A passion for performance

ELF, partner of RENAULT recommends ELF

Partners in cutting-edge automotive technology, Elf and Renault combine their expertise on both the racetrack and the city streets. This enduring partnership gives drivers a range of lubricants perfectly suited to Renault cars. Lasting protection and optimum performance for your engine – guaranteed. Whether changing the oil or simply topping up, to find the approved ELF lubricant best suited to your vehicle, ask your Renault dealer for a recommendation or consult your vehicle maintenance handbook.

www.lubricants.elf.com

A brand from TOTAL
Welcome to your new vehicle

This Driver’s Handbook contains the information necessary:

– for you to familiarise yourself with your vehicle, to use it to its best advantage and to benefit fully from the all the functions and the technical developments it incorporates.

– to ensure that it always gives the best performance by following the simple, but comprehensive advice concerning regular maintenance.

– to enable you to deal quickly with minor faults not requiring specialist attention.

It is well worth taking a few minutes to read this handbook to familiarise yourself with the information and guidelines it contains about the vehicle and its functions and new features. If certain points are still unclear, our Network technicians will be only too pleased to provide you with any additional information.

The following symbol will help you when reading this handbook:

⚠️ To indicate a hazard, danger or safety recommendation.

The descriptions of the models given in this handbook are based on the technical specifications at the time of writing. This handbook covers all items of equipment (both standard and optional) available for these models but whether or not these are fitted to the vehicle depends on the version, options selected and the country where the vehicle is sold.

This handbook may also contain information about items of equipment to be introduced later in the model year.

Throughout the manual, the “approved Dealer” is your RENAULT Dealer.

Enjoy driving your new vehicle.

1. Locks all the opening elements.
2. Unlocks all the opening elements.
3. Ignition and front door key.
4. Locking/unlocking the tailgate only.

Remote control with switchblade key:
5. Locking/unlocking using the switchblade key. To release the insert from its housing, press button 5, it comes out automatically. Press button 5 and guide the insert back into its housing.

Driver’s responsibility
Never leave your vehicle with the card inside the vehicle and never leave a child (or a pet) unsupervised. With the card in the reader, it would be possible to start the engine or operate electrical equipment such as the electric windows and there is a risk that part of their body may become trapped (neck, arm, hand, etc.). Risk of serious injury.

Advice
Avoid leaving the remote control in hot, cold or humid areas.

The key must not be used for any function other than those described in the handbook (removing the cap from a bottle, etc.).
Radio frequency remote control operating range
This varies according to the surroundings: take care not to lock or unlock the doors by inadvertently pressing the buttons on the remote control.

Note: If a door or the boot is open or not closed properly, the doors and boot lock/unlock in quick succession.

Interference
Interference by factors in the immediate vicinity (external installations or the use of equipment operating on the same frequency as the remote control) may affect the operation of the remote control.

Replacement and additional keys or remote controls.
You must only contact an approved dealer:
- If you need to replace a key it will be necessary to take the vehicle and all of its keys to an approved Dealer in order to initialise the system.
- Depending on the vehicle, you have the option of using up to four remote controls.

Remote control unit failure
Make sure that the correct battery type is being used, and that the battery is in good condition and inserted correctly. These batteries have a service life of approximately two years.

Refer to Section 5: “Radio frequency remote control: batteries” for the battery changing procedure.
The remote control A can be used to lock or unlock the doors and boot. It is powered by a battery which must be replaced (refer to the information on “Radio frequency remote control: batteries” in Section 5).

**Locking the doors**
Press locking button 1. The side indicator lights and hazard warning lights flash *twice* to indicate that the doors have been locked. If a door or the boot is open or not properly shut, they will lock and unlock in quick succession and the hazard warning lights and indicator lights will not flash.

**Unlocking the doors**
Pressing button 2 unlocks the doors and tailgate. The side indicator lights and hazard warning lights flash *once* to indicate that the doors have been unlocked.

**Note:**
With the engine running, the ignition switched on and in accessories position (refer to “Ignition switch: vehicles with a key” in Section 2), the remote control buttons will be inactive.

**Driver’s responsibility when parking or stopping the vehicle**
Never leave an animal, child or adult who is not self-sufficient alone on your vehicle, even for a short time. They may pose a risk to themselves or to others by starting the engine, activating equipment such as the electric windows or locking the doors. Also, in hot and/or sunny weather, please remember that the temperature inside the passenger compartment increases very quickly.

**RISK OF DEATH OR SERIOUS INJURY.**
RADIO FREQUENCY REMOTE CONTROL UNIT: deadlocking

To activate deadlocking
Press button 1 twice in quick succession.

The hazard warning lights and indicator lights give **two** slow flashes and three quick flashes to indicate locking.

**Special note:** deadlocking is not possible if the hazard warning lights or the side lights are lit.

If the vehicle is equipped with a deadlocking function, this allows you to lock the opening elements and to prevent the doors from being unlocked using the interior handles (for example, by breaking the window and then trying to open the door from the inside).

Never use deadlocking if someone is still inside the vehicle.
The RENAULT card is used for:
- locking/unlocking the doors and boot (see the following pages);
- switching on the vehicle lighting remotely (refer to the following pages);
- starting the engine; refer to the information on “Starting the engine” in Section 2.

**Battery life**

Make sure that the correct battery type is being used, and that the battery is in good condition and inserted correctly. Its service life is approximately two years: replace it when the message “Keycard battery low” appears on the instrument panel (refer to the information on the “RENAULT card: battery” in section 5).

When the battery is flat, you can still lock/unlock and start your vehicle. Please see the information on “Locking and unlocking the doors” in Chapter 1 and “Starting, stopping the engine” in Chapter 2.
Advice
Avoid leaving the card in hot, cold or humid areas.
Do not keep the RENAULT card in a place where it could be bent or damaged accidentally, such as in a back pocket of a garment.

Replacement: need for an additional RENAULT Card
If you lose your RENAULT card or require another, you can obtain one from an approved dealer.
If a RENAULT card is replaced, it will be necessary to take the vehicle and all of its RENAULT cards to an approved dealer to initialise the system.
You may use up to four RENAULT cards per vehicle.

Driver’s responsibility when parking or stopping the vehicle
Never leave an animal, child or adult who is not self-sufficient alone on your vehicle, even for a short time. They may pose a risk to themselves or to others by starting the engine, activating equipment such as the electric windows or locking the doors.
Also, in hot and/or sunny weather, please remember that the temperature inside the passenger compartment increases very quickly.
RISK OF DEATH OR SERIOUS INJURY.

Distance lighting function
Pressing button 4 switches on the dipped beam headlights, the indicator lights and the interior lighting for approximately 30 seconds. This can be used, for example, to identify the vehicle from a distance when parked in a car park.
Note: Pressing button 4 again switches off the lighting.
RENAULT CARD: usage (1/4)

There are two ways to unlock/lock the vehicle:
– the “hands-free” function;
– RENAULT card buttons.

Do not store the RENAULT card anywhere it may come into contact with other electronic equipment (computer, phone, etc.) as this could hinder its operation.

Driver’s responsibility when parking or stopping the vehicle

Never leave an animal, child or adult who is not self-sufficient alone on your vehicle, even for a short time. They may pose a risk to themselves or to others by starting the engine, activating equipment such as the electric windows or locking the doors.

Also, in hot and/or sunny weather, please remember that the temperature inside the passenger compartment increases very quickly.

RISK OF DEATH OR SERIOUS INJURY.

Using the card in hands-free mode

It allows locking/unlocking without input on the card RENAULT when within the access zone 1.

Note: It is possible to deactivate the hands-free system – please refer to the information on the “Vehicle settings customisation menu” in Section 1.
RENAULT CARD: usage (2/4)

“Hands-free” unlocking
With the RENAULT card in zone 1, press the button 2 on the handle of one of the two front doors: the vehicle will unlock.

The hazard warning lights **flash once** to indicate that the doors have been unlocked.

Pressing the button 4 unlocks the entire vehicle and releases the boot.

Locking using button 2 or 3
With the doors and boot closed, press button 2 on one of the front door handles or button 3 on the tailgate. The vehicle will lock.

The hazard warning lights **flash twice** to indicate that the vehicle is locked.

Special features relating to vehicle locking
– When locking, if a door is open or incorrectly closed, the vehicle will lock and unlock in quick succession without the hazard warning lights flashing;
– after locking by pressing button 2 or 3, you have to wait approximately 3 seconds to be able to unlock the vehicle again.
Using the card as a remote control

Unlocking with the card RENAULT
Press the button 5.
The hazard warning lights flash once to indicate that the doors have been unlocked.

Locking using the RENAULT card
With the doors and boot closed, press button 6: the vehicle will lock.
The hazard warning lights flash twice to indicate that the vehicle is locked.

NB: The maximum distance at which the vehicle locks depends on the surroundings.

Special features
If a door or the boot is open or not properly closed, the vehicle cannot be locked. The vehicle will lock/unlock in quick succession, but the hazard warning lights will not flash.

If, while the engine is running, a door is opened and closed, and the card is no longer in the zone 7, the message Keycard not detected indicates that the card is not inside the vehicle. This avoids you driving away after having dropped off a passenger who has the card, for example.

The warning disappears when the card is detected again.
Locking/unlocking only the boot
Press the button 8 to lock/unlock the boot only.

Driver’s responsibility when parking or stopping the vehicle
Never leave an animal, child or adult who is not self-sufficient alone on your vehicle, even for a short time. They may pose a risk to themselves or to others by starting the engine, activating equipment such as the electric windows or locking the doors.
Also, in hot and/or sunny weather, please remember that the temperature inside the passenger compartment increases very quickly.
RISK OF DEATH OR SERIOUS INJURY.
If the vehicle is equipped with a deadlocking function, this allows you to lock the opening elements and to prevent the doors from being unlocked using the interior handles (for example, by breaking the window and then trying to open the door from the inside).

Never use deadlocking if someone is still inside the vehicle.

To activate deadlocking
Press button 2 twice in quick succession.
With the vehicle unlocked, you can also press the button 3 on the driver’s door, passenger’s door or the boot twice in quick succession (or, depending on the vehicle, on the tailgate of the rear door).
In both cases, locking is indicated by the hazard warning lights flashing five times.

To deactivate deadlocking
Unlock the vehicle using button 1 on the RENAULT card.
The hazard warning lights flash once to indicate that the doors have been unlocked.

After activating the deadlocking function using button 2, “hands-free” locking and unlocking are deactivated.
To reactivate the “hands-free” mode: restart the vehicle.
LOCKING, UNLOCKING THE DOORS (1/3)

If the remote control or, depending on the vehicle, the RENAULT card does not work

In some cases, the radio frequency remote control or the RENAULT card may not work:

– RENAULT card/radio frequency remote control battery worn or run flat, vehicle battery flat, etc.
– use of appliances operating on the same frequency as the card (mobile phone, etc.);
– vehicle located in a high electromagnetic radiation zone.

It is then possible:

– depending on the vehicle, use the radio frequency remote control or the emergency key integrated in the card to unlock the front left-hand door;
– to lock each of the doors manually;
– to use the interior door locking/unlocking control (refer to the following pages).

Never leave your vehicle with the key or RENAULT card inside.
Vehicles with key/remote control

Using the key
Insert the key 2 into the lock 1 and lock or unlock the front left-hand door.

Vehicles with RENAULT card

Access key 3 integrated in the card
Slide the casing 4 upwards and pull the key 1.

Using the integrated key
Insert the key 3 into the lock 1 and lock or unlock the front left-hand door.
Once you are inside the vehicle, put the key back in its casing in the RENAULT card.
Interior locking/unlocking door control

The switch 6 located on the driver and passenger doors simultaneously controls the doors and the boot.

Unlocking: press the switch 6 on side 🗝.

Locking: press the switch 6 on side 🔒.

If a door or the tailgate is open or not closed properly, the doors and tailgate lock/unlock quickly.

If you need to transport objects with the boot open, the other opening elements can still be locked: with the engine stopped, press and hold the switch 6 on side 🗝 for more than 5 seconds to lock the other opening elements.

Driver’s responsibility

If you decide to keep the doors locked when you are driving, remember that it may be more difficult for those assisting you to gain access to the passenger compartment in the event of an emergency.

Locking the opening elements without the RENAULT card or the key

For example, in the event of a discharged battery or the RENAULT card or key temporarily not working, etc.

With the engine switched off and an opening element (door or boot) open, press and hold the switch 6 on side 🗝 for more than 5 seconds. When the door is closed, all the doors and the tailgate will be locked.

Unlocking the vehicle from the outside is only possible with the RENAULT card in the vehicle’s access zone or using the key.

Door and tailgate status indicator

With the ignition on, the warning light 7 informs you of the locking status of the opening elements:
- indicator light on, the doors and tailgate are locked;
- indicator light off, the doors and tailgate are unlocked.

When you lock the doors from the outside, the indicator light remains lit for a moment, and then goes out.
OPENING AND CLOSING THE DOORS (1/2)

Opening the doors from the outside
With the doors unlocked, pull handle 1.

Special feature on vehicles equipped with a RENAULT card
With the doors locked, press button 2 on handle 1 of one of the two front doors and pull towards you.

Opening from the inside
Pull the handle 3.

Lights-on reminder buzzer
If you have switched off the ignition and left the lights switched on, a reminder buzzer will sound when a door is opened and if the light stalk is not in position AUTO.

As a safety precaution, the doors should only be opened or closed when the vehicle is stationary.

Door/tailgate open buzzer
At a standstill, the warning light 4 lights up on the instrument panel alongside the warning light 5 indicating the opening elements (door, boot) are open or incorrectly closed.

Once the vehicle reaches a speed of approximately 12 mph (20 km/h), a warning light indicates the opening element(s) (door, boot) open of improperly closed, alongside the message “Boot open” or “Door open” and a beep will sound for around 40 seconds or until the opening element is closed.
Vehicle with manual door locking

To make it impossible for the rear doors to be opened from the inside, move lever 6 on each door and check from the inside that the doors are securely locked.

Driver’s responsibility when parking or stopping the vehicle

Never leave an animal, child or adult who is not self-sufficient alone on your vehicle, even for a short time. They may pose a risk to themselves or to others by starting the engine, activating equipment such as the electric windows or locking the doors.

Also, in hot and/or sunny weather, please remember that the temperature inside the passenger compartment increases very quickly.

RISK OF DEATH OR SERIOUS INJURY.
Operating principle
After the vehicle is started, the system automatically locks the doors when you are driving at approximately 6 mph (10 km/h) and over.
The door can be unlocked:
– by pressing the central door unlocking switch 1.
– at a standstill, by opening a front door from inside the vehicle.
NB: if a door is opened or closed, it will automatically lock again when the vehicle reaches a speed of 6 mph (10 km/h).

Activating/deactivating the function
To switch it on: with the vehicle at a standstill and the engine running, press the switch 1 on side until a beep sounds.
To deactivate: with the vehicle at a standstill and the engine running, press the switch 1 on side until two beeps sound.

Driver’s responsibility
If you decide to keep the doors locked when you are driving, remember that it may be more difficult for those assisting you to gain access to the passenger compartment in the event of an emergency.

Depending on the vehicle, you can also deactivate/activate this function from the instrument panel or, depending on the vehicle, from the multifunction screen.
Refer to “Vehicle settings customisation menu” in Section 1, regarding the “Lock doors when in motion” function.

Operating faults
If you find an operating fault (no automatic locking, the warning light 2 does not light up when trying to lock the doors and boot, etc.), firstly check that the doors and boot lid are properly closed. If they are properly closed, contact an authorised dealer.
FRONT HEADRESTS

To raise the headrest
Pull the headrest upwards to the desired height. Check that it is correctly locked.

To lower the headrest
Press button 3 and guide the headrest down to the desired height. Check that it is correctly locked in place.

To refit the headrest
Check that the headrest rods are clean 2.
The rod with a notch should be inserted into the slot 1 fitted with a locking button 3.
Insert the headrest rods into the holes (tilt the seatback backwards if necessary).
Press the 3 button and push in the headrest as far as it will go, then adjust it to the desired height. Check that each rod 2 on the seatback is securely locked.

The headrest is important for safety. Ensure that it is in place and in the correct position: the top of the headrest should be as close as possible to the top of the head and there must be a minimal distance between the head and the headrest A.
To raise or lower the seat base
Move lever 2 as many times as necessary upwards or downwards.

To tilt the seatback
Lift the lever 3 and move the seatback to the desired position.

To move the seat forwards or backwards
Lift handle 1 to unlock. Release the handle once the seat is in the correct position and ensure that the seat is locked.

For safety reasons, carry out any adjustments when the vehicle is not being driven.

We would advise you not to recline the seatbacks too far to ensure that the effectiveness of the seat belts is not reduced.

Nothing should be placed on the floor (area in front of driver) as such objects may slide under the pedal during braking manoeuvres, thus obstructing its use.

To adjust the lumbar support on the driver’s seat
Lower handle 5 to increase the support and lift to decrease it.

Heated seats
With the ignition on, press the switch 6 for the seat desired. The switch warning lights come on.

The system automatically decides whether or not the heating is needed. Pressing the button again lowers the temperature. Pressing a third time switches the heating off.
Table function
Depending on the vehicle, the passenger seatback may be folded down onto the seat base to create a table.
- Lower the headrest;
- move the seat back;
- pull the handle 7 and fully lower the seatback.

When using the passenger seat in table position, you must not use the two rear seats immediately behind it.

Be sure to hold the seatback when placing it in the flat position. Risk of injury.

When the front seat is in table position, the front passenger air bag must be disabled (see information on “Child safety: activating/deactivating the front passenger air bag” in Section 1).

Risk of serious injury caused by items resting on the seatback table which may be dislodged when the air bag is deployed.

The label (on the dashboard) and the markings (on the windscreen) remind you of these instructions.

Repositioning the seat
Make sure that nothing prevents the seat from moving.
- Pull the handle 7 and raise the seatback, ensuring that it locks firmly in place.
- Reposition the seat base.

For your safety, attach any transported objects when the seat is in the table position.

For safety reasons, carry out any adjustments when the vehicle is not being driven.
DRIVER’S SEAT WITH ELECTRIC CONTROLS

Adjusting the seat squab:
- To move the seat forwards or back
  Move the switch 1 forwards or backwards.
- To raise or lower the seat base
  Move the switch 1 up or down.

Adjusting the seatback:
To tilt the seatback, move the switch 2 forwards or backwards.

To adjust the seat’s lumbar position
Lower the handle 3 to increase the support and lift to decrease it.

Heated seats
With the ignition on, press the switch 4 for the seat desired. The switch warning lights come on.

The system automatically decides whether or not the heating is needed. Pressing the button again lowers the temperature. Pressing a third time switches the heating off.

For safety reasons, carry out any adjustments when the vehicle is not being driven.

Make sure that the seatbacks are correctly locked in place.

We would advise you not to recline the seatbacks too far to ensure that the effectiveness of the seat belts is not reduced.

No object should be placed on the floor (in front of the driver). Such objects may slide under the pedals during sudden braking manoeuvres and obstruct their use.
Always wear your seat belt when travelling in your vehicle. You must also comply with the legislation of the particular country you are in.

Incorrectly adjusted or twisted seat belts may cause injuries in the event of an accident.

Use one seat belt per person, whether child or adult.

Even pregnant women should wear a seat belt. In this case, ensure that the lap belt is not exerting too much pressure on the abdomen, but do not allow any slack.

Before starting, first adjust your driving position, then ask all occupants to adjust their seat belts to ensure optimum protection.

Adjusting your driving position

- Sit well back in your seat (having first removed your coat or jacket). This is essential to ensure your back is positioned correctly;
- adjust the distance between the seat and the pedals. Your seat should be as far back as possible while still allowing you to depress the clutch pedal fully. The seatback should be adjusted so that your arms are slightly bent when you hold the steering wheel;
- adjust the position of your headrest. For the maximum safety, your head must be as close as possible to the headrest;
- adjust the height of the seat. This adjustment allows you to select the seat position which offers you the best possible view;
- adjust the position of the steering wheel.

Adjusting the seat belts

Sit with your back firmly against the seatback.

Shoulder strap 1 should be as close as possible to the base of the neck but not on it.

Lap belt 2 should be worn flat over the thighs and against the pelvis.

The belt should be worn so that it is as close as possible to your body, i.e.: avoid wearing heavy clothing or keeping bulky objects under the belts, etc.
Locking

Unwind the belt slowly and smoothly and ensure that buckle 3 locks into catch 5 (check that it is locked by pulling on buckle 3).

If the belt jams, allow it to return slightly before attempting to unwind it again.

If your seat belt is completely jammed, pull slowly, but firmly, so that just over 3 cm unwinds. Allow it to return slightly before attempting to unwind it again.

If there is still a problem, contact an approved dealer.

Driver’s seat belt reminder and, depending on the vehicle, front passenger seat belt reminder

This lights up on the central display when starting the engine then, if the driver’s or front passenger’s seat belt (if this seat is occupied) is not fastened and the vehicle has reached approximately 12 mph (20 km/h), it flashes and a bleep sounds for around 120 seconds.

Note: an object placed on the passenger seat base may activate the warning light in some cases.

Rear seat belt reminder (depending on vehicle)

Warning light 6 lights up on the central display, accompanied by the graphic 6 on the instrument panel for approximately 30 seconds each time the vehicle is started, a door is opened or a rear seat belt is fastened or unfastened.

On the graphic 6:
– marker in green: seat belt fastened;
– marker in red: seat belt unfastened.

Unfastening

Press button 4 and the seat belt will be rewound by the inertia reel. Guide the belt.
SEAT BELTS (3/4)

Adjusting the height of the front seat belts

Use button 7 to adjust the seat belt height so that the shoulder strap is worn as shown previously. Press the button 7 and raise or lower the seat belt. Make sure that the seat belt is locked in position correctly after you have adjusted it.

Rear seat belts 8

The belts are locked, unlocked and adjusted in the same way as the front belts.

Check that the rear seat belts are positioned and operating correctly each time the rear bench seat is moved.
The following information applies to the vehicle’s front and rear seat belts.

– No modification may be made to the component parts of the originally fitted restraint system: seat belts, seats and their mountings. For special operations (e.g. fitting child seats), contact an authorised dealer.

– Do not use devices which allow any slack in the belts (e.g. clothes pegs, clips, etc.): a seat belt which is worn too loosely may cause injury in the event of an accident.

– Never wear the shoulder strap under your arm or behind your back.

– Never use the same belt for more than one person and never hold a baby or child on your lap with your seat belt around them.

– The belt should never be twisted.

– Following an accident, have the seat belts checked and replaced if necessary. Always replace your seat belts as soon as they show any signs of wear.

– Make sure that the buckle is inserted into the appropriate catch.

– Ensure that no objects are placed in the area around the seat belt catch as they could prevent it from being properly secured.

– Make sure the seat belt catch is properly positioned (it should not be hidden away, crushed or flattened by people or objects).
METHODS OF RESTRAINT IN ADDITION TO THE FRONT SEAT BELTS (1/4)

Depending on the vehicle, they are composed of:
- **seat belt inertia reel pretensioners**;
- **lap seat belt pretensioner**;
- **chest-level load limiters**;
- **air bags for driver and front passenger**.

These systems are designed to act independently or together when the vehicle is subjected to a frontal impact.

Depending on the severity of the impact, the system can trigger:
- seat belt locking;
- the seat belt inertia reel pretensioner (which engages to correct seat belt slack);
- the low volume front air bag;
- the lap seat belt pretensioner to hold the occupant in their seat;
- the large volume front air bag.

**Pretensioners**

The pretensioners hold the seat belt against the body, holding the occupant more securely against the seat, thus increasing the seat belt’s efficiency.

In the event of a severe frontal impact and if the ignition is switched on, the system may engage the following depending on the force of the impact:
- seat belt inertia reel pretensioner 1 which instantly retracts the seat belt;
- the lap pretensioner 2 on the front seats.

- Have the entire restraint system checked following an accident.
- No operation whatsoever is permitted on any part of the system (pretensioners, air bags, computers, wiring) and the system components must not be reused on any other vehicle, even if identical.
- To avoid incorrect triggering of the system which may cause injury, only qualified personnel from an approved dealer may work on the pretensioner and air bag system.
- The electric trigger system may only be tested by a specially trained technician using special equipment.
- When the vehicle is scrapped, contact an approved dealer for disposal of the pretensioner and air bag gas generators.
Load limiter
Above a certain severity of impact, this mechanism is used to limit the force of the belt against the body so that it is at an acceptable level.

Airbags for driver and front passenger
Fitted to the driver and passenger side. The presence of this equipment is indicated by the word “Air bag” on the steering wheel and dashboard (air bag zone A) and, depending on the vehicle, a symbol on the lower section of the windscreen.

Each air bag system consists of:
- an air bag and gas generator fitted on the steering wheel for the driver and in the dashboard for the front passenger;
- an electronic unit for system monitoring which controls the gas generator electrical trigger system;
- a single ⚠ warning light on the instrument panel.

The air bag system uses pyrotechnic principles. This explains why, when the air bag inflates, it will generate heat, produce smoke (this does not mean that a fire is about to start) and make a noise upon detonation. In a situation where an air bag is required, it will inflate immediately and this may cause some minor, superficial grazing to the skin or other problems.
Operating faults

This warning light will light up on the instrument panel when the ignition is switched on and then go out after a few seconds.

If it does not light up when the ignition is switched on, or comes on when the engine is running, there is a fault in the system.

Contact your approved Dealer as soon as possible. Your protection will be reduced until this fault is rectified.

Operation

This system is only operational when the ignition is switched on.

In a severe frontal impact, the air bags inflate rapidly, cushioning the impact of the driver’s head and chest against the steering wheel and of the front passenger against the dashboard. The air bags then deflate immediately so that the passengers are not in any way hindered from leaving the vehicle.
All of the warnings below are given so that the air bag is not obstructed in any way when it is inflated and also to prevent the risk of serious injuries caused by items which may be dislodged when the air bag inflates.

**Warnings concerning the driver’s air bag**

- Do not modify the steering wheel or the steering wheel boss.
- Do not cover the steering wheel boss under any circumstances.
- Do not attach any objects (badge, logo, clock, telephone holder, etc.) to the steering wheel boss.
- The steering wheel must not be removed (except by qualified personnel from our Network).
- When driving, do not sit too close to the steering wheel. Sit with your arms slightly bent (see the information on “Adjusting your driving position” in Section 1). This will allow sufficient space for the air bag to deploy correctly and be fully effective.

**Warnings concerning the passenger air bag**

- Do not attach or glue any objects (badge, logo, clock, telephone holder, etc.) to the dashboard on or near the air bag.
- Do not place anything between the dashboard and the passenger (pet, umbrella, walking stick, parcels, etc.).
- The passenger must not put his or her feet on the dashboard or seat as there is a risk that serious injuries may occur. In general, parts of the body should be kept away from the dashboard (knees, hands, head, etc.).
- The devices in addition to the front passenger seat belt should be reactivated as soon as a child seat is removed, to ensure the protection of the passenger in the event of an impact.

**A REAR-FACING CHILD SEAT MUST NOT BE FITTED TO THE FRONT PASSENGER SEAT UNLESS THE ADDITIONAL RESTRAINT SYSTEMS, I.E. THE PASSENGER AIR BAG, ARE DEACTIVATED.**

(refer to the information on “Child safety: deactivating/activating the front passenger air bag” in Section 1)
METHODS OF RESTRAINT IN ADDITION TO THE REAR SIDE SEAT BELTS

Force limiter
Above a certain severity of impact, this mechanism is used to limit the force of the belt against the body so that it is at an acceptable level.

- Have the entire restraint system checked following an accident.
- No operation whatsoever is permitted on any part of the system (air bags, electronic control units, wiring) and the system components must not be reused on any other vehicle, even if identical.
- Only qualified personnel from our Network may work on the air bags; otherwise the system may trigger accidentally and cause injury.
SIDE PROTECTION DEVICES

Side Airbags
An airbag can be fitted to each front seat and the rear side seats, which are deployed on the side of the seat (door side) to protect the occupants in the case of a severe side impact.

Curtain Airbags
These are airbag fitted along the sides of the vehicle in the ceiling which trigger along the front and rear side windows to protect the passengers in case of a severe side impact.

Warning relating to the side airbag

– **Fitting seat covers**: seats equipped with an airbag require covers specifically designed for your vehicle. Contact an approved Dealer to find out if these covers are available. The use of any covers other than those designed for your vehicle (and including those designed for another vehicle) may affect the operation of the airbags and reduce your protection.

