VÄLKOMMEN!

We hope you will enjoy many years of driving pleasure in your Volvo. The car has been designed for the safety and comfort of you and your passengers. Volvo strives to be one of the safest cars in the world. Your Volvo is also designed to meet applicable safety and environmental requirements.

To increase your enjoyment of your Volvo, we recommend that you read the instructions and maintenance information in this owner's manual.

The owner's manual is also available as a mobile app (Volvo Manual) and on the Volvo Cars support site (support.volvocars.com).

We encourage everyone to always wear their seatbelt in this and other cars. Please do not drive if you are under the influence of alcohol or medication – or have an impaired ability to drive in some other way.
# TABLE OF CONTENTS

## OWNER INFORMATION

Owner information

Owner’s information is available in several different product formats, both digital and printed. The owner’s manual is available in the car’s centre display, as a mobile app and on the Volvo Cars support site. There is a Quick Guide and a supplement to the owner’s manual available in the glovebox, with specifications and fuse information, amongst other things. A printed owner’s manual can be ordered.

The car’s centre display

In the centre display, drag down the top view and tap on Owner’s manual. Available here are options for visual navigation with exterior and interior images of the car. The information is searchable and is also divided into categories.

Mobile app

In App Store or Google Play, search for "Volvo Manual", download the app to your smartphone or tablet and select the car. Available in the app are video tutorials and options for visual navigation with exterior and interior images of the car. It is easy to navigate between the different sections in the owner’s manual and the content is searchable.

Volvo Cars support site

Go to support.volvocars.com and select your country. Here you can find owner’s manuals, both online and in PDF format. On the Volvo Cars support site there are also video tutorials and further information and help regarding your Volvo and your car ownership. The page is available for most markets.

Printed information

There is a supplement to the owner’s manual in the glovebox that contains information on fuses and specifications, as well as a summary of important and practical information.

There is also a Quick Guide available in printed format that helps you to get started with the most commonly used functions in the car.

Depending on equipment level selected, market, etc. additional owner's information may also be available in printed format in the car.

A printed owner's manual and associated supplement can be ordered. Contact a Volvo retailer to order.

IMPORTANT

The driver is always responsible that the vehicle is driven safely in traffic and that applicable laws and regulations are followed. It is also important that the car is maintained and handled in accordance with Volvo’s recommendations in the owner’s information.

If there should be a difference between the information in the centre display and the printed information then it is always the printed information that applies.

---

1 A complete printed manual is included with the car for markets without owner’s manual in the centre display.
NOTE
Changing the language in the centre display may mean that some owner information is not compliant with national or local laws and regulations. Do not switch to a language that is difficult to understand as this may make it difficult to find your way back in the structure on screen.

Related information
- Owner's manual in centre display (p. 17)

Owner's manual in centre display
A digital\(^2\) version of the owner's manual is available in the car's centre display. The digital owner's manual can be accessed from the top view, and in some cases the contextual owner's manual can also be accessed from the top view.

NOTE
The digital owner's manual is not available while driving.

Owner's manual
The information in the owner's manual can be accessed directly via the owner's manual homepage or its top menu.

Contextual owner's manual
The contextual owner's manual is accessed from the top view.

When the contextual owner's manual is available, it is shown to the right of Owner's manual in the top view.

Pressing the contextual owner's manual opens an article in the owner's manual that is related to the content that is shown on the screen. E.g. press Navigation Manual - an article that is related to navigation opens.

This only applies to some of the apps in the car. For third party apps that are downloaded, it is not possible, for example, to access app-specific articles.

\(^2\) Applies for most markets.
Related information

- Navigating in the centre display's views (p. 111)
- Downloading apps (p. 484)

Navigate in the owner's manual in the centre display

The digital owner's manual can be accessed from the centre display top view in the car. The content is searchable and it is easy to navigate between different sections.

Opening the menu in the top menu

- Press in the upper list in the owner's manual.
  > A menu containing various options for finding information opens:

Homepage

Tap on the symbol to go back to the start page in the owner's manual.

Categories

The articles in the owner's manual are structured into main categories and subcategories. The same article can be found in several appropriate categories in order to be found more easily.

1. Press Categories.
  > The main categories are shown in a list.
2. Tap on a main category ( ),
  > A list of subcategories ( ) and articles ( ) is shown.
3. Tap on an article to open it.
To go back, press the back arrow.
Quick Guide
Press the symbol to access a page with links to a selection of articles that can be particularly useful to read in order to get to know the most common functions of the car. The articles can also be accessed via categories, but are collected here for quick access. Tap on an article in order to read it in its entirety.

Hotspots for exterior and interior
Exterior and interior overview images of the car. Different parts are designated with hotspots that lead to articles about those parts of the car.

1. Press Exterior or Interior.
   > Exterior or interior images are shown with so-called hotspots in place. The hotspot leads to articles about the corresponding part of the car. Swipe horizontally over the screen to browse among the images.

2. Tap on a hotspot.
   > The title of the article about the area is shown.

3. Tap on the title to open the article.
To go back, press the back arrow.

Favourites
Press the symbol to access the articles saved as favourites. Tap on an article in order to read it in its entirety.

Saving or deleting articles as favourites
Save an article as favourite by pressing ⭐ at the top right when an article is open. When an article has been saved as a favourite the star is filled in:

⭐
To remove an article as a favourite, press the star again in the current article.

Video
Press the symbol to view brief instruction videos for various functions in the car.

Information
Tap on the symbol to obtain information about which version of the owner’s manual is available in the car as well as other useful information.

Using the search function in the top menu
1. Tap on 📰 in the top menu of the owner’s manual. A keyboard appears in the lower part of the screen.
2. Type in a keyword, such as "seatbelt".
   > Suggestions for articles and categories are shown while letters are being entered.
3. Tap on the article or category to access it.

Related information

Owner's Manual in mobile devices
The owner's manual is available as a mobile app3 from both the App Store and Google Play. The app is adapted for smartphones and tablets.

The owner's manual can be downloaded as a mobile app from the App Store or Google Play. The QR code provided here takes you directly to the app. Alternatively, you can search for "Volvo manual" in the App Store or Google Play.

The app contains a video along with exterior and interior images where different parts of the car are highlighted with so-called hotspots, which lead to articles about the area in question. It is easy to navigate between the different sections in the owner's manual and the content is searchable.

Available on the iPhone
App Store

ANDROID APP ON
Google play

The mobile app is available from both the App Store and Google Play.

Related information
- Reading the owner's manual (p. 21)

Volvo Cars support site
More information on your car is available on the Volvo Cars website and support site.

Support on the Internet
Go to support.volvocars.com to visit the site. The support site is available for most markets.

It contains support for functions such as web-based services and functions, Volvo On Call*, the navigation system* and apps. Videos and step-by-step instructions explain different procedures, e.g. how to connect the car to the Internet via a mobile phone.

Downloadable information
Maps
For cars equipped with Sensus Navigation, there is the facility to download maps from the support page.

Owner's manuals as PDF
Owner's manuals are available for download in PDF format. Select car model and model year to download the manual as required.

Contact
The support site contains contact details to customer support and your nearest Volvo retailer.

3 For certain mobile devices.

* Option/accessory.
Log in to Volvo Cars website
Create a personal Volvo ID and log in to www.volvocars.com. When you have logged in it is possible to get an overview of service, agreements and warranties, amongst other things. Here there is also information about accessories and software adapted for your car model.

**Related information**
- Volvo ID (p. 26)

**Reading the owner’s manual**
A good way of getting to know your new car is to read the owner’s manual, ideally before your first journey.
Reading the owner’s manual is a good way to become familiar with new functions, get advice on how best to handle the car in different situations and learn how to make the best use of all the car’s features. Please pay attention to the safety instructions contained in the owner’s manual.

The intention of this owner’s information is to explain all of the possible features, functions and options included in a Volvo vehicle. It is not intended as an indication or guarantee that all of these features, functions and options are included in every vehicle. Some terminology used may not exactly match terminology used in sales, marketing and advertising materials.

Development work is constantly underway in order to improve our product. Modifications may mean that information, descriptions and illustrations in the owner’s manual differ from the equipment in the car. We reserve the right to make modifications without prior notice.

Do not remove this manual from the car - if problems should arise then the necessary information about where and how to seek professional help will be missing.

© Volvo Car Corporation

**Options/accessories**
In addition to standard equipment, the owner’s manual also describes options (factory fitted equipment) and certain accessories (retrofitted extra equipment).

All types of option/accessory are marked with an asterisk: *.

The equipment described in the owner's manual is not available in all cars - they have different equipment depending on adaptations for the needs of different markets and national or local laws and regulations.

In the event of uncertainty over what is standard or an option/accessory, contact a Volvo retailer.

**Special texts**

- **WARNING**
  - Warning texts appear if there is a risk of injury.

- **IMPORTANT**
  - "Important" texts appear if there is a risk of damage.

- **NOTE**
  - NOTE texts give advice or tips that facilitate the use of e.g. features and functions.
Footnote
The owner's manual contains information in certain locations in the form of a footnote at the bottom of the page or at the end of a table. This information is an addition to the text that it refers to via a number. If the footnote refers to text in a table then letters are used instead of numbers for referral.

Message texts
There are displays in the car that show menu and message texts. In the owner's manual the appearance of these texts differs from the normal text. Examples of menu texts and message texts: Phone, New message.

Decals
The car contains different types of decal which are designed to convey important information in a simple and clear manner. The decals in the car have the following descending degree of importance for the warning/information.

**Warning of personal injury**
Black ISO symbols on yellow warning field, white text/image on black message field. Used to indicate the presence of danger which, if the warning is ignored, may result in serious personal injury or fatality.

**Risk of property damage**
White ISO symbols and white text/image on black message field.

**Information**
White ISO symbols and white text/image on black message field.

**NOTE**
It is not intended that the decals illustrated in the owner's manual should be exact replicas of those in the car. They are included to show their approximate appearance and location in the car. The information that applies to your particular car is available on the respective decals for your car.
Procedure lists
Procedures where action must be taken in a certain sequence are numbered in the owner’s manual:

1 When there is a series of illustrations for step-by-step instructions each step is numbered in the same way as the corresponding illustration.

A Lists of letters appear adjacent to the series of illustrations where the order of the instructions is not significant.

Arrows appear numbered and unnumbered and are used to illustrate a movement.

Arrows with letters are used to clarify a movement when the relative order is of no relevance.

If there is no series of illustrations for step-by-step instructions then the different steps are numbered with normal numbers.

Position lists
1 Red circles containing a number are used in overview images where different components are pointed out. The number recurs in the position list featured in connection with the illustration that describes the item.

Bulleted lists
A bulleted list is used when there is a list of points in the owner's manual.

Example:

- Coolant
- Engine oil

Related information
Related information refers to other articles containing closely associated information.

Images
Illustrations used in the owner's manual are sometimes schematic and are intended to provide an overall picture or example of a certain function. Illustrations may deviate from the car’s appearance depending on equipment level and market.

To be continued
This symbol is located furthest down to the right when an article continues on the following page.

Continued from previous page
This symbol is located furthest up to the left when an article continues from the previous page.

YOUR VOLVO
**Volvo ID**

Volvo ID provides access to a wide range of personalized Volvo services\(^1\) online.

It is possible to create a Volvo ID from the car, volvocars.com or Volvo On Call app\(^2\). Certain functions and services require that the car is registered to a personal Volvo ID. Registering the Volvo ID to the car makes a wide range of Volvo services available directly from the car.

Examples of services:
- **Volvo On Call** - Volvo ID is used when logging in to the Volvo On Call app.
- **Send to Car** - Makes it possible to send an address from an Internet map service directly to the car.
- **Book Service and Repair** - Register your preferred workshop/retailer at volvocars.com to be able to book service directly from the car.

**Advantages of Volvo ID**
- One user name and one password to access online services, i.e. only one username and one password to remember.
- If the username/password for a service (e.g. Volvo On Call) is changed, then it is also changed automatically for other services.

**Related information**
- Creating and registering a Volvo ID (p. 26)
- Book service and repair (p. 576)

---

\(^1\) The services available may vary over time and vary depending on equipment level and market.

\(^2\) If you have Volvo On Call\(^*\).

\(^3\) Available in certain markets.

---

**Creating and registering a Volvo ID**

It is possible to create a Volvo ID in different ways. If the Volvo ID is created at volvocars.com or with Volvo On Call app, the Volvo ID must also be registered to the car to enable use of the various Volvo ID services.

**Create a Volvo ID with the app**

1. Download the Volvo ID app from **Download Centre** in the centre display’s app view.
2. Start the app and register a personal email address.
3. Follow the instructions that are automatically sent to the specified email address.
   > A Volvo ID has now been created and automatically registered to the car. Volvo ID services can now be used.

**Create a Volvo ID on the Volvo Cars website**

1. Go into www.volvocars.com and log in\(^3\) using the icon at the top right. Select Create Volvo ID.
2. Enter a personal email address.
3. Follow the instructions that are automatically sent to the specified email address.
   > A Volvo ID has now been created. Read below to learn how to register the ID to the car.
Create a Volvo ID with the Volvo On Call app

1. Download the latest version of the Volvo On Call app from a smartphone, via e.g. App Store, Windows Phone or Google Play.

2. Choose to create a Volvo ID from the app’s start page and enter a personal email address.

3. Follow the instructions that are automatically sent to the specified email address.
   > A Volvo ID has now been created. Read below to learn how to register the ID to the car.

Registering your Volvo ID to the car

If you created your Volvo ID via the web or the Volvo On Call app, register it to your car as follows:

1. If not done already, download the Volvo ID app from Download Centre in the app view.
   
   **NOTE**
   
   To download apps, the car must be connected to the Internet.

2. Start the app and enter your Volvo ID/your email address.

3. Follow the instructions that are automatically sent to the email address linked to your Volvo ID.
   > Your Volvo ID is now registered to the car.
   > Volvo ID services can now be used.

**Related information**

*Cars with Volvo On Call*.4
Drive-E - cleaner driving pleasure

Volvo Car Corporation is constantly working on the development of safer and more efficient products and solutions in order to reduce the negative impact on the environment.

Environmental care is one of Volvo Cars' core values and influences all operations. The environmental work is based on the whole life cycle of the car and takes into account the environmental impact it has, from design to scrapping and recycling. Volvo Cars' basic principle is that every new product developed must have less impact on the environment than the product it replaces.

Volvo's environmental management work has resulted in the development of more effective and less polluting drivelines Drive-E. Personal environment is also important to Volvo - the air inside a Volvo is, for example, cleaner than the air outside thanks to the climate control system.

Your Volvo complies with stringent international environmental standards. All Volvo's manufacturing units must be ISO 14001 certified, and this supports a systematic approach to the operation's environmental issues, which leads to continuous improvement with reduced environmental impact. Holding the ISO certificate also means that environmental laws and regulations in force are complied with. Volvo also requires that its partners must also meet these requirements.

Fuel consumption

Since a large part of a car's total environmental impact stems from its use, the emphasis of Volvo Cars' environmental work is on reducing fuel consumption, carbon dioxide emissions and other air pollutants. Volvo cars have competitive fuel consumption in each of their respective classes. Lower fuel consumption generally results in lower emission of the greenhouse gas, carbon dioxide.
Contributing to a better environment
An energy-efficient and fuel-efficient car not only contributes to a reduced impact on the environment, but also means reduced costs for the owner of the car. As the driver, it is easy to reduce fuel consumption and thereby save money and contribute to a better environment – here is some advice:

- Plan for an effective average speed. Speeds above approx. 80 km/h (approx. 50 mph) and below 50 km/h (approx. 30 mph) lead to increased energy consumption.
- Follow the Service and Warranty Booklet’s recommended intervals for service and maintenance of the car.
- Avoid letting the engine idle - switch off the engine when stationary for longer periods. Pay attention to local regulations.
- Plan the journey - a lot of unnecessary stops and uneven speed contribute to increased fuel consumption.
- Use preconditioning* before starting in cold conditions - it improves starting capacity and reduces wear in cold weather. The engine reaches normal operating temperature more quickly, which decreases consumption and reduces emissions.

Also remember to always dispose of environmentally hazardous waste, such as batteries and oil, in an environmentally safe manner. Consult a workshop in the event of uncertainty about how this type of waste should be discarded - an authorised Volvo workshop is recommended.

Efficient emission control
Your Volvo is manufactured following the concept "Clean inside and out" – a concept that encompasses a clean interior environment as well as highly efficient emission control. In many cases the exhaust emissions are well below the applicable standards.

Clean air in the passenger compartment
An air filter helps prevent dust and pollen entering the passenger compartment via the air intake. The Interior Air Quality System (IAQS)* ensures that the incoming air is cleaner than the air in the traffic outside.

The system cleans the air in the passenger compartment from contaminants such as particles, hydrocarbons, nitrous oxides and ground-level ozone. If the outside air is contaminated then the air intake is closed and the air is recirculated. Such a situation may arise in heavy traffic, queues and tunnels for example.

IAQS is a part of the Clean Zone Interior Package (CZIP)*, which also includes a function that allows the fan to start when the car is unlocked with the remote control key.

Interior
The material used in the interior of a Volvo is carefully selected and has been tested in order to be pleasant and comfortable. Some of the details are hand-made, such as the seams of the steering wheel that are sewn by hand. The interior is monitored in order not to emit strong odours or substances that cause discomfort in the event of e.g. high heat and bright light.

Volvo workshops and the environment
Regular maintenance creates the conditions for a long service life and low fuel consumption for your car. In this way you also contribute to a cleaner environment. When Volvo's workshops are entrusted with the service and maintenance of your car it becomes part of Volvo's system. Volvo makes clear demands regarding the way in which workshop premises shall be designed in order to prevent spills and discharges into the environment. The workshop staff have the knowledge and the tools required to guarantee good environmental care.

Recycling
Since Volvo works from a life cycle perspective, it is also important that the car is recycled in an environmentally sound manner. Almost all of the car can be recycled. The last owner of the car is therefore requested to contact a retailer for referral to a certified/approved recycling facility.

* Option/accessory.

- Air quality (p. 197)
**IntelliSafe-driver support**

IntelliSafe is the Volvo Cars concept for car safety. IntelliSafe comprises a number of systems, both standard and optional, whose purpose is to make a car journey safe, to prevent injuries and to protect passengers and other road users.

**Support**

IntelliSafe includes driver support functions such as Adaptive cruise control* which helps the driver to maintain an even speed combined with a pre-selected time interval to the vehicle ahead.

Pilot Assist helps the driver to drive the car between the lane's edge markings using steering assistance as well as to maintain an even speed, combined with a preselected time interval to the vehicle ahead.

Park Assist Pilot* helps the driver to park in or leave a parking space.

Other examples of systems that can help the driver are the Active main beam, Cross Traffic Alert (CTA)* and Blind Spot Information (BLIS)* systems.

**Prevention**

City Safety is a function that can contribute to preventing accidents. The function can prevent or mitigate a collision with pedestrians, cyclists, larger animals or vehicles. Visual, acoustic and brake pulse warnings are given in the event of a risk of collision to help the driver act in time. If the driver does not react to the warning and the risk of collision is assessed as imminent then City Safety can automatically brake the car.

Lane assistance (LKA) is another example of a function that can help prevent accidents by helping the driver - on motorways and similar larger roads - to reduce the risk of the car accidentally leaving its own lane.

The function **Steering aid during increased collision risk** can help the driver reduce the risk of the car leaving its lane unintentionally and/or colliding with another vehicle or obstacle by actively steering the car back into its lane and/or swerving.

**Protection**

With the aim of protecting the driver and passengers, the car is equipped with seatbelt tensioners which can tension the seatbelts in critical situations and in collisions. The car also has airbags and inflatable curtains, as well as Whiplash Protection System (WHIPS), which protects against whiplash injuries.

A Pedestrian Protection System (PPS) is also available for mitigating a pedestrian's impact with the car in the event of a frontal collision.

---

* This function can be either standard or optional, depending on market.

- Whiplash Protection System (p. 43)
- Pedestrian Protection System (p. 44)
**Sensus - online connectivity and entertainment**
Sensus makes it possible to surf the Internet, use different types of apps and make the car a Wi-Fi hotspot.

**This is Sensus**

Sensus offers an intelligent interface and online connectivity with the digital world. An intuitive navigation structure makes it possible to receive relevant support, information and entertainment when it is necessary, without distracting the driver.

Sensus covers all solutions in the car that are connected with entertainment, online connectivity, navigation* and the user interface between driver and car. It is Sensus that makes communication possible between you, the car and the outside world.

**Information when it is needed, where it is needed**
The different displays in the car provide information at the right time. The information is shown in different locations based on how it should be prioritised by the driver.
Different types of information are shown in different displays depending on how the information should be prioritised.

**Head-up display**

The head-up display shows selected information that the driver should deal with as soon as possible. Such information may, for example, include traffic warnings, speed information and navigation information. Road Sign Information and incoming phone calls are also shown in the head-up display. The display is operated via the right-hand steering wheel keypad and via the centre display.

**Driver display**

12-inch* driver display.

* Option/accessory.
8-inch driver display.

The driver display shows information on speed and e.g. incoming calls or song tracks being played. The display is operated via the two steering wheel keypads.

**Centre display**

Many of the main functions of the car are controlled from the centre display, a touch screen which reacts to touch. The number of physical buttons and controls in the car is therefore minimal. The screen can even be operated while wearing gloves.

From here, for example, you can control the climate control system, the entertainment system and seat position*. The information that is shown in the centre display can be acted on by the driver or someone else in the car when the opportunity arises.

**Voice recognition system**

The voice recognition system can be used without the driver needing to take his/her hands off the steering wheel. The system can understand natural speech. Use voice recognition to, for example, play back a song, call someone, increase the temperature or read out a text message.

* Option/accessory.
Software updates
So that you as a Volvo customer get the best experience of your car, Volvo continuously develops the systems in the cars and the services that you are offered.

You can update the software in your Volvo to the latest version when your car is serviced at an authorised Volvo dealer. The latest software update gives you access to new functions and improvements, as well as previous improvements included with previous software updates.

For more information about released updates and answers to frequently asked questions, please go to support.volvocars.com.

NOTE
Functionality after updating may vary depending on market, model, model year and options.

Recording data
As part of Volvo's safety and quality assurance, certain information about the vehicle’s operation, functionality and incidents are recorded in the car.

This vehicle is equipped with an "Event Data Recorder" (EDR). Its primary purpose is to register and record data related to traffic accidents or collision-like situations, such as times when the airbag deploys or the vehicle strikes an obstacle in the road. The data is recorded in order to increase understanding of how vehicle systems work in these types of situations. The EDR is designed to record data related to vehicle dynamics and safety systems for a short time, usually 30 seconds or less.

The EDR in this vehicle is designed to record data related to the following in the event of traffic accidents or collision-like situations:

- How the various systems in the car worked
- Whether the driver and passenger seatbelts were fastened/tensioned
- The driver's use of the accelerator or brake pedal
- The travel speed of the vehicle

This information can help us better understand the circumstances in which traffic accidents, injuries and damage occur. The EDR only records data when a non-trivial collision situation occurs. The EDR does not record any data during normal driving conditions. Similarly, the system never registers who is driving the vehicle or the geographic location of the accident or near-miss situation. However, other parties, such as the police, could use the recorded data in combination with the type of personally identifiable information routinely collected after a traffic accident. Special equipment and access to either the vehicle or the EDR is required to be able to interpret the registered data.

In addition to the EDR, the car is equipped with a number of computers designed to continually check and monitor the function of the car. They can record data during normal driving conditions, but in particular register faults affecting the vehicle’s operation and functionality, or upon activation of the vehicle’s driver support function (e.g. City Safety and the auto brake function).

Some of the recorded data is required to enable service and maintenance technicians to diagnose and remedy any faults that occurred in the vehicle. The registered information is also needed to enable Volvo to satisfy legal requirements laid out in laws and by government authorities. Information registered in the vehicle is stored in its computer until the vehicle is serviced or repaired.

In addition to the above, the registered information can be used in aggregate form for research and product development with the aim of continuously improving the safety and quality of Volvo cars.

Related information
- Sensus - online connectivity and entertainment (p. 32)
- Managing system updates via the Download Centre (p. 575)
Volvo will not contribute to the above-described information being disclosed to third parties without the vehicle owner’s consent. To comply with national legislation and regulations, Volvo may be forced to disclose information of this nature to the police or other authorities who may assert a legal right to access such. Special technical equipment which Volvo and workshops that have entered into agreements with Volvo have access to is required to be able to read and interpret the recorded data. Volvo is responsible that the information, which is transferred to Volvo during servicing and maintenance, is securely stored and managed and that its management complies with relevant legal requirements. For further information - contact a Volvo retailer.

**Terms & Conditions for Services**
Volvo offers services so that you can drive your Volvo as safely and as comfortably as possible. These services include everything from assistance in emergencies to navigation and various maintenance services.

Before using the services, it is important for you to read the Terms & Conditions for Services at support.volvocars.com.

Important information on accessories and auxiliary equipment

The incorrect connection and installation of accessories and extra equipment can negatively affect the car's electronic system.

We strongly recommend that Volvo owners only install Volvo approved original accessories, and that installation of accessories is only carried out by trained and qualified Volvo service technicians. Certain accessories only function when associated software is installed in the car's computer system.

The equipment described in the owner's manual is not available in all cars - they have different equipment depending on adaptations for the needs of different markets and national or local laws and regulations.

Options or accessories described in this manual are marked with an asterisk. In the event of uncertainty over what is standard or an option/accessory, contact a Volvo retailer.

⚠️ WARNING

The driver always bears the ultimate responsibility that the car is used safely and that laws and regulations in force are followed.

It is also important that the car has maintenance and service according to Volvo’s recommendations, the owner’s information and the service and warranty booklet.

If the on-board information differs from the printed owner’s manual then the printed information always has precedence.

Related information

- Installation of accessories (p. 37)
- Connection of equipment to the car’s diagnostic socket (p. 38)
- Reading the owner's manual (p. 21)

Installation of accessories

We strongly recommend that Volvo owners only install Volvo approved original accessories, and that installation of accessories is only carried out by trained and qualified Volvo service technicians. Certain accessories only function when associated software is installed in the car's computer system.

- Volvo original accessories are tested to ensure that they function with the car systems for performance, safety and emissions control. In addition, a trained and qualified Volvo service technician knows where accessories may or may not be safely installed in your Volvo. Always seek the advice of a trained and qualified Volvo service technician before installing any accessories in or on your car.

- Accessories that are not approved by Volvo may not have been specifically tested for use with your car.

- Some of the car's performance or safety systems can be negatively affected if you install accessories that have not been tested by Volvo, or if you permit someone without experience of the car to install accessories.

- Damage that is caused by accessories installed in a non-approved or incorrect way is not covered by any new car warranty. More warranty information can be found in the service and warranty booklet. Volvo does not accept
any liability for deaths, personal injury or costs arising as a result of the installation of non-original accessories.

Related information
• Important information on accessories and auxiliary equipment (p. 37)

Connection of equipment to the car's diagnostic socket
Incorrect connection and installation of software or diagnostic tools may have a negative effect on the car's electronic system. We strongly recommend that Volvo owners only install Volvo approved original accessories, and that installation of accessories is only carried out by trained and qualified Volvo service technicians. Certain accessories only function when associated software is installed in the car's computer system.

Data link connector (On-board Diagnostic, OBDII) is under the instrument panel on the driver's side.

NOTE
Volvo Cars accepts no liability for the consequences if unauthorised equipment is connected to the On-board Diagnostic socket (OBDII). This socket should only be used by trained and qualified Volvo service technicians.

Related information
• Important information on accessories and auxiliary equipment (p. 37)
Showing the car's identification number

When contacting a Volvo retailer concerning your Volvo On Call subscription, for example, you will need the car’s identification number (VIN).

1. Press **Settings** in the top view in the centre display.

2. Continue to **System ➜ System Information ➜ Vehicle Identification Number.**
   - The car’s identification number is shown.

Driver distraction

The driver is responsible for doing everything possible to ensure the safety of themselves, their passengers and other road users. Part of this responsibility is avoiding distractions such as carrying out an activity that is not related to operating the car in a driving environment.

Your new Volvo is, or can be, equipped with content-rich entertainment and communications systems. This could be mobile phones with hands-free, navigation systems and audio systems with lots of functions. You may also have other portable electronic devices for your own convenience. Used correctly, in a safe way they can enrich the driving experience. If they are used in the wrong way they could distract you.

We wish to give the following warnings regarding such systems, to indicate Volvo’s concern for your safety. Never use a device or function in the car in such a way that it will distract you from the task of driving safely. Distractions can lead to serious accidents. Apart from these general warnings, we offer the following advice regarding the new functions that may be in the car:

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Never use a hand-held mobile phone while driving. In some areas it is forbidden for the driver to use a mobile phone while the car is moving.</td>
</tr>
<tr>
<td>• If the car is equipped with a navigation system you must only set and change the itinerary when the car is parked.</td>
</tr>
<tr>
<td>• Never program the audio system while the car is moving. Program the radio's presets when the car is parked and then use the programmed presets for faster and simpler use of the radio.</td>
</tr>
<tr>
<td>• Never use laptops or hand-held computers while the car is moving.</td>
</tr>
</tbody>
</table>

Related information

- Sound, media and Internet (p. 482)
Safety

The vehicle is equipped with several safety systems that work together to protect the vehicle’s driver and passengers in the event of an accident.

The car is equipped with a number of sensors that react in the event of an accident and activate different safety systems, such as different types of airbags and seatbelt tensioners. Depending on the specific accident situation, such as collisions at different angles, roll-over or driving off the road, the systems react in different ways to provide the best protection.

There are also mechanical safety systems such as Whiplash Protection System. The car is also constructed so that a large part of the force of a collision is distributed to beams, pillars, floor, roof and other parts of the body.

The car’s safety mode may be activated after a collision if an important function in the car has been damaged.

