facing seat.

Vehicle Telematics/Data Recorders

This vehicle is equipped with electronic modules that monitor and record data from various vehicle systems, including the motor, Battery, braking and electrical systems. The electronic modules record information about various driving and vehicle conditions, including braking, acceleration, trip and other related information regarding your vehicle. These modules also record information about the vehicle's features such as charging events and status, the enabling/disabling of various systems, diagnostic trouble codes, VIN, speed, direction and location.

The data is stored by the vehicle and may be accessed, used and stored by Tesla service technicians during vehicle servicing or periodically transmitted to Tesla wirelessly through the vehicle's telematics system. This data may be used by Tesla for various purposes, including, but not limited to: providing you with Tesla telematics services; troubleshooting; evaluation of your vehicle's quality, functionality and performance; analysis and research by Tesla and its partners for the improvement and design of our vehicles and systems; and as otherwise may be required by law. In servicing your vehicle, we can potentially resolve issues remotely simply by reviewing your vehicle's data log.

Tesla's telematics system wirelessly transmits vehicle information to Tesla on a periodic basis. The data is used as described above and helps ensure the proper maintenance of your vehicle. Additional Model S features may use your vehicle's telematics system and the information provided, including features such as charging reminders, software updates, and remote access to, and control of, various systems of your vehicle.

Tesla does not disclose the data recorded in your vehicle to any third party except when:

- An agreement or consent from the vehicle's owner (or the leasing company for a leased vehicle) is obtained.
- Officially requested by the police or other authorities.
- Used as a defense for Tesla in a lawsuit.
- Ordered by a court of law.
- Used for research purposes without disclosing details of the vehicle owner or identification information.
- Disclosed to a Tesla affiliated company, including their successors or assigns, or our information systems and data management providers.

In addition, Tesla does not disclose the data recorded to an owner unless it pertains to a non-warranty repair service and in this case, will disclose only the data that is related to the repair.

Quality Control

You might notice a few miles/km on the odometer when you take delivery of your Model S. This is a result of a comprehensive testing process that ensures the quality of your Model S.

The testing process includes extensive inspections during and after production. The final inspection takes place at Tesla Motors and includes a road test conducted by a technician.

California Proposition 65

⚠️ Warning: Certain vehicle components contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. In addition, certain fluids contained in vehicles and certain products of component wear contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

⚠️ Warning: Certain components of this vehicle such as airbag modules and seat belt pre-tensioners may contain Perchlorate Material. Special handling may be required for service or vehicle end of life disposal. See http://www.dtsc.ca.gov/hazardouswaste/perchlorate.

⚠️ Warning: Battery posts, terminals, and related accessories contain lead and lead compounds. Wash hands after handling.
Contacting Tesla

For detailed information about your Model S, go to www.teslamotors.com, click the MY TESLA link, then enter your login credentials (or sign up to get these credentials).

If you have any questions or concerns about your Model S, call 1-877-79TESLA (1-877-798-3752).

Note: You can also use voice commands to provide feedback to Tesla. Say "Note", "Report", "Bug note", or "Bug report" followed by your brief comments. Model S takes a snapshot of its systems, including screen captures of the touchscreen and instrument panel. Tesla periodically reviews these notes and uses them to continue improving Model S. For details, see Using Voice Commands on page 38.

Reporting Safety Defects - US

If you believe that Model S has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Tesla Motors.

If NHTSA receives similar complaints, it may open an investigation. If it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Tesla Motors.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; or write to: Administrator, National Highway Traffic Safety, 1200 New Jersey Avenue SE., Washington, DC 20590. You can also obtain other information about motor vehicle safety from http://www.safercar.gov.

Reporting Safety Defects - Canada

If you believe that your Model S has a defect which could cause a crash or could cause injury or death, you should immediately inform Transport Canada, in addition to notifying Tesla. To contact Transport Canada, call their toll-free number: 1-800-333-0510.

IC Certification

The following device is used in vehicles in Canada:

- Keyfob Model Number: A-0749G02 (315 MHz)
- Keyfob Manufacturer: Pektron

Per IC 10176A-002, this device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by Tesla could void the user’s authority to operate the equipment.

The devices listed above comply with CE standards. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by Tesla could void the user’s authority to operate the equipment.

NCC Certification

- Keyfob Model Numbers: A-0749G01 (433 MHz)
- Keyfob Manufacturer: Pektron

According to NCC low-power radio wave radiation rate of motor management measures:

Article XII of the type certified by the low power radio, non-licensed, company, firm or user is not allowed to change the frequency, increase the power or change the characteristics of the original design and function.
Article XIV: The use of low-power radio-frequency devices shall not influence aircraft security and interfere with legal communications; interference phenomenon discovered over time, should be immediately suspended, and improved to no interference before use can continue. Legal communications, referring to the provisions of the Telecommunications Act of radio communications operations. Low-power radio communications shall tolerate radio wave interference from radiated devices, legal or industrial, scientific and medical.

Tire Pressure Monitoring System

FCC IDs: TZSTPMS201, Z9F-201FS43X
IC ID: 11852A-201FS4X
The tire pressure monitoring system (TPMS) complies with Part 15 of the FCC rules and RSS-210 of Industry Canada. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.
Changes or modifications not expressly approved by Tesla could void the user’s authority to operate the equipment.

Device Approval - Japan

Media Control Unit

Device Approval - Japan

Device Approval - Australia
HomeLink
This device complies with Part 15 of the FCC rules and IC-RSS-210 Industry Canada. Operation is subject to the following conditions:

• This device may not cause harmful interference.
• This device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications to the device not expressly approved by the manufacturer or Tesla Motors could void the user’s authority to operate the equipment.

Radio Frequency Information
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.