– Do not place any accessories, objects or even pets between the seatback, the door and the internal fittings. Do not cover the seatback with any items such as clothes or accessories. This may prevent the air bag from operating correctly or cause injury when the airbag is deployed.

– No work or modification whatsoever may be carried out on the seat or internal fittings, except by qualified personnel from an approved Dealer.

Depending on the vehicle, a marking on the windscreen informs you of the presence of additional means of restraint (air bags, pretensioners, etc.) in the passenger compartment.
ADDITIONAL METHODS OF RESTRAINT

All of the warnings below are given so that the airbag is not obstructed in any way when it is inflated and also to prevent the risk of serious injuries caused by items which may be dislodged when it inflates.

The airbag is designed to complement the action of the seat belt. Both the air bags and seat belts are integral parts of the same protection system. It is therefore essential to wear seat belts at all times. If seat belts are not worn, the occupants are exposed to the risk of serious injury in the event of an accident. It may also increase the risk of minor superficial injuries occurring when the airbag is deployed, although such minor injuries are always possible with air bags.

If the vehicle should overturn or in the event of a rear impact, however severe, the pretensioners and airbags are not always triggered. Impacts to the underside of the vehicle, e.g. from pavements, potholes or stones, can all trigger these systems.

– No work or modification whatsoever may be carried out on any part of the airbag system (airbags, pretensioners, computer, wiring harness, etc.), except by qualified Network personnel.

– To ensure that the system is in good working order and to avoid accidental triggering of the system which may cause injury, only qualified Network personnel may work on the airbag system.

– As a safety precaution, have the airbag system checked if your vehicle has been involved in an accident, or is stolen or broken into.

– When selling or lending the vehicle, inform the user of these points and hand over this handbook with the vehicle.

– When scrapping your vehicle, contact your approved Dealer for disposal of the gas generator(s).

Operating faults

This warning light comes on when the engine is started and then goes out after approximately three seconds.

If it does not come on when the ignition is switched on or if it stays on, there is a fault in the system.

Contact your approved Dealer as soon as possible.

Your protection will be reduced until this fault is rectified.
CHILD SAFETY: General information (1/2)

Carrying children

Children, and adults, must be correctly seated and strapped in for all journeys. The children being carried in your vehicle are your responsibility.

A child is not a miniature adult. Children are at risk of specific injuries as their muscles and bones have not yet finished growing. The seat belt alone would not provide suitable protection. Use an approved child seat and ensure you use it correctly.

A collision at 30 mph (50 km/h) is the same as falling a distance of 10 metres. Transporting a child without a restraint is the equivalent of allowing him or her to play on a fourth-floor balcony without railings. Never travel with a child held in your arms. In the event of an accident, you will not be able to keep hold of the child, even if you yourself are wearing a seat belt. If your vehicle has been involved in a road accident, replace the child seat and have the seat belts and ISOFIX anchorage points checked.

![To prevent the doors being opened, use the “Child safety” device (refer to the information on “Opening and closing the doors” in Section 1).](image)

Driver’s responsibility when parking or stopping the vehicle

Never leave an animal, child or adult who is not self-sufficient alone on your vehicle, even for a short time.

They may pose a risk to themselves or to others by starting the engine, activating equipment such as the electric windows or by locking the doors.

Also, in hot and/or sunny weather, please remember that the temperature inside the passenger compartment increases very quickly.

RISK OF DEATH OR SERIOUS INJURY.
CHILD SAFETY: General information (2/2)

Using a child seat
The level of protection offered by the child seat depends on its ability to restrain your child and on its installation. Incorrect installation compromises the protection it offers the child in the event of harsh braking or an impact.

Before purchasing a child seat, check that it complies with the regulations for the country you are in and that it can be fitted in your vehicle. Consult an approved dealer to find out which seats are recommended for your vehicle.

Before fitting a child seat, read the manual and respect its instructions. If you experience any difficulties during installation, contact the manufacturer of the equipment. Keep the instructions with the seat.

Set a good example by always fastening your seat belt and teaching your child:
- to strap themselves in correctly;
- to always get in and out of the car at the kerb, away from busy traffic.

Do not use a second-hand child seat or one without an instruction manual.

Check that there are no objects in the vicinity of the child seat which could impede its operation.

Never leave a child unattended in the vehicle.

Check that your child is always strapped in and that the belt or safety harness used is correctly set and adjusted. Avoid wearing bulky clothing which could cause the belts to slacken.

Never let your child put their head or arms out of the window.

Check that the child is in the correct position for the entire journey, especially if asleep.
CHILD SAFETY: choosing a child seat

Rear-facing child seats
A baby’s head is, proportionally, heavier than that of an adult and its neck is very fragile. Transport the child in this position for as long as possible (until the age of 2 at the very least). It supports both the head and the neck. Choose a bucket type seat for best side protection and change it as soon as the child’s head is higher than the shell.

Forward-facing child seats
The child’s head and abdomen need to be protected as a priority. A forward-fac- ing child seat which is firmly attached to the vehicle will reduce the risk of impact to the head. Ensure your child travels in a forward-facing seat with a harness for as long as their size permits. Choose a bucket type seat for optimum side protection.

Booster cushions
From 15 kg or 4 years, the child can travel using a booster seat, which will enable the seat belt to be adapted to suit his/her size and shape. The booster seat cushion must be fitted with guides to position the seat belt on the child’s thighs rather than the stomach. It is recommended that you use a seat-back fitted with a belt strap guide which can be adjusted in terms of height to position the seat belt in the centre of the shoulder. It must never rest on the neck or on the arm. Choose a bucket type seat for optimum side protection.
There are two ways of attaching child seats: via the seat belt or using the ISOFIX system.

**Attachment via the seat belt**
The seat belt must be adjusted to ensure that it is effective in the event of harsh braking or an impact.
Ensure that the strap paths indicated by the child seat manufacturer are respected.
Always check that the seat belt is correctly fastened by pulling it up, then pulling it out fully whilst pressing on the child seat.
Check that the seat is correctly held by moving it from side to side and back to front: the seat should remain firmly fixed.
Check that the child seat has not been installed at an angle and that it is not resting against a window.

**Attachment using the ISOFIX system**
Authorised ISOFIX child seats are approved in accordance with regulation ECE-R44 in one of the three following scenarios:
- ISOFIX universal 3-point forward-facing seat;
- ISOFIX semi-universal 2-point seat;
- specific.
For the latter two, check that your child seat can be installed by consulting the list of compatible vehicles.
Attach the child seat with the ISOFIX locks, if these are provided. The ISOFIX system allows quick, easy, safe fitting.
The ISOFIX system consists of 2 rings and, in some cases, a third ring.

Do not use the child seat if it may unfasten the seat belt restraining it: the base of the seat must not rest on the buckle and/or catch of the seat belt.

Before using an ISOFIX child seat that you purchased for another vehicle, check that its installation is authorised. Consult the list of vehicles which can be fitted with the seat from the equipment manufacturer.

The seat belt must never be twisted or the tension relieved. Never pass the shoulder strap under the arm or behind the back.
Check that the seat belt has not been damaged by sharp edges.
If the seat belt does not operate normally, it will not protect the child. Consult an approved dealer. Do not use this seat until the seat belt has been repaired.

No modifications may be made to the component parts of the restraint system (ISOFIX seat belts, seats and their mountings) originally fitted.
Attachment using the ISOFIX system (continued)
The two rings 1 are located between the seatback and the seat base of the seat and are identified by a marking.
To ensure your child seat can be easily fitted and locked on the rings 1, use access guides 2 on the child seat.
To access the rings, insert your finger in the cover and pull.

Note: Keep the covers you have removed in a storage compartment so as not to lose or damage them.

The third ring 3 or 4 is used to attach the upper strap on some seats ISOFIX.

The ISOFIX anchorage points have been exclusively designed for child seats with the ISOFIX system. Never fit a different type of child seat, seat belt or other objects to these anchorage points. Check that nothing is obstructing the anchorage points.

If your vehicle has been involved in a road accident, have the ISOFIX anchorage points checked and replace your child seat.

The child seat strap must be attached to the corresponding ring.

Do not use any other mounting point.
CHILD SAFETY: fitting a child seat, general information (1/2)

In the front seat

The laws concerning children travelling in the front passenger seat differ in every country. Consult the legislation in force and follow the indications on the diagram on the following page.

Before fitting a child seat in this seat (if authorised):
- lower the seat belt as far as possible;
- move the seat as far back as possible;
- gently tilt the seatback away from vertical (approximately 25°);
- on equipped vehicles, raise the seat base as far as possible.

In all situations, reinset the headrest to its full extent so that it does not interfere with the child seat (see the information on “Front headrests” in Section 1);

Fit the child seat in a rear seat wherever possible.

Check that when installing the child seat in the vehicle it is not at risk of coming loose from its base.

If you have to remove the headrest, check that it is correctly stored so that it does not come loose under harsh braking or impact.

Always attach the child seat to the vehicle even if it is not in use so that it does not come loose under harsh braking or impact.

RISK OF DEATH OR SERIOUS INJURY: before fitting a rear-facing child seat to this seat, check that the air bag has been deactivated (refer to the information on “Child safety: deactivating/activating the front passenger air bag” in Section 1).

After installing the child seat, if necessary, the seat may be advanced (so as to leave enough space in the rear seats for passengers or other child seats).

For a rear-facing child seat, do not let it touch the dashboard or move it to the furthest forward position.

Do not change other settings after installing the child seat.
CHILD SAFETY: fitting a child seat, general information (2/2)

In the rear side seat
A carrycot can be installed across the vehicle and will take up at least two seats. Position the child with their feet nearest the door. Move the front seat as far forward as possible to install a rear-facing child seat, then move back the seat in front as far as it will go, although without allowing it to come into contact with the child seat.

For the safety of a child facing forwards, move the seat in front of the child as far forward as possible, remembering to move the seatback forwards to avoid contact between the seat and the child’s legs.

In all situations, remove the rear headrests (refer to the information on the “Rear headrests” in Section 3). This must be done before fitting the child seat. Check that the forward-facing child seat is resting against the back of the vehicle seat.

Rear centre seat
Check that the belt is suitable for securing your child seat. Consult an approved dealer.

Fit the child seat in a rear seat wherever possible.

Ensure that the child seat or the child’s feet do not prevent the front seat from locking correctly. Refer to the information on the “Front seat” in Section 1.

When fitting a child seat (Group 2 or 3 booster seat), check that the seat belts operate (wind) correctly: refer to Section 1 “Rear seat belts”. If necessary, adjust the position of the vehicle seat.
CHILD SEATS: attachment by seat belt (1/3)

RISK OF DEATH OR SERIOUS INJURY: Before installing a child seat on the front passenger seat, check that the airbag has been deactivated (please refer to “Child safety: front passenger airbag deactivation and activation” in Section 1).

Using a child safety system which is not approved for this vehicle will not correctly protect the baby or child. They risk serious or even fatal injury.

Check the status of the airbag before fitting a child seat or allowing a passenger to use the seat.

Seat not suitable for fitting child seats.

Child seat attached using the belt

Seat which allows a child seat with “Universal” approval to be attached by a seat belt.

RISK OF DEATH OR SERIOUS INJURY: Before installing a child seat on the front passenger seat, check that the airbag has been deactivated (please refer to “Child safety: front passenger airbag deactivation and activation” in Section 1).
CHILD SEATS: attachment by seat belt (2/3)

The table below summarises the information already shown on the diagram on the previous page, to ensure the applicable regulations are respected.

</tbody>
</table>
CHILD SEATS: attachment using the ISOFIX system (2/3)

**X** = Seat not suitable for fitting child seats ISOFIX.

**IUF/IL** = On equipped vehicles, seat which allows an approved “Universal/semi-universal” or “vehicle specific” child seat to be attached using the ISOFIX system; check that it can be fitted.

(1) Move the front seat as far forward as possible to install a rear-facing child seat, then move back the seat in front as far as it will go, although without allowing it to come into contact with the child seat.

(2) In all situations, remove the rear headrest of the seat on which the child seat is positioned. This must be done before fitting the child seat. Please refer to the information on the “Rear headrests” in Section 3. Move the seat in front of the child forwards, move the seatback forward to avoid contact between the seat and the child’s legs.
Child seat fitted using the ISOFIX mounting

Seat which allows a ISOFIX child seat to be attached.

The rear seats are fitted with an anchorage point which allows a forward-facing ISOFIX child seat with universal approval to be attached. The anchorage points are located on the backs of the rear seats.

The size of the ISOFIX child seat is indicated by a letter:

- A, B and B1: for forward-facing seats in group 1 (9 to 18 kg);
- C and D: shell seat or rear-facing seats in group 0+ (less than 13 kg) or group 1 (9 to 18 kg);
- E: rear-facing shell seats in group 0 (less than 10 kg) or 0+ (less than 13 kg);
- F and G: cots in group 0 (less than 10 kg).

Using a child safety system which is not approved for this vehicle will not correctly protect the baby or child. They risk serious or even fatal injury.
CHILD SAFETY: deactivating/activating the front passenger air bag (1/3)

Deactivating the front passenger airbags (on equipped vehicles)

You **must** deactivate the devices in addition to the front passenger seat belt before fitting a child seat in the front passenger seat.

To deactivate the airbags: with the vehicle stopped and the ignition off, push and turn lock 1 to the OFF position.

With the ignition on, you **must** check that the warning light 2 on the display is lit up and, depending on the vehicle, that the message “airbag passenger deactivated” is displayed.

**This light remains permanently lit to let you know that you can fit a child seat.**

⚠️ **The passenger air bag must only be deactivated or activated with the ignition off.** If it is interfered with when the vehicle is being driven, indicator lights and will come on. Switch the ignition off then on again to reset the air bag in accordance with the lock.
DANGER
Since operation of the front passenger airbag is not compatible with the position of a rear-facing child seat, NEVER fit a restraint system for a rear-facing child in a seat protected by an ACTIVATED front AIRBAG. This can cause the CHILD’S DEATH or SERIOUS INJURY.

The markings on the dashboard and labels A on each side of passenger sun blind 3 (example: label shown above) remind you of these instructions.
Activating the front passenger air bags

You should reactivate the airbags as soon as you remove the child seat from the front passenger seat to ensure the protection of the front passenger in the event of an impact.

To reactivate the airbags: with the vehicle stopped and the ignition off, push and turn lock 1 to the ON position.

With the ignition switched on, you must check that the warning light 2 is out and that the warning light comes on the display 2 after each start-up for around 60 seconds.

The front passenger seat belt additional restraint systems are activated.

Operating faults

It is forbidden to fit a rear-facing child seat to the front passenger seat if the airbags activation/deactivation system is faulty.

Allowing any other passenger to sit in that seat is not recommended.

Contact your approved dealer as soon as possible.

The passenger airbag must only be deactivated or activated when the vehicle is stationary.

If it is interfered with when the vehicle is being driven, indicator lights and will come on.

Switch the ignition off then on again to reset the airbag in accordance with the lock position.
DRIVING POSITION: LEFT-HAND DRIVE (1/2)
The equipment fitted, described below, depends on the version and country.

1 Air vent.
2 Demister outlet.
3 Stalk for:
   - direction indicator lights;
   - exterior lights;
   - fog lights.
4 Cruise control/speed limiter controls.
5 Instrument panel.
6 Driver Airbag and horn location.
7 Controls for:
   - on-board computer information read-out and vehicle settings customisation menu,
   - remote radio and navigation system.
8 Steering column stalk for windshield and rear screen wash/wiper.
9 Engine start/stop button (vehicle with RENAULT card).
10 Controls for:
    - access the main menu,
    - access the Driving assistance menu or, depending on the vehicle, the user preferences menu,
    - assisted parking.
11 Hazard warning light switch, central door locking warning light.
12 Multifunction screen.
13 Heating or air conditioning controls.
14 Passenger Airbag location.
15 Glovebox.
16 Accessories and multimedia socket.
17 Two and four-wheel drive mode selector or, depending on the vehicle, traction control.
18 Cruise control/speed limiter main control.
19 Assisted parking or handbrake control.
20 Gear lever.
21 Ignition switch (vehicles with key).
22 Control for adjusting steering wheel height and reach.
23 Unlocking controls:
   - bonnet,
   - fuel filler flap.
24 Controls for:
   - electric headlight beam adjustment,
   - instrument panel lighting dimmer,
   - lane departure warning,
   - ESP and Traction Control system.
25 Controls for:
   - ECO mode,
   - activation/deactivation of the Stop and Start function.
**DRIVING POSITION: RIGHT-HAND DRIVE (2/2)**

The equipment fitted, described below, DEPENDS ON THE VERSION AND COUNTRY.

<p>| | |</p>

</table>
WARNING LIGHTS (1/6)

The display of information shown below DEPENDS ON THE VEHICLE EQUIPMENT AND COUNTRY.

Instrument panel A: lights up when the driver’s door is opened.

In some cases, the appearance of a warning light is accompanied by a message.

The warning light means you should **drive very carefully** to an approved dealer as soon as possible. If you fail to follow this recommendation, you risk damaging your vehicle.

- Side light warning light
- Main beam headlight tell-tale
- Dipped beam headlight tell-tale
- Front fog light tell-tale
- Rear fog light tell-tale
- Automatic main beam headlight indicator light

Please refer to the information on “External signals and lights” in Section 1.

- Left-hand direction indicator tell-tale
- Right-hand direction indicator tell-tale
- Low fuel level warning light

It lights up orange when the ignition or the engine is switched on and goes off after a few seconds. If it comes on orange while driving and is accompanied by a beep, fill up with fuel as soon as possible. There is only approximately 30 miles (50 km) worth of fuel left.

**Warning light STOP** requires you to stop immediately, for your own safety, as soon as traffic conditions allow. Switch off the engine and do not restart it. Contact an approved Dealer.

If no lights or sounds are apparent, this indicates a fault in the instrument panel. This indicates that it is essential to stop immediately (as soon as traffic conditions allow). Ensure that the vehicle is correctly immobilised and contact an approved Dealer.
WARNING LIGHTS (2/6)
The display of information shown below depends on the vehicle equipment and country.

STOP light
This lights up when the ignition or engine is switched on and goes out as soon as the engine is running. It comes on with other warning lights and/or messages, and is accompanied by a beep.

It requires you to stop immediately, for your own safety, as soon as traffic conditions allow. Switch off the engine and do not restart it.

Contact an approved Dealer.

Brake circuit fault warning light
It lights up when the ignition or the engine is switched on and goes off after a few seconds.

If it comes on during braking and is accompanied by the STOP warning light and a beep, it indicates that the fluid level in the circuit is low or that there is a braking system fault. Stop as soon as traffic conditions allow and contact an authorised dealer.

Battery charge warning light
It lights up when the ignition or the engine is switched on and goes off after a few seconds.

If it comes on on the road, accompanied by the STOP warning light and a beep, this indicates an overload or discharge in the electrical circuit.

Stop as soon as traffic conditions allow and contact an approved Dealer.

Oil pressure warning light
It lights up when the ignition or the engine is switched on and goes off after a few seconds.

If it comes on on the road, accompanied by the STOP warning light and a beep, stop immediately and cut the ignition.

Check the oil level. If the level is normal, the indicator light is being lit by something else. Contact an approved Dealer.

Variable power-assisted steering warning light
It lights up when the ignition or the engine is switched on and goes off after a few seconds.

If it comes on while driving, alongside the warning light STOP, this means there is a system fault.

Contact an authorised dealer.
WARNING LIGHTS (3/6)

The display of information shown below DEPENDS ON THE VEHICLE EQUIPMENT AND COUNTRY.

- **Warning light**
  This lights up when the ignition or engine is switched on and goes out as soon as the engine is running. It can light up in conjunction with other warning lights and/or messages on the instrument panel.
  It means you should **drive very carefully** to an approved dealer as soon as possible. If you fail to follow this recommendation, you risk damaging your vehicle.

- **Toxic Fume Filter System Warning Light**
  For vehicles equipped with this option, the light comes on when the ignition is switched on then goes out.
  - If it lights up continuously, consult your approved dealer as soon as possible;
  - if it flashes, reduce the engine speed until the light stops flashing. Contact your approved Dealer as soon as possible.
  Refer to the information on “Advice: antipollution, fuel economy and driving” in Section 2.

- **Electronic Stability Program (ESP) and traction control system warning light**
  It lights up when the ignition or the engine is switched on and goes off after a few seconds.
  There are several reasons for the warning light to come on: please refer to the information on “Driver correction devices and aids” in Section 2.

- **Anti-lock braking warning light**
  It lights up when the ignition or the engine is switched on and goes off after a few seconds.
  If it lights up when you are driving, it indicates a fault in the anti-lock braking system.
  Braking will then be as normal, without the ABS. Contact an approved Dealer as soon as possible.

- **Coolant temperature warning light**
  This lights up red when the ignition is switched on or the engine is started.
  If it turns red, stop and let the engine idle for a minute or two.
  The temperature should lower and the warning light should return to a blue colour. If not, stop the engine. Let the engine cool down before checking the coolant.
  Contact an approved Dealer.
WARNING LIGHTS (4/6)

The display of information shown below DEPENDS ON THE VEHICLE EQUIPMENT AND COUNTRY.

- **Preheating warning light** *(diesel version)*

  This should come on when the ignition is switched on. It indicates that the heater plugs are in operation.

  It goes out when preheating is complete. The engine can be started.

- **Door(s) open warning light**

  - **Gear change indicator**
    - This lights up to advise you to change to a higher gear (up arrow) or lower gear (down arrow).
    - Please refer to the information on “Driving advice, Eco-driving” in Section 2.

- **Rear seat belt reminder** *(depending on vehicle)*

  Warning light comes on, accompanied (depending on the vehicle) by a message indicating the number of fastened seat belts on the instrument panel for approximately 30 seconds, each time the vehicle is started, a door is opened or a rear seat belt is fastened/unfastened. Check that the rear passengers are wearing seat belts and that the number of seat belts shown as fastened corresponds to the number of rear seat places occupied.

- **Air bag warning light**

  This warning light will be displayed on the instrument panel when the ignition is switched on or the engine is started, and will then go out after a few seconds.

  If it does not come on when the ignition is switched on, or comes on when the engine is running, there is a fault in the system.

  Contact your approved Dealer as soon as possible.

- **Brake pedal warning light**

  This lights up when the brake pedal should be depressed. Refer to the information on the “Automatic gearbox” in Section 2.

  Please refer to the information on “Driving advice, Eco-driving” in Section 2.

- **Handbrake or electronic parking brake warning light**

  Refer to the information on the “Assisted parking brake” in Section 2.
WARNING LIGHTS (5/6)

The display of information shown below DEPENDS ON THE VEHICLE EQUIPMENT AND COUNTRY.

Engine standby warning light

Please see information in the paragraph on “Stop and Start Function” in Section 2.

Unavailability of engine standby warning light

Please see information in the paragraph on “Stop and Start Function” in Section 2.

Speed limiter and cruise control indicator lights

See the information on the “Speed limiter” and “Cruise control” in Section 2.

Tyre pressure loss warning

Please refer to the information on the “Tyre pressure loss warning” in Section 2.

ECO mode warning light

This comes on when ECO mode is activated.

Please refer to the information on “Eco-driving” in Section 2.

Assisted parking brake fault light

Please refer to the information on the “Assisted parking brake” in Section 2.

Emergency active brake assist

Refer to the information on “Driving correction devices and aids” in Section 2.
The display of information shown below DEPENDS ON THE VEHICLE EQUIPMENT AND COUNTRY.

On display B

- **Passenger airbag ON**
  Please refer to the information on “Child safety: deactivating/activating the front passenger airbag” in Section 1.

- **Passenger airbag OFF**
  Please refer to the information on “Child safety: deactivating/activating the front passenger airbag” in Section 1.

**Driver’s seat belt reminder and, depending on the vehicle, front passenger seat belt reminder**

This lights up in the rear-view mirror when the ignition is started then, if the driver or front passenger seat belt (if this seat is occupied) is not fastened and the vehicle has reached approximately 12 mph (20 km/h), it flashes and a beep sounds for around 120 seconds.

**Note:** An object placed on the passenger seat base can activate the warning light.
**Displays and Indicators (1/2)**

**Instrument panel A**
Depending on the vehicle, you can customise your instrument panel with the content and colours of your choice.

From the multifunction screen, select System, then User profile. Refer to the handbook for the equipment.

**Driving style indicator 3**
Please refer to the information on “Eco-driving” in Section 2.

**Rev counter 4**
(graduations x 1000)

**Speedometer 5**
(km or miles per hour)
This is displayed differently according to how the instrument panel is customised.

**Overspeed buzzer**
Depending on the vehicle and country, a buzzer sounds for approximately 10 seconds every 40 seconds, as long as the vehicle is travelling in excess of 72 mph (120 km/h).

**Instrument panel in miles**
(option to switch to km/h)

**Vehicles not fitted with a navigation system**
- With the ignition off, press the OK button 2 and the start button 6;
- using control 1, select “Settings”, “Instrument panel”, then the unit;
- Press the OK button 2 to confirm.

To return to the previous mode, repeat the same operation.
DISPLAYS AND INDICATORS (2/2)

Vehicles fitted with a navigation system
On the multifunction screen, select “System”, “User profile” and “Unit”.

Note: In both cases, once the battery is switched off, the on-board computer automatically returns to the original unit of measurement.

Trip computer and warning system
Refer to the information on the “Trip computer and warning system” in Section 1.

Coolant temperature indicator 6

Fuel level gauge 7
If the level is at the minimum, warning light \(\text{\textbullet}\) integrated in the indicator comes on orange, accompanied by a beep. Fill up as soon as possible.

Engine oil level low warning
When the engine is started, the instrument panel display \(\text{A}\) alerts you when the minimum oil level is reached. Refer to the information on the “Engine oil level” in Section 4.
The first time the warning appears, it can be cleared by pressing the OK button 2.
Subsequent warnings will disappear automatically after 30 seconds.
On-board computer 1
Depending on the vehicle, this includes the following functions:

- distance travelled;
- journey parameters;
- information messages;
- operating fault messages (associated with the warning light);
- warning messages (associated with the warning light);

All these functions are described on the following pages.

Display selection keys 2
Scroll through the following information by repeated short presses on the control 2 (the display depends on the vehicle equipment and country):

a) total mileage and trip mileage recorder;
b) journey parameters:
   - fuel used;
   - average fuel consumption;
   - current fuel consumption;
   - estimated range;
   - distance travelled;
   - average speed;
c) mileage before service;
d) tyre pressure monitor;
e) trip log, operating faults and information message readout.
Interpreting some of the values displayed after resetting

The values showing average fuel consumption and average speed will become more stable and reliable the further you have travelled since the last time the Reset button was pressed.

The average fuel consumption may decrease when:

– the vehicle stops accelerating;
– the engine reaches its operating temperature (if the engine was cold when the reset key was pressed);
– when driving from an urban area onto the open road.

Automatic resetting of the journey parameters

Resetting occurs automatically when the maximum value of any of the parameters is exceeded.

Trip mileage resetting

With “trip mileage recorder” selected on the display, press key OK 3 until the mileage recorder resets to zero.

Resetting the journey parameters (reset button)

with the display showing one of the trip settings, press key OK 3 until the display is reset to zero.
ON-BOARD COMPUTER: trip settings (1/5)

<td>Service required</td>
<td></td>
</tr>
</tbody>
</table>

*Mileage before service*

*With the ignition switched on, the engine not running* and the display set to “Service Intervals”, press button **OK** for approximately 5 seconds to display the mileage before service (distance or time to the next service). When the range approaches its limit, there are several possible scenarios:

- distance/time remaining less than **900 miles (1,500 km)** or **one month**: the message “Service due in” is displayed along with the nearest limit (distance or time);
- range equal to **0 km/miles** or **service date reached**: the message “Service required” is displayed accompanied by warning light ©.

The vehicle requires a service as soon as possible.

**Resetting**: to reset the distance before service, press and hold button **2** for approximately 10 seconds until the display shows the mileage permanently.