Warning symbol in driver display

The warning symbol is illuminated in the driver display when the car’s electrical system is set in ignition position II. The symbol is extinguished after approx. 6 seconds if the car’s safety system is fault-free.

Safety during pregnancy

It is important that the seatbelt is used correctly during pregnancy, and that pregnant drivers adjust their seating position.

Seatbelt

The diagonal section should wrap over the shoulder then be routed between the breasts and to the side of the abdomen.

The lap section should lay flat over the thighs and as low as possible under the abdomen. – It must never be allowed to ride upward. Remove the slack from the seatbelt and ensure that it fits as close to the body as possible. In addition, check that there are no twists in the seatbelt.

Seating position

As the pregnancy progresses, pregnant drivers must adjust the seat and steering wheel such that they can easily maintain control of the vehi-
cle as they drive (which means that they must be able to easily operate the foot pedals and steering wheel). The aim should be to position the seat with as large a distance as possible between abdomen and steering wheel.

Related information
- Safety (p. 42)
- Seatbelts (p. 45)
- Manual front seat (p. 180)
- Power front seat* (p. 181)

Whiplash Protection System
Whiplash Protection System (WHIPS) reduces the risk of whiplash injuries. The system consists of energy absorbing backrests and seat cushion, as well as a specially designed head restraint in the front seats.

WHIPS is deployed in the event of a rear-end collision, where the angle and speed of the collision and the nature of the colliding vehicle all have an influence.

When WHIPS is deployed, the front seat backrests are lowered backward and the seat cushions move downward to change the seating position of the driver and front seat passenger. Its movement helps to absorb some of the forces that can arise and cause whiplash.

**WARNING**
WHIPS is a supplement to the seatbelts. Always use a seatbelt.

**WARNING**
Never modify or repair the seat or WHIPS yourself. Volvo recommends that an authorised Volvo workshop should be contacted.

If the front seats have been subjected to a major load, such as in conjunction with a collision, the seats must be replaced. Some of the seats' protective properties may have been lost even if they do not appear damaged.

**WARNING**
Do not leave any objects on the floor behind or under the front seats or in the rear seat that may prevent WHIPS from functioning.

**WARNING**
Do not squeeze rigid objects between the rear seat cushion and the front seat's backrest.

If a backrest in the rear seat is lowered then any load must be secured to prevent it from sliding up to the front seat backrest in the event of a collision.

**WARNING**
If a backrest in the rear seat is lowered or a rear-facing child seat is used in the rear seat, the corresponding front seat must be moved forward so that it does not make contact with the lowered backrest or child seat.
Seating position
For optimum protection from WHIPS the driver and passenger must have the correct seating position and make sure that the system’s function is not obstructed.

Set the correct seating position in the front seat before driving starts.

Driver and front seat passenger should sit in the centre of the seat with as little space as possible between the head and the head restraint.

WHIPS and child seats
The protection provided by the car to children seated in a child seat or on a booster cushion is not diminished by WHIPS.

Related information
- Safety (p. 42)
- Manual front seat (p. 180)
- Power front seat* (p. 181)
- Rear Collision Warning (p. 356)

Pedestrian Protection System
The Pedestrian Protection System (PPS) is a system which, in certain frontal collisions, contributes to mitigating a pedestrian’s impact with the car.

In certain frontal collisions with a pedestrian, the sensors in the front of the car react and the system is activated.

When PPS is activated, the following occur:
- The rear section of the bonnet is raised.
- An automatic alarm is sent via Volvo On Call*.

The sensors are active at a speed of approx. 25-50 km/h (15-30 mph).

The sensors are designed to detect a collision with an object that has similar properties to those of the human leg.

NOTE
There may be objects in the traffic environment that prompt a signal to the sensors that is similar to a collision with a pedestrian. It is possible that the system will be activated in the event of a collision with such an object.

WARNING
Do not fit any accessories or change anything in the front. Incorrect intervention at the front may cause incorrect function in the system and lead to serious injury and damage to the car.

Volvo recommends that genuine wiper arms are used and that only genuine parts are used for them.

WARNING
Never modify or repair the system yourself. Volvo recommends that an authorised Volvo workshop should be contacted. Defective work in the system could cause malfunction and result in serious personal injury.

WARNING
Volvo recommends contacting an authorised Volvo workshop in the event of any damage to the front of the car in order to ensure that the system is intact.

Symbols in the driver display

Related information

- Safety (p. 42)

Seatbelts

Heavy braking can have serious consequences if the seatbelts are not used. It is important that the seatbelt lies against the body so it can provide maximum protection. Do not lean the backrest too far back. The seatbelt is designed to protect in a normal seating position.

⚠️ WARNING

Remember not to clip or hook the seatbelt to hooks or other interior fittings, as this prevents the belt from tightening properly.

⚠️ WARNING

The seatbelts and airbags interact. If a seatbelt is not used or is used incorrectly, this may diminish the protection provided by the airbag in the event of a collision.

⚠️ WARNING

Never modify or repair the seatbelts yourself. Volvo recommends that an authorised Volvo workshop should be contacted.

If the seatbelt has been subjected to a major load, such as in conjunction with a collision, the entire seatbelt must be replaced. Some of the seatbelt's protective properties may have been lost even if the seatbelt does not appear damaged. The seatbelt must also be replaced if it shows signs of wear or damage. The new seatbelt must be type-approved and designed for installation at the same location as the replaced seatbelt.

Related information

- Safety (p. 42)
- Seatbelt tensioner (p. 47)
- Putting on and taking off seatbelts (p. 46)
- Door and seatbelt reminder (p. 48)
Putting on and taking off seatbelts

Make sure that all passengers have fastened their seatbelts before starting to drive.

Putting on seatbelts

1. Pull out the seatbelt slowly and make sure it is not twisted or damaged.

   **NOTE**
   The seatbelt locks and cannot be withdrawn:
   • if it is pulled out too quickly
   • during braking and acceleration
   • if the car leans heavily.

2. Lock the belt by inserting the locking tab in the intended buckle.
   > A loud "click" indicates that the belt has locked.

   **WARNING**
   Always insert the tongue of the seatbelt into the buckle on the correct side. The seatbelts and buckles would otherwise possibly not function as intended in the event of a collision. There is a risk of serous injury.

3. In the front seats the seatbelt can be adjusted for height.

   The seatbelt must pass over the shoulder (not down over the arm).
   4. Tension the hip strap over the lap by pulling the diagonal shoulder belt up towards the shoulder.

   The hip strap must be positioned low down (not over the abdomen).
**SAFETY**

---

**WARNING**
Each seatbelt is designed for only one person.

---

**WARNING**
Remember not to clip or hook the seatbelt to hooks or other interior fittings, as this prevents the belt from tightening properly.

---

**WARNING**
Do not make any damages on seatbelts nor insert any foreign objects into a buckle. The seatbelts and buckles would then possibly not function as intended in the event of a collision. There is a risk of serous injury.

---

**Taking off seatbelts**

1. Press the red button on the seatbelt buckle and then let the belt retract.
2. If the seatbelt does not retract fully, feed it in by hand so that it does not hang loose.

**Related information**
- Seatbelts (p. 45)
- Seatbelt tensioner (p. 47)
- Door and seatbelt reminder (p. 48)

---

**Seatbelt tensioner**
The car is fitted with standard seatbelt tensioners and electric seatbelt tensioners that can tension the seatbelts in critical situations and collisions.

**Standard seatbelt tensioner**
All the seatbelts are equipped with a standard seatbelt tensioner.

The seatbelt tensioner tensions the seatbelt in the event of a collision with sufficient force in order to more effectively restrain the occupant.

**Electric seatbelt tensioner**
The driver and front passenger seatbelts are equipped with an electric seatbelt tensioner.

The seatbelt tensioners work together and can be activated together with the driver support systems City Safety and Rear Collision Warning. In critical situations, such as panic braking, driving off the road (e.g. the car rolls into a ditch, lifts off the ground or hits something in the terrain), skidding, or risk of collision, the seatbelt can be tensioned by the seatbelt tensioner’s electric motor.

The electric seatbelt tensioner helps to adjust the occupant to a better position, reducing the risk of striking the car’s interior and improving the effect of safety systems, such as the car’s airbags.

When the critical situation has come to an end, the seatbelt and the electric seatbelt pretensioner are restored automatically, but they can also be restored manually.

---

**IMPORTANT**
If the passenger airbag is deactivated, the electric seatbelt tensioner on the passenger side will also be deactivated.

---

**WARNING**
Never modify or repair the seatbelts yourself. Volvo recommends that an authorised Volvo workshop should be contacted.

If the seatbelt has been subjected to a major load, such as in conjunction with a collision, the entire seatbelt must be replaced. Some of the seatbelt’s protective properties may have been lost even if the seatbelt does not appear damaged. The seatbelt must also be replaced if it shows signs of wear or damage. The new seatbelt must be type-approved and designed for installation at the same location as the replaced seatbelt.

**Related information**
- Seatbelts (p. 45)
- Putting on and taking off seatbelts (p. 46)
- Resetting the electric seatbelt tensioner (p. 48)
- Activating and deactivating passenger airbag* (p. 53)
Resetting the electric seatbelt tensioner
The electric seatbelt tensioner is designed to be reset automatically, but the seatbelt tensioner can be reset manually if the belt remains extended.
1. Stop the car at a safe place.
2. Unfasten the seatbelt and then refasten it.
   > The seatbelt and electric seatbelt tensioner are reset.

**WARNING**
Never modify or repair the seatbelts yourself. Volvo recommends that an authorised Volvo workshop should be contacted.

If the seatbelt has been subjected to a major load, such as in conjunction with a collision, the entire seatbelt must be replaced. Some of the seatbelt’s protective properties may have been lost even if the seatbelt does not appear damaged. The seatbelt must also be replaced if it shows signs of wear or damage. The new seatbelt must be type-approved and designed for installation at the same location as the replaced seatbelt.

Related information
- Seatbelt tensioner (p. 47)
- Seatbelts (p. 45)

Door and seatbelt reminder
The system reminds unbelted occupants to wear a seatbelt, and also warns about an open door, bonnet, boot lid or fuel filler flap.

Driver display graphics
Graphics in the driver display with different types of warnings. The warning colour on the door and boot lid is dependent on the speed of the car.

The driver display’s graphics show which seats in the car are occupied by belted and unbelted passengers.

The same graphic also shows if the bonnet, boot lid, fuel filler flap or any door is open.

The graphic can be acknowledged by pressing the O button on the right-hand steering wheel keypad.
Seatbelt reminder

A visual reminder is given in the roof console and by means of the warning symbol in the driver display.

The acoustic reminder is dependent on speed, driving time and distance.

The belt status of the driver and passengers is shown in the driver display graphics when a belt is buckled or unbuckled.

Child seats are not covered by the seatbelt reminder system.

Front seat
A visual and acoustic reminder remind the driver and front seat passenger to use a seatbelt if either of them is not wearing one.

Rear seat
The seatbelt reminder in the rear seat has two subfunctions:

- Provides information on which seatbelts are being used in the rear seat. The driver display's graphics are shown when the seatbelts are in use.
- Reminding that a seatbelt in the rear seat is unfastened during a journey by means of a visual and acoustic reminder. The reminder will cease once the seatbelt has been put on again.

Reminder for doors, bonnet, boot lid and fuel filler flap

If the bonnet, boot lid, fuel filler flap or any door is not closed properly, the graphic in the driver display shows what is open. Stop the car in a safe place as soon as possible and close the source of the warning.

If the car is driven at a speed lower than approx. 10 km/h (6 mph) then the driver display's information symbol illuminates.

If the car is driven at a speed higher than approx. 10 km/h (6 mph) then the driver display's warning symbol illuminates.

Related information
- Seatbelts (p. 45)
- Putting on and taking off seatbelts (p. 46)
Airbags
The car is equipped with airbags and inflatable curtains for driver and passengers.

NOTE
The detectors react differently depending on the nature of the collision and whether or not the seatbelts are fastened. Applies to all belt positions.

It is therefore possible that only one (or none) of the airbags may inflate in a collision. The detectors sense the force of the collision on the vehicle and the action is adapted accordingly so that none, one or more airbags are deployed.

WARNING
Never drive with deployed airbags. They can make steering difficult. Other safety systems may also be damaged. The smoke and dust created when the airbags are deployed can cause skin and eye irritation/injury after intensive exposure. In case of irritation, wash with cold water. The rapid deployment sequence and airbag fabric may cause friction and skin burns.

Related information
- Safety (p. 42)
- Driver airbags (p. 50)
- Passenger airbag (p. 51)
- Side airbags (p. 55)
- Airbags (p. 56)

Deployed airbags
If any of the airbags have deployed, the following is recommended:

- Recovering the car. Volvo recommends that it is transported to an authorised Volvo workshop. Do not drive with deployed airbags.
- Volvo recommends engaging an authorised Volvo workshop to handle the replacement of components in the car’s safety systems.
- Always contact a doctor.

Driver airbags
As a supplement to the seatbelts, the car is equipped with steering wheel airbag and knee airbag\(^1\) on the driver's side.

Steering wheel airbag and knee airbag\(^1\) on the driver’s side in the front seat.

In the event of a frontal collision, the airbags help to protect the head, neck, face and chest of the driver as well as the knees and legs.

A sufficiently violent collision trips the sensors and the airbag/airbags is inflated. The airbag cushions the initial collision impact for the occupant. The airbag deflates when compressed by the collision. When this occurs, smoke escapes into the car. This is completely normal. The entire process, including inflation and deflation of the airbag, occurs within tenths of a second.

\(^1\) The car is only equipped with knee airbag in certain markets.
WARNING
The seatbelts and airbags interact. If the belt is not used or is used incorrectly, this may diminish the protection provided by the airbag in the event of a collision.

To minimise the risk of injury if the airbag deploys, passengers must sit as upright as possible with their feet on the floor and backs against the backrest.

WARNING
Volvo recommends that an authorised Volvo workshop should be contacted for repair. Defective work in the airbag system could cause malfunction and result in serious personal injury.

Steering wheel airbag location
This airbag is fitted into the centre of the steering wheel. The steering wheel is marked AIRBAG.

Knee airbag location
The airbag is folded up in the lower part of the instrument panel on the driver’s side. Its cover panel is marked AIRBAG.

WARNING
Do not place or attach any object on the top or front of the panel where the knee airbag is stowed.

- Airbags (p. 50)
- Passenger airbag (p. 51)

Passenger airbag
As a supplement to the seatbelts, the vehicle is equipped with an airbag on the passenger side in the front seat.

Front passenger airbag in front seat.

In the event of a frontal collision, the airbag helps to protect the head, neck, face and chest of the passenger as well as the knees and legs.

A sufficiently violent collision trips the sensors and the airbag is inflated. The airbag cushions the initial collision impact for the occupant. The airbag deflates when compressed by the collision. When this occurs, smoke escapes into the car. This is completely normal. The entire process, including inflation and deflation of the airbag, occurs within tenths of a second.

1 The car is only equipped with knee airbag in certain markets.
**WARNING**
The seatbelts and airbags interact. If the belt is not used or is used incorrectly, this may diminish the protection provided by the airbag in the event of a collision.

To minimise the risk of injury if the airbag deploys, passengers must sit as upright as possible with their feet on the floor and backs against the backrest.

**WARNING**
Volvo recommends that an authorised Volvo workshop should be contacted for repair. Defective work in the airbag system could cause malfunction and result in serious personal injury.

**Passenger airbag location**
The airbag is folded up into a compartment above the glovebox. Its cover panel is marked AIRBAG.

**WARNING**
Do not put objects in front of or above the dashboard where the passenger airbag is located.

**Label for passenger airbag**

![Label on the passenger side's sun visor.](image)

**WARNING**
If the car is not equipped with a switch to activate/deactivate the passenger airbag, the airbag will always be activated.

**WARNING**
Never allow anybody to stand or sit in front of the front passenger seat.

Never use a rear-facing child seat on the front passenger seat if the airbag is activated.

Front-facing passengers (children and adults) must never sit on the front passenger seat if the passenger airbag is deactivated.

Failure to follow the advice given above can endanger life or lead to serious personal injury.

**Related information**
- Airbags (p. 50)
- Driver airbags (p. 50)
- Activating and deactivating passenger airbag* (p. 53)

* Option/accessory.
Activating and deactivating passenger airbag*

The passenger airbag can be deactivated if the car is equipped with a switch, Passenger Airbag Cut Off Switch (PACOS).

Switch

The switch for the passenger airbag is located on the passenger end of the instrument panel and is accessible when the passenger door is open.

Check that the switch is in the required position.

> ON - the airbag is activated and all front-facing passengers (children and adults) can sit safely on the passenger seat.

> OFF - The airbag is deactivated and children in rear-facing child seats can sit safely on the passenger seat.

⚠️ WARNING

If the car is not equipped with a switch to activate/deactivate the passenger airbag, the airbag will always be activated.

Activating passenger airbag

1 Pull the switch outward and turn from OFF (B) to ON (A).

> The driver display shows the message Passenger airbag on Please acknowledge.

$i$ NOTE

If the passenger airbag has been activated/deactivated with the car in ignition position I or lower, a message is shown in the driver display and the following indicator in the roof console approx. 6 seconds after the car's electrical system has been set in ignition position II.

* Option/accessory.
2. Confirm the message by pressing the right-hand steering wheel keypad’s O button.

> A text message and a warning symbol in the roof console indicate that the airbag for the front passenger seat is activated.

**WARNING**

Never use a rear-facing child seat on the front passenger seat when the airbag is activated.

The passenger airbag must always be activated when front-facing passengers (children and adults) are sitting in the front passenger seat.

Failure to follow the advice given above can endanger life or lead to serious personal injury.

---

**Deactivating passenger airbag**

1. Pull the switch outward and turn from ON (A) to OFF (B).
   > The driver display shows the message "Passenger airbag off Please acknowledge."

**NOTE**

If the passenger airbag has been activated/deactivated with the car in ignition position I or lower, a message is shown in the driver display and the following indicator in the roof console approx. 6 seconds after the car’s electrical system has been set in ignition position II.

---

**WARNING**

Front-facing passengers (children and adults) must never sit on the passenger seat when the airbag is deactivated.

Failure to follow the advice given above can endanger life or lead to serious personal injury.

---

**IMPORTANT**

If the passenger airbag is deactivated, the electric seatbelt tensioner on the passenger side will also be deactivated.
Side airbags

The side airbags on the driver's and passenger seats act to protect the chest and hips in the event of a collision.

The side airbags are fitted in the outer backrest frames of the front seats and help to protect the driver and passengers in the front seat.

A sufficiently violent collision trips the sensors and the side airbags are inflated. The airbag inflates between the occupant and the door panel and thereby cushions the initial impact. The airbag deflates when compressed by the collision. The side airbag is normally only deployed on the side of the collision.

WARNING

Volvo recommends that an authorised Volvo workshop should be contacted for repair. Defective work in the side airbag system could cause malfunction and result in serious personal injury.

WARNING

Do not put objects in the area between the outside of the seat and the door panel, since this area is required by the side airbag. Volvo recommends the use only of car seat covers approved by Volvo. Other seat covers may impede the operation of the side airbags.

WARNING

Side airbags are a supplement the seatbelts. Always use a seatbelt.

Side airbags and child seats

The protection provided by the car to children seated in a child seat or on a booster cushion is not diminished by the side airbag.

Related information

• Airbags (p. 50)
**Airbags**

The inflatable curtain, Inflatable Curtain (IC), helps to prevent the driver and passengers from striking their heads on the inside of the car during a collision.

The inflatable curtain is mounted along both sides of the headlining and helps protect the driver and outer seat passengers of the car. The panels are labelled with **IC AIRBAG**.

A sufficiently violent collision trips the sensors and the inflatable curtain is inflated.

**WARNING**

Never hang or attach heavy items onto the handles in the roof. The hooks are only designed for light coats and jackets (not for solid objects such as umbrellas).

Do not screw or install anything onto the car’s headlining, door pillars or side panels. This could compromise the intended protection. Volvo recommends only using Volvo genuine parts that are approved for fitting within these areas.

**WARNING**

Leave 10 cm (4 inches) space between the load and the side windows if the car is loaded to above the top edge of the door windows. Otherwise, the intended protection of the inflatable curtain, which is concealed in the headlining, may be compromised.

**WARNING**

The inflatable curtain is a supplement to the seatbelts. Always use a seatbelt.

**Related information**

- Airbags (p. 50)

---

**Safety mode**

Safety mode is a protective state that is triggered when a collision may have damaged any of the car’s vital functions, such as the fuel lines, sensors for any of the safety systems, or the brake system.

If the car has been in a collision, the message **Safety mode See Owner's manual** may be shown on the driver display with a warning symbol as long as the display is not damaged and the car’s electrical system is still in working order. This message means that the car has reduced functionality.

**WARNING**

Never, under any circumstances, attempt to restart the car if it smells of fuel when the **Safety mode See Owner's manual** message is shown in the driver display. Leave the car at once.

If the car is in safety mode, it is possible to attempt to reset the system in order to start and move the car for a short distance, if in a dangerous traffic situation for example.
WARNING

Never attempt to repair your car or reset the electronics yourself if the car has been in safety mode. This could result in personal injury or the car not functioning as normal. Volvo recommends that engaging an authorised Volvo workshop to check and restore the car to normal status after Safety mode See Owner’s manual has been shown.

Starting and moving the car after safety mode

If the car is in safety mode, it is possible to attempt to reset the system in order to start and move the car for a short distance, if in a dangerous traffic situation for example.

Starting the car after safety mode

1. Check the general damage situation of the car and whether any fuel has been leaking. There must be no smell of fuel either.

   If there is only minor damage and a check has revealed no fuel leaks, starting can be attempted.

2. Switch off the car.

3. Then try to start the car.

   > The car’s electronics carry out a systems check and then try to resume normal status.

   IMPORTANT

   If the message Safety mode See Owner’s manual is still shown on the display the car must not be driven or towed but a vehicle recovery service must then be used instead. Even if the car appears to be driveable, hidden damage may make the car impossible to control once moving.

Moving the car after safety mode

1. If the driver display shows the message Normal mode The car is now in normal mode after a start attempt, the car can be carefully moved if standing in a dangerous position.

2. Do not move the car further than necessary.

WARNING

Never, under any circumstances, attempt to restart the car if it smells of fuel when the Safety mode See Owner’s manual message is shown in the driver display. Leave the car at once.

Child safety
Children must always sit secure while travelling in the car.
Volvo has child safety equipment (child seats and attachment devices) which is designed for fitting in this particular car. Using Volvo's child safety equipment, you obtain the optimum conditions for a child to travel safely in the car. In addition, the child safety equipment fits in well and is simple to use.

The equipment that should be used is selected taking account of the weight and size of the child.

Volvo recommends that children travel in a rear-facing child seat until as late an age as possible, at least until 3-4 years of age, and then in a front-facing child seat until the child is 140 cm (4 feet 7 inches) tall.

NOTE
Legal provisions about the type of child seat that must be used for children of different ages and heights vary from country to country. Check what does apply.
Child seats

Suitable child seats should always be used when children are travelling in the car.
Children should sit comfortably and safely. Make sure that the child seat is positioned, mounted and used correctly.

Look in the installation instructions for the child seat for the correct fitting.

**NOTE**

When using child safety equipment, it is important to read the installation instructions included.

In the event of questions when fitting child safety equipment, contact the manufacturer for clearer instructions.

**NOTE**

Never leave a child seat loose in the car. Always secure it according to the instructions for the child seat, even when it is not in use.

Related information

- Child seat positioning (p. 61)
- Activating and deactivating passenger airbag* (p. 53)

Upper mounting points for child seats

The car is equipped with upper mounting points for child seats on the rear seat’s outer seats.
The upper mounting points are primarily intended for use with front-facing child seats.

Always follow the manufacturer’s installation instructions when connecting a child seat to the upper mounting points.

The location of the mounting points

The location of the mounting points is indicated by symbols on the parcel shelf behind the rear seat.

The mounting points are located on the parcel shelf behind the rear seat’s outer seats.
**WARNING**

The child seat's upper straps must be routed through the hole in the head restraint leg before they are tensioned at the mounting point. If this is not possible, follow the recommendations from the child seat manufacturer.

**NOTE**

Fold the head restraints in order to facilitate fitting this type of child seat in cars with folding head restraints on the outer seats.

- i-Size/ISOFIX mounting points for child seats (p. 61)
- Table for location of child seats using the car's seatbelts (p. 65)

---

**Lower mounting points for child seats**

The car is equipped with lower mounting points for child seats in the front seat* and the rear seat.

The lower mounting points are designed to be used in conjunction with certain rear-facing child seats.

Always follow the manufacturer's installation instructions when connecting a child seat to the lower mounting points.

**The location of the mounting points**

Mounting point locations in the rear seat.

The mounting points in the rear seat are located on the rear section of the front seat's floor rails.

**Related information**

- Child seats (p. 59)
- Upper mounting points for child seats (p. 59)
- i-Size/ISOFIX mounting points for child seats (p. 61)

* Option/accessory.
i-Size/ISOFIX mounting points for child seats

The car is equipped with i-Size/ISOFIX² mounting points for child seats in the rear seat.

i-Size/ISOFIX is a fixture system for car child seats that is based on an international standard. Always follow the manufacturer’s installation instructions when connecting a child seat to the i-Size/ISOFIX mounting points.

The location of the mounting points

Mounting point locations are indicated by symbols² on the upholstery of the backrest.

The mounting points for i-Size/ISOFIX are located behind covers in the lower section of the rear seat’s backrest, in the outer seats.

Lift the covers in order to access the mounting points.

- Lower mounting points for child seats (p. 60)
- Table for location of i-Size child seats (p. 67)
- Table for location of ISOFIX child seats (p. 68)

Child seat positioning

It is important to position the child seat in the right place in the car and this depends, amongst other things, on the type of child seat and whether the passenger airbag is activated.

Rear-facing child seat and airbag are not compatible. Always fit rear-facing child seats in the rear seat if the passenger airbag is activated. If a child is sitting on the front passenger seat then he/she could suffer serious injury if the airbag deploys.

If the passenger airbag is deactivated then rear-facing child seats can be fitted on the front passenger seat.

---

² Names and symbols change depending on market.
NOTE
Regulations regarding the placement of children in cars vary from country to country. Check what does apply.

WARNING
Never allow anybody to stand or sit in front of the front passenger seat. Never use a rear-facing child seat on the front passenger seat if the airbag is activated. Front-facing passengers (children and adults) must never sit on the front passenger seat if the passenger airbag is deactivated. Failure to follow the advice given above can endanger life or lead to serious personal injury.

Label for passenger airbag

Label on the passenger side’s sun visor.

Label on the passenger side’s door pillar. The label becomes visible when the passenger door is opened.

The warning label for the passenger airbag is positioned as shown above.
Child seat mounting

It is important to remember a number of things when a child seat is mounted and used, which depend on where the child seat is positioned.

**WARNING**

Booster cushions/child seats with steel braces or some other design that could rest on the seatbelt buckle's opening button must not be used, as they could cause the seatbelt buckle to open accidentally.

Do not secure the straps for the child seat into the seat's horizontal adjustment bar or in springs, rails or beams under the seat. Sharp edges may damage the straps.

Do not allow the upper section of the child seat to rest against the windscreen.

**NOTE**

Never leave a child seat loose in the car. Always secure it according to the instructions for the child seat, even when it is not in use.

Installation in the front seat

- When fitting rear-facing child seats, check that the passenger airbag is deactivated.
- When fitting front-facing child seats, check that the passenger airbag is activated.
- Only use child seats that are recommended by Volvo, are universally approved or are semi-universal, and where the car is included on the manufacturer's vehicle list.
- ISOFIX child seats can only be fitted when the car is equipped with the ISOFIX console\(^3\) accessory.
- If the child seat is equipped with lower straps, Volvo recommends that the lower mounting points are used with these\(^3\).
- The ISOFIX guide can be used in order to facilitate child seat installation.

Installation in the rear seat

**WARNING**

Child seats with support legs must not be mounted in the centre seat, risk of danger.

- Only use child seats that are recommended by Volvo, are universally approved or are semi-universal, and where the car is included on the manufacturer's vehicle list.
- The outer seats are equipped with the ISOFIX fixture system and are approved for i-Size\(^4\).
- The outer seats are equipped with upper mounting points. Volvo recommends that child seat's upper straps should be pulled through the hole in the head restraint before being tensioned at the mounting point. If this is not possible, follow the recommendations from the child seat manufacturer.
- If the child seat is equipped with lower straps, never adjust the position of the seat in front after the straps have been fitted in the lower mounting points. Always remember to remove the lower straps when the child seat is not installed.

\(^3\) The accessory range varies depending on market.

\(^4\) Varies depending on market.

<sup>A</sup> For child seats with the ISOFIX fixture system there is a size classification to help users choose the right type of child seat. The size class can be read on the child seat’s label.

<sup>B</sup> Works for the installation of ISOFIX child seats that are semi-universally approved (IL) if the car is equipped with the ISOFIX console accessory (the accessory range varies depending on market).

<sup>C</sup> Volvo recommends: Volvo infant seat secured using the ISOFIX fixture system (type approval E1 04301146).

<sup>D</sup> Applicable if the car is not fitted with an ISOFIX bracket.

<sup>E</sup> Adjust the backrest so that the head restraint does not interfere with the child seat.

<sup>F</sup> Volvo recommends rear-facing child seat for children in this mass group.

<sup>G</sup> Volvo recommends: BeSafe iZi Kid X3 ISOfix (type approval E5 04200).

---

**WARNING**

Never use a rear-facing child seat on the front passenger seat if the passenger airbag is activated.

**NOTE**

If an i-Size/ISOFIX child seat has no size classification, the car model must be included on the vehicle list for the child seat.

**NOTE**

Volvo recommends contacting an authorised Volvo dealer for information about which i-Size/ISOFIX child seats Volvo recommends.

**Integrated child seat**

The integrated child seats on the outer positions in the rear seat allow children to sit comfortably and safely.

The child seat is specially designed to provide children with good safety, together with the car’s seatbelt. The seat cushion can be raised in two positions depending on the weight of the child.

The child seat is approved for children who weigh 15-36 kg (33-80 lbs) and are at least 95 cm (37 inches) tall.

- the seatbelt is in contact with the child's body and is not slack or twisted
- the seatbelt does not lie across the child's throat or below the shoulder
- the lap section of the seatbelt is positioned low over the pelvis to provide optimal protection.

**WARNING**

Volvo recommends that repair or replacement of the integrated child seat is only performed by an authorised Volvo workshop. Do not make any modifications or additions to the child seat. If an integrated child seat has been subjected to a heavy load, e.g. in connection with a collision, then the seat cushion, seatbelt and backrest, or possibly the whole seat, must be replaced. Even if the child seat appears to be undamaged, it may not afford the same level of protection. This also applies if the seat cushion was in lowered position during a collision or similar. The seat cushion must also be replaced if it is heavily worn.

Correct position, the seatbelt should be positioned in on the shoulder.

Check before driving that:

- the seat cushion is raised to the correct position for the weight of the child
- the seat cushion in locked in position

**Related information**

- Folding down the seat cushion in the integrated child seat* (p. 73)
SAFETY

Folding up the seat cushion in the integrated child seat*

The seat cushion should always be folded up when the integrated child seat is in use.

The seat cushion can be folded up in two positions. The position that should be used depends on the weight of the child.

<table>
<thead>
<tr>
<th>Weight</th>
<th>Lower position</th>
<th>Upper position</th>
</tr>
</thead>
<tbody>
<tr>
<td>22-36 kg</td>
<td>22-36 kg</td>
<td>15-25 kg</td>
</tr>
<tr>
<td>(50-80 lbs)</td>
<td>(33-55 lbs)</td>
<td></td>
</tr>
</tbody>
</table>

Lower position:

1. Pull the handle forwards and upwards to release the seat cushion.

Upper position, start from the lower position:

1. Press the button to release the seat cushion.

2. Lift the seat cushion up at the front edge and press it back against the backrest to lock.

**WARNING**

If the instructions for the integrated child seat are not followed then the child could sustain serious injury in the event of an accident.

**NOTE**

It is not possible to adjust the seat cushion from the upper position to the lower position. From the upper position, the seat cushion must first be fully lowered into the rear seat, and then folded up to the lower position.

* Option/accessory.
Related information
- Integrated child seat* (p. 71)
- Folding down the seat cushion in the integrated child seat* (p. 73)

Folding down the seat cushion in the integrated child seat*
The seat cushion should be folded down into the rear seat when the integrated child seat is not being used.

**NOTE**
It is not possible to adjust the seat cushion from the upper position to the lower position. From the upper position, the seat cushion must first be fully lowered into the rear seat, and then folded up to the lower position.

1. Pull the handle forwards to release the seat cushion.

2. Press down with your hand in the centre of the seat cushion in order to lock it.

**IMPORTANT**
Check that there are no loose objects (e.g. toys) left behind in the space under the child seat's seat cushion before lowering.

**NOTE**
Before the rear backrest is lowered, the child seat's seat cushion must be lowered first.

**Driver display**
The driver display shows information about the car and driving.
The driver display contains gauges, indicators and indicator and warning symbols. The content of the driver display depends on the car's equipment, settings and which functions are active at that time.

The driver display is activated as soon as a door is opened, i.e. in ignition position 0. The driver display extinguishes after a while if it is not used. To reactivate it, proceed with one of the following:

- Depress the brake pedal.
- Activate ignition position I.
- Open one of the doors.

The driver display is available in two versions, 12-inch* and 8-inch.

**WARNING**
In the event of a fault in the driver display the information on e.g. brakes, airbags or other safety systems may not be shown. In which case, the driver cannot check the status of the car’s systems or receive current warnings and information.

**WARNING**
If the driver display should extinguish, not illuminate on activation/start or be fully or partially illegible, the car must not be used. You should visit a workshop immediately. Volvo recommends an authorised Volvo workshop.

### Dynamic symbol

The dynamic symbol in its basic form.

The centre of the driver display contains a dynamic symbol that changes appearance for different types of message. An amber or red marker around the symbol indicates the degree of severity of a control or warning message. With an animation, the basic shape can be turned into a larger image in order to graphically indicate where a problem is situated or to clarify information.
Examples of indicator symbol.

**Related information**
- Driver display settings (p. 83)
- Warning symbols in the driver display (p. 92)
- Indicator symbols in the driver display (p. 90)
- Trip computer (p. 84)
- Messages in the driver display (p. 101)
- Handling the application menu in the driver display (p. 100)
Driver display settings
Settings for the driver display's display options can be made in the driver display's application menu and in the centre display's settings menu.

Settings in the driver display's app menu
In the app menu, you can choose which information is shown on the driver display from:
- Trip computer
- media player
- phone
- navigation system*.

Settings in the centre display

Selecting information type
1. Tap on Settings in the centre display's top view.
2. Press My Car ➔ Displays ➔ Driver Display Information.
3. Select what should be shown in the background:
   - Show no information in background
   - Show information for current playing media
   - Show navigation even if no route is set1.

Selecting theme
1. Tap on Settings in the centre display's top view.
2. Tap on My Car ➔ Displays ➔ Display Themes
3. Select a theme (appearance) for the driver display:
   - Glass
   - Minimalistic
   - Performance
   - Chrome Rings.

Selecting language
1. Tap on Settings in the centre display's top view.
2. Tap on System ➔ System Languages and Units ➔ System Language to select language.
   > A change will affect the language in all displays.
These settings are personal and are saved automatically to the active driver profile.

Related information
- Driver display (p. 79)
- Handling the application menu in the driver display (p. 100)

1 The map is only shown with the 12-inch driver display*. The 8-inch driver display only shows guidance.

Changing settings in the centre display (p. 130)
**Fuel gauge**
The fuel gauge in the driver display shows the fuel level in the tank.

**Fuel gauge in the 12-inch driver display:**
The beige zone in the fuel gauge indicates the quantity of fuel in the tank.

When the fuel level is low and it is soon time to refuel, the fuel pump symbol illuminates and changes to amber colour. The trip computer also indicates the distance to empty tank.

**Fuel gauge in the 8-inch driver display:**
The bars in the fuel gauge indicate the quantity of fuel in the tank.

When the fuel level is low and it is soon time to refuel, the fuel pump symbol illuminates and changes to amber colour. The trip computer also indicates the distance to empty tank. Only an amber-coloured bar remains when the fuel level is critically low. Refuel the car as soon as possible.

**Trip computer**
The car's trip computer records and calculates values such as e.g. distance, fuel consumption and average speed whilst driving.

In order to facilitate fuel-efficient driving, information is recorded about both instantaneous and average fuel consumption. The information from the trip computer can be shown in the driver display.

**Related information**
- Driver display (p. 79)
- Filling fuel (p. 449)
- Fuel tank - volume (p. 647)
The following meters are included in the trip computer:
- Trip meter
- Odometer
- Instantaneous fuel consumption

- Distance to empty tank
- Tourist - alternative speedometer

Units for distance, speed, etc. can be changed via system settings in the centre display.

**Trip meter**
There are two trip meters, TM and TA. TM can be reset manually and TA is reset automatically if the car is not used for at least four hours.

The following information is registered while driving:
- Mileage
- Driving time
- Average speed
- Average fuel consumption.

The values apply from the trip meter’s latest reset.

**Odometer**
The odometer records the car's total mileage. This value cannot be reset to zero.

**Instantaneous fuel consumption**
This gauge shows the fuel consumption that the car has at the moment. The value is updated approximately every second.

**Distance to empty tank**
The trip computer calculates the remaining mileage with the fuel available in the tank.

The calculation is based on the average fuel consumption over the last 30 km (20 miles) and the remaining drivable fuel quantity.

When the gauge shows "----", there is not enough fuel left to be able to calculate the remaining mileage. Refuel as soon as possible.

**NOTE**
There may be a slight deviation if the driving style has been changed.

An economic driving style generally results in a longer driving distance.

**Tourist - alternative speedometer**
The alternative digital speedometer makes it easier to drive in countries where speed limit signs are in a different unit than that shown in the car’s instruments.

The digital speed is then shown in the opposite unit to that shown in the analogue speedometer. If the analogue speedometer is graduated in mph, the digital speedometer shows the corresponding speed in km/h and vice versa.

**Related information**

- Resetting the trip meter (p. 87)
DISPLAYS AND VOICE CONTROL

- Show trip statistics in the centre display (p. 87)
- Driver display (p. 79)

Show trip data in the driver display

The trip computer's recorded and calculated values can be shown in the driver display.

The values are saved in a trip computer app. Via the app menu, you can choose which information is shown on the driver display.

Open and navigate in the app menu\(^2\) using the right-hand steering wheel keypad.

1. Open the app menu in the driver display by pressing (1).
   (It is not possible to open the app menu while there is an unacknowledged message in the driver display. The message must first be acknowledged before the app menu can be opened.)
2. Navigate to the trip computer app to left or right with (2).
   > The top four menu rows show measured values for trip meter TM. The next four menu rows show measured values for trip meter TA. Scroll up or down in the list with (3).
3. Scroll down to the option buttons to select which information to show in the driver display:
   - Distance to empty tank
   - Odometer
   - Mileage for trip meter TM, TA, or no display of mileage
   - Instantaneous fuel consumption, average consumption for TM or TA, alternatively, no display of fuel consumption
   - Tourist (alternative speedometer).

Select or deselect an option with the \(\text{O} \) button (4). The change is made immediately.

---

\(^2\) The figure is schematic - parts may vary depending on car model.
Resetting the trip meter
Reset the trip meter using the left-hand stalk switch.

- Reset all information in trip meter TM (i.e. mileage, average consumption, average speed and driving time) with a long press on the **RESET** button on the left-hand stalk switch.

  A short press on the **RESET** button resets only the mileage.

The trip meter TA can only be reset automatically when the car has not been used for four or more hours.

Related information
- Trip computer (p. 84)

Show trip statistics in the centre display
Trip statistics from the trip computer are displayed graphically in the centre display and provide an overview that facilitates more fuel-efficient driving.

Open the **Driver performance** app in app view in order to show the trip statistics.

Each bar in the diagram symbolises a distance of 1, 10 or 100 km, alternatively miles. The bars are filled in from the right as driving progresses. The bar on the far right shows the value for the current distance.

The average fuel consumption and total driving time are calculated since the last time the trip statistics were reset.

Related information
- Trip computer (p. 84)
Settings for trip statistics
Reset or adjust settings for trip statistics.

1. Open the Driver performance app in app view in order to show the trip statistics.

2. Press Preferences to
   - change graph scale. Select resolution 1, 10 or 100 km/miles for the bar.
   - reset data after every trip. Performed when the car has been stationary for more than 4 hours.
   - reset data for the current trip.

   Trip statistics, calculated average consumption and total driving time are always reset simultaneously.

   Units for distance, speed, etc. can be changed via system settings in the centre display.

Related information
- Show trip statistics in the centre display (p. 87)
- Trip computer (p. 84)

- Resetting the trip meter (p. 87)
**Time and date**
The clock is shown in both the driver display and the centre display.

**Clock location**

![22:46](Image of a clock showing 22:46)

Clock location in the 12-inch and 8-inch driver display.

In the centre display, the clock is located at the top right of the status bar.

In certain situations, messages and information may cover the clock in the driver display.

**Settings for time and date**
- Select **Settings ➔ System ➔ Date and Time** in the centre display's top view to change settings for time and date format.
- Adjust time and date by pressing the up or down arrow on the touch screen.

**Automatic time for cars with GPS**
When the car is equipped with a navigation system, **Auto Time** can be selected. The time zone is then adjusted automatically based on the location of the car. For certain types of navigation systems, the current location (country) must also be set to obtain the right time zone. If **Auto Time** is not selected, time and data are adjusted with arrow up or arrow down on the touch screen.

**Summer time**
In certain countries, it is possible to select automatic setting of summer time with **Auto**. For other countries, summer time can be set with **On** or **Off**.

**Related information**
- Driver display (p. 79)
- Changing settings in the centre display (p. 130)

**Outside temperature gauge**
The outside temperature is shown in the driver display.

![19°C](Image of an outside temperature gauge showing 19°C)

A sensor detects the temperature outside of the car.

**Outside temperature gauge location in the 12-inch and 8-inch driver display.**

If the car has been stationary, the gauge may display a temperature reading that is too high.

When the outside temperature is within the range -5 °C to +2 °C (23 till 36 °F) a snowflake symbol is also shown in the driver display as a warning for potentially slippery conditions.

The snowflake symbol is also illuminated briefly in the head-up display, if the car is equipped with one.

Change the unit for the temperature gauge via system settings in the centre display top view.

FreeType Project License
1. Copyright 1996-1999 by David Turner, Robert Wilhelm, and Werner Lemberg

Introduction The FreeType Project is distributed in several archive packages; some of them may contain, in addition to the FreeType font engine, various tools and contributions which rely on, or relate to, the FreeType Project. This license applies to all files found in such packages, and which do not fall under their own explicit license. The license affects thus the FreeType font engine, the test programs, documentation and makefiles, at the very least. This license was inspired by the BSD, Artistic, and IJG (Independent JPEG Group) licenses, which all encourage inclusion and use of free software in commercial and freeware products alike. As a consequence, its main points are that:

- o We don't promise that this software works. However, we are be interested in any kind of bug reports. ('as is' distribution)
- o You can use this software for whatever you want, in parts or full form, without having to pay us. ('royalty-free' usage)
- o You may not pretend that you wrote this software. If you use it, or only parts of it, in a program, you must acknowledge somewhere in your documentation that you've used the FreeType code. ('credits')

We specifically permit and encourage the inclusion of this software, with or without modifications, in commercial products, provided that all warranty or liability claims are assumed by the product vendor. Legal Terms

0. Definitions Throughout this license, the terms 'package', 'FreeType Project', and 'FreeType archive' refer to the set of files originally distributed by the authors (David Turner, Robert Wilhelm, and Werner Lemberg) as the 'FreeType project', be they named as alpha, beta or final release. 'You' refers to the licensee, or person using the project, where 'using' is a generic term including compiling the project's source code as well as linking it to form a 'program' or 'executable'. This program is referred to as 'a program using the FreeType engine'. This license applies to all files distributed in the original FreeType archive, including all source code, binaries and documentation, unless otherwise stated in the file in its original, unmodified form as distributed in the original archive. If you are unsure whether or not a particular file is covered by this license, you
must contact us to verify this. The FreeType project is copyright (C) 1996-1999 by David Turner, Robert Wilhelm, and Werner Lemberg. All rights reserved except as specified below. 1. No Warranty THE FREETYPE ARCHIVE IS PROVIDED `AS IS' WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT WILL ANY OF THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY DAMAGES CAUSED BY THE USE OR THE INABILITY TO USE, OF THE FREETYPE PROJECT. As you have not signed this license, you are not required to accept it. However, as the FreeType project is copyrighted material, only this license, or another one contracted with the authors, grants you the right to use, distribute, and modify it. Therefore, by using, distributing, or modifying the FreeType project, you indicate that you understand and accept all the terms of this license.

2. Redistribution Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met: o Redistribution of source code must retain this license file (`licence.txt') unaltered; any additions, deletions or changes to the original files must be clearly indicated in accompanying documentation. The copyright notices of the unaltered, original files must be preserved in all copies of source files. o Redistribution in binary form must provide a disclaimer that states that the software is based in part of the work of the FreeType Team, in the distribution documentation. We also encourage you to put an URL to the FreeType web page in your documentation, though this isn't mandatory. These conditions apply to any software derived from or based on the FreeType code, not just the unmodified files. If you use our work, you must acknowledge us. However, no fee need be paid to us.

3. Advertising The names of FreeType's authors and contributors may not be used to endorse or promote products derived from this software without specific prior written permission. We suggest, but do not require, that you use one or more of the following phrases to refer to this software in your documentation or advertising materials: 'FreeType Project', 'FreeType Engine', 'FreeType library', or 'FreeType Distribution'.

4. Contacts There are two mailing lists related to FreeType: o freetype＠freetype.org Discusses general use and applications of FreeType, as well as future and wanted additions to the library and distribution. If you are looking for support, start in this list if you haven't found anything to help you in the documentation. o devel＠freetype.org Discusses bugs, as well as engine internals, design issues, specific licenses, porting, etc. o http://www.freetype.org Holds the current FreeType web page, which will allow you to download our latest development version and read online documentation. You can also contact us individually at: David Turner <david.turner＠freetype.org> Robert Wilhelm <robert.wilhelm＠freetype.org> Werner Lemberg <werner.lemberg＠freetype.org>

Tom Tanner
libpng versions 0.5, May 1995, through 0.88, January 1996, are Copyright (c) 1995, 1996 Guy Eric Schalnat, Group 42, Inc.

For the purposes of this copyright and license, "Contributing Authors" is defined as the following set of individuals:
Andreas Dilger
Dave Martindale
Guy Eric Schalnat
Paul Schmidt
Tim Wegner

The PNG Reference Library is supplied "AS IS". The Contributing Authors and Group 42, Inc. disclaim all warranties, expressed or implied, including, without limitation, the warranties of merchantability and of fitness for any purpose. The Contributing Authors and Group 42, Inc. assume no liability for direct, indirect, incidental, special, exemplary, or consequential damages, which may result from the use of the PNG Reference Library, even if advised of the possibility of such damage.

Permission is hereby granted to use, copy, modify, and distribute this source code, or portions hereof, for any purpose, without fee, subject to the following restrictions:
1. The origin of this source code must not be misrepresented.
2. Altered versions must be plainly marked as such and must not be misrepresented as being the original source.
3. This Copyright notice may not be removed or altered from any source or altered source distribution.

The Contributing Authors and Group 42, Inc. specifically permit, without fee, and encourage the use of this source code as a component to supporting the PNG file format in commercial products. If you use this source code in a product, acknowledgment is not required but would be appreciated.

A "png_get_copyright" function is available, for convenient use in "about" boxes and the like:

```
printf("%s",png_get_copyright(NULL));
```

Also, the PNG logo (in PNG format, of course) is supplied in the files "pngbar.png" and "pngbar.jpg (88x31) and "pngnow.png" (98x31).

Libpng is OSI Certified Open Source Software. OSI Certified Open Source is a certification mark of the Open Source Initiative.

Related information
- Driver display (p. 79)

Application menu in driver display
Application menu (app menu) in the driver display provides quick access to commonly used functions for certain apps.

The app menu in the driver display can be used instead of using the centre display. The figure is schematic - the layout may vary.

The app menu is shown in the driver display and is controlled using the steering wheel's right-hand keypad. The app menu makes it easier to switch between different apps or functions within the apps without having to let go of the steering wheel.

App menu functions
Different apps give access to different types of functions. The following apps and their associated functions can be controlled from the app menu:
### App Functions

<table>
<thead>
<tr>
<th>App</th>
<th>Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tripcomputer</td>
<td>Selection of trip meter, selection of what to show in the driver display, etc.</td>
</tr>
<tr>
<td>Mediaplayer</td>
<td>Selection of active source for the media player.</td>
</tr>
<tr>
<td>Phone</td>
<td>Calling a contact from the call list.</td>
</tr>
<tr>
<td>Navigation</td>
<td>Guide to destination, etc.</td>
</tr>
</tbody>
</table>

### Related information

- Handling the application menu in the driver display (p. 100)

### Handling the application menu in the driver display
The application menu (the app menu) in the driver display is operated with the steering wheel's right-hand keypad.

![The app menu and the steering wheel's right-hand keypad.](image)

1. Open/close
2. Left/right
3. Up/down
4. Confirm

### Opening/closing the app menu
- Press on open/close (1).

(It is not possible to open the app menu while there is an unacknowledged message in the driver display. The message must first be acknowledged before the app menu can be opened.)

> The app menu opens/closes.

The app menu closes automatically after a period of inactivity or after certain options have been selected.

### Navigating and selecting in the app menu
1. Navigate between the different apps that are available by tapping on left or right (2).

> Functions for previous/next app are shown in the app menu.

2. Browse through the functions for the selected app by tapping on up or down (3).

3. Confirm or highlight an option for the function by pressing on confirm (4).

> The function is activated and for some options the app menu then closes.

If the app menu is opened again, the functions of the most recently selected app are shown first.

### Related information
- Application menu in driver display (p. 99)
- Messages in the driver display (p. 101)
Messages in the driver display
The driver display can show messages to inform or assist the driver in the event of different events.

The driver display shows messages that are of high priority for the driver.

The messages can be shown in different parts of the driver display depending on what other information is currently being displayed. After a while, or when the message has been acknowledged/ action taken if required, the message disappears from the driver display. If a message needs to be saved, it is placed in the Car status app, which is opened from the app view in the centre display.

Message composition may vary and they can be shown together with graphics, symbols or buttons for acknowledging the message or accepting a request, for example.

Service messages
Shown below is a selection of important service messages and their meanings.

<table>
<thead>
<tr>
<th>Message</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stop safely^</td>
<td>Stop and switch off the engine. Serious risk of damage - consult a workshop^</td>
</tr>
<tr>
<td>Turn off engine^</td>
<td>Stop and switch off the engine. Serious risk of damage - consult a workshop^</td>
</tr>
<tr>
<td>Service urgent Drive to workshop^</td>
<td>Contact a workshop^ to check the car immediately.</td>
</tr>
<tr>
<td>Service required^</td>
<td>Contact a workshop^ to check the car as soon as possible.</td>
</tr>
<tr>
<td>Regular maintenance</td>
<td>Time for regular service - contact a workshop^</td>
</tr>
<tr>
<td>Book time for maintenance</td>
<td>Time before the next service date.</td>
</tr>
<tr>
<td>Regular maintenance</td>
<td>Time for regular service - contact a workshop^</td>
</tr>
</tbody>
</table>

4 With 8-inch driver display.
5 With 12-inch driver display.
### Message | Specification
--- | ---
Time for maintenance | Shown at the next service date.
Regular maintenance | Time for regular service - contact a workshop. Shown when the service date has passed.
Maintenance overdue | A function has been temporarily switched off and is reset automatically while driving or after starting again.

**Note:**
- **A** Part of message, shown together with information on where the problem has arisen.
- **B** An authorised Volvo workshop is recommended.

### Related information
- Managing messages in the driver display (p. 102)
- Handling a message saved from the driver display (p. 103)
- Message in centre display (p. 136)

**Managing messages in the driver display**
Messages in the driver display are handled using the steering wheel's right-hand keypad.

![Message in the driver display](image)

Message in the driver display and the steering wheel's right-hand keypad.

1. Left/right
2. Confirm

Some messages in the driver display contain one or more buttons for acknowledging the message or accepting a request, for example.

---

6. With 8-inch driver display.
7. With 12-inch driver display.
Managing a new message
For messages with buttons:

1. Navigate between the different buttons that are available by tapping on left or right (1).
2. Confirm the selection by pressing on confirm (2).
   > The message disappears from the driver display.

For messages without buttons:

– Close the message by pressing on confirm (2), or allow the message to close automatically after a while.
   > The message disappears from the driver display.

If a message needs to be saved, it is placed in the Car status app, which is opened from the app view in the centre display. The message Car message stored in Car Status application is shown in the centre display in conjunction with this.

Related information
- Messages in the driver display (p. 101)
- Handling a message saved from the driver display (p. 103)
- Message in centre display (p. 136)

Handling a message saved from the driver display
Whether saved from the driver display or the centre display, messages are managed in the centre display.

Reading a saved message
To read a saved message immediately:

– Press the button to the right of the Car message stored in Car Status application message in the centre display.
  > The saved message is shown in the Car status app.

To read a saved message later:

1. Open the Car status app from the app view in the centre display.
   > The app is opened in the bottom tile of the home view.
2. Select the Messages tab in the app.
   > A list of saved messages is shown.
3. Tap on a message to expand/minimise.
   > More information on the message is shown in the list and the image to the left in the app shows information about the message graphically.
Managing a saved message
In maximised mode, some messages have two buttons available to book service or read the owner’s manual.

To book service for a saved message:
- In maximised mode for the message, press Request appoint.Call to make Appointment\(^8\) for help in booking service.
  > With Request appoint.: The Appointments tab opens in the app and creates a request to book service and repair work.
  > With Call to make Appointment: The phone app is initiated and calls a service centre to book service and repair work.

To read the owner’s manual for a saved message:
- In maximised mode for the message, press Owner’s manual to read about the message in the owner’s manual.
  > The owner’s manual opens in the centre display and shows information linked to the message.

Saved messages in the app are deleted automatically each time the engine is started.

- Message in centre display (p. 136)

\(^8\) Market dependent. Volvo ID and selected workshop also need to be registered.
Overview of centre display
Many of the car’s functions are controlled from the centre display. Presented here is the centre display and its options.
Three of the centre display’s basic views. Swipe right or left to access the function or app view respectively.\(^9\)

1. **Function view** - car functions that are activated or deactivated with a press. Certain functions are also so-called trigger functions, which means they open a window with setting options. Examples of these include Camera. Settings for the head-up display*.

\(^9\) The views are reversed for right-hand drive cars.
are also made from the function view, but adjustments are made using the steering wheel's right-hand keypad.

2 Home view - the first view that is shown when the screen is started.

3 Application view (app view) - apps that have been downloaded (third-party apps) and apps for embedded functions, such as FM radio. Tap on an app icon to open the app.

4 Status bar - the activities in the car are shown right at the top of the screen. Network and connection information is shown on the left-hand side of the status bar, while media-related information, the clock and indication about on-going background activity are shown on the right.

5 Top view - drag the tab down in order to access the top view. Settings, Owner’s manual, Profile and the car’s saved messages are accessed from here. In some cases contextual settings (e.g. Navigation Settings) and the contextual owner’s manual (e.g. Navigation Manual) can also be accessed in the top view.

6 Navigation - leads to map navigation, with e.g. Sensus Navigation*. Tap on the tile to expand it.

7 Media - recently used apps associated with media. Tap on the tile to expand it.

8 Phone - the phone function can be reached from here. Tap on the tile to expand it.

9 Extra tile - recently used apps or car functions that do not belong in any of the other tiles. Tap on the tile to expand it.

10 Climate row - information and direct interaction to set temperature and seat heating for example*. Tap on the symbol in the centre of the climate row in order to open the climate view with more setting options.

* Option/accessory.
Managing the centre display
Many of the car’s functions are controlled and regulated from the centre display. The centre display is a touch screen that reacts to touch.

Using the touch screen functionality in the centre display
The screen reacts differently depending on whether you press, drag or swipe across it. Actions such as browsing between different views, marking objects, scrolling in a list and moving apps can be performed by touching the screen in different ways.

An infrared light curtain just above the surface of the screen enables the screen to detect a finger that is just in front of the screen. This technology makes it possible to use the screen even with gloves on.

Two people can interact with the screen at the same time, e.g. to adjust the climate for the driver and passenger side respectively.

<table>

<tr>
<td>Drag apart</td>
<td>Zooms in.</td>
<td></td>
</tr>
<tr>
<td>Drag together</td>
<td>Zooms out.</td>
<td></td>
</tr>
</tbody>
</table>
### Returning to home view from another view

1. Briefly press the home button below the centre display.
   - The last position of the home view is shown.
2. Briefly press again.
   - All tiles of the home view are set to their default mode.

**NOTE**

In home view standard mode - briefly press the home button. An animation that describes access to the different views is shown on the screen.

### Scrolling in a list, article or view

When a scroll indicator is visible in the screen, it is possible to scroll downward or upward in the view. Swipe downwards/upwards anywhere in the view.

### Using the controls in the centre display

- **Temperature control.**

The control is used for many of the car's functions. Regulate e.g. temperature by means of one of the following:

- Drag the control to the desired temperature,
- Tap on + or – in order to raise or lower the temperature gradually, or
- Tap on the desired temperature on the control.

**Related information**

- Activating and deactivating centre display (p. 111)
- Moving apps and buttons in centre display (p. 120)
- Keyboard in centre display (p. 122)
Activating and deactivating centre display
The centre display can be dimmed and reacti- vated using the home button beneath the screen.

1. Give a long press on the physical home but- ton below the screen.
   > The screen goes dark except for the cli- mate row, which continues to be shown. All functions connected to the screen are still running.

2. Reactivate the screen - briefly tap on the home button.
   > The view that was displayed before the screen was switched off will be shown again.

**NOTE**
The screen cannot be deactivated when a prompt to perform an action is shown on the screen.

**NOTE**
The centre display deactivates automatically when the engine is off and the driver's door is opened.

Related information
- Cleaning the centre display (p. 615)
- Changing the appearance in the centre display (p. 127)
- Overview of centre display (p. 105)

Navigating in the centre display's views
There are five different basic views in the centre display: home view, top view, climate view, application view (app view) and function view. The screen is started automatically when the driver's door is opened.

Home view
Home view is the view that is shown when the screen is started. It consists of four tiles: Navigation, Media, Phone and an extra tile.

An app or car function selected from the app or function view starts in the respective tile of the home view. For example FM radio starts in the Media tile.

The extra tile contains the last used app or car function that is not associated with any of the other three areas.

The tiles show brief information about each different app.

**NOTE**
When the car is started, the home view's various sub-views show information on the current status of apps.

* Option/accessory.
**NOTE**
In home view standard mode - briefly press the home button. An animation that describes access to the different views is shown on the screen.

**Status bar**
The activities in the car are shown at the top of the screen. Network and connection information is shown on the left-hand side of the status bar, while media-related information, the clock and indication that background activity is in progress are shown on the right.

**Top view**
A tab is located in the centre of the status bar at the top of the screen. Open the top view by pressing on the tab or by dragging/swiping from the top downwards across the screen.