**NB**: if a service is performed without changing the engine oil, only the mileage before the next service should be reset. In the event of an oil change, both the distance before the next service and the next oil change should be reset.
Examples of selections

<table>
<thead>
<tr>
<th>On-board computer with distance before next service message (cntd.)</th>
<th>Interpreting the display selected</th>
</tr>

<td>Oil change in 30 000 Kms / 24 mo</td>
<td>Mileage before service</td>
</tr>
<tr>
<td>Service due in 300 Kms / 24 days</td>
<td>With the ignition switched on and the engine not running, and the selected display is “Mileage before service”, press button OK for about 5 seconds to display the mileage before the next service, then press button 2 to view the mileage before the next oil change (distance or time remaining before the next service). When the range approaches its limit, there are several possible scenarios:</td>
</tr>
<tr>
<td>Service required</td>
<td>– distance/time remaining less than 900 miles (1,500 km) or one month: the message “Service due in” is displayed, accompanied by the nearest term (distance or time);</td>
</tr>
<tr>
<td></td>
<td>– range equal to 0 km/miles or service date reached: the message “Service required” is displayed accompanied by warning light ⚠️.</td>
</tr>
</tbody>
</table>

The vehicle requires an oil change as soon as possible.

Depending on the vehicle, the mileage before an oil change varies according to the driving style (frequent driving at low speed, door-to-door journeys, extensive use at idling speed, towing a trailer, etc.). The distance remaining until the next oil change can therefore decrease more quickly in some cases than the actual distance travelled.

**Resetting:** to reset the mileage before a service, press and hold button 2 for approximately 10 seconds until the display shows the range permanently.

**NB:** if a service is performed without changing the engine oil, only the mileage before the next service should be reset. In the event of an oil change, both the distance before the next service and the next oil change should be reset.

</tbody>
</table>
Depending on the vehicle equipment, this function allows you to activate/deactivate and adjust some of the vehicle’s functions.

**Vehicles fitted with a navigation system**

**Accessing the settings menu**

With the vehicle at a standstill, using the multifunction screen 1, select menu “Vehicle”, “User settings” to access the various settings.

**Adjusting the settings**

Select the function to modify:

a) unlocking the driver’s door;

b) automatic locking of the doors while driving;

c) hands-free function;

d) indicator audio volume;

e) internal welcome sound;

f) external welcome;

gh) reading lamp in automatic mode;

h) rear windscreen wiping in reverse gear;

i) configuration of the driving style indicator;

j) Active noise control.

Select “ON” or “OFF” to activate or deactivate the function.

For the “Light brightness intensity” function, select the intensity by pressing “+” or “-”.

For safety reasons, carry out any adjustments when the vehicle is stationary.
VEHICLE SETTINGS CUSTOMISATION MENU (2/2)

Adjusting the settings
Browse using the control 4 to select the function to adjust:

a) Lock doors when in motion;
b) Unlock driver door only;
c) Auto rear wipe with reverse gear;
d) PARKING ASSIST;
e) Automatic main beam lights;
f) Lane depart warn volume;
g) Lane depart warn sensitivity;
h) PARKING ASSIST;
i) PARKING ASSIST Volume;
j) Language.

Once a line has been selected, press the switch 3 OK to adjust the function.

If you select either “PARKING ASSIST VOLUME” or “LANGUAGE”, you will have to make a further selection (sound volume of the parking distance control or instrument panel language). In this case, make your selection and confirm it by holding the switch 3 OK – the selected value is shown by a in front of the line.

To exit the menu, press the control 4 upwards or downwards. It may be necessary to carry out this operation several times.

The vehicle settings personalisation menu cannot be used when driving. At speed exceeding 12 mph (20 km/h), the instrumental panel display switches automatically back to trip computer and warning system mode.

Vehicles not fitted with a navigation system

Accessing the settings menu on display 2
With the vehicle at a standstill, press and hold the switch 3 OK to access the settings menu.

function activated

function deactivated

The selected value is shown by a in front of the line.

To exit the menu, press the control 4 upwards or downwards. It may be necessary to carry out this operation several times.
STEERING WHEEL/POWER-ASSISTED STEERING

Power-assisted steering

Variable power-assisted steering

The variable power assisted steering system is equipped with an electronic control system which alters the level of assistance to suit the vehicle speed.

Steering is made easier during parking manoeuvres (for added comfort) while the force needed to steer increases progressively as the speed rises (for enhanced safety at high speeds).

Stop and Start feature

With the engine on standby, power-assisted steering is no longer operational. It returns to its original state when the engine is restarted or when the speed moves above 1 mph or 1 km/h (hill, slope, etc.).

Never leave the steering wheel at full lock while stationary.

With the engine switched off, or if there is a system fault, it is still possible to turn the steering wheel. The force required will be greater.

Do not switch off the engine when driving downhill and, as a general rule, when driving (the power-assisted steering and brake cannot operate normally).

For safety reasons, only adjust the steering wheel when the vehicle is stationary.

Engine on standby - power-assisted steering is no longer operational.

Adjusting the steering wheel height and depth

Lower the lever 1 and position the steering wheel in the required position.

Then, raise the lever fully, beyond the point of resistance to lock the steering wheel.

Make sure that the steering wheel is correctly locked.

Never leave the steering wheel at full lock while stationary.

With the engine switched off, or if there is a system fault, it is still possible to turn the steering wheel. The force required will be greater.

Do not switch off the engine when driving downhill and, as a general rule, when driving (the power-assisted steering and brake cannot operate normally).
CLOCK AND EXTERIOR TEMPERATURE

Display 1
Vehicles fitted with a touchscreen multimedia screen, navigation aid systems, etc.

The time and exterior temperature are displayed on the multifunction screen 1.
Refer to the handbook for the equipment.

External temperature indicator

Special note:
When the exterior temperature is -3 °C to +3 °C, the °C characters flash (signalling a risk of ice on the road).

External temperature indicator

As ice formation is related to climatic exposure, local air humidity and temperature, the external temperature alone is not sufficient to detect ice.

If the electrical supply is cut (battery disconnected, broken supply wire, etc.), the clock will automatically go back to the right time after a few minutes once the system is capable of receiving information GPS.
Welcome and goodbye function (depending on the vehicle)
From the multifunction screen, select menu “vehicle”, “User settings”, “External welcome” and activate or deactivate the function (ON or OFF).
Depending on the selected choice, the door mirrors will fold out:
- when the ignition is next switched on (function deactivated);
- upon detecting the RENAULT card or upon unlocking the vehicle (function activated)

Folding door mirrors
Press the switch 1 to automatically fold in the door mirrors.

The driver’s door mirror may have two clearly defined zones. Zone B shows what can normally be seen in an ordinary rear-view mirror. Zone A increases rear side visibility.

Objects in zone A look much further away than they really are.

For safety reasons, carry out any adjustments when the vehicle is not being driven.

Door mirrors
Adjustment
Select the door mirror using the switch 2, then use the control 3 to adjust it to the desired position.

Heated door mirrors
Mirror de-icing is carried out at the same time as rear screen de-icing.
Please refer to the information on “Manual air conditioning” and “Automatic climate control” in Section 3.
REAR-VIEW MIRRORS (2/3)

Position memory
- Adjust the door mirrors (see previous paragraphs);
- from the multifunction screen, select menu “Vehicle”, “Seats”, “Settings” then “Position” and select “Save”.

The positions of the door mirrors in a forward gear, reverse and of the front seats are simultaneously saved.

Recollecting the memorised position
From the multifunction screen, select menu “Vehicle”, “Seats”, “Settings” then “Position” and select “Recall”.

The positions of the door mirrors in forward gear, reverse and of the front seats are recalled.

Returning to the driving position
Moving from reverse gear to a forward gear is done:
- approximately 9 seconds after reverse gear has been disengaged when the speed is lower than 6 mph (10 km/h);
- forward gear engaged when the speed is greater than 6 mph (10 km/h);
- when the engine is stopped;
- when switch 2 is in neutral position.

For safety reasons, carry out any adjustments when the vehicle is not being driven.

Rear view mirrors which tilt in reverse gear
For vehicles equipped with the driver’s seat with position memory, you can enter a specific setting for the door mirrors when reversing and store the position.

With the vehicle stationary and reverse gear engaged, select the door mirror using the switch 2, then, with the control 3, adjust it to the required position.
**Interior rear view mirror**
Its position can be adjusted.

**Rear-view mirror with lever 2**
For night driving, to avoid being dazzled by the headlights of the car behind you, flip the small lever 2 located behind the rear view mirror.

**Rear view mirror without lever 2**
The rear-view mirror darkens automatically at night if you are being followed by a vehicle with its lights on.
Main beam headlights

With the dipped beam headlights lit, push stalk 1. This indicator light on the instrument panel comes on.

To return to the dipped headlight position, pull the stalk 1 towards you again.

Before driving at night:
check that the electrical equipment is operating correctly. As a general precaution, check that the lights are not obscured (by dirt, mud, snow or objects being transported).

Dipped beam headlights

Manuel operation
Turn ring 3 until the symbol is opposite mark 2. This indicator light on the instrument panel comes on.

Automatic operation
Turn ring 3 until the AUTO symbol is opposite mark 2: with the engine running, the dipped beam headlights switch on or off automatically depending on the brightness of the light outside, without any action on stalk 1.

When driving on the left in a left-hand drive vehicle (or vice versa), drivers must readjust their lights throughout their stay (see “Adjusting headlight beams” in Section 1).
Automatic main beam headlights

Depending on the vehicle, this system switches the main beam headlights on and off automatically. The function uses a camera located behind the interior rear-view mirror to detect vehicles that are following and coming in the opposite direction.

The main beam headlights come on automatically if:
- exterior light is weak;
- no other vehicles or lighting are detected;
- the vehicle speed is above approximately 30 mph (45 km/h).

If any of the above conditions are not fulfilled, the system switches to dipped beam headlights.

The “automatic main beam headlights” system should under no circumstances be used to replace driver attention and responsibility with regard to vehicle lighting and adapting to light, visibility and traffic conditions.

The system may encounter difficulties under certain conditions, including:
- extreme weather conditions (rain, snow, fog, etc.);
- obstruction in front of the windscreen or camera;
- when a following or oncoming vehicle has weak or hidden lighting;
- incorrect settings for the front headlights;
- reflective systems;
- ...

Activation
Turn ring 3 until the AUTO symbol is opposite mark 2.
Push stalk 1 to activate the main beam headlights. The warning light comes on on the instrument panel.

Deactivation
- Push stalk 1 again;
- or turn ring 3 to a position other than AUTO;
- or, depending on the vehicle, using the multifunction screen: select menu “vehicle”, “Driving assistance”, “Automatic main beam lights” then choose “OFF”.

Warning light goes out on the instrument panel.

Using the portable navigation system at night in the windscreen area below the camera may disturb the operation of the “automatic main beam headlights” system (risk of reflection on the windscreen).
EXTERIOR LIGHTING AND SIGNALS (3/5)

Operating faults
When the message “Check auto lighting” appears on the instrument panel, the system is deactivated. Consult an approved dealer.

Daytime running lights function
The daytime running lights come on automatically (at the front only) with no action on stalk 1 at the time of starting engine, and they go off once the engine is switched off.

Operating faults
When the message “Check lighting” with warning light © is displayed and warning light k flashes on the instrument panel, this indicates that there is a lighting fault. Consult an approved dealer.

Switching off the lights
There are two possibilities:
– manually, move ring 3 to position 0;
– automatically, the lights will go out when the engine is switched off, the driver’s door is opened or the vehicle is locked. In this case, the next time the engine is started the lights will be switched back on according to the position of the ring 3.

Lights-on reminder buzzer
If the lights are on after the engine is switched off, a warning beep sounds when the driver’s door is opened to warn you that the lights are still on.
“See-me-home lighting” function

This function allows you to briefly switch on the dipped beam headlights (to provide light when opening a gate, etc.).

With the engine and lights off and ring 3 in position 0 or AUTO, pull stalk 1 towards you: the dipped beam headlights come on for approximately thirty seconds. To increase this duration, you may pull the stalk up to four times (total time restricted to two minutes). The message “Follow-me home for _ _ _” along with the time the lights will be on for is displayed on the instrument panel to confirm this action. You can then lock your vehicle.

To switch off the lights before they go out automatically, turn ring 3 to any position, then return it to the AUTO position.

Welcome and goodbye function

(detecting the RENAULT card or when the vehicle is unlocked.

They switch off automatically:
– approximately one minute after lighting up;
– when starting the engine based on the position of the lighting stalk;
– upon locking the vehicle.

Activating/deactivating the function

From the multifunction screen, select menu “vehicle”, “User settings” then “External welcome”. Choose “ON” or “OFF” to activate or deactivate the function.
**EXTERIOR LIGHTING AND SIGNALS (5/5)**

**Rear fog lights**

Turn centre ring 5 on the stalk until the symbol faces mark 4, then release it.

Operation of the fog lights depends on the exterior lighting selected, and an indicator light will light up on the instrument panel.

Do not forget to switch off the fog lights when they are no longer needed, to avoid inconveniencing other road users.

**Front fog lights**

Turn centre ring 5 on the stalk 1 until the symbol faces mark 4, then release it.

Operation of the fog lights depends on the exterior lighting position selected, and an indicator light will light up on the instrument panel.

**Switching off the lights**

Turn the ring 5 again until the mark 4 is opposite the symbol for the fog light that you wish to switch off. The corresponding indicator light goes out on the instrument panel.

The fog lights switch off when the exterior lights are switched off.

---

When driving in fog or snow, or when transporting objects which are higher than the roof, the headlights do not come on automatically.

Switching on the fog lights remains the responsibility of the driver: the indicator lights on the instrument panel inform you whether the fog lights are lit (indicator light on) or not (indicator light not on).
AUDIBLE AND VISUAL SIGNALS

Horn
Press the steering wheel boss A to activate the horn.

Headlight flasher
Pull stalk 1 towards you to flash the headlights.

Direction indicators
Move stalk 1 parallel to the steering wheel and in the direction you are going to turn it.

One-touch mode
When driving, it is possible that the steering wheel may not be turned sufficiently to return the stalk automatically to its starting position. In this case, briefly turn stalk 1 to the intermediate position, then release it: the stalk returns to its original point and the indicator light flashes three times.

Hazard warning lights
Press switch 2. This switch activates all four direction indicators and the side indicator lights simultaneously. It must only be used in an emergency to warn drivers of other vehicles that you have had to stop in an area where stopping is prohibited or unexpected or that you are obliged to drive under special conditions.

Depending on the vehicle, the hazard warning lights may come on automatically under heavy deceleration. You can switch them off by pressing switch 2.
HEADLIGHT BEAM ADJUSTMENT (1/2)

On vehicles fitted with this function, control A allows you to adjust the height of the beams according to the load.

Turn control A downwards to lower the headlights and upwards to raise them.

<table>
<thead>
<tr>
<th>For manual settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>Examples of positions for adjusting control A according to the load</td>
</tr>
<tr>
<td>0</td>
</tr>
<tr>
<td>1</td>
</tr>
<tr>
<td>4</td>
</tr>
<tr>
<td>2 et 3</td>
</tr>
</tbody>
</table>

For vehicles not fitted with a control A, the headlight adjustment is automatic, depending on the vehicle load.
Temporary adjustment

Open the bonnet and identify the marking B next to one of the front headlight projectors.

For each headlight, using a screwdriver, turn the screw 1 by a quarter turn towards the - symbol to lower the beams.

Return to the starting point once your trip is over: turn the screw 1 by a quarter turn towards the + symbol to raise the beams.

When driving on the left in a left-hand drive vehicle (or vice versa), you must adjust your lights temporarily during your stay.
Vehicle fitted with intermittent windscreen wipers

A single sweep
A short push will trigger one sweep of the wipers.

B stop

C intermittent wiping
The wipers will pause for several seconds between sweeps. It is possible to change the time between sweeps by turning ring 2.

D slow continuous wiping

E fast continuous wiping

Special note
When driving the vehicle, the wiping speed slows down whenever the vehicle stops. For example, fast wiping speed will slow to normal wiping speed. As soon as the vehicle moves off, wiping will return to the speed originally selected.
If stalk 1 is operated, it overrides and cancels the automatic function.

Positions A, C and D are accessible with the ignition on. Position E is accessible only when the engine is running.

Check the condition of the wiper blades. You are responsible for their service life:
– they must remain clean: clean the blades, windscreen and rear screen regularly with soapy water;
– do not use them when the windscreen or rear screen are dry;
– free them from the windscreen or rear screen when they have not been used for a long time.

In all cases, replace them as soon as they begin to lose efficiency: approximately once a year.

Before using the rear wiper, check that no object obstructs the travel of the blade.

Do not use the wiper arm to open or close the tailgate.
Vehicle fitted with front windscreen wiper rain sensor

The rain sensor is located on the windscreen, in front of the interior rear-view mirror.

**A** single sweep
A short push will trigger one sweep of the wipers.

**B** stop

**C** automatic wiper function
When this position is selected, the system detects water on the windscreen and triggers the wipers at a suitable wiping speed. It is possible to change the triggering threshold and the time sweeps by turning ring **2**:
- **F**: minimum sensitivity
- **G**: maximum sensitivity

The higher the sensitivity, the quicker the wipers will react and the faster the wipe.

When activating automatic wiping or when increasing sensitivity, one sweep of the blades is performed.

**Note:**
- the rain sensor is only intended as a driving aid. In the event of reduced visibility, the driver should manually activate the wipers;
- In foggy weather or during snowfalls, wiping is not automatically triggered and remains under the driver’s control;
- in the event of temperatures below zero, automatic wiping is not activated when the vehicle is started. It is automatically activated as soon as the vehicle exceeds a certain speed (5 mph (8 km/h));
- do not activate automatic wiping in dry weather;
- fully de-ice the windscreen before activating automatic wiping.
Operating fault

In the event of a malfunction of the automatic wiping, the wiper is set to intermittent wiping. Contact an authorised dealer.

The operation of the rain sensor can be disturbed in the event of:
- damaged wiper blades; a screen of water or traces left by a blade in the sensor’s detection zone may increase the response time of the automatic wiper, or increase the wiping frequency;
- a windscreen with any chip or crack level with the sensor, or a windscreen covered in dust, dirt, insects, ice, the use of washing wax and water-repellent chemicals; the automatic wiping will be less sensitive, or even unresponsive.

Positions **A** and **D** are accessible with the ignition on. Positions **B** and **E** are accessible only with the engine running.

Special note

When driving the vehicle, the wiping speed slows down whenever the vehicle stops. For example, fast wiping speed will slow to normal wiping speed. As soon as the vehicle moves off, wiping will return to the speed originally selected.

If stalk 1 is operated, it overrides and cancels the automatic function.

Precautions

- In the event of ice, check whether the blades are stuck to the windscreen before operating the wiping mechanism. If you activate the wipers while the blades are stuck down with ice, you may risk damaging both the blade and the wiper motor.
- Do not activate the wipers on a dry screen. This will lead to the premature wear or damage to the blades.
Specific front wiper position (service position)

This position enables the blades to be lifted to remove them from the windscreen.

It may be useful to:
– to clean the blades;
– to release the blades from the windscreen in winter;
– replace the blades (please refer to the information on “Wiper blades” in Section 5).

With the ignition on and the engine off, lower the windscreen wiper stalk fully (fast continuous wipe position). The wiper arms stop in a position away from the bonnet.

To return the blades to position, make sure they have been placed on the windscreen, then move the stalk to position B (stop) with the ignition on.

Before switching on the ignition, place the wipers on the windscreen. Otherwise, there may be a risk of damage to the bonnet or the wipers when they are switched on.

Note:

Once the wipers have been switched off, at least 1 minute after locking the vehicle, it is possible to manually move the blades. Do not force the blade arms to move. This may risk damage to the wiper motor, the arms and the blades.

After your intervention, to reposition the blades correctly, make sure the blades are resting on the windscreen, switch on the ignition and activate the wiper control.

In the event of obstacles present on the windscreen (dirt, snow, ice, etc.), clean the windscreen (including the central area located behind the interior rear-view mirror) and the rear screen before starting the wipers (risk of motor overheating).

If an object is preventing a blade from moving, it may stop functioning. Remove the obstacle and reactivate the wiper using the wiper stalk.

Before any action involving the windscreen (washing the vehicle, de-icing, cleaning the windscreen, etc.) return stalk 1 to position B (stop).

Risk of injury and/or damage.
Windscreen washer

With the ignition on, pull stalk 1 then release.

A brief pull will trigger a single sweep of the wipers, in addition to the windscreen washer.

A longer pull will trigger three sweeps of the wipers followed, a few seconds later, by a fourth, in addition to the windscreen washer.

Note:
In temperatures below zero, the washer liquid risks freezing to the windscreen, thereby reducing visibility. Heat the windscreen using the demister control before cleaning.

When working in the engine compartment, ensure that the windscreen wiper stalk is in position B (stop).

Risk of injury.
Note:
To ensure the headlight washers operate correctly in winter, remove snow from the jet trims and de-ice the jet trims using an aerosol de-icer.
You are recommended to regularly remove dirt encrusted on the headlight glass.
When the minimum windscreen washer fluid level is reached, the headlight washer system may be deprimed.
Fill the windscreen washer fluid and then activate the windscreen washer, with the engine running, to reprime the system.

Headlight washers

Headlights on
On equipped vehicles, hold stalk 1 pulled towards you for about 2 seconds - the headlight washers and windscreen washers will be activated at the same time.
The headlight washers are also activated after three prolonged movements on the front windscreen washer control.

Risk of injury.

When working in the engine compartment, ensure that the windscreen wiper stalk is in position B (stop).
Check the condition of the wiper blades. You are responsible for their service life:
- they must remain clean: clean the blades, windscreen and rear screen regularly with soapy water;
- do not use them when the windscreen or rear screen are dry;
- free them from the windscreen or rear screen when they have not been used for a long time.

In all cases, replace them as soon as they begin to lose efficiency: approximately once a year.

Before any action involving the rear screen (washing the vehicle, de-icing, cleaning, etc.) return stalk 1 to the stop position.

Risk of injury and/or damage.

Before using the rear wiper, check that no object obstructs the travel of the blade.

Do not use the wiper arm to open or close the tailgate.
Activation/deactivation of the rear screen wiper (depending on the vehicle)

Engaging reverse gear triggers intermittent wiping (if the front wipers are in operation). If your vehicle is fitted with a vehicle settings customisation menu, you can opt to activate or deactivate this function. To do this, refer to the information on the “Vehicle settings customisation menu” in Section 1; “Rear wipping in reverse gear”.

In the event of obstacles present on the rear window (dirt, snow, etc.), the wiper will try to sweep away all the obstacles. If an obstacle prevents the blade from moving, it can be stopped. Remove the obstacle, wait for around 30 seconds and reactivate the wiper using the wiper stalk.

Precautions
- In the event of ice, check whether the blades are stuck to the windscreen before operating the wiping mechanism. If you activate the wiper while the blade is blocked by ice, you risk damaging both the blade and the wiping motor.
- Do not activate the wipers on a dry screen. This will lead to the premature wear or damage to the blades.

With the ignition on, push and hold stalk 1, then release.

A longer action will trigger three sweeps of the wipers followed, a few seconds later, by a fourth, in addition to the windscreen washer.
FUEL TANK (1/3)

Useful capacity of fuel tank:
- Approximately **55 litres** for two-wheel drive models;
- **65 litres** for four-wheel drive models.

To open the cover A, pull the control 1. Use the cap holder 3 on the flap A during filling to hold the cap 2 in place.

After filling, check that the cap and cover are closed.

Fuel grade

Use a high-grade fuel that complies with the legislation in force in each country and which **must** comply with the specifications given on the label on the cover A. Please refer to the information on “Engine specifications” in Section 6.

Petrol version

It is **essential** to use unleaded petrol. The octane rating (RON) must comply with the information given on the label on the cover A. Refer to Section 6 for information on “Engine specifications”.

Diesel version

**Only** use diesel fuel which complies with the information on the label located inside the cover A.

Do not mix even small amounts of petrol (unleaded or E85) with diesel. Do not use ethanol-based fuel if your vehicle is not compatible with this fuel. Do not add additive to the fuel – otherwise you risk damaging the engine.
Filling with fuel
With the ignition off, insert the nozzle and insert it **fully** before turning it on to fill the fuel tank (risk of splashing).

Keep the nozzle in this position throughout the entire filling operation.

When the pump cuts out automatically at the end of the filling procedure, a maximum of two further filling attempts may be made, as there must be sufficient space in the fuel tank to allow for expansion.

Make sure that no water enters the fuel tank during filling. The cover A and its surround must remain clean.

**Petrol versions**
Using leaded petrol will damage the antipollution system and may lead to a loss of warranty.

To ensure that the fuel tank is not filled with leaded petrol, the fuel tank filler neck consists of a restrictor fitted with a safety system which **only allows a nozzle for unleaded petrol to be used** (at the pump).

---

**Fuel filler cap: this is specific.**

If you have to replace it, make sure it is identical to the original cap. Contact an approved Dealer.

Never place the cap near a source of heat or flame.

Do not wash the filler area with a high-pressure washer.

---

**Vehicle fitted with the Stop and Start function**

To fill up with fuel, the engine must be stopped (and not on standby): stop the engine (please refer to the information on “Starting and stopping the engine” in Section 2).
FUEL TANK (3/3)

Running out of fuel on diesel versions

Vehicles with key/remote control

- Put the ignition key in “On” position M (please see the information on the “Ignition switch” in Section 2) and wait for a few minutes before starting, to enable the fuel circuit to be primed;
- turn the key to position D. If the engine does not start, repeat the procedure.
- If the engine does not start after several attempts, please contact an authorised dealer.

No modifications whatsoever are permitted on any part of the fuel supply system (electronic units, wiring, fuel circuit, injectors, protective covers, etc.) as this may be dangerous (unless undertaken by qualified Network personnel).

Vehicles with RENAULT card

With the card RENAULT in the passenger compartment, press the start button 4 without pressing any of the pedals. Wait a few minutes before starting. This will enable the fuel circuit to be primed. If the engine does not start, repeat the procedure.

If the engine does not start after several attempts, please contact an authorised dealer.

Persistent fuel odour

If you notice a persistent fuel odour you should:

- stop the vehicle as soon as traffic conditions allow and switch off the ignition;
- switch on the hazard warning lights and ask your passengers to leave the vehicle and stay clear of the traffic;
- contact an approved Dealer.

RUNNING IN

Petrol version
For the first 600 miles (1,000 km), do not exceed 78 mph (130 km/h) in the highest gear, or 3,000 to 3,500 rpm.
You may only expect top performance from your vehicle after approximately 1,800 miles (3,000 km).

Service intervals: refer to the Maintenance Document for your vehicle.

Diesel version
For the first 1,000 miles (1,500 km), do not exceed 80 mph (130 km/h) in the highest gear, or 2,500 rpm. After completing this mileage you may drive faster, although you may only expect top performance after approximately 3,600 miles (6,000 km).

During the running in period, do not accelerate hard while the engine is still cold and do not let the engine over-rev.

Service intervals: refer to the Maintenance Document for your vehicle.
IGNITION SWITCH: vehicle with key

Ignition position M.
The ignition is switched on:

Start position D
If the engine fails to start at the first attempt, the key must be turned back before the starter can be activated again. Release the key as soon as the engine starts.

Note: on diesel versions, several seconds may pass between turning the key and the engine starting to allow for engine preheating.

Ignition switch

“Stop and steering lock” position St
To lock: remove the key and turn the steering wheel until the steering column locks.
To unlock: turn the key and the steering wheel slightly.

“Accessories” position A
When the ignition is switched off, any accessories (radio, etc.) will continue to function.
STARTING, STOPPING THE ENGINE: vehicle with key

Starting the engine

Petrol versions
- Activate the starter without accelerating;
- release the key as soon as the engine starts.

Diesel versions
- Turn the ignition key to the “Ignition on” position M, and hold this position until the engine pre-heating light goes off;
- turn the key to starter position D without depressing the accelerator pedal;
- release the key as soon as the engine starts.

Special note: if starting the engine when the outdoor temperature is very low (below -10 °C): hold down the clutch pedal until the engine starts.

Stopping the engine
With the engine idling, turn the key to the “Stop” position St.

Never start your vehicle while freewheeling on a gradient. Risk of non-activation of power-assisted steering.
There is a risk of accidents.

Driver’s responsibility
Never leave your vehicle with the key inside and never leave a child (or a pet) unsupervised, even for a short while.
There is a risk that they could start the engine or operate electrical equipment (electric windows etc.) and trap part of their body (neck, arms, hands, etc.).
Risk of serious injury.

Never switch off the ignition before the vehicle has stopped completely. Once the engine has stopped, the brake servo, power-assisted steering, etc., and the passive safety devices such as the airbags and pretensioners will no longer operate.
The RENAULT card must be inserted in detection zone 1.

To start:
- vehicles with an automatic gearbox, place the lever in position P, depress the brake pedal and press button 2;
- vehicles with a manual gearbox, depress the brake or clutch pedal and press the button 2. If a gear is engaged, the vehicle may only be started by depressing the clutch pedal.

Special features
- If one of starting conditions is not applied, the message “Press brake + START” or “Press clutch + START” or “Select P” is displayed on the instrument panel;
- in some cases, it will be necessary to move the steering wheel while pressing the start button 1 to assist in unlocking the steering column. A message on the instrument panel “Turn steeringwheel + START” warns of this.

“Hands-free” starting with the tailgate open
In this case, the RENAULT card should not be located in the boot, to avoid any risk of loss.

Never leave your vehicle with the RENAULT card inside and never leave a child (or a pet) unsupervised, even for a short while.

There is a risk that they could start the engine or operate electrical equipment (electric windows etc.) and trap part of their body (neck, arms, hands, etc.). Risk of serious injury.

Never switch off the ignition before the vehicle has stopped completely. Once the engine has stopped, the brake servo, power-assisted steering, etc. and the passive safety devices such as air bags and pre tensioners will no longer operate.
Accessories function
(switching on the ignition)

Once you have gained access to your vehicle, you may use some of its functions (radio, navigation, wipers, etc.).

To use the other functions, with the RENAULT card in the passenger compartment, press button 2 without pressing the pedals.

Operating faults

In certain cases, the RENAULT “hands-free” card may not work:
- when the RENAULT card battery is drained, etc.;
- near to appliances operating on the same frequency as the card (monitor, mobile phone, video game, etc.);
- vehicle located in a high electromagnetic radiation zone.

The message “Place card close START and push” appears on the instrument panel.

Depress the brake or clutch pedal, then place the RENAULT 3 card (logo side) in contact with the start button 2 for around 2 seconds. Press the 2 button to start the vehicle. The message goes out.

Never leave your vehicle with the RENAULT card in the reader or in the passenger compartment while there is a child (or an animal) in the vehicle, even for a short while.

They may pose a risk to themselves or to others by starting the engine. Risk of serious injury.
If the RENAULT card is no longer in the passenger compartment or if the card battery is low when you try to switch the engine off, the message “No key-card Press and hold” appears on the instrument panel: press the button 2 for longer than two seconds. If the card is no longer in the passenger compartment, make sure you can retrieve it before pressing and holding the button. Without the RENAULT card, you will not be able to restart the vehicle.

With the engine switched off, any accessories being used (radio, etc.) will continue to function for approximately 10 minutes.

When you leave your vehicle, especially if you have your RENAULT card with you, check that the engine is completely switched off.

Driver’s responsibility

Never leave an animal, child or adult who is not self-sufficient alone in your vehicle, even for a short time. They may pose a risk to themselves or to others by starting the engine, activating equipment such as the electric windows or locking the doors, for example.

Also, in hot and/or sunny weather, please remember that the temperature inside the passenger compartment increases very quickly.

RISK OF DEATH OR SERIOUS INJURY.

Never switch off the ignition before the vehicle has stopped completely. Once the engine has stopped, the brake servo, power-assisted steering, etc. and the passive safety devices such as airbags and pretensioners will no longer operate.
STOP AND START FUNCTION (1/4)

This system enables a reduced fuel consumption and lower greenhouse gas emissions. The system is activated automatically when the vehicle is started. While driving, the system stops the engine (standby) when the vehicle is at a standstill (traffic jam, traffic lights, etc.)

Conditions for engine standby

The vehicle has set off from where it was parked;

For automatic gearboxes:
– the gearbox is in position D or N; and
– the brake pedal is depressed (sufficiently hard); and
– the accelerator pedal is not depressed; and
– the speed is zero for around 1 second.
The engine remains on standby if position P is selected, or if position N is selected with the handbrake engaged and the brake pedal released.

For manual gearboxes:
– the gearbox is in neutral; and
– the clutch pedal is released. If the warning light A flashes, this means that the clutch pedal is not sufficiently released; and
– the vehicle speed is less than approximately 7 mph (3 km/h).

For all vehicles:

Warning light A on the instrument panel is lit when the engine is on standby.
The vehicle equipment remain operational while the engine is stopped.

If the engine stalls while the system is in operation, pressing the clutch pedal right down will start it again.

Before getting out of the vehicle, you must switch off the ignition (please see section on “Starting, stopping the engine”).

Keep your vehicle stationary when the engine is on standby (shown by the warning light A on the instrument panel).

If the engine is put in standby, the electronic parking brake (depending on the vehicle) is not applied automatically.

Engine on standby - braking assistance is no longer operational.
STOP AND START FUNCTION (2/4)

Preventing the engine from standing by
In certain situations, such as negotiating a crossroads for instance, it is possible (with the system activated) to keep the engine running so as to be ready to move off quickly.

Automatic gearbox:
Keep the vehicle stationary without pressing too hard on the brake pedal

Manual gearbox:
Keep the clutch pedal pressed right down

Conditions for coming out of engine standby

For automatic gearboxes:
– the brake pedal is released, position D engaged or,
– the brake pedal is released, position N engaged and the handbrake off, or
– the brake pedal is pressed again, with position P engaged or position N engaged with the handbrake applied, or
– position R is engaged or,
– the accelerator pedal is depressed.

For manual gearboxes:
– the gearbox is in neutral and the clutch pedal is slightly depressed, or
– the engine is in gear and the clutch pedal is pressed right down.

To fill up with fuel, the engine must be stopped (and not on standby): always stop the engine (please see “Starting, stopping the engine”).
STOP AND START FUNCTION (3/4)

Conditions preventing the standby of the engine

Certain conditions prevent the system from using the engine standby function, including when:

– reverse gear is engaged;
– the bonnet is not locked;
– the driver’s door is not closed;
– the driver’s seatbelt is not fastened;
– the outdoor temperature is too low or too high (less than around 0 °C or higher than around 30 °C);
– the battery is not sufficiently charged;
– if available, “4WD Lock” mode is activated (please see the section “Transmission: 4-wheel drive (4WD)” in Section 2);
– the difference between the vehicle interior temperature and the automatic climate control instruction is too high;
– parking distance control is in operation;
– for vehicles with automatic gearboxes, the gradient is steeper than approximately 12%;
– the “Clear View” function is activated (please see “Automatic Climate Control” in Section 3);
– the engine temperature is too low;
– the emission control system is being regenerated;
– or
– ...

Warning light is displayed on the instrument panel. This notifies you that engine standby is not available.

Special cases for vehicles with a RENAULT card

With the engine on standby (traffic jam, traffic lights, etc.), if the driver unfastens the seat belt and opens the driver’s door, or gets out of the seat, the ignition is switched off.

The assisted parking brake is applied automatically.

To restart and reactivate the Stop and Start system, start the engine (please refer to “Starting, stopping the engine” in Section 2).

Deactivate the Stop and Start function when performing any operations in the engine compartment.
STOP AND START FUNCTION (4/4)

Special feature of the automatic engine re-start

Under certain conditions, the engine can restart on its own in order to guarantee your safety and comfort. This can occur especially when:

- the outdoor temperature is too low or too high (less than around 0 °C or higher than around 30 °C);
- the “Clear View” function is activated (please see “Automatic Climate Control” in Section 3);
- the battery is not sufficiently charged;
- the vehicle speed is above 3 mph (5 km/h) (downhill slope, etc.);
- repeated pressing on the brake pedal or braking system requirement;
- ...

Deactivating, activating the function

Press switch 1 to deactivate the function. The message “Stop & Start deactivated” will appear on the instrument panel and the integrated warning light 2 on the switch will light up. Pressing again will reactivate the system. The message “Stop & Start activated” will appear on the instrument panel and the integrated warning light 2 on switch 1 will go out.

Note: With the engine on standby, press switch 1 to automatically restart the engine.

Before getting out of the vehicle, you must switch off the ignition (please see section on “Starting, stopping the engine”).

The system is automatically reactivated each time the vehicle is started (see “Starting, stopping the engine” in Section 2).

Operating faults

When the message “Check Stop & Start” appears on the instrument panel and the integrated warning light 2 lights up on the switch 1, the system is deactivated. Please consult an authorised dealer.
SPECIAL FEATURES OF PETROL VERSIONS

The following operating conditions:
– driving for long periods when the low fuel level warning light is lit;
– using leaded petrol;
– using fuel or lubrication additives which are not approved.

Or operating faults such as:
– faulty ignition system, running out of fuel or disconnected spark plugs resulting in the engine misfiring or cutting out when driving;
– loss of power,
as they may cause the catalytic converter to overheat and thus reduce its efficiency, or damage it irreparably and cause heat damage to the vehicle.

If you notice any of the above operating faults, have the necessary repairs carried out as soon as possible by an approved Dealer.

These faults may be avoided by regularly taking your vehicle to an approved Dealer at the intervals specified in the Maintenance document.

Starting problems
To avoid damaging the catalytic converter, do not keep trying to start the engine (using the start button, or by pushing or towing the vehicle) without having identified and corrected the starting fault.

If the fault cannot be identified, do not keep trying to start the engine, but contact an approved Dealer.

Do not park the vehicle or run the engine in locations where combustible substances or materials such as grass or leaves can come into contact with the hot exhaust system.
SPECIAL FEATURES OF DIESEL VERSIONS

Diesel engine speed

Diesel engines are fitted with injection equipment which prevents the engine speed being exceeded irrespective of the gear selected.

If the message “Check antipollution system” is displayed along with warning lights ⚠️ and ⚠️, consult an authorised dealer immediately.

When driving, depending on the fuel grade used, it is possible that white smoke may be emitted.

This is due to the exhaust particle filter being cleaned automatically, and does not affect the way the vehicle runs.

Running out of fuel

If the tank has been completely drained, the system must be reprimed after the tank is refilled: see information on the “fuel tank” in section 1 before restarting the engine.

Precautions to be taken in winter

To avoid any faults in icy weather:

– ensure that the battery is always fully charged,
– always keep the diesel tank relatively full to avoid water vapour condensing in it and accumulating at the bottom of the tank.

⚠️ Do not park the vehicle or run the engine in locations where combustible substances or materials such as grass or leaves can come into contact with the hot exhaust system.
Gear lever

Vehicles with manual gearbox: refer to the grid on the gear lever knob 1.

Vehicles with an automatic gearbox: refer to the information on the “Automatic gearbox” in Section 2.

Selecting reverse gear

The ring 2 has to be lifted up to the gear lever knob to select reverse gear.

The reversing lights will come on as soon as reverse gear is selected with the ignition on.

An impact to the underside of the vehicle while manoeuvring (e.g.: striking a post, raised kerb or other street furniture) may result in damage to the vehicle (e.g.: deformation of an axle).

To avoid any risk of accident, have your vehicle checked by an approved Dealer.
HANDBRAKE

Handbrake

To release:
Pull lever 2 up slightly, press button 1 and then lower the lever to the floor. The red warning light on the instrument panel will come on if you are driving with an incorrectly released handbrake.

To apply:
Pull lever 2 upwards. Check that the vehicle is immobilised. The warning light (○) on the instrument panel will come on.

- When stationary, and depending on the slope and/or vehicle load, it may be necessary to pull up the handbrake at least two extra notches and engage a gear (1st or reverse gear) for vehicles with a manual gearbox or position P for vehicles with an automatic gearbox.

- Make sure that the handbrake is properly released when driving (red indicator light off), otherwise overheating, or even damage, may occur.
ELECTRONIC PARKING BRAKE (1/3)

Automatic operation

The assisted parking brake immobilises the vehicle when stopping the engine (and not when the engine is on standby for vehicles fitted with the Stop and Start function). Please refer to “Starting, stopping the engine” and “Stop and Start function” in Section 2.

In all other instances, e.g. engine stalling, the electronic parking brake is not applied automatically. Manual mode must be used.

For certain country-specific model versions, the automatic brake application function is not activated. Refer to the information on “Manual operation”.

To confirm that the electronic parking brake is applied, the message “Parking brake on” and warning light on the instrument panel and warning light on the switch light up.

After the engine is switched off, indicator light goes out several minutes after the electronic parking brake has been applied and indicator light goes out when the vehicle is locked.

Note:

To indicate that the electronic parking brake is released, a beep sounds and the message “Apply parking brake” appears on the instrument panel:

– with the engine running: when the driver’s door is opened;
– with the engine switched off (eg. when the engine stalls): when a front door is opened.

In this case, pull and release switch to apply the assisted parking brake.

Automatic releasing of the electronic parking brake

The brake will be released as soon as the vehicle starts and accelerates.

Before leaving the vehicle, check that the assisted parking brake is fully applied. Warning light on switch and warning light on the instrument panel light up to show that the parking brake is applied but go out when the doors are locked.
ELECTRONIC PARKING BRAKE (2/3)

Manual operation
You can control the electronic parking brake manually.

Applying the electronic parking brake
Pull switch 1. Warning light 2 and warning light (P) on the instrument panel light up.

Releasing the electronic parking brake
With the ignition on, depress the brake pedal then press switch 1: warning light 2 and warning light (P) go out.

Brief stop
To manually activate the electronic parking brake, (when stopping at a red light, or stopping when the engine is running, etc.): pull and release switch 1. The brake is released as soon as the vehicle is started up again.

Special cases
To park on a slope or while towing a trailer, for example, pull switch 1 for a few seconds to gain the maximum braking.
To park the vehicle without applying the electronic parking brake (if there is a risk of freezing, for example):
– with the engine running, while simultaneously depressing the brake pedal and the switch 1, stop the engine (not standby for vehicles fitted with Stop and Start);
– with a gear or position P engaged, release the brake pedal and the switch 1.

For vehicles fitted with a Stop and Start function, with the engine on standby, the electronic parking brake is automatically activated if the driver unfastens their seat belt and opens the driver's door or gets out of their seat.
Operating faults

- If there is a fault, the 🟡 warning light illuminates on the instrument panel accompanied by the “Check parking brake” message and, in some cases, the 🟡 warning light. Please contact an authorised dealer as soon as possible.

- If there is an assisted parking brake fault, the warning light 🟢 comes on, along with the message “Braking system fault”, a beep and, in some cases, the warning light 🟢. This means that you must stop as soon as traffic conditions allow.

Versions with an automatic gearbox

For safety reasons, automatic release is deactivated when the driver’s door is open or not shut properly and the engine is running (in order to prevent the vehicle from moving without the driver). The “Release parking brake manually” message appears on the instrument panel when the driver depresses the accelerator.

In the event of message “Electric failure DANGER” or “Check battery”, manually activate the electronic parking brake by pulling switch 1 (or position the gear lever in P for automatic gearboxes) before stopping the engine.

Risk of loss of immobilisation of the vehicle.

Contact an authorised dealer.

If no lights or sounds are apparent, this indicates a fault in the instrument panel. This indicates that it is essential to stop immediately (as soon as traffic conditions allow). Ensure that the vehicle is correctly immobilised and contact an approved Dealer.

Never leave your vehicle without moving the selector lever to position P or N. This is because when the vehicle is stationary with the engine running and a gear engaged, the vehicle may begin to move if you accelerate.

There is a risk of accidents.

It is therefore essential to immobilise the vehicle by engaging first gear (manual gearbox) or position P (automatic gearbox). If the slope requires it, chock the vehicle.
Fuel consumption is accredited in accordance with a standard regulatory method. Identical for all manufacturers, this enables vehicles to be compared with one another. Consumption in real time depends on vehicle usage conditions, the equipment fitted and the user’s driving style. To optimise fuel consumption, please refer to the following advice.

Depending on the vehicle, you will have various functions which enable you to lower your fuel consumption:
- the rev counter;
- gear change indicator;
- the driving style indicator;
- the journey record and eco-driving advice via the multimedia screen;
- ECO mode.

If fitted on the vehicle, the navigation system provides additional information.

**Gear change indicator 2**
Depending on the vehicle, to obtain optimum consumption levels, a warning light on the instrument panel lets you know the best time to move up or down a gear:
- move up a gear;
- move down a gear.

If you regularly follow this indicator, you will reduce your vehicle’s fuel consumption.

**On the instrument panel**
The information display can be organised and customised based on the instrument panel customisation style selected from the multimedia screen.

**Rev counter with ECO zone 1**
Driving in the ECO zone helps you optimise fuel consumption under most circumstances.
On the multifunction screen

Journey record
Once the engine is switched off, you will see “Journey record” displayed on the screen 4, enabling you to view information relating to your last journey.

Driving style indicator 3
Informs you about the driving style adopted in real time. You will be notified by indicator 3.

The more petals there are on indicator 3, the smoother and more economical your driving.

If you regularly monitor this indicator, you will reduce your vehicle’s fuel consumption.

The driving style indicator is activated by default. If you wish to deactivate it, please see the multimedia system instructions.

This indicates:
– average fuel consumption;
– number of miles/kilometres travelled;
– number of miles/kilometres saved.

This corresponds to driving without fuel consumption (deceleration and/or foot off the accelerator pedal).

An overall rating from 0 to 100 is displayed to let you assess your eco driving performance. The higher the rating, the lower the fuel consumption.

Eco advice is given to help improve your performance.

With your favourite journeys saved, you can compare your performance between trips and the performance of other vehicle users.

For more information, please see the multimedia system instructions.
ECO mode

ECO mode is a function which optimises fuel consumption. This acts on all power consuming elements (engine power, switching gears for vehicles fitted with an automatic gearbox, heating and/or air conditioning, etc.).

Limiting acceleration enables low fuel consumption in urban and surrounding areas. The air conditioning and heating limiter enables you to save fuel without affecting your heating comfort.

Activating the function

The function can be activated:
- by pressing switch 4.
- Depending on the vehicle, from the navigation menu on the multimedia screen (please refer to the multimedia instructions).

The warning light \[\text{ECO}\] comes on on the instrument panel to confirm activation.

While driving, it is possible to leave the ECO mode temporarily in order to improve engine performance.

For this, depress the accelerator pedal firmly and fully.

ECO mode is reactivated when you take pressure off the accelerator pedal.

Disabling the function

Press switch 4.

The warning light \[\text{ECO}\] goes out on the instrument panel to confirm deactivation.
DRIVING ADVICE, ECO-DRIVING (4/5)

Driving advice, Eco-driving

Behaviour

- Do not overrev the engine in the intermediate gears. You should always use the highest gear possible.
- Avoid sudden acceleration.
- Brake as little as possible. If you anticipate an obstacle or bend in advance, you may then simply release the accelerator pedal.
- Do not try to maintain the same speed up a hill, accelerate no more than you would on flat ground. Keep your foot in the same position on the accelerator pedal.
- Double declutching and accelerating before switching off are unnecessary in modern vehicles.

- Bad weather, flooded roads:

Do not drive through floods if the water is above the lower edge of the wheel rims.

Obstructions to the driver

On the driver’s side, only use mats suitable for the vehicle, attached with the pre-fitted components, and check the fitting regularly. Do not lay one mat on top of another.

There is a risk of wedging the pedals
DRIVING ADVICE, ECO-DRIVING (5/5)

Tyres
- An underinflated tyre increases fuel consumption.
- Opt for the highest speed pressure or the pressure recommended to optimise fuel consumption indicated on edge of the driver’s door (please refer to the information on “Tyre inflation pressure” in Section 4).
- The use of non-recommended tyres can increase fuel consumption.

Advice on use
- Favour the ECO mode.
- Electricity is fuel; switch off all the electrical components which are not really needed. **However** (safety first), keep your lights on when the visibility is bad (“see and be seen”).
- Use the air vents. Driving with the windows open at 60 mph (100 km/h) will increase fuel consumption by 4%.
- Never fill the fuel tank right to the brim to avoid overflow.

- In vehicles fitted with air conditioning, it is normal to observe an increase in fuel consumption (especially in urban conditions) when it is used. For vehicles fitted with manual air conditioning, switch off the system when it is not required.

**Recommendations for reducing consumption and therefore helping to preserve the environment:**

If the vehicle has been parked in the sun, open the doors for a few moments to let the hot air escape before starting the engine.
- Do not leave an empty roof rack fitted to the vehicle.
- It is better to fit a trailer for bulky objects.
- When towing a caravan, fit a wind deflector and adjust it carefully.
- Avoid using the car for door-to-door calls (short journeys with long waits in between) because the engine never reaches its normal operating temperature.
MAINTENANCE AND ANTIPOLLUTION ADVICE

Your vehicle complies with criteria for recycling and recovering vehicles at the end of their service life, which will come into force in 2015.

Some of the parts on your vehicle have been designed to be recycled later.

These parts are easily removable in order to be collected and reprocessed in recycling networks.

Furthermore, by virtue of its design, moderate fuel consumption and initial settings, your vehicle also conforms to current anti-pollution regulations. The manufacturer is actively striving to reduce pollutant exhaust gas emissions and to save energy. However, the fuel consumption of your vehicle and the level of pollutant exhaust gas emissions are also your responsibility. Ensure that it is maintained and used correctly.

Maintenance

It is important to remember that failure to respect anti-pollution regulations could lead to legal action being taken against the vehicle owner.

In addition, replacing engine, fuel supply system and exhaust components with parts other than those originally recommended by the manufacturer may alter your vehicle so that it no longer complies with anti-pollution regulations.

Have your vehicle adjusted and checked by an authorised dealer, in accordance with the instructions given in your maintenance schedule: they will have all the equipment necessary for ensuring that your vehicle is maintained to its original standard.

Engine adjustments

- **Air filter, fuel filter**: a choked element will reduce efficiency. It must be replaced.
- **Idle speed**: no adjustment is needed.

Exhaust gas monitoring system

The exhaust gas monitoring system will detect any operating faults in the vehicle’s antipollution system. If this system malfunctions, toxic substances may be released into the atmosphere or damage may occur.

This warning light on the instrument panel will indicate if there are any faults in the system:

- If it lights up continuously, consult an approved Dealer as soon as possible;
- if it flashes, reduce the engine speed until the light stops flashing. Contact an authorised dealer as soon as possible.
ENVIROMENT

Your vehicle has been designed with respect for the environment in mind for its entire service life: during production, use and at the end of its life. This commitment is illustrated by the Renault eco² signature.

Manufacture

Your vehicle has been manufactured at a factory which complies with a policy to reduce the environmental impact on the surrounding areas (reduction of water and energy consumption, visual and noise pollution, atmospheric emissions and waste water; sorting and reusing waste).

Emissions

Your vehicle has been designed to emit fewer greenhouse gases (CO2) while in use, and therefore to consume less fuel (eg. 140 g/km, equivalent to 5.3 l/100 km for a diesel vehicle).

Our vehicles are also equipped with a particle filter system including a catalytic converter, an oxygen sensor and an active carbon filter (the latter prevents vapour from the fuel tank being released into the open air).

For certain diesel vehicles, this system also has a particle filter to reduce the volume of soot particles emitted.

Please make your own contribution towards protecting the environment too

- Worn parts replaced in the course of routine vehicle maintenance (vehicle battery, oil filter, air filter, batteries, etc.) and oil containers (empty or filled with used oil) must be disposed of through specialist organisations.

- At the end of the vehicle’s service life, it should be sent to approved centres to ensure that it is recycled.

- In all cases, comply with local legislation.

Recycling

Your vehicle is 85% recyclable and 95% recoverable.

To achieve these objectives, many of the vehicle components have been designed to enable them to be recycled. The materials and structures have been carefully designed to allow these components to be easily removed and reprocessed by specialist companies.

In order to preserve raw material resources, this vehicle incorporates numerous parts made from recycled plastics or renewable materials (vegetable or animal-derived materials such as cotton or wool).
TYRE PRESSURE MONITORING SYSTEM (1/3)

If the vehicle is equipped with the function, this system monitors the tyre pressure.

Operating principle
Each wheel (except for the emergency spare wheel) has a sensor in the inflation valve which periodically measures the tyre pressure. The system displays the current pressures on the instrument panel 1 and alerts the driver in the event of insufficient pressure.

Resetting the standard level for the tyre pressures
This should be done:
– when the standard tyre pressure needs to be changed to adapt to usage conditions (empty, carrying a load, motorway driving, etc.);
– after swapping a wheel (however this practice is not recommended);
– after changing a wheel.

With the ignition on:
– make short presses on the control 2 to select the tyre pressure display (see “On-board Computer” in Section 1);
– press and hold (around 3 seconds) the button 2 to launch the reset. Flashing tyres followed by the message “Learning TP initiated” then “Tyres location in progress” means that the request to learn the reference pressures has been taken into account;
– reset can take several minutes of driving.

If the resetting is followed by short trips, the message “Tyres location in progress” can remain displayed after successive restarts.

Note: The standard tyre pressure cannot be less than that recommended and indicated on the door frame.

Resetting can also be done from the multifunction screen 3 if your vehicle is fitted with a navigation system. Select the menu “Vehicle”, “Tyre pressure”.

It should always be done after checking the tyre pressure of all four tyres when cold.
Tyre pressures must correspond to the current usage of the vehicle (empty, carrying a load, motorway driving, etc.).
TYRE PRESSURE MONITORING SYSTEM (2/3)

Display
The display 1 and the warning light 4 on the instrument panel warn you of any tyre pressure faults (flat tyre, punctured tyre, system fault, etc.).

“Puncture”
A wheel B shown red on the display 1, together with the warning light 4 and a beep indicates that the affected tyre is punctured or severely underinflated. Replace it or contact an authorised dealer if it is punctured. Top up the tyre pressure if the wheel is deflated. This message is accompanied by the warning light STOP.

“Check tyre pressure sensors”
A wheel A disappears from the display 1 along with the warning light and a flashing warning light 4 for approximately 1 minute before remaining lit. This appears when at least one wheel fitted on the vehicle does not have sensors (e.g. emergency spare wheel). Otherwise, consult an authorised dealer.

“Adjust tyre pressure”
A wheel B shown in orange on the display 1 together with the warning light 4 indicates a flat tyre. Check and, if necessary, readjust the pressures of the four wheels when cold.

While driving, warning light 4 goes out after a few minutes.

For your safety, the warning light STOP requires you to stop immediately as soon as traffic conditions allow.

The sudden loss of pressure in a tyre (burst tyre, etc.) cannot be detected by the system.
“Tyre location failure”
This message appears when driving if one or more wheels have been fitted with sensors not recognised.
Contact an authorised dealer.

Readjustment of tyre pressures
The tyre pressures should be adjusted when cold (please refer to the label located on the edge of the driver’s door). If the tyre pressures cannot be checked when the tyres are cold, the recommended pressures should be increased by 0.2 to 0.3 bar (3 PSI).

Never deflate a hot tyre.

Replacing wheels/tyres
This system requires specific equipment (wheels, tyres, hubcaps, etc.).
Contact an approved Dealer to fit new tyres and to find out about available accessories compatible with the system and available from your dealer network: the use of any other accessory could affect the correct operation of the system or damage a sensor.

Emergency spare wheel
If the vehicle is equipped with an emergency spare wheel, it will not have a sensor. When it is fitted to the vehicle, the message “Check tyre pressure sensors” is displayed on the instrument panel.

Tyre repair product and inflation kit
Because the valves are specially designed, only use equipment approved by the approved network.

This function is an additional driving aid. However, the function is not intended to replace the driver. It cannot, under any circumstances, replace the car or responsibility of the driver. Check the tyre pressure, including that of the emergency spare wheel, once a month.
DRIVING CORRECTION DEVICES AND AIDS (1/10)

Depending on the vehicle, they will consist of:

- **ABS** (anti-lock braking system);
- **ESC** (electronic stability control) with understeer control and traction control;
- emergency brake assist;
- advanced traction control;
- active emergency braking;
- hill start assistance.

ABS (anti-lock braking system)

Under heavy braking, the ABS prevents the wheels from locking, allowing the stopping distance to be managed and keeping control of the vehicle.

Under these circumstances, the vehicle can be steered to avoid an obstacle whilst braking. In addition, this system can increase stopping distances, particularly on roads with low surface grip (wet ground etc.).

You will feel a pulsation through the brake pedal each time the system is activated. The ABS does not in any way improve the vehicle's physical performance relating to the road surface and roadholding. It is still essential to follow the rules of good driving practice (such as driving at a safe distance from the vehicle in front etc.).

In an emergency, apply firm and continuous pressure to the brake pedal. There is no need to pump it repeatedly. The ABS will modulate the force applied in the braking system.

These functions are an additional aid in the event of critical driving conditions, enabling the vehicle behaviour to be adapted to suit the driving conditions.