In the top view, access is always available to:
- **Settings**
- **Owner’s manual**
- **Profile**
- The car’s saved messages.

In the top view, access is given to the following in some cases:
- Contextual setting (e.g. Navigation Settings). Change settings directly in the top view when an app (e.g. navigation) is running.
- Contextual owner’s manual (e.g. Navigation Manual). Gain access directly in the top view to articles in the digital owner’s manual that are related to the content displayed on screen.

Exit the top view - press outside the top view, on the home button or at the bottom of the top view and drag upward. The underlying view is then visible and available for use again.

**NOTE**
The top view is not available during starting/shutdown or when a message is shown on the screen. It is also not available when climate view is shown.

**Climate view**
The climate row is always visible at the bottom of the screen. The most common climate settings can be made directly there, such as setting temperature and seat heating*.

Press the symbol in the centre of the climate row to open the climate view and gain access to more climate settings.

Press the symbol to close the climate view and return to the previous view.
Application view

Swipe from right to left\(^{10}\) across the screen in order to access the application view (app view) from the home view. Apps that have been downloaded (third-party apps) and apps for embedded functions, such as FM radio, are found here. Certain apps show brief information directly in the app view, such as the number of unread text messages for Messages.

Tap on an app to open it. It then opens in the tile to which it belongs, such as Media.

You can scroll down in the app view, depending on the number of apps. Do this by swiping/dragging from the bottom and up.

Go back to the home view again by swiping from left to right\(^{10}\) across the screen, or by pressing the home button.

Function view

The function view with buttons for different car functions.

Swipe from left to right\(^{10}\) across the screen in order to access the function view from the home view. From here you can activate or deactivate different car functions, e.g. BLIS\(^{\ast}\), Lane Keeping Aid\(^{\ast}\) and Park Assist\(^{\ast}\).

\(^{10}\) Applies to left-hand drive cars. For right-hand drive cars - swipe in the opposite direction.

\(^{\ast}\) Option/accessory.
Depending on the amount of functions, it is also possible here to scroll downward in the view. Do this by swiping/dragging from the bottom and up.

Unlike in app view, where an app is opened with a press, a function is activated or deactivated by pressing the relevant function button. Some functions (trigger functions) open in a new window when pressed.

Go back to the home view again by swiping from right to left\(^\text{10}\) across the screen, or by pressing the home button.

\(^{10}\) Applies to left-hand drive cars. For right-hand drive cars - swipe in the opposite direction.
Managing tiles in centre display
Home view consists of four tiles: Navigation, Media, Phone and an extra tile. These views can be expanded.
Expanding a tile from default mode

Standard mode and expanded mode of a tile in the centre display.
Expanding a tile:

- For tiles **Navigation, Media** and **Phone**: Tap anywhere on the tile. When a tile is expanded, the extra tile in the home view is temporarily forced away. The other two are minimised and only certain information is shown. When the extra tile is tapped, the other three tiles are minimised and only certain information is displayed.

The expanded view provides access to the basic functions of the app.

Closing an expanded tile:

- The tile can be closed in three different ways.
  - Tap on the upper part of the expanded tile.
  - Tap on another tile (that tile will then open in expanded mode instead).
  - Briefly press the physical home button below the centre display.

Opening or closing a tile in full screen mode

The extra tile and the tile for **Navigation** can be opened out in full screen mode, with even more information and more setting options.

When a new tile is opened in full-screen mode, no information from the other tiles is shown.

---

11 Does not apply to all apps or car functions opened via the extra tile
Function view in centre display
All the buttons for car functions are located in the function view, one of the centre display's basic views. Navigate to the function view from home view by swiping from left to right across the screen.\(^\text{12}\).

<table>
<thead>
<tr>
<th>Type of button</th>
<th>Property</th>
<th>Affects car function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Function buttons</td>
<td>Have on/off positions. When a function is running, an LED indicator illuminates to the left of the icon for the button. Press the button to activate/deactivate a function.</td>
<td>Most buttons in function view are function buttons.</td>
</tr>
</tbody>
</table>
| Trigger buttons | Do not have on/off positions. When a trigger button is depressed, a window for the function is opened. For example, it may be a window to change seat position. | • Camera  
• Headrest Fold  
• Head-up Display Adjustments |
| Parking buttons | Have on, off and scan modes. Similar to the function buttons but with an extra position for parking scanning. | • Park In  
• Park Out |

\(^\text{12}\) Applies to left-hand drive cars. For right-hand drive cars - swipe in the opposite direction.
The buttons' different modes

When the LED indicator illuminates in green on a function or parking button, the function is activated. When a function is activated, extra text with an explanation for certain functions is shown. The text is shown for a few seconds and then the button is shown with the LED indicator illuminated.

For Lane Keeping Aid, the text **Works only at certain speeds** is shown, for example, when the button is depressed.

Press the button once briefly to activate or deactivate the function.

The function is deactivated when the LED indicator is extinguished.

When a warning triangle is shown in the right-hand section of the button there is something not working as intended.

Moving apps and buttons in centre display
The apps and buttons for car functions in the app view and function view respectively can be moved and organised as desired.
1. Swipe from right to left\textsuperscript{13} to access the app view, or swipe from left to right\textsuperscript{13} to access the function view.
2. Tap on an app or button and hold it down.
   > The app or button changes size and becomes slightly transparent. It is then possible to move it.
3. Drag the app or button to a vacant space in the view.

The maximum number of rows available for use in order to position apps or buttons is 48. To move an app or button outside the visible view, drag it to the bottom of the view. New rows are then added, where the app or button can be located.

An app or button can thus be located further down and is then not visible in the normal mode for the view.

Swipe across the screen to scroll up or down in the view.

Keyboard in centre display

The centre display keyboard makes it possible to make entries using keys. It is also possible to "draw in" letters and characters on the screen by hand.

The keyboard can be used to enter characters, letters and numbers, e.g. to write text messages from the car, enter passwords or search for articles in the digital owner’s manual.

The keyboard is only shown when entries can be made on the screen.
The image shows an overview of some of the buttons which may be shown in the keyboard. The appearance varies depending on language settings and the context in which the keyboard is being used.
Row of suggested words or characters. The suggested words are adjusted as new letters are being entered. Browse among the suggestions by pressing on the right and left arrows. Tap on a suggestion to select it. Note that this function is not supported by all language selections. If not available, the row will not be shown on the keyboard.

The characters available on the keyboard depend on which language was selected (see point 7). Tap on a character to enter it.

The button works in different ways, depending on the context in which the keyboard is used - either to enter @ (when an email address is entered) or to create a new row (for normal text input).

Hides the keyboard. If this is not possible, the button is not shown.

Used to enter capital letters. Press again to enter one capital letter and then continue with lower-case letters. Another press makes all letters capital letters. The next press restores the keyboard to lower-case letters. In this mode, the first letter after a full stop, exclamation mark or question mark is a capital letter. The first letter in the text field is also a capital letter. In text fields intended for names or addresses, each word automatically starts with a capital letter. In text fields for password, web address or email address entry, all letters are automatically lower case unless otherwise set with the button.

Number entry. The keyboard (2) is then shown with numbers. Press ABC, which in number mode is shown instead of 123, to return to the letter keyboard, or #\ to open the keyboard with special characters.

Changes text input language, e.g. EN. The available characters and word suggestions vary depending on the selected language. To make it possible to change languages for the keyboard, the languages must first be added under Settings.

Space.

Undoes entered text. Pressing briefly deletes one character at a time. Hold the button depressed to delete characters more quickly.

Changes keyboard mode to write letters and characters by hand instead.

Pressing the confirmation button above the keypad (not visible in the illustration) confirms the entered text. The appearance of the button differs depending on context.

Variants of a letter or character, e.g. é or è, can be entered by holding down the letter or character. A box is displayed showing possible variants of letters or characters. Press the required variant. If no variant is selected, the original letter/character is entered.

---

14 Applies to Asiatic languages.
Changing keyboard language in centre display

To make it possible to switch between different languages for the keyboard, the languages must first be added under Settings.

Adding or deleting languages in settings

The keyboard is automatically set to the same languages as the system language. The keyboard language can be manually adapted without affecting the system language.

1. Press Settings in the top view.
2. Press System ➔ System Languages and Units ➔ Keyboard Layouts.
3. Select one or more languages from the list.
   > It is now possible to switch between the selected languages directly from the keyboard for text input.

If no languages have been actively selected under Settings, the keyboard retains the same language as the car’s system language.

Switching between different languages in the keyboard

When a number of languages have been selected in Settings, the button in the keyboard is used to switch between the different languages.

To change keyboard language with list:
1. Give a long press on the button.
   > A list opens.
2. Select the required language. If more than four languages have been selected under Settings, it is possible to scroll in the list from the keyboard.
   > The keyboard is adapted to the selected language and other word suggestions are given.

To change the keyboard language without displaying the list:
– One short press of the button.
   > The keyboard is adapted to the next language in the list without displaying the list.

Enter the characters, letters and words manually in the centre display

The centre display keyboard allows you to enter characters, letters and words on the screen by "drawing" by hand.

Press the button on the keyboard to change from typing with the keys to entering letters and characters by hand.

1. Area for writing characters/letters/words/parts of word.
2. The text field where the characters or word suggestions¹⁵ appear as they are written on screen (1).

¹⁵ Applies to certain system languages.
Suggestions for characters/letters/word/part of word. It is possible to scroll through the list.

Space. A space can also be created by entering a dash (-) in the area for hand-written letters (1). See the heading "Entering a space in the free text field with handwriting recognition" below.

Undo entered text. Press briefly to delete one character/one letter at a time. Wait a moment before pressing again to delete the next character/letter, etc.

Return to the keyboard with regular character input.

Switch off/on sound when entering.

Hide the keyboard. If this is not possible, the button is not shown.

Change text input language.

---

Writing characters/letters/words by hand

1. Write a character, a letter, a word or parts of a word in the area for hand-written letters (1). Write a word or parts of a word above each other or on a line.
   > A number of suggested characters, letters or words is shown (3). The most likely choice is found at the top of the list.

   IMPORTANT
   Do not use sharp objects on the screen as they may scratch it.

2. Enter the character/letters/word by waiting a moment.
   > The character/letter/word at the top of the list is entered. It is also possible to select a different character by pressing the required character, letter or word in the list.

Deleting/changing characters/letters written by hand

Delete all characters in the text field (2) by swiping across the handwriting field (1).

> There are several options for deleting/changing characters/letters:
  - Press the intended letter or word in the list (3).
  - Press the text undo button (5) to delete the letter and begin again.
  - Swipe horizontally from right to left over the area for handwritten letters (1). Delete multiple letters by swiping over the area several times.
  - Pressing the X in the text field (2) deletes all of the entered text.

---

16 For Arabic keyboard - swipe in the opposite direction. Swiping from right to left creates a space.
Changing row in the free text field with handwriting

Change row by hand by drawing the above character in the handwriting field\(^{17}\).

Changing the appearance in the centre display

The appearance of the screen in the centre display can be changed by selecting a theme.

1. Press Settings in the top view.

2. Press My Car \(\rightarrow\) Displays \(\rightarrow\) Display Themes.

3. Then select a theme, e.g. Minimalistic or Chrome Rings.

As a supplement to these appearances, it is possible to choose between Normal and Bright. With Normal, the screen background is dark and the text is light. This alternative is the default for all themes. A light variant can also be selected, in which the background is light and the text is dark. This alternative can be useful in e.g. strong daylight.

This alternative is always available for the user and is not affected by the surrounding lighting.

Opening settings in the centre display
Settings and information for many of the car's functions can be managed in the centre display.

Top view with button for Settings.

1. Open the top view by pressing on the tab or by dragging/swiping from the top downwards across the screen.
2. Press Settings to open the settings menu.
3. Press one of the categories shown and navigate to subcategories and respective settings by pressing again.
4. Press Back to go back in the settings menu. Press Close to close the settings menu.
Open contextual setup in the centre display

It is possible to use contextual setup for most of the car's basic apps so that you can change settings directly in the top view in the centre display.

Press Close or the physical home button beneath the centre display to close setup view.

Most of the car's basic apps have this contextual setting option, but not all.

Third party apps

Third party apps are not included in the car's system from the beginning, but are the type that can be downloaded e.g. Volvo ID. Here the settings are always made inside the app and not from the top view.

### Related Information
- Overview of centre display (p. 105)

### Table showing Centre Display Settings

The settings menu in the centre display has a number of main categories and subcategories where settings and information for many of the car's functions are collected.

There are seven main categories: **My Car, Sound, Navigation, Media, Communication, Climate and System**.

In turn, each category contains a number of subcategories and setting options. The tables below show the first level of subcategories. The setting options for a function or area are described in more detail in the corresponding section of the owner's manual.

Some settings are personal, which means that they can be saved to **Driver Profiles**. Other settings are global, which means they are not linked to a driver profile.

### My Car

#### Subcategories

- Displays
- IntelliSafe

- Lights and Lighting
- Mirrors and Convenience

### Sound

#### Subcategories

- Tone
- Balance
- System Volumes

### Navigation

#### Subcategories

- Map
- Route and Guidance
- Traffic

### Media

#### Subcategories

- AM/FM radio
- DAB*

* Option/accessory.
### System

**Subcategories**
- Driver Profile
- Date and Time
- System Languages and Units
- Privacy and data
- Keyboard Layouts
- Voice Control*
- Factory reset
- System Information

**Related information**
- Overview of centre display (p. 105)
- Changing settings in the centre display (p. 130)
- Resetting settings in the centre display (p. 131)

### Driver profiles

Many of the settings made in the car can be adapted according to the driver's personal preferences and can be saved in one or more driver profiles.

The personal settings are automatically saved in the active driver profile. Each key can be linked to a driver profile. When the linked key is used, the car is adapted to the settings of that specific driver profile.

**What settings are saved in the driver profiles?**

In the car, the settings defined are either personal or global. Only personal settings are saved in driver profiles.

Settings that can be saved in a driver profile include, amongst other things, screens, mirrors, front seats, navigation*, audio and media system, language and voice control.

Some settings, referred to as global settings, can be changed but are not saved to a specific driver profile. Changes to global settings affect all profiles.

---

* Option/accessory.
**Global settings**
The global settings and parameters are not changed when changing between driver profiles. They remain the same regardless of which driver profile is active.

Keyboard layout settings are an example of global settings. If driver profile X is used to add additional languages to the keyboard, these remain available for use even if driver profile Y is used. The keyboard layout settings are not saved to a specific driver profile - the settings are global.

**Personal preferences**
If driver profile X was used to e.g. set centre display brightness, driver profile Y is not affected by this setting. It has been saved to driver profile X - the brightness setting is a personal setting.

**Selecting driver profile**
When the centre display has been started, the selected driver profile is shown at the top of the screen. The driver profile last used is the one that will be active next time the car is unlocked. It is possible to change to another driver profile after the car has been unlocked. However, if the remote control key has been linked to a driver profile then this is what is selected when the car is started.

There are two options for changing to another driver profile.

**Option 1:**
1. Tap on the name of the driver profile shown in the top of the centre display when the display has been started.
   > A list of selectable driver profiles is shown.
2. Select the driver profile required.
3. Press Confirm.
   > The driver profile is selected and the system loads the settings for the new driver profile.

**Option 2:**
1. Drag down the top view in the centre display.
2. Press Profile.
   > The same list as for Option 1 is shown.
3. Select the driver profile required.

**Related information**

- Linking remote control key to driver profile (p. 135)
- Table showing centre display settings (p. 132)
Renaming a driver profile
It is possible to change the name of the different driver profiles used in the car.
1. Press **Settings** in the top view in the centre display.
2. Press **System ➔ Driver Profiles**.
3. Select **Edit Profile**.
   > A menu opens, where the profile can be edited.
4. Tap in the box **Profile Name**.
   > A keyboard appears, and it is possible to change the name. Tap on ✕ to close the keyboard.
5. Save the name change by pressing **Back** or **Close**.
   > The name has now been changed.

**NOTE**
A profile name cannot start with a space, as the profile name will not then be saved.

Related information
- Selecting driver profile (p. 134)
- Keyboard in centre display (p. 122)

Resetting settings in the driver profiles
Settings that have been saved to one or more driver profiles can be reset if the car is stationary.

1. Press **Settings** in the top view.
2. Press **System ➔ Factory reset ➔ Reset Personal Settings**.
3. Select one of the options **Reset for the active profile**, **Reset for all profiles** or **Cancel**.

**NOTE**
Factory reset is only possible when the car is stationary.

1. Press **Settings** in the top view.
2. Press **System ➔ Factory reset ➔ Reset Personal Settings**.
3. Select one of the options **Reset for the active profile**, **Reset for all profiles** or **Cancel**.

Related information
- Driver profiles (p. 133)
- Resetting settings in the centre display (p. 131)

Linking remote control key to driver profile
It is possible to link your key to a driver profile. The driver profile along with all of its settings will then be automatically selected every time the car is used with that specific remote control key.

The first time the remote control key is used, it is not linked to any specific driver profile. When the car is started, the **Guest** profile will automatically be activated.

A driver profile can be selected manually without linking it to the key. When the car is unlocked, the last active driver profile is activated. Once the key has been linked to a driver profile, a driver profile does not need to be selected when that specific key is used.

Linking a remote control key to a driver profile
First select the profile to be linked to the key, if the profile to be linked is not already active. The active profile can then be linked to the key.
1. Press **Settings** in the top view in the centre display.
2. Press **System ➔ Driver Profiles**.
3. Select the desired profile. The display returns to the home view. The **Guest** profile cannot be linked to a key.
4. Drag down the top view again and tap on Settings ➔ System ➔ Driver Profiles ➔ Edit Profile.

5. Select Connect key to link the profile with the key. It is not possible to link a driver profile to a different key than the one currently being used in the car. If there are multiple keys in the car, the message More than one key is found, put the key you want to connect on backup reader will be displayed.

> When the message Profile connected to key is shown, the key and the driver profile are linked.

6. Press OK.

> This key is now linked to the driver profile and will remain linked as long as the Connect key box is not unticked.

**Related information**
- Driver profiles (p. 133)
- Renaming a driver profile (p. 135)
- Remote control key (p. 235)

**Message in centre display**

The centre display can show messages to inform or assist the driver in the event of different events.

The centre display shows messages that are of lower priority for the driver.

Most messages are shown above the centre display's status bar. After a while, or when any required action related to the message has been taken, the message disappears from the status bar. If a message needs to be saved, it is positioned in the top view in the centre display.

Message composition may vary and they can be shown together with graphics, symbols or a button for activating/deactivating a function linked to the message.
Pop-up messages
In some cases, a message is shown in the form of a pop-up window. Pop-up messages have higher priority than messages shown in the status bar and require acknowledgement/action before they disappear. Messages that need to be saved are positioned in the top view in the centre display.

Related information
- Managing messages in the centre display (p. 137)
- Handling a message saved from the centre display (p. 138)
- Messages in the driver display (p. 101)

Managing messages in the centre display
Messages in the centre display are handled in centre display views.

Managing a new message
For messages with buttons:
- Press the button to perform the action or allow the message to close automatically after a while.
  > The message disappears from the status bar.

For messages without buttons:
- Close the message by tapping on it, or allow the message to close automatically after a while.
  > The message disappears from the status bar.

If a message needs to be saved, it is positioned in the top view in the centre display.

Related information
- Message in centre display (p. 136)
- Handling a message saved from the centre display (p. 138)
- Messages in the driver display (p. 101)
Handling a message saved from the centre display

Whether saved from the driver display or the centre display, messages are managed in the centre display.

Saved messages and possible options in the top view.

Messages that are shown in the centre display that need to be saved are added in the top view of the centre display.

Reading a saved message

1. Open the top view in the centre display.
   - A list of saved messages is shown. Messages with an arrow to the right can be maximised.

2. Tap on a message to expand/minimise.
   - More information on the message is shown in the list and the image to the left in the app shows information about the message graphically.

Managing a saved message

Some messages have a button for e.g. activating/deactivating a function linked to the message.

- Press the button to perform the action.

Saved messages in the top view are deleted automatically when the car is switched off.

Related information

- Message in centre display (p. 136)

Head-up display*

The head-up display supplements the car’s driver display and projects information from the driver display onto the windscreen. The projected image can only be seen from the driver position.

Incoming phone calls.

The head-up display shows warnings and information relating to speed, cruise control functions, navigation, etc. in the driver’s field of vision. Road Sign Information and incoming phone calls can also be shown in the head up display.

* Option/accessory.
NOTE
The driver's ability to see the information in the head-up display is impaired by the following:

- use of polarising sunglasses
- a driving position which means that the driver is not sitting centred in the seat
- objects on the display unit's cover glass
- unfavourable light conditions.

IMPORTANT
The display unit from which the information is projected is located in the instrument panel. To avoid damage to the display unit's cover glass - do not store any objects on the cover glass and make sure that no objects fall down onto it.

Examples of what can be shown in the display.

1. Speed
2. Cruise control
3. Navigation
4. Road signs

A number of symbols can be shown temporarily in the head-up display, e.g.:

- If the warning symbol illuminates - read the warning message in the driver display.
- If the information symbol illuminates - read the message in the driver display.

NOTE
Certain visual defects may cause headaches and a feeling of stress during the use of the head-up display.

City Safety in the head-up display
When City Safety is activated, the information in the head-up display is replaced by a graphic for City Safety. This graphic is illuminated even if the head-up display is switched off.

The graphic for City Safety flashes in order to catch the driver's attention.

Related information
- Activating and deactivating the head-up display* (p. 140)
- Cleaning the head up display* (p. 616)
- Head-up display when replacing the windscreen* (p. 583)
Activating and deactivating the head-up display*
The head-up display can be activated and deactivated when the car has been started.

Press the Head-up Display button in the centre display function view. An indicator in the button illuminates when the function is activated.

Related information
- Settings for head-up display* (p. 140)
- Head-up display* (p. 138)

Settings for head-up display*
Adjust the settings for the head up display’s projection onto the windscreen. Settings can be defined in the centre display when the car has started and a projected image is displayed on the windscreen.

The setting is saved as a personal setting in the driver profile.

Selecting display options
Select functions to be shown in the head up display.
1. Tap on Settings in the centre display's top view.
2. Press My Car ➔ Displays ➔ Head-Up Display Options.
3. Select one or more functions:
   - Show Navigation
   - Show Road Sign Information
   - Show Driver Support
   - Show Phone.

Adjusting brightness and vertical position
1. Press the Head-up Display Adjustments button in the centre display function view.
2. Adjust the brightness and vertical position of the projected image in the driver’s field of vision using the steering wheel’s right-hand keypad.

   1 Reducing the brightness
   2 Increasing the brightness
   3 Raising the position
Lowering the position

Confirm

The brightness of the graphics is automatically adapted to their background light conditions. The brightness is also affected by the adjustment of the brightness in the car's other displays.

The height position can be stored in the memory function of the power* front seat.

Calibrate the horizontal position

The head-up display's horizontal position may need to be calibrated if the windscreen or display unit is replaced. Calibration means that the projected image is rotated clockwise or anticlockwise.

1. Tap on Settings in the centre display's top view.
2. Select My Car ➔ Displays ➔ Head-Up Display Options ➔ Head-Up Display Calibration.
3. Calibrate the image's horizontal position with the steering wheel's right keypad.

Voice recognition

The driver can use voice recognition to control certain functions in the media player, Bluetooth-connected phone, climate system and Volvo's navigation system*.

Voice commands offer additional convenience and assist the driver to not be distracted so that he or she can concentrate on driving, the road and the traffic situation.

WARNING

The driver always holds overall responsibility for driving the vehicle in a safe manner and complying with all applicable rules of the road.

Related information

- Head-up display* (p. 138)
- Activating and deactivating the head-up display* (p. 140)

19 Applies to certain markets.
Voice control is done in dialogue form with the user saying commands and receiving verbal responses from the system. The voice recognition system uses the same microphone as Bluetooth-connected devices, and the voice recognition system’s responses are given via the car’s speakers. In some cases, a text message is also shown in the driver display. Functions are controlled from the right-hand steering wheel keypad. Settings are made via the centre display.

**System updating**
The voice recognition system is continuously improved. Download updates for optimal performance from support.volvocars.com.

**Related information**
- Using voice recognition (p. 142)
- Controlling a telephone with voice recognition (p. 143)
- Voice control of radio and media (p. 144)
- Controlling climate control with voice recognition (p. 196)
- Settings for voice recognition (p. 144)

**Using voice recognition**
Depress the steering wheel button for voice recognition to activate the system and initiate a dialogue using voice commands.

Remember the following:
- Speak after the tone with a normal voice at a normal tempo.
- Do not speak while the system is replying (the system cannot understand commands during this time).
- Avoid background noise in the passenger compartment by having the doors, windows and sunroof* closed.

Voice recognition can be deactivated as follows:
- by saying "Cancel".
- with a long press on the voice recognition button on the steering wheel.

To speed up communication and skip the prompts from the system, press the steering wheel button for voice recognition when the system voice is speaking and say the next command.

**Example of voice recognition control**
Press ☎, say "Call [Forename] [Surname] [number category]" - dials the selected contact from the phone book. If the contact has several phone numbers (e.g. home, mobile, work), the right category must be referred to.

So press ☎ and say "Call Robin Smith Mobile".

**Commands/phrases**
The following commands are always available for use:
- "Repeat" - repeats the last voice instruction in the ongoing dialogue.
- "Cancel" - discontinue the dialogue.
- "Help" - starts a help dialogue. The system replies with the commands available in the current situation, a prompt or an example.

Commands for specific functions such as phone and radio are described in specific sections.
Digits
The number commands are stated differently depending on the function to be controlled:

- **Phone numbers and postcodes** must be spoken individually, number by number, e.g. zero three one two four three (03122443).
- **House numbers** can be spoken individually or in groups, e.g. two two or twenty-two (22). For English and Dutch, several groups can be said in sequence, e.g. twenty-two twenty-two (22 22). For English, double or triple can be used, e.g. double zero (00). Numbers can be given within the range 0-2300.
- **Frequencies** can be spoken as ninety eight point eight (98.8), a hundred and four point two (104.2).

Related information
- Voice recognition (p. 141)
- Controlling a telephone with voice recognition (p. 143)
- Voice control of radio and media (p. 144)
- Controlling climate control with voice recognition (p. 196)
- Settings for voice recognition (p. 144)

### Controlling a telephone with voice recognition

Call a contact, have messages read aloud or dictate brief messages with voice control commands to a Bluetooth connected telephone.

To specify a contact in the phone book, the voice recognition command must include contact information that is entered in the phone book. If a contact, e.g. **Robyn Smith**, has several phone numbers then the number category can also be stated, e.g. **Home** or **Mobile**: "Call Robyn Smith Mobile".

Press \( \text{VOICE} \) and say one of the following commands:

- **"Call [contact]"** - dials the selected contact from the phone book.
- **"Call [phone number]"** - dials the phone number.
- **"Recent calls"** - displays the call list.
- **"Read message"** - message is read out. If there are several messages - select which message should be read out.
- **"Message to [contact]"** users are requested to say a brief message. The message is then repeated aloud and the user can choose to send or revise the message. For this function to work, the car must be connected to the Internet.

---

21 Applies to certain markets.

22 Only certain phones can broadcast messages from the car. For compatibility, see support.volvocars.com.
Displays and Voice Control

Voice control of radio and media

Commands for radio and media player device control are shown below.
Tap on \(\text{\.}\) and say one of the following commands:

- "Media" - starts a dialogue for media and radio and shows examples of commands.
- "Play [artist]" - plays back music by the selected artist.
- "Play [song title]" - plays back the selected song.
- "Play [song title] from [album]" - plays back the selected song from the selected album.
- "Play [TV channel name]" - starts the selected TV channel\(^{24}\).
- "Play [radio station]" - starts playing back the selected radio channel.
- "Tune to [frequency]" - starts the selected radio frequency in the current frequency band. If no radio source is active, the FM band is started by default.
- "Tune to [frequency] [wavelength]" - starts the selected radio frequency in the selected frequency band.
- "Radio" - starts FM radio.
- "Radio FM" - starts FM radio.
- "Radio AM" - starts AM radio.
- "DAB " - starts DAB radio\(^*\).
- "TV" - starts playback from TV\(^{24}\).
- "CD" - starts playback from CD\(^*\).
- "USB" - starts playback from USB.
- "iPod" - starts playback from iPod.
- "Bluetooth" - starts playback from a Bluetooth-connected media source.
- "Similar music" — plays back music similar to the music currently playing back from USB devices.

LIGHTING
Lighting control

The different lighting controls are used to control both exterior and interior lighting. The left-hand stalk switch activates and adjusts the exterior lighting. The interior brightness is adjusted using a thumbwheel on the instrument panel.
Headlamp levelling\(^1\) is also adjusted using a thumbwheel on the instrument panel.

Exterior lighting

<table>
<thead>
<tr>
<th>Position</th>

<td>Main beam flash can be used.</td>
</tr>
</tbody>
</table>

\(^A\) If the car is stationary but running, the rotating ring can be moved to position from another position to switch on only the position lamps instead of other lighting.

Volvo recommends that **AUTO** mode is used when the vehicle is driven.

---

\(^1\) Applies to vehicles with halogen headlamps.
**WARNING**

The car’s audio system is not able to determine when daylight is too weak or sufficiently strong, e.g. in fog and rain, in all situations.

The driver is always responsible for ensuring that the car is driven with a beam pattern suitable for the traffic situation and in accordance with applicable traffic regulations.

**Thumbwheel in instrument panel**

1. Thumbwheel for adjusting interior brightness
2. Thumbwheel for headlamp levelling

A car with LED\(^2\) headlamps\(^*\) has automatic headlamp levelling and therefore does not have the thumbwheel for headlamp levelling.

---

\(^{2}\) LED (Light Emitting Diode)

\(^{*}\) Applies to vehicles with halogen headlamps.
Adjusting headlamp level

Headlamp levelling is adjusted using one of the thumbwheels in the instrument panel.