However, the functions do not take the place of the driver. **They do not increase the vehicle’s limits and should not encourage you to drive more quickly.** Therefore, they can under no circumstances replace the vigilance or responsibility of the driver when manoeuvring the vehicle (the driver must always be ready for sudden incidents which may occur when driving).
Operating faults:

- and \(\text{ABS}\) lit up on the instrument panel alongside messages “Check ABS”, “Check braking system” and “Check ESC”: indicates the ABS, ESC and emergency brake assist are deactivated. **Braking is always enabled**;

- \(\text{ABS}\), \(\text{ESC}\) and \(\text{STOP}\) lit up on the instrument panel alongside the message “Braking system fault”: this indicates a fault in the braking system.

In both cases, consult an approved dealer.

**Warning light \(\text{STOP}\) requires you to stop immediately, for your own safety, as soon as traffic conditions allow. Switch off the engine and do not restart it. Contact an approved Dealer.**

**Your braking systems are partially operational. However, it is dangerous to brake suddenly and it is essential to stop immediately, as soon as traffic conditions allow. Contact an approved dealer.**
Electronic stability control ESC with understeer control and traction control

Electronic stability control ESC
This system helps you to keep control of the vehicle in critical driving conditions (avoiding an obstacle, loss of grip on a bend, etc.).

Operating principle
A sensor in the steering wheel detects the direction selected by the driver.
Other sensors throughout the vehicle measure the actual direction.
The system compares driver input to the actual trajectory of the vehicle and corrects the trajectory if necessary by controlling the braking of certain wheels and/or engine power. In the event that the system is engaged, indicator light \(\text{一闪一闪}\) flashes on the instrument panel.

Understeer control
This system optimises the action of the ESC in the case of pronounced understeer (loss of front axle road holding).

Traction control
This system helps to limit wheelspin of the drive wheels and to control the vehicle when pulling away accelerating or decelerating.

Operating principle
Using the wheel sensors, the system measures and compares the speed of the drive wheels at all times and slows down their over-rotation. If a wheel is starting to slip, the system brakes automatically until the drive supplied becomes compatible with the level of grip under the wheel again.
The system also adjusts the engine speed to the grip available under the wheels, independently of the pressure exerted on the accelerator pedal.

Operating faults
When the system detects an operating fault the message “Check ESC” and warning light \(\text{一闪一闪}\) and \(\text{一闪一闪}\) appear on the instrument panel.
In this case, the ESC and traction control system are deactivated. Consult an authorised dealer.
The traction control system offers additional safety. It is recommended that you do not drive with the function disabled. Correct this as soon as possible by pressing the switch 1 again. **Note:** The function is reactivated automatically when the ignition is switched on or when a speed of approximately 24 mph (40 km/h) is exceeded.

**Emergency brake assist**
This system supplements the ABS and helps reduce vehicle stopping distances.

**Operating principle**
The system detects an emergency braking situation. In this case, the braking assistance immediately develops maximum power and may trigger ABS regulation. ABS braking is maintained as long as the brake pedal is not released.

**Hazard warning lights illumination**
Depending on the vehicle, these may light up in the event of sudden deceleration.

These functions are an additional aid in the event of critical driving conditions, enabling the vehicle behaviour to be adapted to suit the driving conditions. However, the functions do not take the place of the driver. **They do not increase the vehicle’s limits and should not encourage you to drive more quickly.** Therefore, they can under no circumstances replace the vigilance or responsibility of the driver when manoeuvring the vehicle (the driver must always be ready for sudden incidents which may occur when driving).
Advanced traction control

If fitted on the vehicle, grip control makes it easier to control the vehicle on low grip surfaces (soft ground, etc.).

For your safety, please respect the speed limit.
When they need to be replaced, only tyres of the same make, size, type and profile should be used on a single axle.
**They must:** either have a load capacity and speed rating at least equal to those of the original tyres, or conform to those recommended by an authorised dealer.
Failure to heed these instructions could endanger your safety and affect your vehicle’s roadworthiness.

**Risk of loss of control of the vehicle.**

“Road” mode

When the vehicle is started up, the warning light on the selector comes on, along with the instrument panel message “Automatic mode on”. This position enables optimal usage under normal driving conditions (dryness, humidity, light snow, etc.).

“Road” mode uses traction control functions.

“Soft ground” mode

Turn the selector: the integrated warning light comes on, along with the instrument panel message “Non grip road mode on”. This position enables optimal usage on soft ground (mud, sand, dead leaves, etc.). “Soft ground” mode uses traction control functions. The system automatically switches to “Road” mode above around 25 mph (40 km/h), and the integrated warning light on the selector comes on.

“Expert” mode

Turn the selector: the integrated warning light comes on, along with the instrument panel message “Expert mode on”. This position enables optimum usage in extreme conditions (very snowy or muddy roads). The engine speed is left under the control of the driver.

The system automatically switches to “Road” mode above around 25 mph (40 km/h), and the integrated warning light on the selector comes on.
If the driver depresses the brake pedal and the system still detects a risk of collision, the brake force is increased. If the driver fails to react following an alert of an imminent collision, the system activates the brakes.

Active emergency braking
Using the sensor 3, the system calculates the distance separating the vehicle from the one in front and alerts the driver if there is a risk of a front-end collision. The driver can then brake the vehicle to limit the damage arising from a collision.

Note: Make sure that the sensor 3 is not obscured (by dirt, mud, snow, etc.).

Operation
While driving (at speeds of between 20 and 85 mph (30 and 140 km/h)), if there is a risk of collision with the vehicle in front, the warning light 4 will be displayed on the instrument panel in red, alongside a beep.

The system only detects vehicles driving in the same direction of traffic. The system cannot detect motorcycles because of the difficulty in forecasting their trajectory.
Actuating or deactivating the system

For vehicles fitted with a navigation system

From the multifunction screen 5, select menu “Vehicle”, “Driving assistance”, “Active braking” then choose “ON” or “OFF”.

For vehicle not fitted with a navigation system

– With the vehicle at a standstill, press and hold the switch 7 OK to access the settings menu,
– repeatedly press the control 8 up or down until you reach the “Driving assistance” menu. Press the switch 7 OK;
– repeatedly press control 8 up or down until you reach the “Active braking” menu, then press the switch 7 OK.

You can access menu “Driving assistance” directly from button 6.

Press the switch 7 OK again to activate or deactivate the function:

+ function activated
- function deactivated

The warning light ⚠️ is displayed on the instrument panel when the system is deactivated. This system is reactivated each time the ignition is switched on.

Conditions for non-activation of the system

The system cannot be activated:
– when the gear lever is in neutral;
– when the parking brake is activated;
– while cornering;
– When Electronic Stability Programme (ESC) with understeer and traction control are deactivated (please see “Electronic Stability Programme (ESC) with understeer and traction control” above).
Operating faults
When the system detects an operating fault, the warning light appears on the instrument panel along with the warning light and the message “Check Active braking”. Consult an approved dealer.

Active emergency braking
This function is an additional driving aid. However, this function is not under any circumstances intended to replace the due care and attention of the driver, who should at all times be in control of the vehicle.

System servicing/repairs
– In the event of an impact, the sensor alignment may become changed, and its operation will consequently be affected. Deactivate the function, then consult an authorised dealer.
– Any servicing on the bumper (replacement, repair, paint retouching, etc.) should be undertaken by a qualified professional.
– Fitting accessories which may block the radar is prohibited (bull-bars, etc.). Only an authorised dealer is qualified to service the system.

In the event of system disturbance
Some conditions can disturb or damage the operation of the system, such as:
– a complex environment (metal bridge, etc.);
– poor weather conditions (snow, hail, black ice, etc.).
Risk of inadvertent braking.
Active emergency braking

Limitation of the system operation
- The system will only respond to vehicles which are moving or which have been sensed as moving.
- A vehicle travelling in the opposite direction will not trigger any alert or any action on the system operation.
- The sensor area should be kept clean and free of any modifications in order to ensure the proper operation of the system.
- The system cannot respond to small vehicles such as motorbikes or bicycles as effectively as to other vehicles.

Deactivating the function
The function should be deactivated if:
- the brake lights are not functioning;
- the bumper has suffered an impact or damage;
- the vehicle is being towed (breakdowns).

Halting the function
You can halt the automatic braking function at any time by tapping the accelerator pedal or by turning the steering wheel in an evasive manoeuvre.

If the driver notices any unusual behaviour in the system, please consult an authorised dealer.
DRIVING CORRECTION DEVICES AND AIDS (10/10)

Hill start assistance
This function assists the driver when starting on hills. It prevents the vehicle from rolling backwards by automatically applying the brakes when the driver lifts his/her foot off the brake pedal to depress the accelerator pedal.

System operation
It only operates when the gear lever is in a position other than neutral (other than N or P for automatic transmissions) and the vehicle is completely stationary (brake pedal depressed). The system holds the vehicle for approximately 2 seconds. The brakes are then released (the vehicle will move according to the slope).

The hill start assistance system cannot completely prevent the vehicle from rolling backwards in all situations (extremely steep gradients, etc.). In all cases, the driver may depress the brake pedal to prevent the vehicle from rolling backwards. The hill start assistance function should not be used for prolonged stops: use the brake pedal. This function is not designed to immobilise the vehicle permanently. If necessary, use the brake pedal to stop the vehicle. The driver must remain particularly vigilant when driving on slippery or low-grip surfaces and/or on hills. Risk of serious injury.
Mode selector

Depending on the road conditions, turning the selector 1 enables the following modes to be selected:
- AUTO;
- 2WD;
- 4WD Lock.

“AUTO” mode

To activate this mode, turn selector 1 to the “AUTO” position.

Operating principle

“AUTO” mode automatically distributes the engine torque between the front and rear axles according to the road conditions and the vehicle speed. This position optimises roadholding. Use this mode on any type of road (dry, snow-covered, slippery, etc.) or when towing (trailer or caravan). This mode is not indicated on the instrument panel.

“2WD” mode

To activate this mode, turn the selector 1 to the “2WD” position. The warning light 2WD on the instrument panel will come on.

Operating principle

The “2WD” mode uses the front wheels only. Use this mode on dry roads with good grip.

To deactivate this mode, turn the selector 1 to the “AUTO” position. Warning light 2WD goes out on the instrument panel.

Remember that driving a vehicle off-road is very different to driving it on the road.

To make the most of your vehicle in an off-road situation, we recommend that you are trained to drive a 4x4 (4WD) vehicle.

The safety of both you and your passengers is your responsibility, and depends on your skill and the care you take when driving off-road.
"4WD Lock" mode
To activate this mode, turn selector 1 to the "4WD Lock" position. The selector returns to the "AUTO" position. The indicator light will light up on the instrument panel.

Operating principle
"4WD Lock" mode distributes the engine torque between the front and rear axles in order to optimise the performance capacity of the vehicle in off-road situations. This mode should only be used in extreme driving conditions (mud, steep slopes, sand).
To deactivate this mode, turn selector 1 to the "4WD Lock" position again. The indicator light on the instrument panel goes out. When the engine is switched off, the system stays in "4WD Lock" mode for one minute.

After one minute, the system switches to "2WD" or "AUTO" mode depending on the position of the selector.

Note: If the vehicle speed exceeds 36 mph (60 km/h) in 4WD Lock mode, the system automatically switches back to AUTO mode. The warning light goes out.

Special features of the 4-wheel drive transmission
The vehicle may make more noise when the "AUTO" or "4WD Lock" modes are activated. This is normal. If the system detects a difference in the dimensions of the front and rear wheels (eg. underinflation, severe wear on an axle), the system automatically switches to "2WD" mode.

The warning lights 2WD and  are displayed on the instrument panel. Drive as soon as possible at a moderate speed to an authorised dealer.

This problem may be resolved by changing the tyres. Always use four identical tyres (same brand, profile, etc.) and with similar wear.

In the event of excessive wheelspin, the mechanical components may overheat.
If this happens:

– at first, the warning light flashes. "4WD Lock" mode is still active – however we recommend that you stop as soon as possible to allow the system to cool down (until the warning light stops flashing);
– if the wheels still spin, the system automatically switches to "2WD" mode to protect the mechanical components.

The 2WD warning light flashes. The mode cannot be changed while the light is flashing.
TRANSMISSION: 4-wheel drive (4WD) (3/4)

After stopping the engine, the system may take up to five minutes to cool down.
If the system detects excessive wheel-spin on the front wheels, it adapts the engine to run in a way that reduces wheel-spin.

**Anti-lock braking in LOCK mode**
When “4WD Lock” mode is active, the ABS switches to off-road mode. In this case, the wheels may lock intermittently to achieve better grip, thus reducing braking distances on soft ground. When this mode is active:
- the vehicle’s manoeuvrability is limited during braking. This operating mode is therefore not recommended in very low-grip conditions (eg. ice).
- there may be some noise. This is normal, and does not indicate an operating fault.

**Electronic stability program and traction control when driving off-road**
When driving on soft ground (sand, mud, deep snow), we recommend that you deactivate the ESC function by pressing the “ESC” switch.
In this case, only individual wheel braking remains active. This function applies the brake to any wheel that is slipping, allowing the engine torque to be transferred to the wheels with the most grip. This is particularly useful when crossing a bridge.
All the ESC functions will be reactivated when the vehicle speed reaches approximately 30 mph (50 km/h) (36 mph (60 km/h) in 4WD Lock mode), when the engine is restarted or when the “ESC” switch is pressed again.

**Operating faults**
If the system detects an operating fault, it automatically switches to “2WD” mode, and the 2WD and ![2WD](image) warning lights come on.
Drive as soon as possible at a moderate speed to an approved dealer.
For certain operating faults, the system may not be able to switch to “2WD” or "4WD Lock" mode. "AUTO" mode remains active.
Contact an approved dealer as soon as possible.
All-wheel drive system

- Irrespective of the mode selected, do not start the engine if one or more wheels are not in contact with the ground (e.g. when the vehicle is on a jack or roller bench).
- Do not turn the mode selector when cornering, reversing or if the wheels are spinning excessively. Only select the “2WD”, “AUTO” or “4WD Lock” mode when the vehicle is being driven in a straight line.
- Only use tyres which meet the required specifications.
- “4WD Lock” mode is exclusively reserved for driving off-road. The use of this mode in any other conditions may adversely affect the vehicle’s manoeuvrability and damage its mechanical components.
- Always ensure tyres with identical specifications are fitted to all four wheels (brand, size, structure, wear etc.). Fitting tyres of different sizes to the front and rear wheels and/or left and right wheels may have serious consequences for the tyres, gearbox, transfer gearbox and the rear differential pinions.
LANE DEPARTURE WARNING (1/3)

This system notifies the driver when they accidentally cross a continuous or broken line. This function uses a camera attached to the windscreen, behind the rear-view mirror.

This function is a driving aid in the event of the accidental crossing of a continuous or broken line in the road. However, the function is not intended to replace the driver. The function can be disrupted under certain conditions, including:

- poor visibility (rain, snow, fog, dirty windscreen, glare of the sun, partially obscured road lines, etc.);
- roads with tight bends;
- closely following a vehicle in the same lane;
- worn road markings, difficult to distinguish or spaced very widely apart;
- narrow roads;
- ...

In this case, the line visibility indicators remain uncoloured on the instrument panel to indicate that the function will not operate (lines not detected).

Under no circumstances should this function replace the driver’s care or responsibility whilst performing manoeuvres.
LANE DEPARTURE WARNING (2/3)

Activation/deactivation

Vehicles fitted with a navigation system

From the multifunction screen 2: select “Vehicle”, “Driving assistance”, “Lane departure warning” then choose “ON” or “OFF”.

Vehicles not fitted with a navigation system

Press the switch 3.

Operation

With the function activated, the grey visibility indicators 4 for the left and right lines are displayed on the instrument panel.

The function is set to notify the driver if:
- the vehicle speed is greater than approximately 45 mph (70 km/h);
- lines are detected and the visibility indicators 4 are green.

The function triggers an alert if a line is crossed without the direction indicators being activated. The function alerts the driver through a beep and the indicator the line crossed switches to red on the instrument panel.
Adjustment

**Vehicles fitted with a navigation system**

From the multifunction screen 2, select “Vehicle”, “Driving assistance”, “Lane departure warning settings”.
- Volume: adjust the alert volume to one of five levels;
- sensitivity: adjust the sensitivity level for line detection. To do this select:
  - “Low” line detected upon crossing;
  - “Average” line detected on approach;
  - “high” line detected nearby.

**Vehicles not fitted with a navigation system**

- With the vehicle at a standstill, press and hold the switch 5 OK to access the settings menu;
- repeatedly press the control 6 up or down until you reach the “Driving assistance” menu. Press the switch 5 OK;
- Volume: adjust the alert volume to one of three levels;
- sensitivity: adjust the sensitivity level for line detection. To do this select:
  - “Low” line detected upon crossing;
  - “Average” line detected on approach;
  - “high” line detected nearby.

**Operating faults**

In the event of a malfunction, a message “Lane departure warning check” is displayed on the instrument panel, and the visibility indicators for the left and right lines disappear from the instrument panel.
Consult an approved dealer.
This system alerts the driver to other vehicles in the detection zone A.
The system is activated when the vehicle’s speed is between approximately 30 km/h (19 mph) and 140 km/h (87 mph).
This function uses sensors 1 installed in the front and rear bumper of both sides.

**Special feature**
Make sure that the sensors are not obscured (by dirt, mud, snow, etc.).
If a sensor is obscured, the message “Blind spot clean sensor” will appear on the instrument panel. Clean the sensors.

- **Special feature**
  - Make sure that the sensors are not obscured (by dirt, mud, snow, etc.).
  - If a sensor is obscured, the message “Blind spot clean sensor” will appear on the instrument panel. Clean the sensors.

- **Warning**
  - This function is an additional aid which indicates other vehicles in the blind spot area.
  - It can never in any case be a substitute for care nor for the driver’s responsibility while in charge of his vehicle.
  - The driver should always look out for sudden hazards during driving: make sure while manoeuvring that there are no moving or movable objects (such as a child, an animal, a pushchair or a bicycle) or small or narrow obstacles (such as a boulder or a post) in the blind spot area.
BLIND SPOT WARNING (2/4)

Activation/deactivation

Vehicles fitted with a navigation system

From the multifunction screen 3, select menu “Vehicle”, “Driving assistance”, “Blind spot alert” then choose “ON” or “OFF”.

Vehicles not fitted with a navigation system

– With the vehicle at a standstill, press and hold the switch 4 OK to access the settings menu;
– repeatedly press the control 5 up or down until you reach the “Driving assistance” menu. Press the switch 4 OK;

You can access menu “Driving assistance” directly from button 2.

When the engine is started, the system remembers its position when the ignition was last switched off.
BLIND SPOT WARNING (3/4)

Indicator 4
An indicator light 4 is located on each door mirror 5.
Note: Clean the door mirrors 5 regularly, so that the indicator lights 4 can be seen properly.

Operation
This function will indicate:
– when the vehicle speed is between approximately 30 km/h (19 mph) and 140 km/h (87 mph);
– when another vehicle is in the blind spot area and travelling in the same direction as your vehicle.

If another vehicle is being overtaken, the indicator 4 will be activated only if that vehicle remains in the blind spot for more than one second.

Display B
The function is activated and has not detected any vehicles.

Display C
Initial warning: the indicator light 4 shows that a vehicle has been detected in the blind spot.

Display D
When the direction indicator is activated, the indicator light 4 flashes when a vehicle is detected in the blind spot on the side towards which you are about to steer. If you cancel the direction indicator, the function will return to the initial warning (display C).

Note: The system’s detection range operates according to a standard lane width. If you are driving in narrow traffic lanes, it may detect vehicles in other lanes.
Operating faults

If the system detects a fault, the message “Check blind spot alert” is displayed on the instrument panel. Consult an authorised dealer.

Note: When the engine is started, the indicator light 4 (display B) flashes three times. It is normal.

Conditions for non-function

– If the object is not moving;
– if traffic is heavy;
– the road is winding;
– if front and rear sensors both detect objects at the same time (e.g. when passing an articulated lorry).
– ...

– The system’s detection range operates according to a standard lane width. If you are driving in wide traffic lanes, the system might not be able to detect a vehicle in the blind spot.
– The system might be disrupted momentarily if it is exposed to strong electromagnetic waves (as beneath high-tension power lines) or to very poor weather conditions (heavy rain, snow, etc.). Remain aware of driving conditions.

There is a risk of accidents.

Because sensors have been installed in the bumpers, any work (repairs, replacements, touching up of paintwork) must be carried out by a qualified professional.
The speed limiter function helps you stay within the driving speed limit that you choose, known as the limit speed.

Switching on
Press switch 1 on side 🟠. The indicator light 🟠 comes on, lit orange, and the message “Speed limiter” appears on the instrument panel, accompanied by dashes to indicate that the speed limiter function is activated and waiting to store a limited speed.
To store the current speed, press the switch 2 on side a (+): the limited speed will replace the dashes.
The minimum stored speed is 20 mph (30 km/h).

Controls
1 Main “On/Off” switch.
2 Controls for:
   a speed limiter activation, memory and increase (+);
   b decreasing the speed limiter (-).
3 Activation and recall of memorised limited speed (R).
4 Speed limiter function standby (with limited speed memory) (O).

If you wish, you can associate the speed limiter and the “Overspeed alert” function (please refer to the information on the “Overspeed alert” in Section 2).
Varying the limit speed
The speed limiter can be changed by repeatedly pressing the switch 2:
- side a (+) to increase the speed;
- side b (-) to reduce the speed.

Exceeding the limit speed
It is possible to exceed the limit speed at any time. To do this: press the accelerator pedal firmly and fully (beyond the resistance point).
While the speed is being exceeded, the speed limiter flashes red on the instrument panel.
Then, release the accelerator: the speed limiter function will return as soon as you reach a speed lower than the stored speed.

Limited speed cannot be maintained
If driving up or down a steep gradient, the system is unable to maintain the limited speed: the memorised speed flashes red on the instrument panel and a beep sounds at regular intervals to inform you.

Driving
When a limited speed has been stored and this speed is not reached, driving is similar to driving a vehicle without the speed limiter function.
Once you have reached the stored speed, no effort on the accelerator pedal will allow you to exceed the programmed speed except in an emergency (refer to information on “Exceeding the limit speed”).

The speed limiter function is in no way linked to the braking system.
Recalling the limit speed
If a speed has been saved, it can be re-called by pressing switch 3 ((R)).

Putting the function on standby
The speed limiter function is sus-pended when you press switch 4 (O). In this case, the speed limit remains stored and the message “Memorised” accompanied by this speed appears on the instrument panel.

Switching off the function
The speed limiter function is deacti-vated if you press switch 1: in this case a speed is no longer stored. The orange warning light and message on the instrument panel goes out to confirm that the function is deactivated.

When the speed limiter is put on standby, pressing side a (+) on the switch 2 reactivates the func-tion without taking into account the stored speed: it is the speed at which the vehicle is moving that is taken into account.
OVERSPEED ALERT (1/3)

The overspeed alert with signage panel recognition notifies the driver that they are exceeding the speed limit for the section of road on which they are currently travelling.

Operating principle
The system detects speed limit signs on the side of the road and displays the speed limit. This mainly uses information taken from the camera 1, attached to the windscreen behind the rear-view mirror.

Note: Make sure the windscreen is not obstructed (dirt, ice, snow, etc.).

With the engine running, once you have activated the system, dashes on the instrument panel notify the driver that the system is running.

When a speed limit sign is detected, this speed will replace the dashes for a few seconds, after which the dashes will come on again until the next speed limit sign is detected.

Once the speed limiter is activated, you can adjust the speed limiter indication displayed by the system.

In the event of exceeding the speed limit, the sign display is modified (the characters change to red or the circle around the sign flashes) to notify you.

Special situation
The system does not take into account exceptional speed limit measures, such as peak pollution days.
OVERSPEED ALERT (2/3)

Activating/deactivating the system

Vehicles fitted with a navigation system

From the multifunction screen 2, select menu “Vehicle”, “Driving assistance”, “Speed alert settings” then choose “ON” or “OFF”.

With the function activated and depending on local laws, you can activate the “increased vigilance zones”. The system will notify you of the distance separating you from this zone, and while you are travelling in the zone.

Vehicles not fitted with a navigation system

– With the vehicle at a standstill, press and hold the switch 5 OK to access the settings menu;
– repeatedly press the control 6 up or down until you reach the “Driving assistance” menu. Press the switch 5 OK;

Varying the limit speed

If the speed limiter notification differs from the detected speed value, press and hold the switch 4:
– side a (+) to increase the notification speed to the detected speed;
– side b (-) to reduce the notification speed to the detected speed.

You can access menu “Driving assistance” directly from button 3.
OVERSPEED ALERT (3/3)

Operating fault
The system cannot detect the speed limit if:
– the windscreen is not clean;
– the camera is blinded by the sun;
– there is insufficient visibility (night, fog, etc.);
– the signs are not legible (snow, etc.) or are hidden (by another vehicle or by trees).

This function is an additional driving aid. However, this function is not under any circumstances intended to replace the due care and attention of the driver, who should at all times be in control of the vehicle.

The driver should always adapt their speed to the traffic conditions, regardless of the system indications.

The system enables maximum speed signs to be detected and does not detect other traffic signage.

The driver should not, however, ignore signs which are not detected by the system and should as a priority comply with the traffic signage and the highway code.

In the event of poor visibility (fog, snow, frost, etc.), it is possible that the system may not indicate the correct speed to the driver.

The driver should always adapt their speed to the traffic conditions, regardless of the system indications.
The cruise control function helps you to maintain your driving speed at a speed that you choose, called the **cruising speed**.

This cruising speed may be set at any speed above 20 mph (30 km/h).

### Controls

1. **Main “On/Off” switch.**
2. Controls for:
   - **a** cruising speed activation, storage and increase (+);  
   - **b** decreasing cruising speed (-).
3. **Activation with recall of saved cruising speed (R).**
4. **Switch the function to standby (with cruising speed saved) (O).**

**Warning:**
This function is an additional driving aid. However, the function does not take the place of the driver. Therefore, it can under no circumstances replace the driver’s responsibility to respect speed limits and to be vigilant (the driver must always be ready to brake). Cruise control must not be used in heavy traffic, on undulating or slippery roads (black ice, aquaplaning, gravel) and during bad weather (fog, rain, side winds etc.).

There is a risk of accidents.
Cruise Control/Speed Limiter: Cruise Control Function (2/4)

Activating Cruise Control

At a steady speed (above approx. 20 mph (30 km/h)), press the switch 2 on side a (+): the function is activated and the current speed is saved.

The cruising speed replaces the dashes and cruise control is confirmed by the appearance of the message “Check cruise control” and the warning light.

If you try to activate the function below 20 mph (30 km/h), the message “Invalid speed” will be displayed and the function will remain inactive.

Switching on

Press switch 1 on side.

Indicator light comes on, lit green, and the message “Check cruise control” appears on the instrument panel, accompanied by dashes to indicate that the cruise control function is activated and waiting to store a cruising speed.

Driving

Once a cruising speed is memorised and the cruise control function is active, you may lift your foot off the accelerator pedal.

Please note that you are strongly advised to keep your feet close to the pedals in order to react in an emergency.
**Exceeding the cruising speed**

The cruising speed may be exceeded at any time by depressing the accelerator pedal. While overtaking, the cruising speed flashes red on the instrument panel.

Then, release the accelerator: after a few seconds, the vehicle will automatically return to its set cruising speed.

**Cruising speed cannot be maintained**

If driving up or down a steep gradient, the system is unable to maintain the cruising speed: the stored speed is flashes red on the instrument panel to inform you of this situation.

---

**Adjusting the cruising speed**

The cruising speed can be changed by pressing the switch 2 repeatedly:

- side a (+) to increase the speed;
- side b (-) to reduce the speed.

---

The cruise control function is in no way linked to the braking system.
CRUISE CONTROL/SPEED LIMITER: cruise control function (4/4)

Putting the function on standby

The function is set to standby if you:
– use the switch 4 (O);
– the brake pedal;
– depress the clutch pedal or the shift into neutral if the vehicle has an automatic gearbox.

In these three cases, the cruising speed remains stored and the message “Memorised” accompanied by this speed appears on the instrument panel. Standby is confirmed by the display of the cruising speed in grey and the message “Memorised”.

Returning to the cruising speed

If a speed is stored, it can be recalled, once you are sure that the road conditions are suitable (traffic, road surface, weather conditions, etc.). Press switch 3 (R) if the vehicle speed is above 20 mph (30 km/h).

When the stored speed is recalled, activation of the cruise control is confirmed by the illumination of the cruising speed in green, along with the message “Check cruise control”.

NB: if the speed previously stored is much higher than the current speed, the vehicle will accelerate more rapidly to reach this threshold.

Putting the cruise control on standby or switching it off does not cause a rapid reduction in speed: you must brake by depressing the brake pedal.

Switching off the function

The cruise control function is deactivated if you press switch 1: in this case a speed is no longer stored. The green warning light and message on the instrument panel goes out to confirm that the function is deactivated.

When the cruise control function is put on standby, pressing the switch 2 on side a (+) reactivates the cruise control function without taking into account the stored speed: it is the speed at which the vehicle is moving that is taken into account.
PARKING DISTANCE CONTROL (1/5)

Operating principle
Ultrasonic sensors in the rear bumper measure the distance between the vehicle and an obstacle.
This measurement is indicated by beeps which become more frequent the closer you come to the obstacle, until they become a continuous beep when the vehicle is approximately 20 to 30 centimetres from the obstacle.
The system detects obstacles to the front, the rear and the sides of the vehicle.
The parking distance control system is only activated when the vehicle is driven at a speed below approximately 6 mph (10 km/h).

Special features
Ensure that the ultrasonic sensors indicated by arrows 1 are not obscured (by dirt, mud, snow, etc.).

This function is an additional aid that indicates the distance between the vehicle and an obstacle whilst reversing, using sound signals.
Under no circumstances should it replace the driver’s care or responsibility whilst reversing.
The driver should always look out for sudden hazards during driving: always ensure that there are no moving obstacles (such as a child, animal, pram or bicycle, etc.) or small, narrow objects such as stones or posts in your path when manoeuvring.
Note: the display 2 shows the vehicle surroundings and emits beeps.

It is necessary to travel a few metres before the side detection is activated.

If all areas have a grey background, the whole area around the vehicle is being monitored:

- **A**: analysis of the vehicle surroundings in progress;
- **B**: analysis of the vehicle surroundings carried out

**Operation**

Most objects located less near the front, rear and sides of the vehicle are detected.

Depending on the distance of the obstacle, the frequency of the beep will be higher while approaching it, and will become a solid beep around 20 cm for obstacles to the sides, and 30 cm for obstacles to the front or rear. Green, orange and red zones will be displayed on the display **C**.
PARKING DISTANCE CONTROL (3/5)

Detection of obstacles to the side

Depending on the direction of the wheels, the system determines the trajectory of the vehicle and notifies the driver of any risk or otherwise of a collision with an obstacle \(3\) to the side of the vehicle.

If a side obstacle is detected:
- the beeps become faster and then sound continuously as the obstacle gets nearer. Green, orange and red zones will be displayed on the display \(D\);
- if there is no risk of collision, no beep will sound when approaching the obstacle. Green, orange and red zones will be displayed interspersed on the display \(D\).

**Note:** in the event of a change in trajectory during a manoeuvre, the risk of collision with an obstacles may be signalled late.

An impact to the underside of the vehicle while manoeuvring (e.g.: striking a post, raised kerb or other street furniture) may result in damage to the vehicle (e.g.: deformation of an axle).

To avoid any risk of accident, have your vehicle checked by an approved Dealer.
**PARKING DISTANCE CONTROL (4/5)**

**System sound**
Enables the system sound to be selected from a choice of 3.

**Deactivating the system sound**
Activate or deactivate the parking distance control sound.

**Note:** If you deactivate the sound, you will no longer be notified with beeps when approaching an obstacle.

**Deactivating the system**
Activate or deactivate parking distance control.

**Vehicles not fitted with a navigation system**
Vehicle stationary:
- press and hold the switch 5 OK to access the settings menu;
- repeatedly press the control 6 up or down until you reach the “Driving assistance” menu;
- press the switch 5 OK;
- repeatedly press the control 6 up or down until you reach the “Parking distance control settings” menu;

**Vehicles fitted with a navigation system**
Select “Vehicle”, “PARKING ASSIST”, “Obstacle detection”.

**Parking distance control audio volume**
Adjust the volume of the parking distance control by pressing + or -.

When the vehicle is being driven at a speed below approximately 6 mph (10 km/h), certain noises (motorcycle, lorry, pneumatic drill, etc.) may trigger the beeping sound of the parking distance control.
PARKING DISTANCE CONTROL (5/5)

Automatic deactivation of the parking distance control
The system deactivates:
– when the vehicle speed is above approximately 6 mph (10 km/h);
– depending on the model, when the vehicle is stationary for more than approximately 5 seconds and an obstacle is detected (such as when in a traffic jam, etc.);
– when the vehicle is in neutral for manual gearboxes, or in position N or P for automatic gearboxes.

Operating faults
When the system detects an operating fault, a beep sounds for approximately 3 seconds each time reverse gear is selected and is accompanied by the message “Check parking sensor” shown on the instrument panel. Please consult an authorised dealer.
REVERSING CAMERA (1/2)

Operation
Moving into reverse gear, the camera 1 located on the tailgate provides a view of the area behind the vehicle on the multimedia screen 2, accompanied by one or two moving or fixed guide lines 4 and 3.

This system is initially used with the aid of several gauges (mobile for trajectory and fixed for distance). When the red zone is reached, use the bumper image to stop accurately.

Fixed gauge 3
The fixed clearance gauge comprises coloured markers A, B and C, indicating the distance behind the vehicle:
- A (red) approximately 30 centimetres from the vehicle;
- B (yellow) approximately 70 centimetres from the vehicle;
- C (green) approximately 150 centimetres from the vehicle.

This gauge remains fixed and indicates the vehicle trajectory if the wheels are in line with the vehicle.

4 moving guide line:
This is shown in blue on the multifunction screen 2. It indicates the vehicle trajectory according to the position of the steering wheel.

Special feature
Make sure that the camera is not obscured (by dirt, mud, snow, etc.).
Activating, deactivating the reversing camera

From the multifunction screen 2, select “Vehicle”, “Settings”, “Parking assistance”, then “Rear view camera”. Activate or deactivate the reversing camera and confirm your choice.

You can also adjust the camera image settings (brightness, contrast, etc.)

The screen shows a reverse mirror image.

The frames are a representation projected onto flat ground; this information must not be taken into account when superimposed on a vertical object or an object on the ground.

Objects which appear on the edge of the screen may be deformed.

In very bright light (snow, vehicle in sunshine etc.), the camera vision may be adversely affected.

If the boot is open or poorly closed, the message “Boot open” appears and the camera display disappears.

This function is an additional aid. It cannot, therefore, under any circumstances replace the vigilance or the responsibility of the driver. The driver should always look out for sudden hazards during driving: always ensure that there are no moving obstacles (such as a child, animal, pram, bicycle, etc.) or small, narrow objects such as stones or posts in your path when manoeuvring.
ASSISTED PARKING (1/4)

This function assists with parking manoeuvres.
Take your hands off the steering wheel. You only control the pedals and the gear lever.
You can retake control at any time by operating the steering wheel.

Switching on
With the vehicle at a standstill or driving at less than 6 mph (10 km/h), press switch 1. The warning light integrated on switch 1 lights up and the 2 screen appears on the multifunction screen.

Special features
Ensure that the ultrasonic sensors indicated by arrows 3 are not obscured (by dirt, mud, snow, etc.).
ASSISTED PARKING (2/4)

Choice of manoeuvre
The system can perform four types of manoeuvres:
– parallel parking;
– perpendicular parking;
– angle parking;
– moving out of a parallel parking space.

From the multifunction screen, select the manoeuvre to be performed.

Note: When starting the vehicle, or after successfully completed parallel parking using the system, the default manoeuvre proposed by the system is assistance in exiting a parallel parking space. In other cases, the default manoeuvre can be set from the multifunction screen.

Operation

Parking
As long as the vehicle speed is less than 20 mph (30 km/h), the system looks for available parking spaces on both sides of the vehicle.

Once a space has been found, it is displayed on the multifunction screen, indicated by a small letter “P”. Drive slowly, with the indicators activated on the side of the space, until the message “Stop” is displayed, alongside a beep.

The space is then indicated on the multifunction screen by a capital “P”.

– Stop the vehicle;
– select reverse gear.

Warning light \[\text{P} \] lights up on the instrument panel, along with a beep.

– release the steering wheel;
– follow the system instructions provided on the multifunction screen.

Your speed should not exceed around 4 mph (7 km/h).

Once the warning light \[\text{P} \] on the instrument panel goes off and a beep sounds, the manoeuvre has been completed.
ASSISTED PARKING (3/4)

Exiting a parallel parking space
- Select “exit parallel parking space” mode;
- activate the direction indicator on the side you wish to go out of;
- press and hold switch 1 (around 2 seconds).

Warning light $\text{P}$ lights up on the instrument panel, along with a beep.
- release the steering wheel;
- go forwards and backwards using the parking distance control system alerts.

Your speed should not exceed around 4 mph (7 km/h).
Once in position to exit the space, the system will notify you of the end of the manoeuvre.

Once the warning light $\text{P}$ on the instrument panel goes off and a beep sounds, the manoeuvre has been completed.

Suspending the manoeuvre
The manoeuvre is suspended in the following circumstances:
- you take control of the wheel;
- a door or the boot is opened;
- the vehicle is at a standstill for too long;
- an obstacle in the direction of movement prevents the manoeuvre from being completed;
- the engine will stop.

Once the warning light $\text{P}$ on the instrument panel goes off and a beep sounds, the manoeuvre has been suspended. Then to resume the manoeuvre, press and hold the system activation switch.

In this case, the reason for suspending the manoeuvre will be displayed on the multifunction screen.

Make sure:
- you have released the steering wheel and;
- that all doors and the boot are closed, and;
- that no obstacles are in the way of the direction of movement, and;
- that the engine is started.

Canceling the manoeuvre
The manoeuvre can be stopped in the following cases:
- by pressing the system activation switch;
- the vehicle speed has exceeded 4 mph (7 km/h);
- You have performed more than ten forwards/backwards movements in one manoeuvre;
- the parking distance control sensors are dirty or blocked;
- the vehicle wheels have skidded.

Once the warning light $\text{P}$ on the instrument panel goes off and a beep sounds, the manoeuvre has been ended.
This function is an additional driving aid. However, this function is not under any circumstances intended to replace the due care and attention of the driver, who should at all times be in control of the vehicle.

Make sure that the manoeuvre complies with the applicable traffic regulations at your location.

- The driver should always look out for sudden hazards during driving: always ensure that there are no moving obstacles (such as a child, animal, pram, bicycle, etc.) or small, narrow objects such as stones or posts in your path when manoeuvring.
- The system cannot detect objects located in the sensor blind spots.
- During manoeuvring, the steering wheel may turn quickly: do not place your hands inside the wheel, and ensure nothing is located in this space.
- Always visually check that the parking space proposed by the system is still available and contains no obstacles.
- The system should be deactivated when towing a trailer.
Selector lever 1
P: park
R: reverse
N: Neutral
D: automatic mode
M: manual mode

Note: Press the button 2 to go from position D or N to R or P.

Selector lever 2
3: displays the gear engaged in manual mode.

Operation
With the selection lever 1 in position P, switch on the ignition.

To move out of position P, you must depress the brake pedal before pressing the unlocking button 2.

With the foot on the brake pedal (the warning light on the display goes out), move the lever out of position P.

Only engage D or R when the vehicle is stopped, with your foot on the brake and the accelerator pedal released.

Driving in automatic mode
Move lever 1 to position D.

In most road conditions you will encounter, you will not need to touch your lever again: the gears will change automatically at the right time and at the most suitable engine speed because the automatic system takes into account the vehicle load and road contour and adjusts itself to the particular driving style you have chosen.

Economical driving
When driving, always leave the lever in position D, keeping the accelerator pedal lightly depressed to ensure automatic gear changes at a lower engine speed.

Accelerating and overtaking
Depress the accelerator pedal firmly and fully (so that it goes beyond the kickdown point).

This will enable you to change down to the optimum gear within the engine range.
AUTOMATIC TRANSMISSION (2/3)

Special cases
In certain driving conditions (for example, engine protection, operation of the Electronic Stability Programme: the automatic system may change gear automatically. Likewise, to prevent incorrect manoeuvres, a gear change may be refused by the automatic system: in this case the gear display flashes for a few seconds as a warning.

Special circumstances
- If the bends and road surface do not allow you to stay in automatic mode (e.g. in the mountains), we recommend that you change to manual mode. This will prevent the automatic gearbox from changing gear repeatedly when climbing, and permit engine braking on long descents.
- In cold weather, start the engine and wait a few seconds before moving the selector lever from position P or N and engaging it in D or R to prevent the engine stalling.

When facing uphill, to remain stopped, do not keep your foot on the accelerator.
Risk of overheating the automatic gearbox.

Driving in manual mode
With the selection lever 1 in position D, move the lever to the left.
Shifting the lever repeatedly allows you to change gears manually:
- to move down through the gears, push the lever forwards;
- to move up through the gears, push the lever backwards.
The gear selected is displayed on the instrument panel.
AUTOMATIC TRANSMISSION (3/3)

Parking the vehicle
When the vehicle is stopped, move the lever to position P while keeping your foot on the brake pedal: the gearbox is in neutral and the drive wheels are mechanically locked by the driveshaft. Apply the handbrake.

Operating faults
– when driving, if the ‘check gearbox’ message appears on the instrument panel, it indicates a fault.
   Contact your approved Dealer as soon as possible;
– when driving, if the message “Gearbox overheating” appears on the instrument panel, stop as soon as possible to let the gearbox cool down and wait for the message to disappear;
– If a vehicle with an automatic gearbox breaks down, refer to the information on “Towing” in Section 5.

When setting off, if the lever is locked in position P even though you are pressing the brake pedal, the lever can be released manually. To do this, insert a tool (with a hard rod) into the slot 4 to unlock the lever.

Contact an authorised dealer as soon as possible.

An impact to the underside of the vehicle while manoeuvring (e.g.: striking a post, raised kerb or other street furniture) may result in damage to the vehicle (e.g.: deformation of an axle).

To avoid any risk of accident, have your vehicle checked by an approved Dealer.

For safety reasons, do not switch off the ignition before the vehicle has come to a complete standstill.
Section 3: Your comfort

Air vents ............................................................... 3.2
Manual air conditioning and heating system ........................................... 3.4
Automatic climate control ...................................................................... 3.7

AIR VENTS, air outlets (1/2)

1 left-hand air vent
2 windscreen demisting vents
3 centre air vents
4 side window demister outlets
5 right-hand air vent
6 multifunction screen
7 footwell heater outlets for front passengers
8 footwell heater outlets for rear passengers (depending on the vehicle)
AIR VENTS, air outlets (2/2)

Centre air vents.

Air flow
Move the control knob 10 (beyond the resistance point).
Upwards: closed.
Down: maximum air flow.

Direction
Move the cursors 9 to the desired position.

Side air vents

Air flow
Move the control knob 11 (beyond the resistance point).
Upwards: closed.
Down: maximum air flow.

Direction
Move the cursors 12 to the desired position.

Do not add anything to the vehicle’s ventilation circuit (for example, to remove bad odours).
There is a risk of damage or of fire.
The controls

1 Adjusting the air temperature.
2 Air recirculation.
3 “Clear View” function.
4 Adjusting the ventilation speed.
5 Stopping the system.
6 De-icing/demisting of the rear screen and, depending on the vehicle, the door mirrors.
7 Air conditioning.
8 Adjusting air distribution in the passenger compartment.

Indicators

A Air temperature.
B Air recirculation.
C Fan speed.
D Distribution of air in the passenger compartment.

Switching air conditioning on or off
The air conditioning is switched on (indicator light on) or off (indicator light off) using the button 7.

The air conditioning system is used for:
– lowering the temperature inside the passenger compartment;
– eliminating condensation more quickly.

Clear View function
Press button 3 – the integrated indicator light comes on.
This function quickly demists and de-ices the windscreen, the rear screen, the front side windows, and the door mirrors (depending on the vehicle). The air conditioning and rear screen de-icing functions must be activated.
Press button 6 to stop the heated rear screen operating, and the integrated indicator goes out.
To exit this function, press button 3 again.
**MANUAL AIR CONDITIONING (2/3)**

**Distribution of air in the passenger compartment**

There are five air distribution options. Turn control 8 to choose the distribution option.

The air distribution is displayed on the indicator D.

- The air flow is directed to the windscreen and the front side window demisting vents.
- The air flow is distributed between all the air vents, the front side window demisting vents, the windscreen demisting vents and the footwells.
- The air flow is directed mainly towards the footwells.
- All the air flow is directed to the dashboard vents.

**Switching the air recirculation on**

Press the button 2: the warning light B comes on. In these conditions, air is taken from the passenger compartment and is recycled, with no air being taken from outside the vehicle.

**Air recirculation is for:**

- isolating the vehicle from the external atmosphere (driving in polluted areas, etc.);
- lowering the passenger compartment temperature as quickly as possible.

Prolonged use of air recirculation can lead to condensation forming on the side windows and windscreen, and discomfort due to the use of non-renewed air in the passenger compartment. We therefore advise you to return to normal mode (external air) as soon as the air recirculation function is no longer required, by pressing the button 6 again.
Varying the ventilation speed
You can adjust the fan speed by pressing the buttons 4 to increase or reduce the fan speed. The fan speed is displayed on the indicator C. The system is stopped (OFF): the ventilation speed is zero (vehicle stationary). You can, however, still feel a slight flow of air when the vehicle is moving.

Adjusting the air temperature
Turn the control 1 to obtain the desired temperature. The more bars displayed A, the higher the temperature. When the air conditioning system is used for long periods, it may begin to feel cold. To increase the temperature, turn control 1 to the right. The air temperature is displayed on the indicator A.

Rear screen de-icing/demisting
With the engine running, press button 6. The operating tell-tale comes on. This function permits rapid demisting/de-icing of the rear screen and de-icing of the door mirrors (on equipped vehicles).
To exit this function, press button 6 again. Demisting automatically stops.

Stopping the system
To stop the system, press the button 5 OFF (the integrated warning light comes on).

The de-icing function cannot be used with the air recirculation mode to avoid any risk of condensation forming on the windscreen and triggers the air conditioning to come on. The integrated light in button 7 does not come on.
AUTOMATIC CLIMATE CONTROL (1/6)

Automatic mode
The automatic climate control system guarantees comfort in the passenger compartment and good visibility (except in the event of extreme conditions), while optimising consumption. The system controls the ventilation speed, air distribution, air recirculation, and starting and stopping the air conditioning and air temperature.

AUTO: allows the selected comfort level to be best attained, depending on the exterior conditions. Press button 7. The integrated indicator light on button 7 comes on.

The controls
1 Stopping the system or, depending on the vehicle, de-icing/demisting the windscreen.
2 and 10 air temperature.
3 “Clear View” function.
4 and 5 Passenger compartment air distribution.
6 Fan speed and, depending on the ventilation, stopping the system.
7 Automatic programme.
8 Air conditioning.
9 Air recirculation.
11 De-icing/demisting of the rear screen and, depending on the vehicle, the door mirrors.
12 DUAL function

Indicators
A Left-hand side air temperature.
B Distribution of air.
C Fan speed.
D Automatic air recirculation warning light.
E Right-hand side air temperature.

Varying the ventilation speed
In automatic mode, the system uses the most suitable amount of air to reach and maintain the desired comfort level. You can still adjust the fan speed by pressing the buttons 6 to increase or reduce the fan speed. In this case, the fan speed, which is no longer controlled automatically, appears on the indicator C.
AUTOMATIC CLIMATE CONTROL (2/6)

Temperature adjustment
There are two types of settings:
– uniform passenger compartment setting;
– adjustment in DUAL function to independently adjust the left and/or right-hand side of the passenger compartment.

Uniform passenger compartment setting
Use control 2.

DUAL function setting
Press button 12 to activate.
Use the control 2 to adjust the left side and control 10 for the right side.

The displayed temperature values show a comfort level. When starting the engine, increasing or decreasing the value displayed will not allow the comfort level to be reached any more quickly. The system will always optimise the temperature increase or decrease (the ventilation system does not start instantly at maximum speed: it gradually increases). This may take several minutes. Generally speaking, unless there is a particular reason not to, the dashboard air vents should remain open.
Switching air conditioning on or off
In automatic mode, the system switches the air conditioning system on or off, depending on the climate conditions.

Press the switch 8 to force activation (the integrated warning light comes on) or stop the air conditioning (the integrated warning light goes out).

Preferably, use automatic mode.
In automatic mode (warning light 7 is on), all climate control functions are controlled by the system.

You can always modify the choice of system; in this case, the warning light in the button 7 goes out.

To return to automatic mode, press programme AUTO.

Vehicles fitted with the ECO mode (button 13): Once activated, the ECO mode may reduce the effective performance of the air conditioning. Please refer to the information on “Eco-driving” in Section 2.
Clear View function

This function quickly demists and de-ices the windscreen, the rear screen, the front side windows, and the door mirrors (depending on the vehicle). The air conditioning and rear screen de-icing functions must be activated.

Press button 3 – the integrated indicator light comes on.

To stop the operation of the rear screen, press the de-icer button 11. The integrated warning light will go out.

You can change the fan speed: press the button 6.

To exit this function, press button 3 again.

Adjusting the distribution of air in the passenger compartment

There are five air distribution options. Press switches 4 and 5 to scroll through them. The arrows located on the indicator B combine to show you the distribution selected:

- All the air is then directed to the windscreen and front side window demisting vents.
- The air flow is distributed between front side window demisting vents, the windscreen demisting vents and the footwells.
- The air flow is directed mainly towards the footwells.
- All the air flow is directed to the dashboard vents.

Some buttons have an operating tell-tale which indicates the operating status.
De-icing or demisting the windscreen  
(depending on the vehicle)

With the engine running, press the button 1 – the integrated indicator will come on.
This function enables quick electric de-icing/demisting.

Rear screen de-icing/ demisting

Press button 11 – the integrated indicator light comes on. This function enables rapid demisting or de-icing of the rear screen and de-icing of the door mirrors (on equipped vehicles).
To exit this function, press button 11 again. Demisting automatically stops.
AUTOMATIC CLIMATE CONTROL (6/6)

Recycling
This function is managed automatically (operation is confirmed by warning light $D$), but you can also activate it manually.

**Note:**
- during recirculation, air is taken from the passenger compartment and is recycled, with no air being taken from outside the vehicle;
- air recirculation allows the external atmosphere to be cut off (when driving in polluted areas, etc.);
- lowering the passenger compartment temperature as quickly as possible.

Manual use
Pressing the button $9$ allows air recirculation to be forced. In this case, the integrated warning light comes on and the indicator $D$ goes out.

Prolonged use of this position may lead to odours, caused by non-renewal of air, and the formation of condensation on the windows.

We therefore advise you to return to automatic mode as soon as air recirculation is no longer needed, by pressing button $9$.

Stopping the system
To stop the system, press the button $1$ OFF (the integrated warning light comes on) or, depending on the vehicle, reduce the fan speed down to a minimum by pressing the button $6$ marked by OFF as many times as is necessary.

To start, press the switch $7$.

The demisting/de-icing will still take priority over the air recirculation.
AIR CONDITIONING: information and advice on use

Advice on use
In some situations, (air conditioning off, air recirculation activated, ventilation speed at zero or low, etc.) you may notice that condensation starts to form on the windows and windscreen.

If there is condensation, use the “Clear View” function to remove it, then use the air conditioning in automatic mode to stop it forming again.

Maintenance
Refer to the Maintenance Document for your vehicle for the inspection frequency.

Fuel consumption
You will normally notice an increase in fuel consumption (especially in town) when the air conditioning is operating.

For vehicles fitted with air conditioning with no automatic mode, switch off the system when it is not required.

Advice for reducing consumption and helping to preserve the environment
Drive with the air vents open and the windows closed.

If the vehicle has been parked in the sun, open the doors for a few moments to let the hot air escape before starting the engine.

Operating faults
As a general rule, contact your approved dealer in the event of an operating fault.

– Reduction in de-icing, demisting or air conditioning performance.
  This may be caused by the passenger compartment filter cartridge becoming clogged.

– No cold air is being produced.
  Check that the controls are set correctly and that the fuses are sound. Otherwise, switch off the system.

Presence of water under the vehicle
After prolonged use of the air conditioning system, it is normal for water to be present under the vehicle. This is caused by condensation.

Do not add anything to the vehicle’s ventilation circuit (for example, to remove bad odours).

There is a risk of damage or of fire.

Do not open the refrigerant fluid circuit. The fluid may damage eyes or skin.
OUTSIDE AIR QUALITY AND DEODORISATION FUNCTION

With the air conditioning switched on, from the screen A, select Menu, Vehicle, Take care.

Outside air quality
The air quality is given using a graph on the multifunction screen.
Three colours indicate the air quality level (from the cleanest to the most polluted):
1 (blue)
2 (light grey)
3 (grey)

Deodorisation function
This reduces unpleasant odours in the passenger compartment.

Deodorization cycle
– ON: helps to reduce the unpleasant odour more quickly in the passenger compartment,
– OFF: stop the function.

Note:
The function is on a timer. It stops automatically after a few minutes.

Please refer to the multimedia instructions for further information.
ELECTRIC WINDOWS (1/2)

These systems operate with the ignition switched on.

![Image](205x232 to 362x388)

Press or pull the switch to raise or lower a window to the desired height (the rear windows do not open fully);

From the driver’s seat, use switch:
- 1 for the driver’s side;
- 3 for the front passenger side;
- 4 and 5 for the rear passengers.

From the passenger seats, use switch 6.

Avoid resting any objects against a half-open window: there is a risk that the electric window could be damaged.

![Image](383x232 to 539x388)

Passenger safety
The driver can prevent the front and rear passenger electric windows from operating (and the driver’s window) by pressing switch 2. A confirmation message is displayed on the instrument panel.

Driver’s responsibility
Never leave your vehicle with the RENAULT card or key inside, and never leave a child (or a pet) unsupervised, even for a short while. They may pose a risk to themselves or to others by starting the engine, activating equipment such as the electric windows or by locking the doors. If a body part gets trapped, reverse the direction of travel of the window as soon as possible by pressing the relevant switch.

Risk of serious injury.
ELECTRIC WINDOWS (2/2)/FIXED SUNROOF

One-touch mode
Depending on the vehicle, this mode works in addition to the operation of the electric windows described previously. It is only fitted to the driver’s window. Briefly press or pull switch 1 fully: the window is fully lowered or raised. Pressing the switch again stops the window moving.

NB: if the driver’s window detects resistance when closing (e.g.: fingers, branch of a tree, etc.), it stops and then lowers again by a few centimetres.

Operating faults
In case of a fault when closing a window, the system reverts to normal mode: pull the switch concerned up as often as necessary to fully close the window (the window will close gradually), hold the switch (still on the closure side) for one second then lower and raise the window fully to reinitialise the system.
If necessary, contact your authorised dealer.

Fixed glass roof

Opening the blind
Pull the switch 7 and put it to the desired position.

Closing the blind
Push the switch 7 and put it to the desired position.

Automatic operation
Quickly pull or push the switch 7 as far as it will go: the blind closes or opens fully. Using the switch stops the blind function in place.

Closing windows can cause serious injury.
INTERIOR LIGHTING

Map reading lights
Press switch 1 to get:
- permanent lighting;
- immediate switching off.

When the doors or boot are unlocked and opened, the reading and footwell lights come on temporarily.

Note: For vehicles fitted with a navigation system, you can use the multifunction screen to deactivate/activate the courtesy lights which come on when the doors or boot are opened. To do this, please refer to “Vehicle settings customisation menu” in Section 1.

With the doors properly shut, locking or starting the engine makes the interior lights and the courtesy lights go out.

Boot lights
Light 2 comes on when the boot is opened.
Front door storage pockets 1
They can hold a 0.5-litre bottle.

Front sun visor
Lower sun visor 2.

Sun visor storage 3
This can be used for storing motorway tickets, cards, etc.

Courtesy mirrors
Lift the cover 4.

Ensure that no hard, heavy or pointed objects are placed in the “open” storage compartments in such a way that they may fall onto passengers during sudden turning, braking or in the event of an accident.

When driving, ensure the courtesy mirror cover is closed. Risk of injury.

Nothing should be placed on the floor area in front of the driver as such objects may slide under the pedal during braking manoeuvres, thus obstructing its use.
Cup holders 6
This can be used for storing a mobile ashtray, cup holder, etc.
This storage compartment has a removable carpet for easy cleaning.

When turning corners, accelerating or braking, ensure that the receptacle being held by the cup holder is not dislodged.
There is a risk of injury if hot liquid escapes.