The load in the car changes the vertical alignment of the headlamp beam, which could dazzle oncoming motorists. Avoid this by adjusting the headlamp level. Lower the beam if the car is heavily laden.

1. Keep the engine running or the car’s electrical system in ignition position I.
2. Roll the thumbwheel up/down to raise/lower headlamp level.

The position in which the thumbwheel should be set for a number of load cases is shown below.

<table>
<thead>
<tr>

</tbody>
</table>

Examples of thumbwheel position.

A Thumbscrew in position 0
B Thumbscrew in position 1

Related information
- Lighting control (p. 148)

3 Applies to vehicles with halogen headlamps.
Position lamps

Position lamps can be used so that other road users can see the car if it stops or is parked. The position lamp is switched on with the rotating ring on the stalk switch.

Position lamps position

Position lamps can be used so that other road users can see the car if it stops or is parked. The position lamp is switched on with the rotating ring on the stalk switch.

If the car’s electrical system is in ignition position II or the car is running then the daytime running lights are switched on instead of the front position lamps. When the rotating ring is in this position, the position lamps are switched on regardless of the ignition position of the car’s electrical system.

If the car is stationary but running, the rotating ring can be moved to the position lamp  

Daytime running lights

The car has sensors that detect the light conditions in the surroundings. The daytime running lights are switched on when the rotating ring on the stalk switch is in position 0 or 01 as well as when the car’s electrical system is in ignition position II or when the car is running. In position 01, the headlamps change automatically to dipped beam in weak daylight or darkness.
If the stalk switch rotating ring is in the **AUTO** position, the daytime running lights (DRL⁴) are switched on when the car is driven in daylight. The car automatically changes lighting from daytime running light to dipped beam in weak daylight or darkness. Changing to dipped beam also takes place if the front fog lamp* and/or rear fog lamp are activated.

**WARNING**

This system helps to save energy - it cannot determine in all situations when daylight is too weak or sufficiently strong, e.g. in mist and rain.

The driver is always responsible for ensuring that the car is driven with the correct beam pattern for the traffic situation and in accordance with applicable traffic regulations.

**Related information**

• Lighting control (p. 148)
• Ignition positions (p. 416)
• Dipped beam (p. 152)
• Replacing daytime running light bulb/position lamp bulb, front (p. 592)

---

**Dipped beam**

When driving with the stalk switch’s rotating ring in the **AUTO** position, dipped beam is activated automatically in weak daylight or darkness, when the car’s electrical system is in ignition position II or when the car is running.

**Stalk switch rotating ring in **AUTO** position.**

With the stalk switch’s rotating ring in **AUTO** position, dipped beam is also activated automatically if:

• the front fog lamps* are activated
• the rear fog lamp is activated
• the front and rear fog lamps are activated

Dipped beam is always switched on when the rotating ring on the stalk switch is in position **AUTO** when the car’s electrical system is in ignition position II or when the car is running.

**Tunnel detection**

The car detects when it is driven into a tunnel and switches from daytime running lights to dipped beam.

Note that the rotating ring in the left-hand stalk switch must be in **AUTO** mode for tunnel detection to work.

**Related information**

• Lighting control (p. 148)
• Ignition positions (p. 416)
• Daytime running lights (p. 151)
• Replacing the dipped beam bulb (p. 590)

⁴ Daytime Running Lights

* Option/accessory.
Using main beam

Main beam is operated with the left-hand stalk switch. Main beam is the car’s strongest lighting and should be used when driving in the dark for better visibility, as long as it does not dazzle other road users.

Deactivate by moving the stalk switch backwards.

When main beam has been activated the symbol illuminates in the driver display.

Related information
- Lighting control (p. 148)
- Active main beam (p. 153)
- Replacing the main beam lamp (p. 591)

Main beam flash

Move the stalk switch backwards slightly to main beam flash position. Main beam comes on until the stalk switch is released.

Main beam

Main beam can be activated when the steering wheel stalk switch’s rotating ring is in position AUTO or . Activate main beam by moving the stalk switch forwards.

Active main beam

Active main beam is a function which uses a camera sensor at the top edge of the windshield to detect the headlamp beams from oncoming traffic or the rear lights of vehicles in front, and then switches from main beam to dipped beam.

Active main beam is activated with the rotating ring on the stalk switch in position AUTO.

The function can also take streetlights into account. Main beam is reactivated when the camera sensor no longer sees any oncoming vehicles or vehicles ahead.

The function can start while driving in the dark when the car’s speed is approx. 20 km/h (approx. 12 mph) or higher.

When dipped beam is activated.

5 When dipped beam is activated.
If active main beam is deactivated while main beam is on, the lighting is immediately reset to dipped beam.

When active main beam is activated, the symbol 🛡️ illuminates with a white glow in the driver display.

When main beam is activated, the symbol shines blue. This also applies for LED headlamps if the main beam is partially dimmed, i.e. if the light beam shines with slightly more than dipped beam.

**Car with halogen headlamps**

The lighting returns to main beam about a second after the camera sensor no longer detects the headlamp beams from oncoming traffic or the rear lights from vehicles in front.

**Car with LED**[^6] headlamps*

If the active main beam has the on/off functionality[^7] then the lighting returns to main beam about a second after the camera sensor no longer detects the headlamp beams from oncoming traffic or the rear lights from vehicles in front.

If the active main beam has adaptive functionality[^7] then, unlike what happens during conventional dimming, the light beam continues to illuminate with main beam on both sides of oncoming traffic or vehicles ahead - only the part of the light beam that points directly to the vehicle is dimmed.

Adaptive functionality: Dipped beam directly towards oncoming vehicle, but continued main beam on both sides of the vehicle.

The lighting returns to full main beam about a second after the camera sensor no longer detects the headlamp beams from oncoming traffic or the rear lights from vehicles in front.

### Limitations for active main beam

The camera sensor on which the function is based has limitations.

If this symbol is shown in the driver display, together with the message **Active High Beam Temporarily unavailable**, then switching between main and dipped beam must be performed manually. The rotating ring on the stalk switch can still be in the **AUTO** position. The 🛡️ symbol extinguishes when these message are shown.

The same applies if this symbol is shown together with the message **Windscreen sensor Sensor blocked, see Owner's manual**.

Active main beam may be temporarily unavailable e.g. in situations with dense fog or heavy rain. When active main beam becomes available again, or the windscreen sensors are no longer blocked, the message goes out and the 🛡️ symbol illuminates.

### WARNING

Active main beam is an aid for using the optimum beam pattern when conditions are favourable.

The driver always bears responsibility for manually switching between main and dipped beam when traffic situations or weather conditions so require.

---

[^6]: LED (Light Emitting Diode)

[^7]: Depending on the car’s equipment level.

* Option/accessory.
Related information

- Lighting control (p. 148)
- Using main beam (p. 153)
- Limitations for camera unit (p. 341)

**Using direction indicators**
The car's direction indicators are operated with the left-hand stalk switch. The direction indicator lamps flash three times or continuously, depending on how far up or down the stalk switch is moved.

**NOTE**
- This automatic flashing sequence can be stopped by moving the stalk switch immediately in the opposite direction.
- If the symbol for direction indicators in the driver display flashes more quickly than normal - see the message in the driver display.

**Continuous flash sequence**
1. Move the stalk switch up or down to its end position.
   The stalk switch remains in its position and is moved back manually, or automatically by the steering wheel movement.

**Related information**
- Hazard warning flashers (p. 158)
- Adjusting light functions via the centre display (p. 149)
- Replacing the front direction indicator bulb (p. 593)

**Short flash sequence**
1. Move the stalk switch up or down to the first position and release. The direction indicator lamps flash three times. The function can be activated/deactivated via the centre display.

Direction indicators.
**Active bending lights**

Active bending lights are designed to provide maximum illumination in bends and junctions. Cars with LED\(^8\) headlamps\(^*\) can have active bending lights, depending on the car’s equipment level.

Active bending lights follow steering wheel movements to provide maximum illumination in bends and junctions and can thereby provide the driver with improved visibility.

The function is activated automatically when the car is started. In the event of a fault in the function, the \(\bigcirc\) symbol illuminates in the driver display at the same time as the driver display shows an explanatory text.

The function is only active in weak daylight or darkness and only when the car is moving and dipped beam is switched on.

**Deactivating/activating the function**

The function is activated when the car is supplied from the factory and can be deactivated/activated via the centre display’s function view.

Press the **Active Bending Lights** button.

**Related information**

- Adjusting light functions via the centre display (p. 149)
- Front fog lamps/corning lights\(^*\) (p. 156)

---

**Front fog lamps/cornering lights**

The front fog lamps emit a stronger beam than dipped beam and are therefore additionally effective in fog.

The front fog lamps can only be switched on when ignition position II is active or the car is running and the rotating ring on the stalk switch is in position AUTO, D or D¹.

Press the button to activate and deactivate. The \(\bigcirc\) symbol in the driver display illuminates when the front fog lamps are switched on.

The front fog lamps switch off automatically when the start knob it turned clockwise to switch off the car or the stalk switch rotating ring is set to the 0 position.

---

\(^8\) LED (Light Emitting Diode)

\(*\) Option/accessory.
**Cornering lights***

The front fog lamps can include the cornering lights function, which temporarily illuminates the area diagonally in front of the car in the direction the steering wheel is turned on a sharp bend, or in the direction shown by the direction indicators.

The function is activated in weak daylight or darkness when the stalk switch's rotating ring is in the **AUTO** or **EDGE** position and the speed of the car is lower than approx. 30 km/h (approx. 20 mph).

In addition, both cornering lights are switched on as a supplement to the reversing lamp during reversing.

The function is activated when the car is supplied from the factory and can be activated and deactivated via the centre display.

**Related information**
- Lighting control (p. 148)
- Ignition positions (p. 416)
- Rear fog lamp (p. 157)
- Active bending lights* (p. 156)
- Adjusting light functions via the centre display (p. 149)

---

**Rear fog lamp**

The rear fog lamp is considerably stronger than the normal rear lights and should only be used in reduced visibility due to fog, snow, smoke or dust so that other road users have an early warning of a vehicle ahead.

**NOTE**

Regulations on the use of fog lamps vary from country to country.

Press the on/off button. The symbol in the driver display illuminates when the rear fog lamp is switched on.

The rear fog lamp is switched off automatically when:
- the start knob is turned clockwise to switch off the car or the stalk switch rotating ring is set to the **0** position
- the stalk switch's rotating ring is in position **EDGE** and the front fog lamps are switched off.

**NOTE**

Regulations on the use of rear fog lamps vary from country to country.

**Related information**
- Lighting control (p. 148)
- Front fog lamps/cornering lights* (p. 156)
- Ignition positions (p. 416)
- Replacing the rear fog lamp bulb (p. 593)
Brake lights
The brake light automatically comes on during braking.

The brake light is switched on when the brake pedal is depressed. It is also switched on when the car is braked automatically by one of the driver support systems.

Related information
- Emergency brake lights (p. 158)
- Brake functions (p. 419)

Emergency brake lights
Emergency brake lights are activated to alert vehicles behind about heavy braking.

The function means that the brake light flashes instead of - as in normal braking - shining with a constant glow.

The emergency brake lights are activated during heavy braking or if the ABS system is activated at high speeds.

After the driver brakes to a low speed and then releases the brake, the brake light returns to normal glow.

The car’s hazard warning flashers are activated at the same time. These flash until the driver accelerates the car to a higher speed again or switches off the hazard warning flashers.

Related information
- Brake lights (p. 158)
- Foot brake (p. 419)
- Hazard warning flashers (p. 158)

Hazard warning flashers
Hazard warning flashers warn other road users by means of all of the car’s direction indicators being activated simultaneously. The function can be used to give a warning in the event of traffic hazards.

Button for hazard warning flashers.

Press the button to activate the hazard warning flashers.

The hazard warning flashers are automatically activated when the car brakes so powerfully that the emergency brake lights are activated and the speed is low. The hazard warning flashers start to flash after the emergency brake lights have stopped flashing and are then deactivated automatically when the car drives away again or are deactivated if the button is depressed.
NOTE
Regulations for the use of hazard warning flashers may vary between countries.

Related information

- Using direction indicators (p. 155)

Using home safe lighting
Some of the exterior lighting can be kept switched on to work as home safe lighting after the car has been locked.

To activate the function:
1. Switch off the car.
2. Move the left-hand stalk switch forward toward the instrument panel and release.
3. Get out of the car and lock the door.

When the function is activated, a symbol illuminates in the driver display and position lamps, exterior handle lighting* and number plate lighting are switched on.

The length of time that home safe lighting remains on can be set via the centre display.

Related information
- Adjusting light functions via the centre display (p. 149)
- Approach light duration (p. 159)

Approach light duration
Approach lighting is switched on when the car is unlocked and is used to switch on the car’s lighting at a distance.

The function is activated when the remote control key is used for unlocking. At which point, position lamps, exterior handle lighting*, number plate lighting, interior roof lamps, floor lamps and cargo area lighting are switched on. If a door is opened within the activation time, the time for the lighting in the outside handles* and the interior lighting will be extended.

The function can be activated and deactivated via the centre display.

Related information
- Adjusting light functions via the centre display (p. 149)
- Using home safe lighting (p. 159)
- Remote control key (p. 235)
**Interior lighting**
The interior is equipped with several different types of lighting to improve the experience. This includes, reading lamps, glovebox lighting and ground lighting.

All lighting in the passenger compartment can be switched on and off manually at least 5 minutes from when:
- the car has been switched off and its electrical system is in ignition position 0
- the car has been unlocked but it has not been started.

**Front roof lighting**

<table>
<thead>

<tr>
<td>4</td>
<td>Reading lamp, right-hand side</td>
</tr>
</tbody>
</table>

**Reading lighting**
The reading lamps on the right and left-hand sides can be turned on and off by briefly pressing the buttons in the roof console. Brightness is adjusted by holding the button pressed in.

**Passenger compartment lighting**
The floor lighting and interior roof lighting are switched on or off with a short press on the button in the roof console.

**Auto function for passenger compartment lighting**
The automatic function is activated by a short press on the AUTO button in the roof console. With the automatic system activated, the light indicator in the button illuminates and the passenger compartment lighting is switched on and off according to the following.

**Passenger compartment lighting:**
- illuminates when the car is unlocked and when it is switched off
- extinguishes when the car is started and when it is locked
- comes on and goes off, respectively, when a side door is opened or closed
- remains on for 2 minutes if one of the side doors is open.

**Rear roof lighting**
The rear area of the car has reading lighting, which is also used as passenger compartment lighting.

<table>
<thead>
<tr>
<th></th>
<th>Reading lamps above the rear seat.</th>
</tr>
</thead>
</table>

**Glovebox lighting**
Glovebox lighting is switched on and off respectively when the lid is opened or closed.

**Sun visor mirror lighting**
The lighting for the mirror in the sun visor is switched on and off respectively when the cover is opened or closed.

**Ground lighting**
The ground lighting is switched on and off when the corresponding door is opened or closed.

* Option/accessory.
Door sill lighting
The door sill lighting is switched on and off when the corresponding door is opened or closed.

Lighting in cargo area
The lighting in the cargo area is switched on and off respectively when the boot lid is opened or closed.

Decor lighting
The ambient light is switched on when you open the doors and is switched off when the car is locked. The intensity of the decor lighting can be adapted in the centre display and also precisely adjusted using the thumbwheel in the instrument panel.

Ambience lights*
The car is equipped with a number of LEDs that make it possible to change the colour of the light. These lights are switched on when the car is running. The ambience light can be adapted in the centre display and also precisely adjusted using the thumbwheel in the instrument panel.

Lighting in storage compartments in doors
The lighting in the storage compartments in the doors is switched on when you open the doors and is switched off when the car is locked. The brightness can be precisely adjusted using the thumbwheel in the instrument panel.

Lighting in front cup holders in tunnel console
The lighting in the front cup holders is switched on when the car is unlocked and is switched off when the car is locked. The brightness can be precisely adjusted using the thumbwheel in the instrument panel.

Related information
- Adjusting interior lighting (p. 161)
- Lighting control (p. 148)
- Ignition positions (p. 416)
- Passenger compartment interior (p. 562)

Adjusting interior lighting
The lamps inside the car come on differently depending on the ignition position used. The interior lighting can be adjusted with a thumbwheel in the instrument panel, and certain light functions can also be adjusted via the centre display.

Adjusting ambient decor illumination
1. Press Settings in the top view in the centre display.
3. Choose between the following settings:
   - Under Ambient Light Intensity, select from Off, Low and High.
   - Under Ambient Light Level, select from Reduced and Full.

Adjusting ambience light*
The car is equipped with a number of LEDs that make it possible to change the colour of the light. These lights are switched on when the car is running.

* Option/accessory.
**Changing the brightness of the lights**

1. Press **Settings** in the top view in the centre display.
2. Press **My Car ➔ Lights and Lighting ➔ Interior Lighting ➔ Interior Mood Lighting**.
3. Under **Interior Mood Light Intensity**, select from **Off**, **Low** and **High**.

**Changing the colour of the light**

1. Press **Settings** in the top view in the centre display.
2. Press **My Car ➔ Lights and Lighting ➔ Interior Lighting ➔ Interior Mood Lighting**.
3. Choose between **By Temperature** and **By Colour** in order to change the colour of the light.

   With the **By Temperature** option, the light changes according to the set passenger compartment temperature.

   With the **By Colour** option, the **Theme Colours** subcategory can be used to adjust further.

WINDOWS, GLASS AND MIRRORS
Windows, glass and mirrors
The car contains controls for windows, glass and mirrors. Some of the windows in the car are laminated.

Laminated glass
The windscreen and sunroof* have laminated glass. The glass is reinforced, which provides better protection against break-ins and improved sound insulation in the passenger compartment. Laminated glass is available as an option for certain other glass surfaces.

* Option/accessory.

The symbol is shown on the windows where the glass is laminated.

Related information
• Pinch protection for windows and sun blinds (p. 164)
• Sunroof* (p. 172)
• Power windows (p. 166)
• Rearview and door mirrors (p. 169)
• Using the sun blind* (p. 168)
• Head-up display* (p. 138)
• Using windscreen wipers (p. 175)

• Using windscreen and headlamp washers (p. 177)
• Activating and deactivating the heated windscreen* (p. 215)
• Activating and deactivating the heated rear window and door mirrors (p. 216)

Pinch protection for windows and sun blinds
All windows and sun blinds* controlled electrically have pinch protection which is deployed if they are blocked by any object when opening or closing. In the event of blocking, the movement stops and then reverses automatically to approx. 50 mm (approx. 2 inches) from the blocked position (or to full ventilation position).

If the pinch protection has deployed then it is still possible to operate once more in the same direction without pinch protection, if this is done within 10 seconds after pinch protection deployment. In other words, it is possible to force pinch protection when closing has been cancelled, e.g. when ice is formed, by continuing to press the control until fully closed.

WARNING
If the starter battery is disconnected, the automatic opening and closing function must be reset to work properly. A reset must take place for pinch protection to work.

Related information
• Reset sequence for pinch protection (p. 165)
• Operating power windows (p. 166)

1 Does not apply to the windscreen or sunroof* which are always laminated and thus do not have this symbol.
Reset sequence for pinch protection

If any fault arises with the electrical functions of the power windows, a reset sequence can be tested.

The electrically-operated sun blinds* have a reset sequence that can be tested in the event of problems.

**WARNING**

If the starter battery is disconnected, the automatic opening and closing function must be reset to work properly. A reset must take place for pinch protection to work.

If the problem persists, or if it concerns the panoramic roof or sunroof, contact a workshop.  

Reset the power window

1. Start with the window in closed position.
2. Then operate it in the manual position 3 times upwards to closed position.
   > The system is initiated automatically.

Reset sun blind

1. Start with the sun blind* retracted.
2. Press the control against retracting mode for approx. 15 seconds.
   > The system is initialised automatically.

Related information

---

2 An authorised Volvo workshop is recommended.
## Power windows

The power windows are operated using the control panels in each respective door. The driver's door has controls for operating all windows and also to activate the child safety locks.

**Driver's door control panel.**

1. **Electric child safety locks** that deactivate the controls in the rear doors to prevent doors or windows from being opened from the inside.
2. Controls for rear windows.
3. Controls for front windows.

The power windows are equipped with pinch protection. If any fault arises with the pinch protection, a reset sequence can be tested.

### WARNING

Children, other passengers or objects may be trapped by the moving parts.
- Always operate the windows with caution.
- Do not allow children to play with the controls.
- Never leave children alone in the car.
- Remember to always switch off the power supply to the power windows by setting the car's electrical system in ignition position 0, and then take the remote control key with you when leaving the car.
- Never put an object or part of the body through the windows, even if the car's electrical system is fully disconnected.

### Related information

- Operating power windows (p. 166)
- Pinch protection for windows and sun blinds (p. 164)
- Reset sequence for pinch protection (p. 165)

---

## Operating power windows

Using the driver's door control panel, all power windows can be operated - using the control panels in the other doors operates the power window in the individual door.

The power windows are equipped with pinch protection. If any fault arises with the pinch protection, a reset sequence can be tested.

### WARNING

Children, other passengers or objects may be trapped by the moving parts.
- Always operate the windows with caution.
- Do not allow children to play with the controls.
- Never leave children alone in the car.
- Remember to always switch off the power supply to the power windows by setting the car's electrical system in ignition position 0, and then take the remote control key with you when leaving the car.
- Never put an object or part of the body through the windows, even if the car's electrical system is fully disconnected.

---

* Option/accessory.
Operating the power windows.

1 Operating without auto. Move one of the controls gently up or down. The power windows move up or down as long as the control is held in position.

2 Operating with auto. Move one of the controls up or down to the end position and release it. The window runs automatically to its end position.

In order for the power windows to be used, the ignition position must be I or II. The power windows can be operated for a few minutes after the car has been switched off and after the ignition has been switched off - although not after a door has been opened. Only one control panel can be operated at a time.

It can also be operated using the remote control key, keyless opening* with the door handle or the central locking button.

---

**WARNING**

Check that children or other passengers are not at risk of crushing when all the windows are closed with:

- keyless closing*
- central locking button
- remote control key.

---

**NOTE**

One way to reduce the pulsating wind noise when the rear windows are open is to also open the front windows slightly.

---

**NOTE**

The windows cannot be opened at speeds above approx. 180 km/h (approx. 112 mph), but they can be closed.

The driver always bears responsibility for following traffic regulations in force.

---

Related information

- Power windows (p. 166)
- Pinch protection for windows and sun blinds (p. 164)
- Reset sequence for pinch protection (p. 165)
- Keyless locking and unlocking* (p. 259)

---

* Option/accessory.
**Using the sun blind***

Sun blinds can be installed, built into each rear door. A sun blind can also be built into the rear window parcel shelf.

**In the rear door - manually operated**

1. Hook with associated catch
   - Pull up the sun blind and attach it to the hook in the upper door frame.

The window can still be opened and closed with the sun blind up.

The figure is schematic - the version may vary.

There is an electrically operated sun blind built on the rear window shelf.

In order that the sun blind can be operated, the car's electrical system must be in ignition position II.

**NOTE**

It may not be possible to operate the sun blind in low passenger compartment temperatures.

**Operating via the centre display**

Give a short tap on the Rear Sun Curtain button in the function view in the centre display - the sun blind is operated automatically to its end position, up or down.

**Related information**

- Pinch protection for windows and sun blinds (p. 164)
- Reset sequence for pinch protection (p. 165)
- Power windows (p. 166)
Rearview and door mirrors
The rearview mirrors and door mirrors are used to give the driver better visibility to the rear.

Interior rearview mirror
The interior rearview mirror is adjusted easily by angling it manually. The interior rearview mirror can be fitted with HomeLink®, automatic dimming* and compass*.

Door mirrors

**WARNING**
Both mirrors are bent to provide optimal vision. Objects may appear to be further away than they actually are.

The door mirror positions are adjusted with the joystick in the driver's door control panel. There are also a number of automatic settings that can be linked to the memory function buttons for the power seat*.

Related information
- HomeLink®* (p. 474)
- Compass (p. 477)
- Adjusting rearview mirror dimming (p. 169)
- Angling the door mirrors (p. 170)
- Storing memory function in power operated front seat* (p. 182)

Activating and deactivating the heated rear window and door mirrors (p. 216)

Adjusting rearview mirror dimming
Bright light from behind could be reflected in the rearview mirrors and dazzle the driver. Use dimming when disturbed by light from behind.

Manual dimming
The interior rearview mirror can be dimmed with a control in the mirror's lower edge.

1. **Control for manual dimming.**

   1. Use dimming by moving the control in towards the passenger compartment.
   2. Return to normal mode by moving the control towards the windscreen.

The control for manual dimming is not available on mirrors with automatic dimming.
Automatic dimming*
Bright light from behind is automatically dimmed by the interior rearview and door mirrors. Automatic dimming is always active while driving, apart from when gearbox reverse position is selected.

NOTE
When sensitivity is changed there is no immediately noticeable change in dimming, but the change will be complete after a while.

Dimming sensitivity will affect both the interior rearview mirror and the door mirrors.

1. Press Settings in the top view in the centre display.
2. Press My Car ➔ Mirrors and Convenience.
3. Under Rearview Mirror Auto Dimming, select Normal, Dark or Light.

The interior rearview mirror contains two sensors - one forward facing and one rearward facing - that work together to identify and eliminate dazzling light. The forward facing sensor detects ambient light, while the rearward facing sensor detects the light from vehicle headlights behind.

For the door mirrors to be equipped with automatic dimming, the interior rearview mirror must also be equipped with automatic dimming.

NOTE
If the sensors are obscured by e.g. parking permits, transponders, sun visors or objects in the seats or on the parcel shelf in such a way that light is prevented from reaching the sensors, then the dimming function of the interior rearview and door mirrors is reduced.

Related information
- Rearview and door mirrors (p. 169)
- Angling the door mirrors (p. 170)

Angling the door mirrors
To ensure better visibility to the rear, the door mirrors need to be set to the preferences of the driver. There are a number of automatic settings that can also be linked to the memory function buttons for the power seat*.

Using controls for door mirrors

The door mirror positions are adjusted with the joystick in the driver's door control panel.

1. Press the L button for the left-hand door mirror or the R button for the right-hand door mirror. The light in the button illuminates.
2. Adjust the position with the joystick in the centre.
3. Press the L or R button again. The light should no longer be illuminated.

* Option/accessory.
Resetting to neutral
Mirrors that have been moved out of position by an external force must be reset electrically to the neutral position for electric retracting/extending to work correctly.
1. Fold in the door mirrors by pressing down the L and R buttons simultaneously.
2. Fold them out again by pressing the L and R buttons simultaneously.
3. Repeat the above procedure as necessary.
The mirrors are now reset in neutral position.

Folding in rearview mirrors electrically*
The mirrors can be retracted for parking/driving in narrow spaces.
1. Depress the L and R buttons simultaneously (ignition position must be at least I).
2. Release them after approximately 1 second. The mirrors automatically stop in the fully retracted position.
Fold out the mirrors by pressing down the L and R buttons simultaneously. The mirrors automatically stop in the fully extended position.

Angling during parking³
The door mirror can be angled down for the driver to view the side of the road when parking for example.

---

Automatic angling during parking³
With this setting, the door mirror is automatically angled down when reverse gear is selected. The folded position is preset and cannot be adjusted. You can make the door mirror return to its original position by pressing the L or R button twice.
1. Tap on Settings in the centre display's top view.
2. Press My Car ➔ Mirrors and Convenience.
3. Select Fold Mirror When Locked to activate/deactivate.

• Activating and deactivating the heated rear window and door mirrors (p. 216)

---

³ Only in combination with power seat with memory buttons*.
**Sunroof**

The sunroof can be opened vertically at the rear edge (ventilation position) or horizontally (open position).

The sunroof has a wind deflector. There is also an inner sunscreen that is closed manually.

The sunroof is operated with a control located in the roof. The control is activated when the car’s electrical system is in ignition position I or II.

It can also be operated using the remote control key, keyless opening* with the door handle or the central locking button.

**WARNING**

Children, other passengers or objects may be trapped by the moving parts.

- Always operate the windows with caution.
- Do not allow children to play with the controls.
- Never leave children alone in the car.
- Remember to always switch off the power supply to the power windows by setting the car's electrical system in ignition position 0, and then take the remote control key with you when leaving the car.
- Never put an object or part of the body through the windows, even if the car's electrical system is fully disconnected.

**Wind deflector**

The sunroof has a wind deflector that is folded up when the sunroof is in the open position.

**Related information**

- Keyless locking and unlocking* (p. 259)
- Locking and unlocking with the remote control key (p. 237)
- Locking and unlocking from inside the car (p. 262)

**IMPORTANT**

- Do not open the sunroof when load carriers are fitted.
- Do not place any heavy objects on the sunroof.

- Remove ice and snow before opening the sunroof.
- Do not operate the sunroof if it has frozen closed.
Operating the sunroof*

When operating with the control that is fitted in the roof, the sunroof is first opened horizontally to a comfort position.

In ventilation position, the sunroof is raised at the rear edge.

**WARNING**

Children, other passengers or objects may be trapped by the moving parts.

- Always operate the windows with caution.
- Do not allow children to play with the controls.
- Never leave children alone in the car.
- Remember to always switch off the power supply to the power windows by setting the car’s electrical system in ignition position 0, and then take the remote control key with you when leaving the car.
- Never put an object or part of the body through the windows, even if the car’s electrical system is fully disconnected.

**IMPORTANT**

- Do not open the sunroof when load carriers are fitted.
- Do not place any heavy objects on the sunroof.

- Remove ice and snow before opening the sunroof.
- Do not operate the sunroof if it has frozen closed.

In order that the sunroof can be operated, the car’s electrical system must be in ignition position I or II.

It can also be operated using the remote control key, keyless opening* with the door handle or the central locking button.