Storage compartment under the front central armrest A
(depending on the vehicle)
Lift the control 8 and raise the armrest 7.

Front centre armrest storage compartment B
Lift the control 9 and raise the armrest 7.
Glovebox
To open the glovebox, lift the catch 10.

Grab handle 11
This offers support and can be held when the vehicle is being driven. Do not use it for getting into or out of the vehicle.

Clothes hooks 12
PASSENGER COMPARTMENT STORAGE, FITTINGS (4/5)

Storage 13
Can hold loose change, etc.

Front seat storage pockets 14

Rear centre console storage compartments 15
Ensure that no hard, heavy or pointed objects are placed in the “open” storage compartments in such a way that they may fall onto passengers during sudden turning, braking or in the event of an accident.

When turning corners, accelerating or braking, ensure that the receptacle being held by the cup holder is not dislodged. There is a risk of injury if hot liquid escapes.
Ashtray 1
To open, lift the cover. To empty, pull the ashtray towards you and it will be released from its housing.

Accessories sockets 2
They are designed for connecting accessories with a maximum power rating of 120 Watts (voltage: 12V) which have been approved by our Technical Department.

If your vehicle is not fitted with a cigar lighter and an ashtray, these can be obtained from an approved Dealer.

Connect accessories with a maximum power of 120 Watts only.

Fire hazard.
Position for use
Raise the headrest as far as possible to use it in the high position. Check that it is correctly locked.

Storage position
Press button A and lower the headrest completely.
When the headrest is set at the lowest position, this is for storage only. It should not be in this position when a seat is occupied.

To raise the headrest
Raise the headrest as far as it will go, then press button A and remove the headrest.

To refit the headrest
Insert the rods in the holes, press the button A and lower the headrest. Check that it is correctly locked in place.

The headrest is a safety component; check that it is fitted and in the correct position. The top of the headrest should be as close as possible to the top of the head.
To manually fold down the seatbacks

Ensure that the front seats are far enough forward.
Lower the headrests fully.
Pull the control 1 and lower the seatback A.

For safety reasons, carry out any adjustments when the vehicle is not being driven.

To replace the seatback, proceed in the reverse order to removal.
Refit the seatback and click it back into place.

The configuration of the two-seat bench with the small seatback B pulled down, does not allow the central seat to be used as it would be impossible to buckle the seat belt (belt buckles inaccessible).

When refitting the seatback, make sure it is correctly locked in place.
If seat covers are fitted, make sure these do not prevent the seatback latch from locking in.
Make sure that the seat belts are positioned correctly.
Reposition the headrests.

When moving the rear seats, ensure that nothing obstructs the anchorage points (passenger’s arm or leg, a pet, gravel, cloth, toys, etc.).
To automatically fold down the seatbacks (flat position)

From the boot, pulling the control 2 enables you to automatically unlock the rear bench seatbacks to get a flat floor.

Conditions of use
- Vehicle stationary;
- Boot lid open;
- Rear seat belts unlocked.

Operating fault
If all user conditions have been fulfilled and the folding action still fails to operate, please contact an authorised dealer.

Use restriction
It is forbidden to drive with a seatback or a front seat folded down when there is a passenger occupying a rear seat.

For safety reasons, carry out any adjustments when the vehicle is not being driven.

When moving the rear seats, ensure that nothing obstructs the anchorage points (passenger’s arm or leg, a pet, gravel, cloth, toys, etc.).
BOOT

To open
Press button 1 and lift the tailgate.

To close
Lower the tailgate using the handles 2 inside the tailgate to help you.

Opening the doors manually from the inside
If it is impossible to unlock the tailgate, it can be done manually from inside:

– access the luggage compartment by tilting the rear bench seatback(s),
– insert a pencil or similar object in recess 3 and slide the unit as shown in the illustration;
– push the tailgate to open it.
To remove the flexible section of the luggage cover
Pull handle 1 gently to release the pins from their mounting points located on each side of the boot.
Guide the luggage cover onto the roller 2.

Removing the luggage cover
Swivel the ends of the luggage cover 2, press the side 3 (movement A), release the opposite side from its housing, then remove the whole cover.

Refitting the luggage compartment cover
Position the side 3 of the luggage compartment cover in its housing, press the side 3 and position the opposite side into its housing.

Do not place any heavy or solid objects on the luggage cover. These may pose a risk to the vehicle occupants if the driver has to brake suddenly or if the vehicle is involved in an accident.

Luggage compartment cover storage
Version without emergency spare wheel
Lift the false floor 4, then position the luggage cover roller 2. Attach it using the elastic cords 5 on each side of the boot.
3.29

BOOT FITTINGS (1/2)

Mobile floor 1
(depending on the vehicle)
It is made up of two independent and interchangeable parts, A and B. The smooth side is easy to clean.

Flat position
It allows you to have a flat floor by folding down the back of the rear bench seat.
The mobile floor is positioned on supports 3.

Intermediate position
This enables you to compartmentalise the boot into two separate spaces.
- Remove the part B of the mobile floor;
- place it in the boot using the runners provided 2.

Storage position
This allows for more space to store things in the boot.
- remove both sections of the mobile floor 1;
- place them in boot under the supports 3.

Maximum load allowed on the mobile floor when flat: 50 kg evenly distributed.
Bag hooks 4
Maximum weight per hook: 5 kg.

Anchorage points
Attachment points 5

If your vehicle is not equipped with anchorage points, you can get them from an authorised dealer.
Always position the heaviest items directly on the floor. Use the lashing points 1 on the boot floor, if these are fitted to the vehicle. The luggage should be loaded in such a way that no items will be thrown forward and strike the occupants if the driver has to brake suddenly. Fasten the rear seat belts, even if the seats are not occupied.

TRANSPORTING OBJECTS IN THE LUGGAGE COMPARTMENT

Always position the objects transported so that the largest surface is against:

– The rear bench seatback for normal loads (example A).

– The front seatbacks with the rear seatbacks folded down, the mobile floor in the flat-floor position (example B).

– The front seatbacks with the rear seatbacks folded down, the mobile floor in the stored-away position, as is the case for maximum loads (example C).

If you have to place objects on the folded seatback, it is necessary that you lower the headrests before folding the seatback so that it can be folded as flat as possible against the seat.
Permissible nose weight, maximum permissible towing weight, braked and unbraked: refer to the information on “Weights” in Section 6.

For fitting and conditions of use, refer to the equipment’s fitting instructions.

Please keep these instructions with the rest of the vehicle documentation.

If the towbar ball obscures the registration plate or the rear fog lights, it should be removed when not in use.

In all cases, comply with local legislation.

Maximum dimension A: 1029 mm.
Accessing the mounting points

Vehicles fitted with longitudinal roof bars
The attachment inserts 2 are located on the longitudinal roof bars 1.

Vehicles not fitted with longitudinal roof bars
Open the doors to access the fixing points 3.

If original roof bars, approved by our Technical Department, are supplied with screws, only use these screws for attaching the roof bars to the vehicle.
ROOF BARS (2/2)/SPOILER

Precautions during use

Handling the tailgate

Before handling the tailgate, check the objects and/or accessories (bike rack, roof box, etc.) fitted to the roof bars: these must be correctly positioned and secured, so as not to hinder the operation of the tailgate.

For information on the range of equipment adapted to your vehicle, we advise you to consult an approved Dealer.

Refer to the fitting instructions for information on how to fit roof bars and conditions of use.

Please keep these instructions with the rest of the vehicle documentation.

Maximum permissible load on roof rack: refer to the information on “Weights” in Section 6.

It is forbidden to fix objects and/or accessories (bike racks, etc.) to the spoiler.
MULTIMEDIA EQUIPMENT

Multimedia systems
1 Multimedia touchscreen;
2 Multimedia sockets;
3 Steering column controls;
4 Steering wheel controls;
5 Microphone.

Hands-free telephone integrated control
For equipped vehicles, use the steering wheel controls 4.

Using the telephone
We remind you of the need to conform to the legislation in force concerning the use of such equipment.

Refer to the equipment instructions for information on how to operate this equipment.
Section 4: Maintenance

Bonnet ................................................................. 4.2
Engine oil level: general information ........................................ 4.4
Engine oil level: topping up, filling ........................................ 4.5
Engine oil change ...................................................... 4.6
Levels ................................................................. 4.7
  engine coolant ...................................................... 4.7
  brake fluid ......................................................... 4.8
  windscreen washer reservoir ......................................... 4.9
Filters ................................................................. 4.9
Tyre pressures ......................................................... 4.10
Battery ............................................................... 4.12
Bodywork maintenance .................................................. 4.14
Interior trim maintenance ................................................ 4.16
4.2

To open, press the control 1.

Unlocking the bonnet catch
To open, raise the bonnet slightly, then lift the paddle 2 at the centre point of the bonnet.

Opening the bonnet
Lift the bonnet up and release the stay 4 from its holder 5. For your own safety, it is very important to fit the stay into its retainer 3.

Before performing any action in the engine compartment, the ignition must be switched off by pressing the engine stop button (please see the information on “Starting, stopping the engine” in Section 2).

When working in the engine compartment, ensure that the windscreen wiper stalk is in the park position.
Risk of injury.

The engine may be hot when carrying out operations in close proximity. In addition, the engine cooling fan can come on at any moment.
Risk of injury.
Closing the bonnet

Before closing the bonnet, make sure that nothing has been left in the engine compartment.

To close the bonnet, replace the stay 4 in its holder 5. Hold the middle of the bonnet and guide it down to one foot (30 cm) above the closed position, then release. It will latch automatically under its own weight.

- After carrying out any work in the engine compartment, check that nothing has been left behind (cloth, tools, etc.). These may damage the engine or cause a fire.

- Ensure that the bonnet is properly locked. Check that nothing is preventing the catch from locking (gravel, cloth, etc.).

- In the event of even a slight impact involving the radiator grille or bonnet, have the bonnet lock checked by an approved dealer as soon as possible.
ENGINE OIL LEVEL: general information

It is normal for an engine to use oil for lubrication and cooling of moving parts and it is normal to top up the level between oil changes. However, contact your approved Dealer if more than 0.5 litres is being consumed every 600 miles (1,000 km) after the running in period.

Oil change frequency: check the oil level from time to time and certainly before any long journey to avoid the risk of damaging your engine.

Reading the oil level
The oil level should be read with the vehicle on level ground, after the engine has been switched off for some time. The dipstick must be used to read the exact oil level and make sure that the maximum level has not been exceeded (risk of engine damage). Refer to the following pages.

The instrument panel display only alerts the driver when the oil level is at its minimum.

- Remove the dipstick and wipe with a clean, lint-free cloth;
- push the dipstick in as far as it will go (for vehicles equipped with a cap-type dipstick C, screw the cap in as far as it will go);
- take out the dipstick again;
- read the level: it should never fall below minimum mark A or exceed maximum mark B.

Once the operation has been completed, ensure that the dipstick is pushed in as far as it will go or that the “cap-type dipstick” is completely screwed in.

Exceeding the maximum engine oil level
Under no circumstances must the maximum fill level B be exceeded: risk of damage to the engine and catalytic converter.

If the level exceeds the maximum level, do not start your vehicle and contact an authorised dealer.

In order to prevent splashback, it is recommended that a funnel be used when topping up/filling with oil.

Before performing any action in the engine compartment, the ignition must be switched off by pressing the engine stop button (please see the information on “Starting, stopping the engine” in Section 2).
Topping up/filling

The vehicle must be parked on level ground and the engine should be cold (for instance, before the engine is started up for the first time in the day).

- Unscrew cap 1;
- top up the level (as a guide, the capacity between the minimum and maximum reading on the dipstick 2 is between 1.5 and 2 litres, depending on the engine);
- wait for approximately 10 minutes to allow the oil to flow into the engine;
- check the level using the dipstick 2 (as described above).

Once the operation has been completed, ensure that the dipstick is pushed in as far as it will go and that the cap is completely screwed in.

⚠️ Before performing any action in the engine compartment, the ignition must be switched off by pressing the engine stop button (please see the information on “Starting, stopping the engine” in Section 2).

In order to prevent splashback, it is recommended that a funnel be used when topping up/filling with oil.

Do not exceed the max level and do not forget to refit cap 1 and dipstick 2.
ENGINE OIL LEVEL: topping up, filling (2/2) OIL CHANGE

Oil change
Service interval: refer to the Maintenance Document for your vehicle.

Oil change capacity
Please refer to the maintenance document for your vehicle, or contact an authorised dealer.
Always check the engine oil level using the dipstick, as explained previously (it should never fall below the minimum level, or be over the maximum level on the dipstick).

Engine oil grade
Refer to the maintenance document for your vehicle.

Exceeding the maximum engine oil level
Under no circumstances must the maximum fill level be exceeded: risk of damage to the engine and catalytic converter.
If the oil level exceeds the maximum level, do not start your vehicle and contact an approved Dealer.

Consult your approved dealer at once if you notice an abnormal or repeated drop in any of the fluid levels.

When working in the engine compartment, ensure that the windscreen wiper stalk is in the park position.
Risk of injury.

The engine may be hot when carrying out operations in close proximity. In addition, the engine cooling fan can come on at any moment.
Risk of injury.

Filling: take care when topping up the oil that no oil drips onto engine components - risk of fire.
Remember to refit the cap securely as there is a risk of fire if oil splashes onto hot engine components.

Never run the engine in an enclosed space as exhaust gases are poisonous.

Engine oil change: if you are changing the oil when the engine is hot, be careful not to scald yourself if the oil overflows.
Coolant level
With the engine switched off and on level ground, the level when cold must be between the MINI and MAXI marks on reservoir 1.
Top this level up when cold before it reaches the MINI mark.

Frequency of checking coolant level
Check the coolant level regularly (very severe damage is likely to be caused to the engine if it runs out of coolant).
If the level needs to be topped up, only use products approved by our Technical Department which ensure:
– protection against freezing;
– an anti-corrosion protection for the cooling system.

Before performing any action in the engine compartment, the ignition must be switched off by pressing the engine stop button (please see the information on “Starting, stopping the engine” in Section 2).

Replacement interval
Refer to the Maintenance Document for your vehicle.

Consult your approved dealer at once if you notice an abnormal or repeated drop in any of the fluid levels.

No operations should be carried out on the cooling circuit when the engine is hot.

Risk of burns.

Risk of injury.

When working in the engine compartment, ensure that the windscreen wiper stalk is in the park position.
**Level 2**

It is normal for the level to drop as the brake shoes become worn, but it must never drop lower than the "MINI" warning line.

If you wish to check the disc and drum wear yourself, you should obtain the document explaining the checking procedure from the manufacturer’s network or web site.

**Topping up**

After any operation on the hydraulic circuit, a specialist must replace the brake fluid.

Only use fluids approved by our Technical Department (and taken from a sealed container).

**Replacement interval**

Refer to the Maintenance Document for your vehicle.

---

**Brake fluid level**

The level should be read with the engine switched off and on level ground.

This should be checked frequently, and immediately if you notice even the slightest loss in braking efficiency.

---

**The engine may be hot**

When carrying out operations in close proximity. In addition, the engine cooling fan can come on at any moment.

Risk of injury.
Windscreen washer reservoir

Topping up
With the engine switched off, open the cap 3. Fill until you can see the fluid, then replace the cap.

Liquid
Screen wash product (product with antifreeze in winter).

Checking the level
Use the “dropper cap”. To do this, plug the hole 4 with your finger, remove the cap then read the gauge attached to the cap.

Note: Regularly check the reservoir level by topping up the liquid before taking a trip.

Jets
To adjust the windscreen washer jets, please consult an authorised dealer.

Filters
The replacement of filter components (air filter, cabin filter, diesel filter, etc.) is scheduled in the maintenance operations for your vehicle.

Replacement intervals for filter elements: refer to the Maintenance Document for your vehicle.

⚠️ Before performing any action in the engine compartment, the ignition must be switched off by pressing the engine stop button (please see the information on “Starting, stopping the engine” in Section 2).

⚠️ The engine may be hot when carrying out operations in close proximity. In addition, the engine cooling fan can come on at any moment.

Risk of injury.
4.10

**TYRE PRESSURE (1/2)**

**Label A**
Open the driver’s door to read it.
Tyre pressures should be checked when the tyres are cold.
If the tyre pressures cannot be checked when the tyres are **cold**, increase the pressures from 0.2 to 0.3 bar (or 3 PSI).
**Never deflate a hot tyre.**

**B**: dimension of the tyres fitted to the vehicle.
**C**: intended driving speed.
**D**: recommended pressure for optimising fuel consumption.

**NB**: driving comfort may be altered.

**Vehicle fitted with a tyre pressure monitoring system**
In cases of under-inflation (puncture, low pressure, etc.), warning light \( \text{\texttrade} \) lights up on the instrument panel. Please refer to the information on the “Tyre pressure monitoring system” in Section 2.

**E**: front tyre pressure.
**F**: rear tyre pressure.
**G**: tyre pressure for the emergency spare wheel.
TYRE PRESSURES (2/2)

Special note concerning fully laden vehicles (Maximum Permissible All-Up Weight) and towing a trailer: the maximum speed must be limited to **60 mph** (100 kph) and the tyre pressure increased by **0.2 bar**.

Please refer to the information on “Weights” in Section 6.

**Tyre safety and use of snow chains:** Refer to the information on “Tyres” in Section 5 for the servicing conditions and, depending on the version, the use of chains.

For your safety, please respect the speed limit.

When they need to be replaced, only tyres of the same make, size, type and profile should be used on a single axle.

**They must:** either have a load capacity and speed rating at least equal to those of the original tyres, or conform to those recommended by an authorised dealer.

Failure to heed these instructions could endanger your safety and affect your vehicle’s roadworthiness.

**Risk of loss of control of the vehicle.**
The battery does not require any maintenance.

Handle the battery with care as it contains sulphuric acid which must not come into contact with the eyes or skin. If it does, wash the affected area with plenty of cold water. If necessary, consult a doctor.

Ensure that naked flames, red hot objects and sparks do not come into contact with the battery as there is a risk of explosion.

Depending on the vehicle, a system continuously checks the battery charge status. If this decreases, the message “Battery low start engine” is displayed on the instrument panel. In this case, start the engine. The message will go off.

The charge status of your battery can decrease especially if you use your vehicle:
- for short journeys;
- for driving in town;
- when the temperature drops;
- after extended use of energy-consuming devices (radio, etc.) with the engine switched off.

Before performing any action in the engine compartment, the ignition must be switched off by pressing the engine stop button (please see the information on “Starting, stopping the engine” in Section 2).

The engine may be hot during operations in close proximity. In addition, the engine cooling fan may start at any moment.

Risk of injury.
Replacing the battery

As this operation is complex, we advise you to contact an approved Dealer.

Label A

Observe the indications on the battery:
- 2 Naked flames and smoking are forbidden;
- 3 eye protection required;
- 4 keep away from children;
- 5 explosive materials;
- 6 refer to the handbook;
- 7 corrosive materials.

The battery is a specific type, please ensure it is replaced with the same type. Consult an approved dealer.
BODYWORK MAINTENANCE (1/2)

A well-maintained vehicle will last longer. It is therefore recommended to maintain the exterior of the vehicle regularly.

Your vehicle has been treated with very effective anti-corrosion products. It is nevertheless subject to various outside influences.

Corrosive agents in the atmosphere
– atmospheric pollution (built-up and industrial areas),
– saline atmospheres (near the sea, particularly in hot weather),
– seasonal and damp weather conditions (e.g. road salt in winter, water from road cleaners, etc.).

Minor impacts

Abrasive action
Dust and sand in the air, mud, road grit thrown up by other vehicles, etc.

You should take a number of minor precautions in order to safeguard your vehicle against such risks.

You should
Wash your car frequently, with the engine off, with cleaning products recommended by the manufacturer (never use abrasive products). Rinse thoroughly beforehand with a jet:
– spots of tree resin and industrial grime;
– mud in the wheel arches and underneath the body which forms damp patches;
– bird droppings, which cause a chemical reaction with the paint that rapidly discolours paintwork and may even cause the paint to peel off;
wash the vehicle immediately to remove these marks since it is impossible to remove them by polishing;
– salt, particularly in the wheel arches and underneath the body after driving in areas where the roads have been gritted.

Remove any plant matter (resin, leaves, etc.) from the vehicle regularly.

What you should not do
Do not degrease or clean mechanical components (e.g. the engine compartment), underneath the body, parts with hinges (e.g. inside the doors) and painted plastic external fittings (e.g. bumpers) using high-pressure cleaning equipment or by spraying on products not approved by our Technical Department. Doing this could give rise to corrosion or operational faults.

Wash the vehicle in bright sunlight or freezing temperatures.
Do not scrape off mud or dirt without pre-wetting.
Allow dirt to accumulate on the exterior.
Allow rust to form following minor impacts.
Do not use solvents not approved by our Technical Department to remove stains as this could damage the paintwork.
Do not drive in snow or muddy conditions without washing the vehicle, particularly under the wheel arches and body.
Respect local regulations about washing vehicles (e.g. do not wash your vehicle on a public highway).

Observe the vehicle stopping distances when driving on gravelled surfaces to prevent paint damage.

Repair, or have repaired quickly, areas where the paint has been damaged, to prevent corrosion spreading.

Remember to visit the body shop periodically in order to maintain your anti-corrosion warranty. Refer to the Maintenance Document.

If it is necessary to clean mechanical components, hinges, etc., spray them with products approved by our Technical Department to protect them after they have been cleaned.

We have selected special products to care for your vehicle and you can obtain these from the manufacturer’s accessory outlets.

Vehicles with a matte paint finish
This type of paint requires certain precautions.

Do not do the following
– use wax-based products (polishing);
– rub hard;
– wash the vehicle in a roller-type car wash;
– wash the vehicle using a high-pressure device;
– attach stickers to the paintwork (risk of leaving marks).

You should do the following
Wash the vehicle by hand using plenty of water, using a soft cloth or a gentle sponge.

Using a roller type car wash
Return the windscreen wiper stalk to the Park position (refer to the information on the “Windscreen washer, wiper” in Section 1). Check the mounting of external accessories, additional lights and mirrors, and ensure that the wiper blades are secured with adhesive tape. Remove the radio aerial mast if your vehicle is fitted with this equipment. Remember to remove the tape and refit the antenna after washing.

Cleaning the headlights
As the headlights are made of plastic “glass”, use a soft cloth or cotton wool to clean them. If this does not clean them properly, moisten the cloth with soapy water, then wipe clean with a soft damp cloth or cotton wool. Finally, carefully dry off with a soft dry cloth.

Cleaning products containing alcohol must not be used.

Vehicles with a matte paint finish
This type of paint requires certain precautions.

Do not do the following
– use wax-based products (polishing);
– rub hard;
– wash the vehicle in a roller-type car wash;
– wash the vehicle using a high-pressure device;
– attach stickers to the paintwork (risk of leaving marks).

You should do the following
Wash the vehicle by hand using plenty of water, using a soft cloth or a gentle sponge.

Using a roller type car wash
Return the windscreen wiper stalk to the Park position (refer to the information on the “Windscreen washer, wiper” in Section 1). Check the mounting of external accessories, additional lights and mirrors, and ensure that the wiper blades are secured with adhesive tape. Remove the radio aerial mast if your vehicle is fitted with this equipment. Remember to remove the tape and refit the antenna after washing.

Cleaning the headlights
As the headlights are made of plastic “glass”, use a soft cloth or cotton wool to clean them. If this does not clean them properly, moisten the cloth with soapy water, then wipe clean with a soft damp cloth or cotton wool. Finally, carefully dry off with a soft dry cloth.

Cleaning products containing alcohol must not be used.
INTERIOR TRIM MAINTENANCE (1/2)

A well-maintained vehicle will last longer. It is therefore recommended to maintain the interior of the vehicle regularly.

A stain should always be dealt with swiftly.

Whatever type of stain is on the trim, use **cold** (or warm) **soapy water with natural soap**.

**Detergents** (washing-up liquid, powdered products, alcohol-based products) should not be used.

Use a soft cloth.

Rinse and soak up the excess.

**Glass instrument panel**
(e.g. instrument panel, clock, exterior temperature display, radio display, etc.)

Use a soft cloth (or cotton wool).

If this does not clean it properly, use a soft cloth (or cotton wool) slightly moistened with soapy water and then wipe clean with a soft damp cloth or cotton wool.

Finally, **carefully** dry off with a soft dry cloth.

**Cleaning products containing alcohol must not be used under any circumstances.**

**Seat belts**

These must be kept clean.

Use products selected by our Technical Department (Approved outlets) or warm, soapy water and a sponge and wipe with a dry cloth.

**Detergents or dyes must not be used under any circumstances.**

**Textiles (seats, door trim, etc)**

Vacuum-clean the textiles **regularly**.

**Liquid stain**

Use soapy water.

Dab lightly (never rub) with a soft cloth, rinse and remove the excess.

**Solid or pasty stain**

Carefully remove the excess solid or pasty material **immediately** with a spatula (working from the edges to the centre to avoid spreading the stain).

Clean as for a liquid stain.

**Special instructions for sweets or chewing gum**

Put an ice cube on the stain to solidify it, then proceed as for a solid stain.

For further recommendations for maintaining the interior, and/or for any unsatisfactory results, please see an authorised dealer.
INTERIOR TRIM MAINTENANCE (2/2)

**Removal/replacing removable equipment originally fitted in the vehicle**

If you need to remove equipment in order to clean the passenger compartment (for example, mats), always ensure that they are correctly refitted and are the right way around (the driver’s mat should be fitted on the driver’s side, etc.) and fit them with the components supplied with the equipment (for example, the driver mat should always be fixed using the pre-fitted mounting components).

With the vehicle stationary, ensure that nothing will impede driving (anything obstructing the pedals, heel wedged by the mat, etc.).

**You should not:**

You are strongly advised not to position objects such as deodorants, scents, etc. near air vents, as this could damage your dashboard trim.

---

You are strongly recommended not to use high-pressure or spray cleaning equipment inside the passenger compartment: use of such equipment could impair the correct functioning of the electrical or electronic components in the vehicle, or have other detrimental effects.

Wipers (replacing blades) .................................................................... 5.29
Towing .................................................................................................... 5.31
Operating faults .................................................................................... 5.33
In case of puncture

Depending on the vehicle, a tyre inflation kit or emergency spare wheel is provided (refer to the following pages).

Special note

The Tyre Pressure Monitor function does not check the emergency spare wheel (the wheel replaced by the emergency spare wheel disappears from the instrument panel display).

Refer to the information on the “Tyre pressure monitoring system” in Section 2.

If the emergency spare wheel has been stored for several years, have it checked by your Dealer to ensure that it is safe to use.

**Vehicles fitted with an emergency spare wheel smaller than the four other wheels:**
- Never fit more than one emergency spare wheel to the same vehicle.
- As the punctured wheel is wider than the emergency spare wheel, the vehicle’s ground clearance is reduced.
- Replace the emergency spare wheel as soon as possible with a wheel with the same dimensions as the original.
- When this is fitted to the vehicle, which must only be a temporary measure, the driving speed must not exceed the speed indicated on the label on the wheel.
- Fitting an emergency spare wheel may alter the way the vehicle usually runs. Avoid sudden acceleration or deceleration and reduce your speed when cornering.
- If you need to use snow chains, fit the emergency spare wheel to the rear axle and check the tyre pressure.
Emergency spare wheel A

To get to it:
– open the tailgate;
– Depending on the vehicle, lift up the mobile floor;
– lift the boot carpet;
– remove the tool kit by lifting it by its handles;
– unscrew the central mounting;
– remove the emergency spare wheel.

Note: Store the punctured wheel in the storage bag provided, along with the tool kit and put them in the boot.

If the vehicle is parked on the hard shoulder, you must warn other road users of your vehicle’s presence with a warning triangle or with other devices as per the legislation applying to the country you are in.
The kit repairs tyres when tread A has been damaged by objects smaller than 4 mm. It cannot repair all types of puncture, such as cuts larger than 4 mm, or cuts in tyre sidewall B.

Ensure also that the wheel rim is in good condition.

Do not pull out the foreign body causing the puncture if it is still in the tyre.

Do not attempt to use the inflation kit if the tyre has been damaged as a result of driving with a puncture.

You should therefore carefully check the condition of the tyre sidewalls before any operation.

Driving with underinflated, flat or punctured tyres can be dangerous and may make the tyre impossible to repair.

**This repair is temporary**

A tyre which has been punctured should always be inspected (and repaired, where possible) as soon as possible by a specialist.