**WARNING**

Check that children or other passengers are not at risk of crushing when all the windows are closed with:

- keyless closing*
- central locking button
- remote control key.

**IMPORTANT**

Check that the sunroof is properly closed when closing.
**Manual operation**
- To open the sunroof, press the control rearward to the position for manual opening. The sunroof first reaches comfort position\(^4\). In order to open to maximum opening position - press the control backwards a second time.

Close the sunroof by repeating the preceding procedure in reverse order - press the control forward/downward to the manual closing position instead.

**Automatic operation**
- To open the sunroof, press the control backwards to the position for automatic opening and release. The sunroof first reaches comfort position\(^4\). To open to the maximum opening position - press the control a second time backward to the position for automatic opening and release.

Close the sunroof by repeating the preceding procedure in reverse order - press the control forward/downward to the automatic closing position instead.

The movement of the sunroof is not stopped when it reaches the comfort position when closing from maximum opening position.

**Ventilation position**

Ventilation position, vertically at the rear edge.

1. Open by pressing the control upward.
2. Close by pressing the control forward/downward.

When ventilation position is selected, the sunroof is raised at the rear edge.

**Sunscreen**
The sunroof features a manual, sliding interior sunscreen. The sunscreen slides back automatically when the sunroof is opened. Grip the handle and slide the sunscreen forward to close it.

**Related information**
- Sunroof* (p. 172)
- Pinch protection for windows and sun blinds (p. 164)

---

\(^4\) Comfort position is an open position for the sunroof, where wind noise and resonance noise are at a comfortably low level while driving.

* Option/accessory.
Using windscreen wipers
The windscreen wiper cleans the windscreen. Different settings for the windscreen wiper are made with the right-hand steering wheel stalk switch.

Right-hand stalk switch.
1 Thumbwheel, used to set rain sensor sensitivity and wiper swipe frequency.

Single sweep
Move the stalk switch to position 1 to make one sweep.

Windscreen wipers off
Move the stalk switch to position 0 to switch off the windscreen wipers.

Intermittent wiping
Set the number of sweeps per time unit with the thumbwheel when intermittent wiping is selected.

Continuous wiping
Raise the stalk switch for the wipers to sweep at normal speed.
Raise the stalk switch further for the wipers to sweep at high speed.

IMPORTANT
Before activating the wipers - ensure that the wiper blades are not frozen in, and that any snow or ice on the windscreen is scraped away.

IMPORTANT
Use plenty of washer fluid when the wipers are cleaning the windscreen. The windscreen must be wet when the windscreen wipers are operating.

Related information

- Wiper blades in service position (p. 629)
- Replacing windscreen wiper blades (p. 628)
- Using windscreen wipers (p. 175)

Using the rain sensor  
The rain sensor automatically starts the windscreen wipers based on how much water it detects on the windscreen. Rain sensor sensitivity can be adjusted with the thumbwheel on the right-hand stalk switch.

![Right-hand stalk switch.](image)

1. **Rain sensor button**
2. **Thumbwheel sensitivity/frequency**

When the rain sensor is activated, the rain sensor symbol [💧] is shown in the driver display.

**Activating the rain sensor**  
When activating the rain sensor, the car must be running or the electrical system in ignition position I or II while the windscreen wiper stalk switch must be in position 0 or in the position for a single sweep.

Activate the rain sensor by pressing the rain sensor button [💧].

Press the stalk switch down for the wipers to make an extra sweep.

Turn the thumbwheel upward for higher sensitivity and downward for lower sensitivity. An extra sweep is made when the thumbwheel is turned upward.

**Deactivating the rain sensor**  
Deactivate the rain sensor by pressing the rain sensor button [💧] or moving the stalk switch up to another wiper program.

The rain sensor is deactivated automatically in ignition position 0 or when the engine is switched off.

The rain sensor is deactivated automatically when wiper blades are set in service position. The rain sensor is reactivated when service mode has been deactivated.

**IMPORTANT**  
The windscreen wipers could start and be damaged in an automatic car wash. Deactivate the rain sensor while the car is running or when the car’s electrical system is in ignition position I or II. The symbol in the driver display extinguishes.

* Option/accessory.
Related information
- Using windscreen and headlamp washers (p. 177)
- Heated windscreen wiper nozzles* (p. 176)
- Using the rain sensor’s memory function (p. 177)
- Filling washer fluid (p. 630)
- Wiper blades in service position (p. 629)
- Replacing windscreen wiper blades (p. 628)
- Using windscreen wipers (p. 175)

**Using the rain sensor’s memory function**
The rain sensor automatically starts the windscreen wipers based on how much water it detects on the windscreen.

**Activating/deactivating the memory function**
The memory function for the rain sensor can be activated in such a way that the rain sensor button does not need to be depressed each time the car is started:

1. Press **Settings** in the top view in the centre display.
2. Press **My Car ➔ Wipers**.
3. Select **Rain Sensor Memory** to activate/deactivate the memory function.

**Related information**
- Using the rain sensor (p. 176)
- Using windscreen and headlamp washers (p. 177)
- Heated windscreen wiper nozzles* (p. 176)
- Filling washer fluid (p. 630)
- Wiper blades in service position (p. 629)
- Replacing windscreen wiper blades (p. 628)
- Using windscreen wipers (p. 175)

**Using windscreen and headlamp washers**
Windscreen and headlamp washers clean the windscreen and headlamps. Windscreen and headlamp washers are started using the right-hand stalk switch.

**Starting windscreen and headlamp washers**

Washing function, right-hand stalk switch.

- Move the right-hand stalk switch toward the steering wheel to start the windscreen and headlamp washers.

The windscreen wipers will make several more sweeps once the stalk switch has been released.
**IMPORTANT**

Avoid activating the washer system when it is frozen or the washer reservoir is empty, otherwise there is a risk of damaging the pump.

**Headlamp washing**
To save fluid, the headlamps are washed automatically at a defined interval when the headlamps are switched on.

**Reduced washing**
If only approx. 1 litre (1 qt) of washer fluid remains in the reservoir and the message **Washer fluid Level low, refill**, together with the symbol, is shown in the driver display, then the supply of washer fluid to the headlamps is switched off. This is to prioritise cleaning the windscreen and the visibility through it. The headlamps are only washed if main or dipped beam is switched on.

* Option/accessory.
SEATS AND STEERING WHEEL
**Manual front seat**
The car's front seats have different setting options for optimum seating comfort.

1. Raise/lower the front edge of the seat cushion* by pumping up/down.
2. Change the length* of the seat cushion by pulling the lever up and moving the seat cushion forward/backward by hand.
3. Adjust the seat forward/backward by lifting the handle and adjusting the distance to the steering wheel and pedals. Check that the seat is locked after the position has been adjusted.
4. Change the lumbar support* by pressing the button upward/downward/forward/back.
5. Raise/lower the seat by means of adjusting the control up/down.
6. Change the backrest inclination by turning the control knob.

**WARNING**
Adjust the position of the driver's seat before setting off, never while driving. Make sure that the seat is in locked position in order to avoid personal injury in the event of heavy braking or an accident.

* Option/accessory.
Power front seat*

The car’s front seats have different setting options for optimum seating comfort. The power seat can be moved forwards/backwards and upwards/downwards. The front edge of the seat cushion can be raised/lowered as well as adjusted in length* and the backrest inclination can be changed. The lumbar support can be adjusted upward/downward/forward/backward.

The power seats have overload protection which is tripped if a seat is blocked by an object. If this happens, remove the object and then operate the seat again.

The seat can be adjusted for a period of time after unlocking the door without the engine running. Seat adjustment can always be performed when the engine is running. Adjustment can also be performed for a period of time after the engine has been switched off.

Adjusting the power front seat*

Set to desired sitting position using the control on the front seat’s seating section. To activate the multi-function control and set the various comfort functions, turn the control upwards/downwards.

1 To activate the multi-function control and set the various comfort functions, turn the control* upwards/downwards.
2 Raise/lower the seat cushion front edge by adjusting the control up/down.
3 Raise/lower the seat by means of adjusting the control up/down.
4 Move the seat forward/backward by adjusting the control forward/backward.
5 Change the backrest inclination by adjusting the control forward/backward.

* Option/accessory.
Only one movement (forward/back/up/down) can be made at a time. The backrests of the front seats cannot be lowered fully forward.

**Storing memory function in power operated front seat***
The memory function stores settings for the seat, door mirrors, and head-up display*.

It is possible to store two different settings with the memory function. The memory function keypad is located either on one front door or both*.

1. Button M for storing settings.
2. Memory button
3. Memory button

**Store setting**
1. Adjust seat, door mirrors and head-up display to the desired position.
2. Press and hold the M button depressed. The light indicator in the button illuminates.
3. Within three seconds, press and hold the 1 or 2 button.
   > When the position has been stored in the selected memory button an acoustic signal sounds and the light indicator in the M button extinguishes.

If none of the memory buttons is depressed within three seconds then the M button extinguishes and no storing takes place.

The seat must be adjusted again before a new memory can be set.

* Option/accessory.
Using stored memory in a powered front seat
The memory function stores settings for the seat, door mirrors, and head-up display*.

Using a stored setting
A stored setting can be used with the front door either open or closed:

Open front door
- Depress one of the memory buttons 1 or 2 with a short press. Seat, door mirrors and head-up display move and then stop at the positions stored in the selected memory button.

Closed front door
- Hold one of the memory buttons 1 or 2 depressed until seat, door mirrors and head-up display stop in the positions that are stored in the selected memory button.

If the memory button is released, the movement of the seat, door mirrors and head-up display will be stopped.

WARNING
- Because the driver's seat can be adjusted with the ignition off, children should never be left unattended in the vehicle.
- Movement of the seat can be STOPPED at any time by pressing any button on the power seat control panel.
- Do not adjust the seat while driving.
- Make sure there is nothing under the seats when they are being adjusted.

Massage settings in the front seat*
Both the multi-function control* on the seat and the centre display can be used in order to change the settings. The range of settings is shown in the centre display.

Settings for massage
The following setting options are available for massage:
- On/Off: Select On/Off in order to switch on/off the massage function.
- Programs 1-5: There are 5 preset massage programs. Select between Swell, Tread, Advanced, Lumbar and Shoulder.
- Intensity: Select between Low, Normal and High.
- Speed: Select between Slow, Normal and Fast.
### Restarting massage

The massage function is deactivated automatically after 20 minutes. Reactivation of the function is performed manually.

- Tap on **Restart**, which is shown in the centre display, to restart the selected massage program.

  > The massage program restarts. If no action is taken, the message remains shown in the top view.

### Adjusting massage settings* in the front seat

Both the multi-function control on the seat and the centre display can be used in order to change the settings. The range of settings is shown in the centre display*.

The front seat has massage in the backrest. The massage is performed by air cushions that can massage with different settings.

The massage function can only be activated when the car's engine is running.

1. Activate the multi-function control by turning the control upward/downward. The seat settings view will be shown on the centre display.
2. Select **Massage** in the seat settings view.
3. To choose between the different massage functions, select either directly in the touch screen or by moving the cursor up/down using the multi-function control's upper/lower button. Change the setting in the selected function by selecting directly in the touch screen or by pressing the arrows, or by using the multi-function control's front/rear button.

Adjusting the side support* in the front seat

Both the multi-function control* on the seat and the centre display can be used in order to change the settings. The range of settings is shown in the centre display.

To activate the multi-function control, turn the control upwards/downward.

Adjusting the seat cushion

Seat cushion length can be adjusted by using the multi-function control on the seat.

1. Activate the multi-function control by turning the control upward/downward. The seat settings view will be shown on the centre display.

Multi-function control, located on the side of the seat’s seating section.

To adjust the side support:

1. Activate the multi-function control by turning the control upwards/downwards. The seat settings view will be shown in the centre display.

Multi-function control, located on the side of the seat’s seating section.

The sides of the backrest can be adjusted to provide side support.

To adjust the side support:

1. Activate the multi-function control by turning the control upwards/downwards. The seat settings view will be shown in the centre display.
2. Select Side bolsters in the seat settings view.
   - Press the front section of the four-way button to increase side support.
   - Press the rear section of the four-way button to decrease side support.

• Adjusting the passenger seat from the driver’s seat* (p. 187)

Adjusting the passenger seat from the driver’s seat*
The front passenger seat can be adjusted from the driver’s seat.

Activating the function
The function is activated via the function view in the centre display:

Press the **Adjust Passenger Seat** button to activate.

Adjust passenger seat
From activation of the function, the driver must adjust the passenger seat within 10 seconds. If no adjustment is made within this time the function is deactivated.

The driver adjusts the passenger seat using the controls on the driver’s seat:

1. Move the passenger seat forward/backward by adjusting the control forward/backward.
2. Change the passenger seat's backrest inclination by adjusting the control forward/backward.

Lowering the backrests in the rear seat*

The rear seat's backrest is divided into two parts. The two parts can be folded forward individually.

⚠️ WARNING
- Adjust the seat and fix it before driving away. Take care when adjusting the seat. Uncontrolled or careless adjustment can lead to trapping injuries.
- When loading long objects, they must always be strapped in securely to avoid injury and damage during sudden braking.
- Always switch off the engine and apply the parking brake when loading and unloading the car.
- For cars with automatic gearbox, set the gear selector in P to prevent it from being moved by mistake.

⚠️ IMPORTANT
The seat cushion on the integrated child seat* must be in the lowered position before lowering the rear seat backrest.

The armrest* for the centre seat must be raised before lowering the seat.

If the car has private locking, the tailgate must be closed before lowering the seat.

NOTE
The front seats may need to be pushed forwards, and/or the backrests adjusted upwards, in order that the rear backrests can be fully folded forward.

⚠️ IMPORTANT
There must be no objects on the rear seat when the backrest is to be folded down. The seat belts must not be connected either. Otherwise there is a risk of damaging the rear seat upholstery.

* Option/accessory.
Lowering the backrest

Buttons for seat folding, located on the upper section of the rear seat.

To facilitate folding of the rear seat, the car must be stationary and at least one rear door open.

1. Ensure that there are no occupants or objects in the rear seat.
2. Lower the centre seat's head restraint manually.
3. Hold the button depressed. The buttons are located in the parcel shelf on the left-hand side of the car.
4. The seat is released from the lock but remains in the same position. The head restraints are lowered automatically.
5. Lower the backrest manually to the horizontal position.

If the car is equipped with rear seat ventilation, the backrests cannot be lowered.

Raising the backrest

Raising the backrest to upright position is carried out manually:
1. Move the backrest up/down manually.
2. Press the backrest until the lock engages.
3. The head restraint is raised manually.
4. If necessary, raise the centre seat's head restraint.

Related information
- Adjusting the head restraints in the rear seat (p. 189)

Adjusting the head restraints in the rear seat

Adjust the centre seat head restraint according to the height of the passenger. Fold down the outer seat head restraints* to improve rearward visibility.

Adjusting the head restraint, centre seat

The centre seat's head restraint must be adjusted according to the passenger's height so that, if possible, the whole of the back of the head is covered. Slide it up manually as required.

* Option/accessory.
To lower the head restraint, the button (see illustration) must be depressed while the restraint is carefully moved down.

**WARNING**
The centre seat head restraint must be in its lowest position when the centre seat is not used. When the centre seat is used, the head restraint must be correctly adjusted to the height of the passenger so that it covers the whole of the back of the head if possible.

**Electrical lowering of the rear seat's outer head restraints**

The outer head restraints can be retracted via the centre display's function view. You can lower the head restraints in ignition position O.

Press the **Headrest Fold** button to activate/deactivate lowering.

Move the head restraint back manually until a click is heard.

**WARNING**
Do not lower the outer head restraints if there are passengers in any of the outer rear seats.

**Related information**
- Lowering the backrests in the rear seat* (p. 188)
Steering wheel controls and horn
The steering wheel houses the horn and controls for e.g. the driver support systems and voice recognition.

Keypads and paddles* in the steering wheel.

1 Controls for driver support systems2.

2 Paddle shifter* for manual gear changing in an automatic gearbox.

3 Controls for voice recognition, head-up display settings, and menu, message and phone handling.

Horn
The horn is located in the centre of the steering wheel.

Related information
- Steering lock (p. 191)
- Adjusting the steering wheel (p. 192)

Steering lock
The steering lock makes steering difficult if the car is e.g. taken unlawfully. A mechanical noise can be perceived when the steering lock locks or unlocks.

Activating the steering lock
The steering lock is activated when the car is locked from the outside and the engine is switched off. If the car is left unlocked then the steering lock will lock automatically after a while.

Deactivating the steering lock
The steering lock is deactivated when the car is unlocked from outside. If the car is not locked, the steering lock will deactivate if the remote control key is inside the passenger compartment and the car is started by turning the start knob clockwise to unlock the steering lock.

Related information
- Steering wheel controls and horn (p. 191)
- Adjusting the steering wheel (p. 192)

2 Speed Limiter*, Cruise Control, Adaptive Cruise Control*, Distance Warning* and Pilot Assist*.

* Option/accessory.
**Adjusting the steering wheel**

The steering wheel can be adjusted in different positions.

The steering wheel can be adjusted for height and for depth.

Steering wheel adjustment can be made in different ways depending on whether or not the car is equipped with knee airbag.

**WARNING**

Adjust the steering wheel and fix it before driving away. The steering wheel must never be adjusted while driving.

With speed related power steering the level of steering force can be adjusted. Steering force is regulated according to the car's speed in order to give the driver enhanced road responsiveness.

**With knee airbag**

1. Push the lever forwards to release the steering wheel.
2. Adjust the steering wheel to the position that suits you.
3. Pull the lever back to fix the steering wheel in place. If the lever is stiff, press the steering wheel lightly at the same time as you move the lever back.

**Without knee airbag**

1. Pull the lever backwards to release the steering wheel.
2. Adjust the steering wheel to the position that suits you.
3. Push the lever forwards to secure the steering wheel. If the lever is stiff, press the steering wheel lightly at the same time as you move the lever back.

**Related information**

- Steering lock (p. 191)

---

3 The car is only equipped with knee airbag in certain markets.
CLIMATE
Climate

The car is equipped with electronic climate control. The climate control system cools or heats as well as dehumidifies the air in the passenger compartment.

All climate control system functions are controlled from the centre display and physical buttons in the centre console.

Some functions for the rear seat can also be controlled from the climate controls* at the rear of the tunnel console.

Related information
- Climate zones (p. 194)
- Climate control - sensors (p. 195)
- Perceived temperature (p. 195)
- Controlling climate control with voice recognition (p. 196)
- Parking climate* (p. 222)
- Heater* (p. 229)
- Air quality (p. 197)
- Air distribution (p. 200)
- Climate controls (p. 206)

Climate zones

The number of climate zones that the car is divided into governs the options for setting different temperatures for different parts of the passenger compartment.

2-zone climate

Climate zones with 2-zone climate.

With 2-zone climate, the temperature in the passenger compartment can be set separately for the left and right-hand sides.

4-zone climate*

Climate zones with 4-zone climate.

With 4-zone climate the temperature in the passenger compartment can be set separately for the left and right-hand sides in both the front and rear seat.

Related information
- Climate (p. 194)

* Option/accessory.
Climate control - sensors
The climate control system has a number of sensors to help control the climate in the car.

Sensor location

1. Moisture sensor - in the casing by the interior rearview mirror.
2. Outside temperature sensor - in the right-hand door mirror.
3. Sun sensor - on the upper side of the instrument panel.
4. Temperature sensor for the passenger compartment - by the physical buttons in the centre console.

With the Interior Air Quality System* there is also an air quality sensor that is fitted into the climate control system air intake.

Related information
- Climate (p. 194)
- Interior Air Quality System* (p. 198)

Perceived temperature
The climate control system regulates the climate in the passenger compartment based on the perceived temperature, not on actual temperature.

The temperature you select in the passenger compartment corresponds to the physically perceived temperature as affected by factors such as the ambient temperature, air speed, humidity, solar radiation, etc. in and around the car at the time.

The system includes a sun sensor which detects on which side the sun is shining into the passenger compartment. This means that the temperature can differ between the right and left-hand side’s air vents despite the controls being set for the same temperature on both sides.

Related information
- Climate (p. 194)

* Option/accessory.
Controlling climate control with voice recognition

Voice recognition commands for the climate control system to e.g. change temperature, activate a heated seat* or change fan level.

Press \* and say one of the following commands:

- "Climate" - starts a dialogue for climate control and shows examples of commands.
- "Set temperature to X degrees" - sets the desired temperature.
- "Raise temperature"/"Lower temperature" - raise/lower the temperature setting one step.
- "Sync temperature" - synchronises the temperature for all climate zones in the car with the temperature set for the driver's side.
- "Air on feet"/"Air on body" - opens the desired air flow.
- "Air on feet off"/"Air on body off" - closes the desired air flow.
- "Set fan to max"/"Turn off fan" - changes the air flow to Max/Off.
- "Raise fan speed"/"Lower fan speed" - raises/lowers the fan level one step.
- "Turn on auto" - activates automatic climate regulation.
- "Air condition on"/"Air condition off" - activates/deactivates the air conditioning.
- "Recirculation on"/"Recirculation off" - activates/deactivates the air circulation.
- "Turn on defroster"/"Turn off defroster" - activates/deactivates defrosting of windows and door mirrors.
- "Turn on max defroster"/"Turn max defroster off" - activates/deactivates the max defroster.
- "Turn on electric defroster"/"Turn off electric defroster" - activates/deactivates the heated windscreen*.
- "Turn on rear defroster"/"Turn off rear defroster" - activates/deactivates the heated rear window and door mirrors.
- "Turn steering wheel heat on"/"Turn steering wheel heat off" - activates/deactivates the heated steering wheel*.
- "Raise steering wheel heat"/"Lower steering wheel heat" - raises/lowers the setting for the heated steering wheel* one step.
- "Turn on seat heat"/"Turn off seat heat" - activates/deactivates the heated seat*.
- "Raise seat heat"/"Lower seat heat" - raises/lowers the setting for the heated seat* one step.
- "Turn on seat ventilation"/"Turn off seat ventilation" - activates/deactivates the seat ventilation*.
- "Raise seat ventilation"/"Lower seat ventilation" - raises/lowers the setting for the ventilated seat* one step.

\* Applies to certain markets.

\* Option/accessory.
Air quality
The materials selected for the passenger compartment and the air cleaning system ensure that the air quality in the passenger compartment is high.

Materials in the passenger compartment
The interior of the passenger compartment is designed to be pleasant and comfortable, even for people with contact allergies and for asthma sufferers.
Tested materials have been developed in order to minimise the quantity of dust in the passenger compartment and to contribute to making the passenger compartment easier to keep clean.
The carpets in both the passenger compartment and the cargo area are removable and easy to remove and clean.
Use cleaning agents and car care products recommended by Volvo to clean the interior.

Air cleaning system
In addition to the passenger compartment filter, Clean Zone Interior Package* and the Interior Air Quality System* also help to maintain high air quality in the passenger compartment.

Related information
- Climate (p. 194)
- Clean Zone* (p. 197)
- Clean Zone Interior Package* (p. 198)
- Interior Air Quality System* (p. 198)
- Passenger compartment filter (p. 199)

Clean Zone*
The Clean Zone function checks and indicates whether or not all conditions have been met for good air quality in the passenger compartment.

A The indicator is visible in the climate view in the centre display.
B The indicator is visible in the climate row when the climate view is not open.
If the conditions have not been met then the Clean Zone text is white. When all conditions have been met, this is indicated by the text changing colour to blue.
Conditions that are checked:
- That all doors and the boot lid are closed.
- That all side windows and the sunroof* are closed.
- That the air quality system Interior Air Quality System* is activated.

* Option/accessory.
That the ventilation fan is activated.
That the air recirculation is deactivated.

**NOTE**
Clean Zone does not indicate that the air quality is good. It only indicates that the conditions for good air quality have been met.

**Clean Zone Interior Package**
Clean Zone Interior Package (CZIP) comprises a series of modifications that keep the passenger compartment even clearer from allergy and asthma-inducing substances.

The following is included:
- An enhanced fan function that means that the fan starts when the car is unlocked with the remote control key. The fan fills the passenger compartment with fresh air. The function starts when required and is disengaged automatically after a time or when one of the passenger compartment doors is opened. The amount of time the fan runs is reduced gradually due to reduced need up until the car is 4 years old.
- The fully automatic air quality system Interior Air Quality System (IAQS).

**Interior Air Quality System**
Interior Air Quality System (IAQS) is a fully automatic air quality system that separates gases and particles to reduce the levels of odours and contaminants in the passenger compartment. IAQS is a part of the Clean Zone Interior Package (CZIP) and cleans the air in the passenger compartment from contaminants such as particles, hydrocarbons, nitrous oxides and ground-level ozone.

If the air quality sensor senses that the outside air is contaminated, the air intake is closed and air recirculation is activated.

**NOTE**
The air quality sensor must always be enabled to ensure the best air in the passenger compartment.
In a cold climate recirculation is limited so as to prevent misting.
In the event of misting, the defrost functions for windscreen, side windows and rear window should be used.

**Related information**

• Passenger compartment filter (p. 199)

Activating and deactivating the air quality sensor*

The air quality sensor is part of the fully automatic air quality system Interior Air Quality System (IAQS).

It is possible to set whether the air quality sensor should be activated/deactivated.

1. Press **Settings** in the top view in the centre display.
2. Press **Climate**.
3. Select **Air Quality Sensor** to activate/deactivate the air quality sensor.

Passenger compartment filter

All air entering the car's passenger compartment is cleaned with a filter.

Replacing the passenger compartment filter

To maintain high climate system performance, the filter must be changed at regular intervals. Follow the Volvo Service Programme for the recommended replacement intervals. If the car is used in a severely contaminated environment, it may be necessary to replace the filter more often.

**NOTE**

There are different types of passenger compartment filter. Make sure that the correct filter is fitted.

Air distribution
The climate control system distributes the incoming air via a number of different vents in the passenger compartment.

Automatic and manual air distribution
With auto-regulated climate control running the air distribution takes place automatically. If necessary, the air distribution can be controlled manually.

Adjustable air vents
Some of the air vents in the car are adjustable, which means that you can open/close the vent to aim the air flow.

Changing air distribution
The air distribution can be changed manually if required.

1. Open the climate view in the centre display.
2. Press one or more of the air distribution buttons in order to open/close the corresponding air flow.
   > The air distribution is changed and the buttons illuminate/extinguish.

Location of adjustable air vents in the passenger compartment.

1. With 2-zone climate - four on the instrument panel and one on each of the door pillars between the front and rear doors.
2. Addition with 4-zone climate* - two at the rear of the tunnel console.

Opening, closing and aiming the air vents
Some air vents in the passenger compartment can be opened, closed and aimed individually.
If the car's outer vents are aimed at the side windows then misting can be eliminated.
If the car's outer vents are aimed inwards then, in a hot climate, a comfortable environment is obtained in the passenger compartment.

Opening and closing the air vents
Air vents for the front seat:

![Air vent knob](image)

- Turn the knob in order to open/close the air flow from the vent.
  The air flow is at maximum when the marking on the knob is in vertical position.

Air vents for the rear seat:

![Air vents for the rear seat](image)

- Roll the thumbwheel in order to open/close the air flow from the nozzle.
  The longer the white lines on the thumbwheel that are visible, the higher the air flow.

2 The illustration is schematic - nozzle design varies depending on location.
Aiming the air vents

The air vent's lever$^2$.

- Move the lever sideways/vertically in order to aim the air flow from the nozzle.

Climate controls

The climate control system's functions are controlled from physical buttons in the centre console, the centre display and the climate controls at the rear of the tunnel console*.

Physical buttons in centre console

1. Button for heated windscreen* and max defroster.
2. Button for heated rear window and door mirrors.

Climate row in centre display

The most common climate functions can be regulated from the climate row.

1. Temperature controls for driver and passenger side.
2. Controls for heated* and ventilated* driver and front passenger seat, as well as heated steering wheel*.
3. Button for access to the climate view. The graphic on the button shows activated climate settings.

Climate view in centre display

One tap on the centre button in the climate row gives access to the climate view. The climate view is divided into the tabs:

- Main climate
- Rear climate*
- Parking climate*

Change between the tabs by swiping left/right or by pressing the respective heading.

Main climate

In addition to the climate row's functions, other main climate functions can also be controlled in the Main climate tab.

1. Max, Electric, Rear - Controls for defrosting the windows and door mirrors.
2. AC - Controls for air conditioning.
3. Recirc - Controls for air recirculation.
4. Controls for air distribution.

* Option/accessory.
Fan control for front seat (with 2-zone climate, the control is shared with the rear seat).

**AUTO** - Auto regulating the climate.

**Rear climate control**
All climate functions for the rear seat can be regulated in the **Rear climate** tab.

**2nd row climate** - Controls for climate functionality in the rear seat. Fan controls for rear seat.

**Temperature controls for rear seat.**

**Controls for heated rear seat**.

**Parking climate**
The car’s parking climate control can be regulated in the **Parking climate** tab.

**Climate controls at rear of tunnel console**

1. Controls for heated rear seat.
2. Fan controls for rear seat.
3. Temperature controls for rear seat.
4. Locking/unlocking button on the climate panel.

If the car is not equipped with a climate panel at the rear of the tunnel console, but has heated rear seats, there are physical buttons at the rear of the tunnel console for controlling these.

The climate panel has a screen lock to prevent unintentional change of fan speed and temperature. When the screen is locked, only the seat controls and the unlocking button are shown.

After unlocking, the fan speed and temperature can be changed via the climate panel and all
selected climate settings are shown. The screen locks automatically after a period of inactivity.

### Activating and deactivating heated front seat*

The seats can be heated in order to increase comfort for driver and passengers when it is cold.

1. Press the left or right-hand side's steering wheel and seat button in the climate row in the centre display in order to open the controls for seat and steering wheel.

   If the car is not equipped with ventilated seats or heated steering wheel, the button for heated seats is immediately available in the climate row.

   ![Steering wheel and seat buttons in the climate row.](image)

2. Repeatedly press the button for heated seats in order to change between the four levels: Off, High, Medium and Low.

   > The level changes and the button shows the set level.

**WARNING**

Heated seats must not be used by people who find it difficult to perceive an increase in temperature due to a lack of sensation or who otherwise have problems operating the controls for the heated seats. Otherwise they may suffer burn injuries.

**Related information**

Activating and deactivating heated rear seat*

The seats can be heated in order to increase comfort for driver and passengers when it is cold.

Activating and deactivating the heated rear seat from the front seat*

Buttons for heated seats in the group Rear climate in the climate view.

1. Open the climate view in the centre display and select the tab for Rear climate.
2. Repeatedly press the button for heated seats in order to change between the four levels: Off, High, Medium and Low.
   > The level changes and the button shows the set level.

Activating and deactivating the heated rear seat from the rear seat

With 2-zone climate:

Buttons for heated seats at the rear of the tunnel console.

- Press repeatedly on the left or right-hand side’s physical buttons for heated seats at the rear of the tunnel console to switch between the four levels: Off, High, Medium and Low.
  > The level changes and the LEDs in the button show the set level.
With 4-zone climate*:

Activating and deactivating ventilated front seat*

The seats can be ventilated to provide increased comfort in a hot climate, for example. The ventilation system consists of fans in the seats and backrests that draw air through the seat upholstery. The cooling effect increases the cooler the passenger compartment air becomes. The system can be activated when the engine is running.

1. Press the left or right-hand side's steering wheel and seat button in the climate row in the centre display in order to open the controls for seat and steering wheel.

   If the car is not equipped with heated seats or heated steering wheel, the button for ventilated seats is immediately available in the climate row.

   > The level changes and the button shows the set level.

   Related information
   • Climate controls (p. 206)

Activating and deactivating automatic start of heated steering wheel*

The steering wheel can be heated in order to increase comfort for the driver when it is cold. It is possible to set whether automatic start of heated steering wheel should be activated/deactivated when the engine is started. With automatic start activated, heating will start in the event of low ambient temperature.

1. Press Settings in the top view in the centre display.

2. Press Climate.

3. Select Auto Steering Wheel Heating Level to activate/deactivate automatic start of heated steering wheel.

4. Select Low, Medium or High to select level after the function has been activated.

Related information
- Activating and deactivating the heated steering wheel* (p. 211)
Activating auto climate control
With auto climate control activated, multiple climate functions are controlled automatically.

1. Open the climate view in the centre display.
2. Give a short or long press on AUTO.
   - Short press - air recirculation, air conditioning and air distribution are controlled automatically.
   - Long press - air recirculation, air conditioning and air distribution are controlled automatically, temperature and fan speed are changed to standard settings: 22 °C (72 °F) and level 3 (level 2 in the rear seat*).

> Auto-regulation of the climate is activated and the button illuminates.

** NOTE **
Temperature and fan speed can be changed without deactivating the automatically-regulated climate control system. The automatically-regulated climate control system is deactivated when the air distribution is changed manually or when maximum defroster is activated.

Related information
● Climate controls (p. 206)

Activating and deactivating air recirculation
Air recirculation shuts out bad air, exhaust gases, etc. from outside the car by the climate control system reusing the air in the passenger compartment.

1. Open the climate view in the centre display.
2. Press Recirc.

> Air recirculation is activated/deactivated and the button illuminates/extinguishes.

** IMPORTANT **
If the air in the car is recirculated for too long then there is a risk of misting on the insides of the windows.

* Option/accessory.

3 For cars with 4-zone climate*.
activating and deactivating time setting for air recirculation

air recirculation shuts out bad air, exhaust gases, etc. from outside the car by the climate control system reusing the air in the passenger compartment. it is possible set whether the air recirculation timer should be activated/deactivated. when the timer is activated, air recirculation is automatically switched off after 20 minutes.

1. press settings in the top view in the centre display.
2. press climate.
3. select recirculation timer to activate/deactivate the air recirculation timer.

activating and deactivating max defroster

max defroster is used to quickly remove mist and ice from windows.

activating and deactivating max defroster from centre console

there is a physical button in the centre console for quick access to max defroster.

with heated windscreen* the max defroster can only be activated individually from the climate view in the centre display.

physical button in the centre console.

cars without heated windscreen:
- press the button.
  > max defroster is activated/deactivated and the button illuminates/extinguishes.
Cars with heated windscreen:
- Press the button repeatedly in order to switch between the three levels:
  - Activated heated windscreen
  - Activated heated windscreen and max defroster
  - Deactivated.
- Heated windscreen and max defroster are activated/deactivated and the button illuminates/extinguishes.

**NOTE**
Max defroster starts with a certain delay in order to avoid a short increase in fan level if the heated windscreen is deactivated by two quick presses of the button.

---

**Activating and deactivating max defroster from centre display**

Max defroster button in the climate view.

1. Open the climate view in the centre display.
2. Press **Max**.
   - Max defroster is activated/deactivated and the button illuminates/extinguishes.

   Max defroster deactivates auto-regulation of the climate and air recirculation, activates air conditioning and changes the fan level to 5 and the temperature to HI.

   When max defroster is deactivated, the climate control system returns to the previous settings.

**NOTE**
Changing the fan level to 5 increases the noise level.

- Climate controls (p. 206)
Parking climate*
The climate of the car's passenger compartment can be preconditioned or maintained while the car is parked.

- Climate comfort when parking* (p. 227)
- Symbols and messages for parking climate control* (p. 228)

Preconditioning*
Preconditioning of the car before driving can reduce wear and energy needs during a journey. Preconditioning can use direct start or be set via the timer.

The function utilises several systems in different cases:
- The parking heater*, in a cold climate, warms up both the passenger compartment and the engine.
- When it is warm, the ventilation cools the passenger compartment by blowing in air from outside the car.

NOTE
During preconditioning of the passenger compartment, the car works to reach comfort temperature and not the temperature set in the climate control system.

Related information
- Parking climate* (p. 222)

- Preconditioning time setting* (p. 224)

* Option/accessory.
Starting/stopping preconditioning*
Preconditioning warms the passenger compartment and engine or airs the passenger compartment before driving. The function can use direct start from the centre display or a mobile phone.

Starting/stopping from the centre display

Starting/stopping from the centre display

![Preconditioning button in the Parking climate tab in the climate view.](image)

1. Open the climate view in the centre display.
2. Select the Parking climate tab.
3. Press Preconditioning.
   > Preconditioning is started/switched off and the button is illuminated/extinguished.

**NOTE**
The car's doors and windows should be closed during the preconditioning of the passenger compartment.

**WARNING**
Do not use preconditioning if the car is equipped with a heater*:
- In unventilated spaces indoors. Exhaust gases are emitted if the heater starts.
- In locations with combustible or flammable material nearby. Fuel, gas, long grass, sawdust, etc. may ignite.
- When there is a risk that the heater's exhaust line may be blocked. For example, deep snow inside the front right-hand wheel housing can obstruct the heater's ventilation.

Remember that the preconditioning can be started by a timer that has been set for a long time in advance.

The timer buttons in the **Parking climate** tab in the climate view.

1. Open the climate view in the centre display.
2. Select the **Parking climate** tab.
3. Activate/deactivate a time setting by tapping on the timer button to the right of the setting. > The time setting is activated/deactivated and the button illuminates/extinguishes.

*Option/accessory.*
**WARNING**

Do not use preconditioning if the car is equipped with a heater*:

- In unventilated spaces indoors. Exhaust gases are emitted if the heater starts.
- In locations with combustible or flammable material nearby. Fuel, gas, long grass, sawdust, etc. may ignite.
- When there is a risk that the heater’s exhaust line may be blocked. For example, deep snow inside the front right-hand wheel housing can obstruct the heater’s ventilation.

Remember that the preconditioning can be started by a timer that has been set for a long time in advance.

Climate comfort when parking*

The climate in the car's passenger compartment can be maintained while the car is parked, e.g. if the engine needs to be switched off but the driver or passenger(s) wants to remain in the car and maintain the level of climate comfort.

Starting climate comfort retention is only possible via direct start.

The function utilises several systems in different cases:

- Residual heat from the engine, in a cold climate, heats the passenger compartment to comfort temperature.
- When it is warm, the ventilation cools the passenger compartment by blowing in air from outside the car.

Starting and switching off climate comfort when parking*

Climate comfort retention maintains the climate in the passenger compartment after driving. The function can use direct start from the centre display.

Related information

- Parking climate\(^*\) (p. 222)
**Heater**

The heater helps the engine and passenger compartment reach the correct temperature before and during driving.

The heater has two subfunctions:

- **Parking heater** - heats the engine and passenger compartment, if necessary, when the parking climate control's preconditioning* is activated.
- **Additional heater** - heats the passenger compartment and engine, if necessary, during driving.

The heater is fuel-driven and is fitted in the front right-hand wheel housing.

**NOTE**

When the heater is running, smoke may be emitted from the right-hand front wheel housing and a low hum may be heard. A ticking sound from the fuel pump may also be heard from the rear section of the car. This is perfectly normal.

**Battery and charging**

The heater is powered by the car’s starter battery. If the charge level of the starter battery is too low, then the heater is switched off automatically and the driver display shows a message.

**NOTE**

Make sure that there is enough charge in the battery if the heater needs to be used.

**Fuel and refuelling**

- **NOTE**
  - Make sure there is enough fuel in the car’s normal fuel tank if the heater needs to be used.

**WARNING**

Fuel which spills out could be ignited. Switch off the fuel-driven heater before starting to refuel.

Check in the driver display that the heater is switched off. This symbol is lit when it is working as a parking heater.

**Related information**

- Climate (p. 194)
- Parking heater* (p. 230)
- Additional heater* (p. 231)
Parking heater*
The parking heater heats the passenger compartment as necessary before driving if the car’s preconditioning is activated.

The parking heater is one of two subfunctions of the car’s heater. The heater is fitted in the front right-hand wheel housing.

This symbol illuminates in the driver display when the parking heater is active.

NOTE
When the heater is running, smoke may be emitted from the right-hand front wheel housing and a low hum may be heard. A ticking sound from the fuel pump may also be heard from the rear section of the car. This is perfectly normal.

The parking heater starts automatically if the parking climate’s preconditioning* is activated and the passenger compartment needs to be heated up.

It switches off automatically when a set timer time or the heater’s maximum run time expires, or if the car is restarted.

The heater’s maximum running time is 40 minutes.

NOTE
Make sure there is enough fuel in the car’s normal fuel tank if the parking heater needs to be used.

Make sure that there is enough charge in the starter battery if the parking heater needs to be used.

IMPORTANT
Repeated use of the parking heater combined with short journeys may discharge the battery and impair starting.

If the heater is used on a regular basis, then the car should be driven for the same amount of time that the heater is used in order to ensure that the car’s battery is recharged with the same amount of energy as consumed by the parking heater. The parking heater is used for a maximum of 40 minutes each time.

WARNING
Do not use preconditioning if the car is equipped with a heater*:

- In unventilated spaces indoors. Exhaust gases are emitted if the heater starts.
- In locations with combustible or flammable material nearby. Fuel, gas, long grass, sawdust, etc. may ignite.
- When there is a risk that the heater’s exhaust line may be blocked. For example, deep snow inside the front right-hand wheel housing can obstruct the heater’s ventilation.

Remember that the preconditioning can be started by a timer that has been set for a long time in advance.

WARNING
If there is a smell of fuel, unusual amounts of smoke, black smoke, or unusual sounds coming from the parking heater, switch off the heater and, if possible, pull out its fuse. Volvo recommends that an authorised Volvo workshop should be contacted for repair.

Related information
- Heater* (p. 229)
- Additional heater* (p. 231)
**Additional heater**

The auxiliary heater helps to heat the passenger compartment and engine while driving.

The additional heater is one of two subfunctions of the car's heater. The heater is fitted in the front right-hand wheel housing.

<table>

KEY, LOCKS AND ALARM
**Lock confirmation**

When the car is locked or unlocked the direction indicators confirm that locking or unlocking was correctly performed.

**Exterior indication**

**Locking**
- The car’s hazard warning flashers indicate locking by flashing and retracting the door mirrors¹.

**Unlocking**
- The car’s hazard warning flashers indicate unlocking by two flashes and extending the door mirrors¹.

All doors, boot lid and bonnet must be closed to indicate the car is locked. If locking is performed with only the driver’s door closed², the car will be locked but lock indication with hazard warning flashers will only occur after all doors, boot lid and bonnet have been closed.

**Lock and alarm indicator**

The lock and alarm indicator on the instrument panel show the status of the alarm system.

- Long flash indicates locking of the car. When the car is locked, this will be indicated by short, pulsating flashes.

**Other indication**

The home safe lighting and approach light functions also provide indication of locking and unlocking.

---

¹ Only for cars with retractable power door mirrors.

² Does not apply to cars equipped with the keyless locking/unlocking (Passive Entry*).
In rear door*

An illuminated indicator lamp in the lock button for one of the doors indicates that the door in question is locked. If any door is unlocked, its lamp will extinguish while the others will continue to illuminate.

Related information

- Approach light duration (p. 159)
- Using home safe lighting (p. 159)

Lock indication setting

It is possible to select how the car confirms locking and unlocking in the centre display settings menu.

1. Tap on Settings in the centre display's top view.
2. Press My Car ➔ Locking.
3. Tap on Visible Locking Feedback to select when the car should give a visible response: at Lock, Unlock, Both, or to switch off the function.

Indication with retractable door mirrors*

1. Tap on Settings in the centre display's top view.
2. Press My Car ➔ Mirrors and Convenience.
3. Select Fold Mirror When Locked to activate or deactivate the function.

Related information
- Lock confirmation (p. 234)

Remote control key

The remote control key locks and unlocks the doors, boot lid and fuel filler flap. The remote control key needs to be inside the car for it to be started.

Remote control key, on left, and button-less key (Key Tag)*, on right.

The remote control key is not physically used when starting since the car is equipped with support for keyless starting (Passive Start) as standard. The key must be in the front part of the passenger compartment, e.g. in the driver's pocket or the runnel console cup holder, for it to be possible to start the car.

* Option/accessory.
Keyless locking and unlocking of doors, boot lid (Passive Entry*) is also available as an option. The key then has a range extending in a semicircle with a radius of approx. 1.5 metres (5 feet) out from the driver’s door and approx. 1 metre (3 feet) out from the boot lid respectively.

With keyless starting and keyless locking and unlocking, the remote control key can be located anywhere in the passenger compartment or the cargo area and maintain the functionality to start the car.

Each one of the remote control keys included with the car can be linked to a driver profile with unique settings for the car. When a key with a certain profile is used, the car’s settings are adapted according to the profile.

**Button-less key (Key Tag)**
For cars equipped with keyless locking and unlocking*, a slightly smaller, lighter and button-less key (Key Tag) is supplied. It works the same way as the normal remote control key when it comes to keyless starting and locking and unlocking. It has no detachable key blade and the battery cannot be replaced.

---

**Remote control key buttons**

The remote control key has four buttons - one on the left-hand side and three on the right-hand side.

- **Locking** - Pressing the button locks the doors, boot lid and fuel filler flap and also arms the alarm*.
  - Press and hold to close all of the windows and the sunroof* simultaneously.

- **Unlocking** - Pressing the button unlocks the doors and boot lid and also disarms the alarm.
  - A longer press opens all windows simultaneously*.

- **Boot lid** - Unlocks and disarms the alarm for the boot lid only. On cars with power operated boot lid*, the boot lid is opened automatically when the button is held depressed. The tailgate is also closed with a long press - acoustic warning signals sound. On cars without power operated boot lid, the boot lid is opened mechanically, by spring pressure, using a long press.

- **Panic function** - Used to attract attention in an emergency. Press and hold the button for at least 3 seconds or press it twice within 3 seconds to activate the direction indicators and the horn. The function can be turned off with the same button once it has been active for at least 5 seconds. Otherwise the function switches off automatically after 3 minutes.

---

**WARNING**
If anyone is left in the car, make sure the power windows and sunroof* are de-energised by always taking the remote control key with you when you leave the car.

---

3 The key is waterproof to a depth of approx. 10 metres (30 feet) for up to 60 minutes, which makes it suitable for use in activities in and around water.

4 The total airing function can be used, for example, to quickly air the car in hot weather.

* Option/accessory.
NOTE
Be aware of the risk of locking the remote control key/Key Tag in the car.
A remote control key/Key Tag left in the car will be deactivated when the car is locked and the alarm is armed using another valid key. The "Double lock" function is also deactivated.
The deactivated key is reactivated when the car is unlocked.

NOTE
When the remote control key is placed in the cup holder, make sure that no other car keys, metal objects or electronic apparatus (e.g. mobile phones, tablets, laptops or chargers) are in the cup holder. Several car keys close to each other in the cup holder can cause interference with each other.

NOTE
Avoid storing the remote control key close to metal objects or electronic apparatus, e.g. mobile phones, tablets, laptops or chargers - preferably no closer than 10-15 cm (4-6 inches).
If there is still interference - use the remote control key's detachable key blade to unlock and then place the key in the backup reader in the cup holder to disarm the car.

Interference
Remote control key functions for keyless starting and keyless locking and unlocking* can be disrupted by electromagnetic fields and screening.

Locking and unlocking with the remote control key
The buttons on the remote control key can be used to lock and unlock all doors, the boot lid and the fuel filler flap simultaneously.

Locking with the remote control key

Remote control key.

- Press the remote control key button to lock.

The driver's door must be closed in order for the lock sequence to be activated\(^5\). If any of the other doors or the boot lid is open, then these are not locked and their alarms armed* until they are closed. The alarm's movement detectors* are activated when all the doors and the boot lid are closed and locked.

\(^5\) If the car is equipped with keyless locking/unlocking then all side doors must be closed.
NOTE
Be aware of the risk of locking the remote control key/Key Tag in the car.
A remote control key/Key Tag left in the car will be deactivated when the car is locked and the alarm is armed using another valid key. The "Double lock" function is also deactivated.
The deactivated key is reactivated when the car is unlocked.

When the remote control key does not work

NOTE
Always try moving closer to the car and making another unlock attempt.

If it is not possible to lock or unlock with the remote control key, the battery may be discharged - in which case, lock or unlock the driver's door with the detachable key blade.

Related information

Locking when the boot lid is open

NOTE
If the car has been locked while the boot lid is open, be careful not to leave the remote control key in the cargo area when the boot lid is closed and the car is completely locked.

Unlocking with the remote control key
- Press the remote control key button to unlock.

Automatic relocking
If none of the doors or the boot lid is opened within two minutes of unlocking, they are locked automatically. This function prevents the car from being left unlocked unintentionally.

Unlocking with the remote control key
- Press the remote control key button to unlock.

Automatic relocking
If none of the doors or the boot lid is opened within two minutes of unlocking, they are locked automatically. This function prevents the car from being left unlocked unintentionally.
Unlocking the boot lid with the remote control key

It is possible to unlock just the boot lid using a button on the remote control key.

1. Press the remote control key’s button.
   > The lock and alarm indicator on the instrument panel extinguishes in order to show that the alarm is not armed for the whole of the car.
   The alarm's level and movement sensors and the sensors for opening the boot lid are disconnected.
   The boot lid is unlocked, but remains closed while the doors remain locked and their alarm functions armed.
   To open the boot lid, grip the rubber pressure plate beneath the boot lid handle and open the boot lid.
   If the tailgate is not opened within 2 minutes then it is relocked and the alarm is re-armed.

2. With the power operated boot lid option*
   Long press (approx. 1.5 seconds) on the remote control key's button.
   > The boot lid is unlocked and opened, while the doors remain locked and their alarm functions armed.

Related information
• Locking and unlocking with the remote control key (p. 237)

Remote control key range

In order for the remote control key to work properly it needs to be within a certain distance from the car.

For manual use
The remote control key's functions for e.g. locking/unlocking that are activated by pressing on or have a range that extends approx. 20 metres (65 feet) from the car.
If the car does not verify a button being pressed - move closer and try again.

For keyless use7

The marked area in the illustration shows areas covered by the system's antennas.
For keyless use, a remote control key or the button-less key (Key Tag) must be within a semicir-

---

7 Only applies to cars equipped with the keyless locking/unlocking option (Passive Entry*).
circular area with a radius of approx. 1.5 metres (5 feet) on both long sides and approx. 1 metre (3 feet) from the boot lid.

### Key, Locks and Alarm

#### If the remote control key is removed from the car

If the remote control key is removed from the car when the engine is running, the warning message **Car key not found Removed from car** is shown in the driver display and an acoustic reminder sounds when the last door is closed.

The message extinguishes when the key is returned to the car, followed by a press of the right-hand keypad's O button, or when the last door is closed.

**Related information**

- Remote control key (p. 235)
- Antenna locations for the start and lock systems (p. 261)
- Keyless and touch-sensitive surfaces* (p. 258)

#### Replacing the battery in the remote control key

The battery in the remote control key needs to be replaced when it has become discharged.

**NOTE**

All batteries have a limited service life and must eventually be replaced (does not apply to Key Tag). The service life of the battery varies depending on how often the vehicle/key is used.

The battery for the remote control key should be replaced if:

- the information symbol illuminates and the message **Car key battery low** is shown in the driver display
- the locks repeatedly do not react to signals from the remote control key within 20 metres (65 feet) of the car.

**NOTE**

Always try moving closer to the car and making another unlock attempt.

#### Opening the key and changing the battery

The battery in the button-less key* (Key Tag) cannot be replaced - a new key can be ordered from an authorised Volvo workshop.

**IMPORTANT**

A discharged Key Tag must be handed over to an authorised Volvo workshop. The key must be deleted from the car since it is still possible to use it to start the car via back-up start.

1. **Hold the remote control key with the front visible and the Volvo logo facing the right way - slide the button at bottom edge by the key ring to the right. Slide the front side's shell a few millimetres upwards.**
2. **The shell will then come free and can be lifted off the key.**

* Option/accessory.
Turn the key, move the button to the side and slide the back shell a few millimetres upwards.

The shell will then come free and can be lifted off the key.

Use a screwdriver or similar to turn the battery cover anticlockwise until the markings meet at the OPEN text.

Carefully lift away the battery cover by pressing e.g. a fingernail into the recess.

Then prize the battery cover upwards.

The battery (+) side is facing upwards. Then carefully prize loose the battery as illustrated.

**IMPORTANT**

Avoid touching new batteries and their contact surfaces with your fingers as this may impair their function.

---

8 This key is supplied with a car equipped with the keyless locking/entry option (Passive Entry*).
Install a new battery with the (+) side up. Avoid touching the remote control key's battery contacts with your fingers.

Place the battery in the holder with the edge down. Then slide the battery forwards so that it fastens under the two plastic catches.

Press the battery down so that it fastens under the upper black plastic catch.

Volvo recommends that the batteries to be used in the remote control key fulfil UN Manual of Test and Criteria, Part III, subsection 38.3. Batteries fitted in the factory or replaced by an authorised Volvo workshop fulfil the above criteria.

Use batteries with the designation CR2032, 3 V.

Refit the battery cover and turn it clockwise until the marking aligns with the CLOSE text.

Reposition the rear side's shell and press it down until a clicking sound can be heard. Then slide the shell back sedan. A further click will indicate that the shell is properly positioned and securely attached.
Turn the remote control key over and refit the front side's shell by pressing it down until a clicking sound can be heard.

Then slide the shell back sedan. A further click will indicate that the shell is securely attached.

**IMPORTANT**
Make sure that exhausted batteries are disposed of in a manner which is kind to the environment.

Related information
- Remote control key (p. 235)

---

**Ordering more remote control keys**
The car is supplied with two remote control keys. A button-less key is supplied if the car is equipped with keyless locking and unlocking*. Additional keys can be ordered.
A total of twelve keys can be programmed and used for one single car. If additional keys are ordered, additional driver profiles are added - one per new remote control key. This also applies for the key tag.

**Loss of a remote control key**
If you lose a remote control key then a new one can be ordered at a workshop - an authorised Volvo workshop is recommended. The remaining remote control keys must be taken to the workshop. The code of the missing key must be erased from the system as a theft prevention measure.

The current number of keys registered to the car can be checked via driver profiles in the centre display’s top view, select **Settings ➔ System ➔ Driver Profiles**.

**Related information**
- Remote control key (p. 235)

---

**Red Key - restricted remote control key***
A Red Key makes it possible for the car’s owner to set limitations for certain of the car’s properties. The limitations are intended to encourage the car to be driven in a safe manner, e.g. when being loaned out.

For a Red Key, it is possible to define the car's maximum speed, set speed reminders and determine the loudspeaker system's maximum volume. In addition, some of the car's driver support systems will always be active. Other functions of the key are the same as those of a normal remote control key.

One or more Red Keys can be ordered from a Volvo retailer. A total of eleven keys with restrictions can be programmed and used for a single car - at least one must be a normal remote control key.
The restrictions are intended to act as measures to reduce the risk of accidents, thereby making it feel safer to hand over the car to e.g. young drivers, valet parking or a workshop. The holder of a Red Key cannot change settings defined for it – a regular remote control key is required for this.

**Related information**
- Red Key settings* (p. 244)
- Remote control key (p. 235)

---

**Red Key settings**
The holder of a regular remote control key can define settings for Red Key. Certain driver support functions are always active.

1. Tap on **Settings** in the centre display’s top view.
2. Press **System ➔ Driver Profiles ➔ Red Key**.
   - The following settings can be defined:
     - **Set Time Gap For Adaptive Cruise Control**
     - **Reduced Maximum Volume**
     - **Max Speed Limit**
     - **Speed Limit Warning**

**Adaptive cruise control***:
- Setting at first use: Longest intervals

**Reduced max. volume (On/Off)**:
- Setting at first use: On

**Speed limiter (On/Off)**:
- Setting interval: 50-250 km/h (30-160 mph)
- Setting during first use is 120 km/h (75 mph)
- Increments: 1 km/h (1 mph)

The driver display shows the symbol and message

**Red key Speed limitation cannot be exceeded.**

---

**Speed reminder (On/Off)**:
- Setting interval: 0-250 km/h (0-160 mph)
- Setting during first use is: 50, 70 and 90 km/h (30, 45 and 55 mph)
- Increments: 1 km/h (1 mph)
- Max. number of simultaneous reminders: 6

**Driver support functions**
The following driver support functions will always be active for the user of a Red Key:
- Blind Spot Information (BLIS)*
- Lane assistance (LKA)*
- Distance Warning*
- City Safety
- Driver Alert Control (DAC)*
- Road Sign Information*

**Related information**
- Red Key - restricted remote control key* (p. 243)

* Option/accessory.
**Detachable key blade**

The remote control key contains a detachable key blade of metal with which a number of functions can be activated and some operations carried out.

The key blade’s unique code is provided by authorised Volvo workshops, which are recommended when ordering new key blades.

**The key blade’s application areas**

Using the remote control key’s detachable key blade:

- the left-hand front door can be opened manually if central locking cannot be activated with the remote control key.
- all doors are emergency-locked.
- the rear doors’ mechanical child safety locks can be activated and deactivated.

The button-less key (Key Tag) does not have a detachable key blade. If necessary, use the detachable key blade from the normal remote control key.

---

### Detaching the key blade

**1** Hold the remote control key with the front visible and the Volvo logo facing the right way - slide the button at bottom edge by the key ring to the right. Guide the front side’s shell a few millimetres upwards.

**2** The shell will then come free and can be lifted off the key.

**3** Detach the key blade by angling it up.

Return the key blade to its intended position in the remote control key after use.

**1** Refit the shell by pressing it downward until a clicking sound is heard.

**2** Then slide the shell back.

> A further click will indicate that the shell is securely attached.

**Related information**

- Locking and unlocking with the detachable key blade (p. 246)
- Remote control key (p. 235)

---

9 This applies whether the car is left-hand drive or right-hand drive.

10 Supplied with cars equipped with the keyless locking/unlocking option (Passive Entry*).
Locking and unlocking with the detachable key blade

Amongst other things, the detachable key blade can be used to unlock the car from the outside - e.g. if the remote control key's battery has become discharged.

Unlocking

1. Pull out the front door handle on the left-hand side\(^{11}\) to its end position so that the lock cylinder become visible.

2. Insert the key in the lock cylinder.

3. Turn clockwise 45 degrees so that the key blade is pointing straight back.

4. Turn the key back 45 degrees to its starting position. Remove the key from the lock cylinder and release the handle so that the rear section of the handle is resting against the car again.

5. Pull out the handle.
   > The door opens.

Locking will be performed in the same way, but with an anticlockwise turn 45 degrees instead of clockwise in step (3).

Switching off the alarm*

**NOTE**

When the door is unlocked using the key blade and is then opened, the alarm is triggered.

The backup reader's location in the cup holder.

Deactivate the alarm as follows:

1. Place the remote control key on the key symbol in the backup reader in the bottom of the cup holder in the tunnel console.

2. Then turn the start knob clockwise and release it.
   > The control automatically returns to its starting position - the alarm signal stops and the alarm switches off.

Locking

It is also possible to lock the car with the remote control key's detachable key blade e.g. in the event of a loss of power or if the key's battery has become discharged.

The left-hand front door can be locked with its lock cylinder and the detachable key blade.

Other doors have no lock cylinders and instead have a lock switch on the end of each door which must be depressed using the key blade - they are then mechanically locked/blockced to prevent them being opened from outside.

The doors can still be opened from the inside.

\(^{11}\) This applies whether the car is right-hand drive or left-hand drive.

* Option/accessory.
Manual locking of the door. Not to be mixed up with the child safety locks.

- Remove the detachable key blade from the remote control key. Insert the key blade in the hole for lock reset and press the key in until the key bottoms, approx. 12 mm.

A The door can be opened from both the outside and the inside.

B The door is blocked against opening from the outside. To return to position A, the inner door handle must be opened.