When taking a tyre which has been repaired using this kit to be replaced, you must inform the specialist.

When driving, vibration may be felt due to the presence of the repair product injected into the tyre.

The kit is only approved for inflating the tyres of the vehicle originally equipped with the kit.

It must never be used to inflate the tyres of another vehicle, or any other inflatable object (rubber ring, rubber boat, etc.).

Avoid spillage on skin when handling the repair liquid bottle. If droplets do leak out, rinse them off with plenty of water.

Keep the repair kit away from children.

Do not dispose of the empty bottle in the countryside. Return it to your approved dealer or to a recycling organisation.

The bottle has a limited service life which is indicated on its label. Check the expiry date.

Contact an approved dealer to replace the inflation tube and repair product bottle.
TYRE PRESSURE KIT (2/3)

In the event of a puncture, use the kit located in the boot, underneath the boot carpet.

Before using this kit, park the vehicle at a sufficient distance from traffic, switch on the hazard warning lights, apply the handbrake, ask all passengers to leave the vehicle and keep them away from traffic.

With the engine running and the parking brake applied,
- Unscrew the cap from recess 3 on the bottle;
- unscrew the bottle cap 2;
- screw the bottle 2 onto the compressor at the bottle recess point 3;
- unscrew the valve cap on the relevant wheel and screw the inflation adapter 6 onto the valve;
- the plug 4 must be connected to the vehicle accessories socket;
- press switch 5 to inflate the tyre to the recommended pressure (please refer to the information in the section on “Tyre pressure”);
- after a maximum of 10 minutes, stop inflating and read the pressure (on pressure gauge 1).

Note: while the container is emptying (approximately 30 seconds), the pressure gauge 5 will briefly indicate a pressure of up to 6 bar. The pressure will then drop.

Adjust the pressure: to increase it, continue inflating with the kit.

If the recommended pressure of 1.8 bar cannot be achieved after 10 minutes, repair is impossible. Do not drive the vehicle. Consult an authorised dealer.

If the vehicle is parked on the hard shoulder, you must warn other road users of your vehicle’s presence with a warning triangle or with other devices as per the legislation applying to the country you are in.
Once the tyre is correctly inflated, remove the kit: slowly unscrew the inflation adapter 6 to prevent any repair product from escaping and store the container in plastic packaging to prevent the product from escaping.

- Affix the driving recommendation label to the dashboard where it can easily be seen by the driver;
- Put the kit away.
- At the end of this initial inflation operation, air will still escape from the tyre. You must drive a short distance in order to seal the hole.
- Start immediately and drive at between 12 and 40 mph (20 and 60 km/h) in order to distribute the product evenly in the tyre and, after driving for 2 miles (3 km), stop and check the pressure.
- If the pressure is greater than 1.3 bar but less than the recommended pressure (refer to the label affixed to the edge of the driver’s door), readjust it. Otherwise, please contact an authorised dealer: the tyre cannot be repaired.

Precautions when using the kit

The kit should not be operated for more than 10 consecutive minutes.

⚠️ Please be aware that a poorly tightened or missing valve cap can make the tyres less airtight and may lead to pressure loss.
Always use valve caps identical to those fitted originally and tighten them fully.

⚠️ Following repair with the kit, do not travel further than 120 miles (200 km). In addition, reduce your speed and under no circumstances exceed 48 mph (80 km/h). The sticker, which you must affix in a prominent position on the dashboard, reminds you of this.
Depending on the country or local legislation, a tyre repaired with the inflation kit may need to be replaced.

Nothing should be placed around the driver’s feet as such objects may slide under the pedals during sudden braking manoeuvres and obstruct their use.
The presence of the tools depends on the vehicle.
The tools are located in a tray under the boot carpet.
Lift the cover and remove them.

**Wheel bolt bag**

**Storage bag**
This allows you to store a punctured wheel in the boot.

**Wheelbrace 1**
Locks or unlocks the wheel bolts and tow eye 5.

**Jack 2**
Fold it correctly before refitting it in its housing (ensure that the wheelbrace is correctly positioned).

**Lever 3**
This tightens or releases the tow eye 5.

**Hubcap tool 4**
This tool is used to remove the wheel trims.

**Tow eye 5**
Please see “Towing: breakdown recovery” in Section 5.

---

Do not leave the tools unsecured inside the vehicle as they may come loose under braking. After use, check that all the tools are correctly clipped into the tool kit, then position it correctly in its housing: there is a risk of injury.

If wheel bolts are supplied in the tool kit, only use these bolts for the emergency spare wheel: refer to the label affixed to the emergency spare wheel.

The jack is designed for wheel changing purposes only. Under no circumstances should it be used for carrying out repairs underneath the vehicle or to gain access to the underside of the vehicle.
Remove the wheel trim using hubcap tool 1 (located in the tool kit) by engaging the hook in the opening near valve 2.

To refit it, align it with valve 2. Push the retaining hooks in fully, starting with side A near the valve, followed by B and C, finishing at D opposite the valve.

Do not leave the tools unsecured inside the vehicle as they may come loose under braking. After use, check that all the tools are correctly clipped into the tool kit, then position it correctly in its housing: risk of injury.
Switch on the hazard warning lights.
Keep the vehicle away from traffic and on a level surface where it will not slip (if necessary, place a solid support under the jack base).
Apply the parking brake and engage a gear (first or reverse, or P for automatic transmissions).
Ask all the passengers to leave the vehicle and keep them away from traffic.

**Vehicles equipped with a jack and wheelbrace**

If necessary, remove the wheel trim.
Use the wheelbrace 1 to slacken off the wheel bolts. Position it so as to be able to push from above.
Crank up the jack 3 by hand to align the jack head between the 2 jacking points 2 closest to the relevant wheel.

Continue to crank the jack so that the baseplate is correctly positioned (it should be underneath the vehicle and aligned with the jack head).

If the vehicle is not equipped with a jack or wheelbrace, you can obtain these from your approved dealer.

If the vehicle is parked on the hard shoulder, you must warn other road users of your vehicle’s presence with a warning triangle or with other devices as per the legislation applying to the country you are in.

To prevent any risk of injury or damage to the vehicle, only crank the jack until the wheel you are replacing is a maximum of 3 centimetres off the ground.
CHANGING A WHEEL (2/2)

Turn it a few times to lift the wheel off the ground.

Undo the bolts and take off the wheel.

Fit the emergency spare wheel on the central hub and turn it to locate the mounting holes in the wheel and the hub.

Tighten the bolts, checking that the wheel is correctly positioned on its hub.

Lower the jack.

With the wheel on the ground, tighten the bolts fully and have the tightness of the bolts checked and the emergency spare wheel pressure checked as soon as possible.

Do not leave the tools unsecured inside the vehicle as they may come loose under braking. After use, check that all the tools are correctly clipped into the tool kit, then position it correctly in its housing: risk of injury.

If wheel bolts are supplied in the tool kit, only use these bolts for the emergency spare wheel: refer to the label affixed to the emergency spare wheel.

The jack is designed for wheel changing purposes only. Under no circumstances should it be used for carrying out repairs underneath the vehicle or to gain access to the underside of the vehicle.

If you have a puncture, replace the wheel as soon as possible.

A tyre which has been punctured should always be inspected (and repaired, where possible) by a specialist.
TYRES (1/3)

The tyres are the only contact between the vehicle and the road, so it is essential to keep them in good condition. You must make sure that your tyres conform to local road traffic regulations.

Maintaining the tyres

The tyres must be in good condition and the tread form must have sufficient depth; tyres approved by our Technical Department have tread wear indicators which are indicators moulded into the tread at several points.

When the tread has worn down to the wear warning strips, these strips will become visible: it is then necessary to replace your tyres because the tread rubber is now only 1.6 mm deep at most, resulting in poor road holding on wet roads.

An overloaded vehicle, long journeys by motorway, particularly in very hot weather, or continual driving on poorly surfaced minor roads will lead to more rapid tyre wear and affect safety.

Incidents which occur when driving, such as striking the kerb, may damage the tyres and wheel rims, and could also lead to misalignment of the front or rear axle geometry. In this case, have the condition of these checked by an approved dealer.

For your safety, please respect the speed limit.

When they need to be replaced, only tyres of the same make, size, type and profile should be used on a single axle.

They must: either have a load capacity and a speed capacity at least equal to the original tyres, or correspond to those recommended by your authorised dealer.

Failure to heed these instructions could endanger your safety and affect your vehicle’s roadworthiness.

Risk of loss of control of the vehicle.

Risk of loss of control of the vehicle.
TYRES (2/3)

Tyre pressures
Adhere to the tyre pressures (including the emergency spare wheel). The tyre pressures should be checked at least once a month and additionally before any long journey (refer to the label affixed to the edge of the driver’s door).

The pressures should be checked cold: ignore higher pressures which may be reached in hot weather or following a high speed journey.

If the tyre pressures cannot be checked when the tyres are cold, increase the pressures from 0.2 to 0.3 bar (or 3 PSI). Never deflate a hot tyre.

Special note
Depending on the vehicle, there may be an adapter which needs to be positioned on the valve before air is added.

Incorrect tyre pressures lead to abnormal tyre wear and unusually hot running. These are factors which may seriously affect safety and lead to:
– poor road holding,
– risk of bursting or tread separation.

The pressure depends on the load and the speed of use. Adjust the pressure according to the conditions of use (refer to the label affixed to the edge of the driver’s door).

Vehicle fitted with a tyre pressure monitoring system
In cases of under-inflation (puncture, low pressure, etc.), warning light \( \text{\textbullet} \) lights up on the instrument panel. Please refer to the information on the “Tyre pressure monitoring system” in Section 2.

Emergency spare wheel
Refer to the information on “Puncture” and “Changing a wheel” in Section 5.

Please be aware that a poorly tightened or missing valve cap can make the tyres less airtight and lead to pressure loss.
Always use valve caps identical to those fitted originally and tighten them fully.
TYRES (3/3)

Fitting new tyres

For safety reasons, this operation must be carried out by a specialist.

Fitting different tyres may change your vehicle as follows:
- it may mean that your vehicle no longer conforms to current regulations;
- it may change the way it handles when cornering;
- it may cause the steering to be heavy;
- it may affect the use of snow chains.

Use in winter

Chains
For safety reasons, fitting snow chains to the rear axle is strictly forbidden.
Chains cannot be fitted to tyres which are larger than those originally fitted to the vehicle.

Snow or Winter tyres
We would recommend that these be fitted to all four wheels to ensure that your vehicle retains maximum adhesion.

Warning: These tyres sometimes have a specific direction of rotation and a maximum speed index which may be lower than the maximum speed of your vehicle.

Changing a wheel
As the tyre pressure monitor may take several minutes to correctly determine the positions of the wheels and the pressure values after driving, check the tyre pressures following any operation.

Snow chains may only be fitted to tyres of the same size as those originally fitted to your vehicle.

Studded tyres
This type of equipment may only be used for a limited period and as laid down by local legislation. It is necessary to observe the speed specified by current legislation.
These tyres must, at a minimum, be fitted to the two front wheels.

In all cases, we would recommend that you contact an authorised dealer who will be able to advise you on the choice of equipment which is most suitable for your vehicle.

18” wheels and larger cannot be fitted with chains.
If you wish to use special equipment, please consult an authorised dealer.
After replacing the bulbs, you must put the air duct A back into position. To do this, perform the above operation in reverse.

Accessing the bulbs

On the left-hand side of the vehicle, you will need to remove the air duct A to access the bulbs. To do this:
– remove the clips 3;
– unscrew the bolt 2;
– press the upper part of the fastening clips 1 to release the air duct A;
– slide the air duct A towards the front of the vehicle to release it.

On the right-hand side of the vehicle, you will need to remove the filler neck 4 for the windscreen washer tank to access the bulbs. To do this:
– unscrew the funnel 4;
– pull the funnel 4.

Before performing any action in the engine compartment, the ignition must be switched off (please see the information on “Starting, stopping the engine” in Section 2).

The engine may be hot when carrying out operations in close proximity. In addition, the engine cooling fan can come on at any moment. Risk of injury.
FRONT HEADLIGHTS: changing bulbs (2/3)

Direction indicator lights
Turn the bulb holder 5 a quarter of a turn and take out the bulb.
Bulb type: PY21W.
Once the bulb has been replaced, check that it is properly secured.

Halogen main beam headlight
To change the bulb:
– remove cover C;
– turn the bulb holder a quarter turn 7;
– remove the bulb.
Bulb type: H7.
It is essential to use anti-U.V. 55W bulbs so as not to damage the plastic on the headlights.
Do not touch the bulb glass. Hold it by its base.
When the bulb has been changed, make sure you refit the cover correctly.

The bulbs are under pressure and can break when replaced.
Risk of injury.

Halogen dipped beam headlight
To change the bulb:
– remove cover B;
– turn the bulb holder a quarter turn 6;
– remove the bulb.
Bulb type: H7.
LED dipped beam/main beam headlights 9
Please see an authorised dealer.

Daytime running lights and side lights 8
Please see an authorised dealer.

Front fog lights 10
The front bumper needs to be removed; consult an approved Dealer.
Bulb type: H8.

Additional lights
If you wish to fit fog lights to your vehicle, please see an authorised dealer.

To comply with local legislation, or as a precaution, you can obtain an emergency kit containing a set of spare bulbs and fuses from an approved dealer.

The bulbs are under pressure and can break when replaced.
Risk of injury.

Any operation on (or modification to) the electrical system must be performed by an approved dealer since an incorrect connection might damage the electrical equipment (harness, components and in particular the alternator). In addition, your Dealer has all the parts required for fitting these units.
Side lights and brake lights
Consult an approved Dealer.

**Direction indicators 1**
Open the boot lid and remove screws 2.
Pull on the outside A of the light and remove the rear light unit.
Turn the bulb holder a quarter of a turn 3.
Remove the bulb.
**Bulb type: PY21.**

Refit the bulb holder and push the unit as far as it will go, until it locks into place.
Check that the light is properly locked in position.
Tighten screws 2.
REAR AND SIDE LIGHTS: changing bulbs (2/3)

Reversing lights
From the boot, unclip the cover on the interior trim of the boot lid 4 using a screwdriver or similar tool.

Replace the bulb 5.
Bulb type: H21W.

Refitting
To refit, proceed in the reverse order, taking care not to damage the wiring.

The bulbs are under pressure and can break when replaced.
Risk of injury.
High level brake light 6
Consult an approved dealer.

Rear fog lights 7
The front bumper needs to be removed; consult an authorised dealer.
Bulb type: P21W.

Number plate lights 8
- Unclip the light 8 (using a tool such as a flat-blade screwdriver).
- remove the light cover to gain access to the bulb.
Bulb type: W5W.

Side indicator lights 10
The wing mirror needs to be removed; consult an authorised dealer.
Bulb type: W5W.

The bulbs are under pressure and can break when replaced.
Risk of injury.
INTERIOR LIGHTING: changing bulbs

Map reading lights 1
Please consult an authorised dealer.

Boot lights 2
Unclip light 2 by pressing the tabs on each side (using a flat-blade screwdriver or similar).
Disconnect the light.
Press tab 3 to release the lens 5 and access bulb 4.
Bulb type: W5W.

⚠️ The bulbs are under pressure and can break when replaced.
Risk of injury.
Replaced the battery

When the message “Keycard battery low” appears on the instrument panel, replace the battery in the RENAULT card:
- slide the casing 1;
- remove the battery cover 2;
- remove the battery by pressing on one side and lifting the other;
- replace it, taking care to respect the polarity and the model, as shown inside the cover.

When refitting, proceed in the reverse order, then press one of the buttons on the card four times, close to the vehicle: the message will disappear.

Note: it is not advisable to touch the electronic circuit or contacts on the RENAULT card when replacing the battery.

Operating faults

If the battery is too weak to ensure correct operation, you can start and lock/unlock the vehicle (please refer to the information on “Locking/unlocking the opening elements” in Section 1).
Replacing the battery

Open the case at slot 1 using a flat-blade screwdriver or similar, and replace the battery 2, observing the polarity shown on the back of the cover.

**Note:** It is not advisable to touch the electronic circuit in the key cover when replacing the battery.

The batteries are available from approved Dealers, and their service life approximately two years.

Check that there is no dye on the battery: risk of an incorrect electrical contact.

When refitting, ensure that the cover is correctly clipped on and the screw tightened.

Do not throw away your used batteries; give them to an organisation responsible for collecting and recycling batteries.
In accordance with local legislation or as a precautionary measure:
obtain an emergency kit containing a set of spare bulbs and fuses from an approved Dealer.

If any electrical component does not work, check the condition of the fuses.

**Fuses in passenger compartment A or B on the left-hand side of the vehicle**
Unclip the cover A using a screwdriver or similar.
Open the glovebox and unclip the flap B.

**Fuses in passenger compartment C on the right-hand side of the vehicle**
Unclip the cover C using a screwdriver or similar.
FUSES (2/3)

Use the fuse allocation label in the storage compartment A, B or C to identify the fuses.

Certain fuses should only be replaced by a qualified professional. These fuses are not listed on the label.

Only change the fuses represented on the label.

Check the fuse in question and replace it, if necessary, by a fuse of the same rating.

If a fuse is fitted where the rating is too high, it may cause the electrical circuit to overheat (risk of fire) in the event of an item of equipment using an excessive amount of current.

Clip 1

Remove the fuse using tweezers 1, located on the fuse plate.

To remove the fuse from the tweezers, slide the fuse to the side.

It is not advisable to use the free fuse locations.

Do not touch the wiring harnesses or the connectors.
## Allocation of fuses
(the presence of certain fuses depends on the vehicle equipment level)

BATTERY: troubleshooting (1/2)

To avoid all risk of sparks:
- Ensure that any consumers (courtesy lights, etc.) are switched off before disconnecting or reconnecting the battery;
- when charging, stop the charger before connecting or disconnecting the battery;
- to avoid creating a short circuit between the terminals, do not place metal objects on the battery;
- always wait at least one minute after the engine has been switched off before disconnecting a battery;
- make sure that you reconnect the battery terminals after refitting.

Connecting a battery charger
The battery charger must be compatible with a battery with nominal voltage of 12 volts.
Do not disconnect the battery when the engine is running. Follow the instructions given by the manufacturer of the battery charger you are using.

Before performing any action in the engine compartment, the ignition must be switched off by pressing the engine stop button (please see the information on “Starting, stopping the engine” in Section 2).

⚠️ Special procedures may be required to charge some batteries. Contact your approved dealer.
Avoid all risk of sparks which may cause an immediate explosion, and charge the battery in a well-ventilated area. Risk of serious injury.

⚠️ Handle the battery with care as it contains sulphuric acid, which must not come into contact with eyes or skin. If it does, wash the affected area with plenty of cold water. If necessary, consult a doctor.
Ensure that naked flames, red hot objects and sparks do not come into contact with the battery as there is a risk of explosion.
The engine may be hot when carrying out operations in close proximity. In addition, the engine cooling fan can come on at any moment.
Risk of injury.
Starting the vehicle using the battery from another vehicle

If you have to use the battery from another vehicle to start, obtain suitable jump leads (with a large cross section) from an approved dealer or, if you already have jump leads, ensure that they are in perfect condition.

**The two batteries must have an identical nominal voltage of 12 volts.** The battery supplying the current should have a capacity (amp-hours, Ah) which is at least the same as that of the discharged battery.

Ensure that there is no risk of contact between the two vehicles (risk of short circuiting when the positive terminals are connected) and that the discharged battery is properly connected. Switch off your vehicle ignition.

Start the engine of the vehicle supplying the current and run it at a moderate speed.

Lift the cover and then the red terminal cap 1 (+).

Connect the positive cable A to the terminal 1 (+), then to the terminal 4 (+) of the battery supplying the current.

Connect the negative cable B to the terminal 3 (–) of the battery supplying the current and then to the terminal 2 (–).

Start the engine, and as soon as it starts running, disconnect cables A and B in reverse order (2 - 3 - 4 - 1).

Check that there is no contact between leads A and B and that the positive lead A is not touching any metal parts on the vehicle supplying the current.

Risk of injury and/or damage to the vehicle.
Electrical and electronic accessories
Before installing this type of accessory (particularly for transmitters/receivers: frequency bandwidth, power level, position of the aerial, etc.), make sure it is compatible with your vehicle. You can get advice from an authorised dealer.
Connect accessories with a maximum power of 120 watts only. **Fire hazard.**
No work may be carried out on the vehicle’s electrical or radio circuits, except by authorised dealers: an incorrectly connected system may result in damage being caused to the electrical equipment and/or the components connected to it.
If the vehicle is fitted with any aftermarket electrical equipment, make sure that the installation is correctly protected by a fuse. Establish the rating and position of this fuse.

Use of transmission/receiving devices (telephones, CB equipment etc.).
Telephones and CB equipment with integrated aerials may cause interference to the electronic systems originally fitted to the vehicle: it is advisable only to use equipment with an external aerial. **Furthermore, we remind you of the need to conform to the legislation in force concerning the use of such equipment.**

Fitting after-market accessories
If you wish to install accessories on the vehicle: please contact an authorised dealer. Also, to ensure the correct operation of your vehicle, and to avoid any risk to your safety, we recommend that you use only accessories specifically designed for your vehicle, which are the only accessories for which the manufacturer will provide a warranty.
If you are using an anti-theft device, only attach it to the brake pedal.

Obstructions to the driver
On the driver’s side, only use mats suitable for the vehicle, attached with the pre-fitted components, and check the fitting regularly. Do not lay one mat on top of another. **There is a risk of wedging the pedals**
WINDSCREEN WIPER BLADES: replacement (1/2)

Windscreen wiper blades 1
With the ignition on and the engine switched off, lower the windscreen wiper stalk fully: the blades stop slightly away from the bonnet.

Lift wiper arm 3, press button 2 to release the blade.

Refitting
Slide the blade along the arm until it clips on. Check that it is correctly locked in place. Lower the windscreen wiper arm carefully.

With the ignition on, return the windscreen wiper stalk to the stop position. The blade on the driver’s side must always be above the passenger blade. If this is not the case, a quick sweep of the windscreen wipers should be performed once the vehicle is travelling at over 4 mph (7 km/h).

NB: Before restarting your vehicle, lower the windscreen wiper blades onto the windscreen to avoid any risk of damaging the bonnet or the wipers.

Do not activate the wipers on a dry screen. This will lead to premature wear or damage to the blades.

– In frosty weather, make sure that the wiper blades are not stuck by ice (to avoid the risk of the motor overheating or damaging the blades).
– Check the condition of the wiper blades.
Replace the wiper blades as soon as they begin to lose efficiency (approximately once a year).

Whilst changing the blade, take care not to drop the arm onto the window after it has been removed as this may break the window.
Keep monitoring the condition of the wiper blades. How long they last depends on you:
- clean the blades, windscreen and rear screen regularly with soapy water;
- do not use them when the windscreen or rear screen are dry;
- free them from the windscreen or rear screen when they have not been used for a long time.

Before changing the rear wiper blade, make sure the stalk is in the stop position (deactivated).

Risk of injury.

Rear screen wiper blade 4
Stalk in stop position (deactivated):
- Lift the wiper arm 6;
- pivot wiper blade 4 until some resistance is met (movement B);
- depending on the vehicle, press tab 5, then remove the wiper blade by pulling it (movement A).

To refit
To refit the wiper blade, proceed in reverse order to removal. Make sure that the blade is correctly locked in position.
TOWING: breakdown recovery (1/2)

Before towing, put the gearbox in neutral, unlock the steering column and release the parking brake. For vehicles fitted with an automatic gearbox, if it is not possible to put the gear lever into position N, please consult an authorised dealer.

Steering column unlocking

Insert the key into the ignition or, depending on the vehicle, having the RENAULT card on you, press the engine start button for 2 seconds. Reposition the lever to neutral (position N for vehicles fitted with an automatic gearbox).

The column is unlocked, the accessory functions are supplied: the vehicle lights can be used (indicators, brake lights etc.). At night the vehicle must have its lights on.

Depending on the vehicle, once you have finished towing, press the engine start button twice (risk of running down the battery).

The speed specified by current legislation for towing must always be observed. If your vehicle is the towing vehicle, do not exceed the maximum towing weight for your vehicle (refer to the information on “Weights” in Section 6).

Towing a vehicle with an automatic gearbox

Transport the vehicle on a trailer or tow it with the front wheels off the ground.

In exceptional circumstances, you may tow it with all four wheels on the ground, only in a forward gear, with the gear in neutral position N over a maximum distance of 50 miles and not exceeding a speed of 15 mph (25 km/h).

If the lever is stuck in P, even though you are depressing the brake pedal, the lever can be released manually. To do this, insert a tool (with a hard rod to it) into the slot 1 and press the button 2 at the same time to unlock the lever.

Contact an authorised dealer as soon as possible.

Do not remove the key from the ignition when the vehicle is being towed.
**TOWING: breakdown recovery (2/2)**

Only use the front **5** and rear **8** towing points (never use the drive shafts or any other part of the vehicle)

These towing points may only be used for towing: never use them for lifting the vehicle directly or indirectly.

---

**Access to towing points**

Unclip cover **4** or **7** by inserting a flat-blade screwdriver or similar under the cover.

**Tighten the tow eye **6** fully:** as much as possible by hand at first, then finish tightening it using the wheelbrace or, depending on the vehicle, the lever.

Only use the towing eye **6** and the wheelbrace **3** included in the tool kit (please refer to the information under “Tools” in Section 5).

---

**Warning:**

- Use a rigid towing bar. If a rope or cable is used (where the law allows this), the vehicle being towed must be able to brake.
- A vehicle must not be towed if it is not fit to be driven.
- Avoid accelerating or braking suddenly when towing, as this may result in damage being caused to the vehicle.
- When towing a vehicle, it is advisable not to exceed **30 mph** (**50 km/h**).
- Do not push the vehicle if the steering column is locked.

---

**Warning:**

Do not leave the tools unsecured inside the vehicle as they may come loose under braking.

---

**Warning:**

When the engine is stopped, steering and braking assistance are not operational.
The following advice will enable you to carry out quick, temporary repairs. For safety reasons you should always contact an approved Dealer as soon as possible.

<table>
<thead>
<tr>

</table>
WEIGHTS (in kg)

The weights indicated for a basic vehicle without options: they vary depending on the vehicle’s equipment. Consult your approved Dealer.

<table>
<thead>
<tr>
<th>Maximum permissible all-up weight (MMAC)</th>
<th>Weights are indicated on the vehicle identification plate (refer to the information on “Vehicle identification plates” in Section 6)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum permissible all-up weight (MMTA)</td>
<td></td>
</tr>
<tr>
<td>Gross Train Weight (MTR)</td>
<td></td>
</tr>
<tr>
<td>Braked Trailer Weight*</td>
<td>found by calculating: MTR - MMAC</td>
</tr>
<tr>
<td>Unbraked Trailer Weight*</td>
<td>690</td>
</tr>
<tr>
<td>Permissible nose weight*</td>
<td>75</td>
</tr>
<tr>
<td>Maximum permissible load on roof</td>
<td>75 kg (including carrying device)</td>
</tr>
</tbody>
</table>

* Towing weight (towing a caravan, boat, etc.)

Towing is prohibited when the MTR - MMAC calculation is equal to zero, or when the MTR is equal to zero (or is not listed) on the identification plate.

- It is important to comply with the towing weights, governed by local legislation in each country and, in particular, laid down in the Road Traffic Regulations. Contact an approved Dealer about any towing equipment.
- When towing, under no circumstances may the total train weight (vehicle + trailer) be exceeded. However the following is permitted:
  - rear axle MMTA exceeded by no more than 15%,
  - maximum MMAC exceeded by no more than 10% or 100 kg (whichever is reached first).
In either case, the maximum speed of the vehicle and trailer must not exceed 60 mph (100 km/h) and the tyre pressures must be increased by 0.2 bar (3 PSI).
- The engine output and climbing capability are reduced with altitude. We recommend that the maximum load be reduced by 10% at an altitude of 1,000 metres and by an additional 10% for each 1,000 metres thereafter.
REPLACEMENT PARTS AND REPAIRS

Original parts are based on strict specifications and are subject to highly-specialised tests. Therefore, they are of at least the same level of quality as the parts fitted originally.

If you always fit genuine replacement parts to your vehicle, you will ensure that it performs well. Furthermore, repairs carried out within the manufacturer’s Network using original parts are guaranteed according to the conditions set out on the reverse of the repair order.
### SERVICE SHEETS (1/6)