The doors can also be unlocked with the unlock button on the remote control key or with the central locking button on the driver's door.

### NOTE
- A door’s lock reset only locks that particular door - not all doors simultaneously.
- A manually locked rear door with activated manual or electric child safety locks cannot be opened from either the outside or the inside. A rear door that is locked in this way can only be unlocked with the remote control key or central locking button.

### Immobiliser
The electronic immobiliser is a theft protection system that prevents an unauthorised person from starting the car.

The car can only be started with the correct remote control key.

The following error message in the driver display is related to the electronic immobiliser:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Message</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="symbol.png" alt="Remote control key icon" /></td>

</tr>
<tr>
<td><img src="symbol.png" alt="See Owner's manual" /></td>
<td>See Owner's manual</td>
<td></td>
</tr>
</tbody>
</table>

### Remote-controlled immobiliser with tracking system12
The car is fitted with a system which makes it possible to track and locate the car and to remotely activate the immobiliser, which prevents starting the engine. Contact your nearest Volvo dealer for more information and assistance with activating the system.

* Only certain markets and together with Volvo On Call*.

**Related information**
- Remote control key (p. 235)
Keyless and touch-sensitive surfaces*
If the car is equipped with keyless locking and unlocking, it is sufficient to have the remote control key in the vicinity e.g. in a pocket or a bag, making it more convenient to open the car if your hands are full.

Touch-sensitive surfaces

Door handle
The outside of the door handles contains a recess for locking, while the inside contains a touch-sensitive surface for unlocking.

NOTE
It is important that only one touch-sensitive surface is activated at a time. Gripping the handle while touching the lock surface risks giving double commands. This means that the requested activity (locking/unlocking) will not be executed, or will be executed with a delay.

Boot lid
The boot lid handle has a rubberised pressure plate that is only used for unlocking.

NOTE
Be aware that the system may be activated in connection with car washing if the remote control key is in range.

Related information
- Keyless locking and unlocking* (p. 259)
- Keyless unlocking of the boot lid* (p. 260)
Keyless locking and unlocking*

The car is locked and unlocked from the outside using the door or boot lid handles if the car is equipped with keyless locking/unlocking (Passive Entry)*.

1. Touch-sensitive recess for locking
2. Touch-sensitive surface for unlocking

Rubberised pressure plate on the boot lid used for unlocking only.

**NOTE**
One of the car’s remote control keys must be within range for locking and unlocking to work.

**NOTE**
Be aware that the system may be activated in connection with car washing if the remote control key is in range.

Keyless locking

All side doors must be closed to be able to lock the car. The boot lid, on the other hand, can be open when locking the car with a side door handle.

– Touch the marked surface towards the rear on the outside of a door handle after the door has been closed, or press the lock^13 button on the bottom edge of the boot lid before closing it.

> The lock indicator in the windscreen starts to flash to indicate the car is locked.

To close all side windows and the sunroof* simultaneously - place a finger against the touch-sensitive recess on the outside of the door handle and hold it there until all side windows and the sunroof have been closed.

**Locking when the boot lid is open**

**NOTE**
If the car has been locked while the boot lid is open, be careful not to leave the remote control key in the cargo area when the boot lid is closed and the car is completely locked^14.

^13 Applies with power operated boot lid.
^14 If the key is detected inside the car, the boot lid will not lock when it is closed.
Keyless unlocking

- Grasp a door handle or press the rubberised pressure plate beneath the boot lid handle to unlock the car.
  > The lock indicator in the windscreen extinguishes to confirm the car is unlocked - open the doors or boot lid as usual.

Automatic relocking

If none of the doors or the boot lid is opened within two minutes of unlocking, they are locked automatically. This function prevents the car from being left unlocked unintentionally.

Related information

- Settings for Keyless entry* (p. 260)
- Keyless unlocking of the boot lid* (p. 260)
- Keyless and touch-sensitive surfaces* (p. 258)

Settings for Keyless entry*

It is possible to select different sequences for Keyless entry.

1. Tap on Settings in the centre display's top view.
2. Tap on My Car ➔ Locking ➔ Keyless Unlock
3. Select option:
   - All Doors
     - unlocks all doors simultaneously.
   - Single Door
     - unlocks selected door.

Related information

- Keyless locking and unlocking* (p. 259)
- Keyless and touch-sensitive surfaces* (p. 258)

Keyless unlocking of the boot lid*

For keyless unlocking of the boot lid, all you have to do is have the remote control key in a pocket or bag, for example.

The boot lid is held closed by an electrical lock.

To open the tailgate:

1. Press gently on the rubberised pressure plate beneath the boot lid handle.
  > The lock is released.

NOTE

One of the car's remote control keys must be within range behind the car for unlocking to work.
2. Lift by the outside handle in order to fully open the tailgate.

**IMPORTANT**
- Minimal force is required to release the boot lid’s lock - just gently press the rubberised panel.
- Do not place the lift force on the rubber panel when opening the boot lid - lift the handle. Using too much force may damage the electrical contacts on the rubber panel.

It is also possible to open the boot lid hands-free with a foot movement under the rear bumper, see separate section.

**WARNING**
Do not drive with an open boot lid! Toxic exhaust fumes could be drawn into the car through the cargo area.

**Related information**
- Opening and closing the boot lid with foot movement* (p. 268)
- Keyless and touch-sensitive surfaces* (p. 258)
- Remote control key range (p. 239)

---

**Antenna locations for the start and lock systems**
The car is equipped with a keyless start and lock system and therefore has a number of built-in antennas positioned at different locations in the car.

![Antenna locations](image)

1. Under the cup holder in the front section of the tunnel console
2. In the upper front section of the left-hand rear door
3. In the upper front section of the right-hand rear door
4. In the cargo area

**WARNING**
People with pacemaker operations should not come closer than 22 cm (9 inches) to the keyless system's antennas with their pacemaker. This is to prevent interference between the pacemaker and the keyless system.

**Related information**
- Keyless and touch-sensitive surfaces* (p. 258)
- Remote control key range (p. 239)

---

15 The keyless lock system only applies to cars equipped with keyless locking and unlocking (Passive Entry*).
16 Only in cars equipped with keyless locking and unlocking (Passive Entry*).
Locking and unlocking from inside the car

The doors and boot lid can be locked and unlocked from inside using the central locking controls in the front doors. The lock controls* on the rear doors each lock their own rear door.

Central locking

Unlocking using a button in the front door

- Press the button to unlock all side doors and the boot lid.

A long press on the button opens all the side windows simultaneously.\(^\text{17}\)

Alternative unlocking method

Opening handle for alternative unlocking in the side door.

- Pull the opening handle on one of the side doors and release.

> Depending on the settings in the remote control key, either all doors will be unlocked or only the selected door will be unlocked and opened.

To change this setting, tap on Settings → My Car → Locking → Remote and Interior Unlock in the centre display’s top view.

Locking using a button in the front door

- Press the button - both front doors must be closed.

> All doors and the boot lid are locked.

A long press on the button closes all side windows and the sunroof* simultaneously.

Locking using a button in the rear door*

Locking button with indicator lamp in the rear door.

The rear door lock buttons only lock their respective rear door.

Unlocking the rear door

- Pull the opening handle.

> The rear door is unlocked and opened.

17 The total airing function can be used, for example, to quickly air the car in hot weather.
**Related information**
- Settings for remotely controlled and inside unlocking (p. 238)
- Unlocking the boot lid from the inside of the car (p. 263)
- Activating and deactivating child safety locks (p. 263)

**Unlocking the boot lid from the inside of the car**
The boot lid can be unlocked from inside by pressing a button on the instrument panel.

1. Brief press on the button on the instrument panel.
   > The tailgate can be unlocked and opened from the outside by grasping the rubberised pressure plate.

   With the power operated boot lid option* -

2. Long press on the button on the instrument panel.
   > The tailgate opens.

**Related information**
- Locking and unlocking from inside the car (p. 262)

**Activating and deactivating child safety locks**
The child safety locks prevent children from being able to open a rear door from the inside. There is an electric* and a manual lock.

**Activating and deactivating electrically**
The electric child safety locks can be activated and deactivated in all ignition positions higher than 0. Activation and deactivation can be performed up to 2 minutes after switching off the engine, provided that no door is opened.

1. Start the engine or choose an ignition position higher than 0.
2. Press the button in the driver’s door control panel.
   > The driver display shows the message **Rear child lock Activated** and the button’s lamp illuminates - the locks are active.

When the electric child safety lock is active then the rear:
- windows can only be opened with the driver’s door control panel
- doors cannot be opened from inside.

To deactivate the locks:
- Press the button in the driver’s door control panel.
  > The driver display shows the message **Rear child lock Deactivated** and the button’s lamp goes out - the locks are deactivated.

The current setting is stored when the engine is switched off - if the child safety locks are activated at engine shutdown, the function will remain activated the next time the engine is started.

### Table: Symbol and Message

</tbody>
</table>

### Activating and deactivating manually

- Use the remote control key’s detachable key blade to turn the knob.

  - The door is blocked against opening from the inside.

  - The door can be opened from both the outside and the inside.

### NOTE
- A door’s knob control only blocks that particular door - not both rear doors simultaneously.
- Cars with an electric child safety lock do not have a manual child lock.

### Related information
- Locking and unlocking from inside the car (p. 262)
- Detachable key blade (p. 245)
Automatic locking when driving
The doors and boot lid are locked automatically when the car starts to move.
To change this setting:
1. Tap on Settings in the centre display’s top view.
2. Press My Car ➔ Locking.
3. Select Auto Lock Doors While Driving to deactivate or activate this function.

Related information
• Locking and unlocking from inside the car (p. 262)

Opening and closing the power operated boot lid*
The car’s boot lid can be opened and closed electrically.

Opening power operated boot lid
Choose one of the following options to open the boot lid:
– Long press on the remote control key’s button. Keep it depressed until the tailgate starts to open.
– Light press on the boot lid handle.
Closing power operated boot lid
Choose one of the following options to close the boot lid:

- Foot movement* under the rear bumper.
- Press the button on the underside of the boot lid to close.
- Long press on the button on the instrument panel.
  > The boot lid closes automatically and acoustic signals sound - the boot lid remains unlocked.
- Foot movement* under the rear bumper.
  > The boot lid closes automatically and acoustic signals sound - the boot lid remains unlocked.

NOTE

The button is active 24 hours after the hatch has been left open. Thereafter, it must be closed manually.

- Long press on the button on the remote control key.
  > The boot lid closes automatically and acoustic signals sound - the boot lid remains unlocked.

* Option/accessory.
Closing and locking\textsuperscript{18} power operated boot lid
- Press the \( \mathbb{R} \) button on the underside of the boot lid to close it and simultaneously lock the boot lid and doors (all doors must be closed for locking).
  > The boot lid closes automatically - the boot lid and doors are locked, and the alarm\textsuperscript{*} is armed.

\begin{mdframed}[backgroundcolor=white]
\textbf{NOTE}
\begin{itemize}
  \item One of the car's remote control keys must be within range for locking and unlocking to work.
  \item When using keyless\textsuperscript{*} locking or closing, three signals will sound if the key is not detected sufficiently close to the tailgate.
\end{itemize}
\end{mdframed}

\begin{mdframed}[backgroundcolor=white]
\textbf{IMPORTANT}
During manual boot lid operation, open or close it slowly. Do not use force to open/close it if there is resistance. It may be damaged and stop working correctly.
\end{mdframed}

Cancel closing
Cancel closing in one of the following ways:
- Press the button on the instrument panel.
- Press the remote control key's button.
- Press the closing button on the underside of the boot lid.
- Press the rubberised pressure plate beneath the outside handle.
- Using a foot movement\textsuperscript{*}.

The movement of the boot lid is stopped and it returns to fully open. The boot lid can then be operated manually.

\begin{mdframed}[backgroundcolor=white]
\textbf{Pinch protection}
If something with sufficient resistance prevents the boot lid from closing then the pinch protection is activated.
- During closing - the movement is stopped, the boot lid returns to fully open and a long signal sounds.
\end{mdframed}

\begin{mdframed}[backgroundcolor=white]
\textbf{WARNING}
Pay attention to the risk of crushing when closing. Before starting to close, check that no one is near the boot lid, since a crushing injury can have serious consequences.
Always operate the boot lid with caution.
\end{mdframed}

\begin{mdframed}[backgroundcolor=white]
\textbf{Related information}
- Opening and closing the boot lid with foot movement\textsuperscript{*} (p. 268)
- Remote control key range (p. 239)
\end{mdframed}

\textsuperscript{18} A car with keyless locking and unlocking (Passive Entry\textsuperscript{*}) has one button for closing and one button for closing and locking.
Opening and closing the boot lid with foot movement*

To facilitate the operation of the boot lid when your hands are occupied, it can be opened and closed by means of a forward kicking motion under the rear bumper.

If the car is equipped with keyless locking and unlocking* then you can open the boot lid with a foot movement.

The function with both opening and closing of the boot lid is also available when the car is equipped with power operated boot lid*.

**NOTE**
The foot-operated boot lid function is available in two versions:

- Only opening with foot movement.
- Both opening and closing with foot movement.

Note that the function for closing with foot movement requires power operated boot lid*.

---

One of the car's remote control keys must be within range behind the car (approx. 1 metre (3 feet)) for opening and closing to be possible. This also applies to an already unlocked car in order to avoid accidental opening e.g. in a car wash.

---

19 Applies to cars with power operated boot lid*.

---

Opening and closing with foot movement

Kicking motion within the detector's valid activation area.

- Make one slow, forward kicking motion under the left part of the rear bumper. Then take a step back. The bumper must not be touched.

> A short acoustic signal sounds when opening and closing is activated - the boot lid is opened/closed.

If the boot lid is in open position then it is always closed19 on activation via foot movement.

If several kicking motions take place without an approved remote control key being located behind the car, opening and closing will not be possible until after a certain delay.

* Option/accessory.
Do not leave your foot positioned under the car during the kicking motion. This could cause activation to fail.

**Cancel closing with a foot movement**
- Make one slow forward kicking motion when closing is in progress in order to stop the movement of the boot lid.
  > The movement of the boot lid is stopped and it returns to fully open. The boot lid can then be operated manually.

The remote control key does not have to be in the vicinity of the car to cancel closing.

**NOTE**
There is a risk of reduced function, or no function, if the rear bumper is loaded with large amounts of ice, snow, dirt or similar. For this reason, make sure you keep it clean.

**NOTE**
Pay attention to the possibility that the system may be activated in a car wash or similar if the remote key is within range.

**Related information**
- Keyless and touch-sensitive surfaces* (p. 258)
- Opening and closing the power operated boot lid* (p. 265)

**Private locking**
The boot lid and rear seat can be locked with the private locking function when the car is taken in for service, left at a hotel or similar. The function prevents the boot lid from being opened, locks the rear seat in upright position and prevents folding the rear seat.

The private locking function button is located in the centre display function view. Depending on the current status of the lock, Private Locking Unlocked or Private Locking Locked is shown.

**Related information**
- Activating and deactivating private locking (p. 270)
Activating and deactivating private locking

Private locking is activated with a function button in the centre display and an optional PIN code.

**NOTE**
The car needs to be in ignition mode I as a minimum for the private locking function to be activated.

Enter the security code before using for the first time

A security code needs to be selected during the first time the function is used. It can then be used to deactivate private locking if the selected PIN code has been lost or forgotten. The security code acts as a PUK code for all subsequent PIN codes set for the private locking function.

Save the security code in a safe place.

To create a security code:

1. Press the button for private locking in the function view.

   > A pop-up window is shown.

2. Enter the desired security code.

   > The security code is saved. The private locking function is now ready for activation.

If the system has been reset then the above procedure needs to be repeated.

**Activate private locking**

1. Press the button for private locking in the function view.

   > A pop-up window is shown.

2. Enter the code to be used in order to unlock the boot lid and rear seat after locking and tap on **Confirm**.

   > The boot lid and rear seat are locked. Confirmation of locking takes place by means of a green indicator being shown by the button in the function view.

**Deactivate private locking**

1. Press the button for private locking in the function view.

   > A pop-up window is shown.

2. Enter the code that was used for locking and tap on **Confirm**.

   > The boot lid and rear seat are unlocked. Confirmation of unlocking takes place by means of the green indicator by the button in the function view extinguishing.

**NOTE**

If the PIN code has been lost/forgotten, or if the wrong PIN code has been entered more than three times, the security code can be used to deactivate the private locking.
NOTE
If private locking is activated and the car is unlocked via Volvo On Call* or the Volvo On Call* app, private locking will be deactivated automatically.

Related information
- Private locking (p. 269)

Alarm*
The alarm provides audible and visual warnings if anyone enters the car without a valid remote control key or manipulates the starter battery or alarm siren.

When armed, the alarm is triggered if:
- a door, the bonnet or the boot lid is opened20
- a movement is detected in the passenger compartment (if fitted with a movement detector*)
- the car is raised or towed away (if fitted with a tilt detector*)
- the starter battery's cable is disconnected
- the siren is disconnected.

Alarm signals
When the alarm has been triggered, the following happens:
- A siren sounds for 30 seconds or until the alarm is switched off.
- The direction indicators flash for 5 minutes or until the alarm is switched off.

If the cause of alarm activation is not rectified, the alarm cycle is repeated up to 10 times21.

Alarm indicator
A red LED on the instrument panel indicates the alarm system’s status:
- LED not lit – alarm not armed.
- The LED flashes once every other second – alarm is armed.
- After the alarm has been disarmed, the LED flashes rapidly for a maximum of 30 seconds or until ignition position I has been selected by turning the start knob clockwise and releasing it - the alarm has been triggered.

---

20 Applies to certain markets.
21 Applies to certain markets.

* Option/accessory.
Movement and tilt sensors*  
Movement and tilt sensors react to movements inside the car, if the window is broken or if anyone tries to steal the wheels or tow the vehicle away.

The movement sensor triggers an alarm in the event of movement in the passenger compartment - air currents are also registered. For this reason the alarm is triggered if the car is left with a window or the sunroof* open or if the passenger compartment heater is used.

To avoid this:
- Close the window and sunroof when leaving the car.
- If the passenger compartment or parking heater is to be used – direct the airflow from the air vents so that they do not point upwards in the passenger compartment.

Alternatively, use a reduced alarm level to temporarily deactivate the movement and tilt sensors.

Also switch off the movement and tilt sensors when the car is being transported on a ferry or train as these movements may affect the car and trigger the alarm.

In the event of an alarm system fault
If there is a fault in the alarm system, the driver display shows the symbol and the message **Alarm system failure Service required**. In which case, contact a workshop - an authorised Volvo workshop is recommended.

**NOTE**
Do not attempt to repair or alter components in the alarm system yourself. Any such attempts may affect the terms of the insurance.

Related information
- Activating and deactivating alarms* (p. 272)
- Reduced alarm level* (p. 274)
- Double lock* (p. 274)

Activating and deactivating alarms*
The alarm is armed when the car is locked.

**Arming the alarm**
Lock and arm the car alarm as follows:
- press the remote control key's lock button
- touch the marked surface on the outside of the door handles or the boot lid's rubberised pressure plate*.

If the car is equipped with both keyless locking/unlocking* and a power-operated boot lid, the button on the underside of the boot lid can also be used to lock the car and arm the car alarm.

A red LED on the instrument panel flashes once every two seconds when the car is locked and the alarm is armed.

---

22 Only applies to a car with keyless locking and unlocking* (Passive Entry).

* Option/accessory.
Deactivate the alarm
Unlock and disarm the car alarm as follows:

- press the remote control key’s unlock button
- grip one of the door handles or press on the boot lid’s rubberised pressure plate

Deactivate the alarm without a functioning remote control key
The car can be unlocked and disarmed even if the remote control key does not work, e.g. if the remote control key’s battery is dead.

1. Open the driver’s door with the detachable key blade.
   > The alarm is triggered.
2. Place the remote control key on the key symbol in the backup reader in the tunnel console’s cup holder.
   > The alarm is deactivated.
3. Turn the start knob clockwise and release it.
   > The alarm is deactivated.

Switching off a triggered alarm
– Press the remote control key’s unlock button or set the car in ignition position I by turning the start knob clockwise and then releasing.

NOTE
- Remember that the alarm is activated when the car is locked.
- If any of the doors are opened from the inside then the alarm is triggered.

Automatic arming and rearming of the alarm
Automatic rearming of the alarm prevents the car being left with the alarm disarmed unintentionally.

If the car is unlocked with the remote control key (which disarms the alarm) but none of the doors or the boot lid is opened within two minutes, then the alarm is automatically re-armed. The car is relocked at the same time.

In certain markets, the alarm is armed automatically after a certain delay after the driver’s door has been opened and closed without being locked.

To change this setting:
1. Tap on Settings in the centre display’s top view.
2. Press My Car ➔ Locking.
3. Select Passive Arming Deactivation to deactivate the function temporarily.

Related information
- Alarm* (p. 271)

---

22 Only applies to a car with keyless locking and unlocking* (Passive Entry).
Reduced alarm level*
A reduced alarm level means that the movement and tilt sensors are temporarily switched off. Switch off the movement and tilt detectors in order to avoid accidental triggering of the alarm - e.g. if a dog is left in a locked car or during transport on a car train or car ferry.

Press the Reduced Guard button in the centre display function view to switch off the movement and tilt sensors when subsequently locking the car.

At the same time, the double lock function is deactivated, i.e. unlocking from inside is possible. If the car is unlocked and then locked again, the reduced alarm level must be reactivated.

Related information
- Alarm* (p. 271)
- Double lock* (p. 274)

Double lock*
Double lock means that all opening handles are disengaged mechanically, which prevents door opening from the inside when the car is locked from the outside.

Double locks are activated with the remote control key and in keyless locking (Passive Entry)*.

Double locks are activated with a delay of about 10 seconds after the doors have locked.

If a door is opened within the delay time then the sequence is interrupted and the alarm is deactivated.

NOTE
- Remember that the alarm is activated when the car is locked.
- If any of the doors are opened from the inside then the alarm is triggered.

The car can only be unlocked with the remote control key, keyless unlocking or the Volvo On Call* app when double locks are activated.

The front left door can also be unlocked with the detachable key blade. If the car is unlocked with the detachable key blade, the alarm will be triggered.

WARNING
Do not allow anyone to remain in the car without first deactivating the double lock in order to avoid the risk of anyone being locked in.

Related information
- Temporarily deactivating double locks* (p. 275)
- Alarm* (p. 271)
Temporarily deactivating double locks*
If someone is going to stay in the car but the doors must be locked from the outside, then the double lock function should be deactivated, to allow unlocking from the inside.

Press the Reduced Guard button in the centre display’s function view in order to deactivate the double lock function temporarily.

This also means that the alarm’s movement and tilt detectors* are switched off.

After this, Reduced Guard is shown in the centre display and double locks are temporarily deactivated in the subsequent locking of the car.

In conventional locking, the electrical sockets are deactivated immediately, but when double locks are temporarily deactivated, they will be active for a maximum of 10 minutes after locking.

If the car is unlocked and then locked again, the double lock function must be deactivated again.

The system is reset the next time the engine is started.

Related information
- Double lock* (p. 274)
- Alarm* (p. 271)

Detection of unknown car component*
The "Foreign Component Detection" function can detect whether an unknown car component has been connected to the car.

Each LED headlamp* is designed for the car. If an unknown headlamp is connected, the driver display shows a message Unknown car part. Service required, unknown car part found. Volvo recommends contacting an authorised Volvo workshop.

Related information
- Volvo service programme (p. 574)
Driving support systems
The car is equipped with different driver support systems which can assist the driver in different situations, either actively or passively.

The systems can, for example, help the driver to hold a set speed or a certain time interval to the vehicle in front, prevent a collision by warning the driver and brake the car or help the driver to park.

Some of the systems are fitted as standard, while others are options. This also varies depending on market.

Speed-dependent steering force
Speed related power steering causes the steering wheel force to increase with the speed of the car in order to give the driver enhanced sensitivity.

On motorways the steering feels firmer. When parking and at low speed steering is light and requires only a slight effort.

NOTE
In certain situations the power steering may become too hot and then needs to be temporarily cooled - during this time the power steering operates with reduced power and turning the steering wheel may then be perceived to be slightly heavier.

In parallel with the temporarily reduced steering assistance, the driver display shows a message as well as a STEERING WHEEL symbol.

* Option/accessory.
**WARNING**
While the power steering is working at reduced power, the driver support functions with steering assistance are not available.

In such a situation, the driver display shows the **Power steering failure** or **Power Steering Assist Temporarily Reduced** message, combined with a STEERING WHEEL symbol.

---

**Change the steering force level**
To select the steering force level, go to the "Drive modes" section and see the description at the alternative INDIVIDUAL under the heading "Selectable drive modes".

For the car models without a drive mode control with its INDIVIDUAL option, the selection of steering force is instead made via the centre display's top view and the following search path:

**Settings ➔ My Car ➔ Drive Modes ➔ Steering force**
Steering force selection cannot be accessed during a turn if the speed exceeds 10 km/h (6 mph).

**Related information**
- Drive modes* (p. 435)
- Pilot Assist (p. 316)
- Lane assistance (p. 374)

---

**Stability system Roll Stability Control**
The stability system RSC\(^1\) minimises the risk of overturning, for example during a sudden evasive manoeuvre or if the car skids.

The RSC system registers if and how much the car’s lateral inclination changes. This information is used to calculate the risk of the car overturning. If the car is at risk, its electronic stability control system engages, the engine torque is reduced and one or more wheels are braked until the car has regained its stability.

---

**WARNING**
Under normal driving conditions, the RSC system improves the car’s road safety, but this must not be taken as a reason to increase speed. Always follow the normal precautions for safe driving.

---

\(^{1}\) Roll Stability Control
Electronic stability control

Electronic Stability Control (ESC\(^2\)) helps the driver to avoid skidding and improves the car's traction.

The driver display shows this symbol when the ESC system is engaged.

Braking from the ESC system may be heard as a pulsing sound, and the car may accelerate more slowly than expected when applying the throttle.

The ESC system consists of the following sub-functions:
- Stability function\(^3\)
- Spin control and traction control system
- Engine Drag Control
- Trailer stability assist

**WARNING**

- The stability system ESC is supplementary driver support intended to facilitate driving and make it safer – it cannot handle all situations in all traffic, weather and road conditions.
- ESC is not a substitute for the driver's attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

**Stability function\(^3\)**

The function checks the driving and brake force of the wheels individually in order to stabilise the car.

**Spin control and traction control system**

The function is active at low speed and brakes the drive wheels that spin so that additional traction shall be transferred from the drive wheels that are not spinning.

The function also prevents the driving wheels from spinning against the road surface during acceleration.

**Engine Drag Control**

Engine Drag Control (EDC\(^4\)) prevents involuntary wheel locking, e.g. after shifting down or engine braking when driving in low gear on slippery road surfaces.

Involuntary wheel locking while driving can, amongst other things, impair the driver's ability to steer the car.

**Trailer stability assist\(^5\)**

Trailer stability assist (TSA\(^6\)) stabilises a car towing a trailer in situations where they begin snaking. Also see section "Trailer stability assist" for more information.

**NOTE**

The TSA function is deactivated if ESC Sport Mode is activated.

**Related information**

- Sport mode for electronic stability control (p. 281)
- Activating/deactivating Sport mode in Electronic Stability Control (p. 281)

---

\(^2\) Electronic Stability Control

\(^3\) Also known as Active Yaw Control.

\(^4\) Engine Drag Control

\(^5\) Trailer stability assist is included when the Volvo genuine towbar is installed.

\(^6\) Trailer Stability Assist

* Option/accessory.
• Limitation for sport mode in Electronic Stability Control (p. 282)
• Symbols and messages for electronic stability control (p. 283)

**Sport mode for electronic stability control**
The ESC\(^7\) system is always activated — it cannot be switched off. However, the driver can select ESC Sport Mode, which allows for a more active driving experience.

With the **ESC Sport Mode** subfunction selected, intervention from ESC is reduced and the car is allowed to skid more and greater control than normal is thus transferred to the driver.

When **ESC Sport Mode** is selected, ESC can be considered as deactivated, despite helping the driver in many cases.

**NOTE**

With the **ESC Sport Mode** function selected, Trailer Stability Assist (TSA\(^8\)) is deactivated.

**ESC Sport Mode** also provides maximum traction if the car has become bogged down or is driving on a loose surface, such as in sand or deep snow.

**Related information**
- Electronic stability control (p. 280)
- Towbar* (p. 462)

**Activating/deactivating Sport mode in Electronic Stability Control**
The ESC\(^9\) system is always activated — it cannot be switched off. However, the driver can select sport mode, which allows for a more active driving experience.

The Sport mode is activated/deactivated in the centre display's function view.

- Tap on the **ESC Sport Mode** button in the function view.
  > Sport mode is activated/deactivated - a green/grey indicator is displayed in the button.

The driver display indicates activated **ESC Sport Mode** by displaying this symbol with a constant glow until the function is deactivated or the engine is switched off. The next time the engine is started, the ESC system is back in its normal mode again.

**Related information**
- Electronic stability control (p. 280)

\(^7\) Electronic Stability Control
\(^8\) Trailer Stability Assist
\(^9\) Electronic Stability Control

* Option/accessory.
Limitation for sport mode in Electronic Stability Control

There are certain limitations associated with the ESC\textsuperscript{10} system's subfunction ESC Sport Mode being activated. The ESC Sport Mode function cannot be selected when one of the following functions is activated:

- Speed limiter
- Cruise control
- Adaptive cruise control
- Pilot Assist.

- Electronic stability control (p. 280)

\textsuperscript{10} Electronic Stability Control
Symbols and messages for electronic stability control

A number of symbols and messages regarding electronic stability control (Electronic Stability Control - ESC) can be shown on the driver display.

The following table shows some examples.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Message</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="Image" alt="Symbol" /></td>
<td>Constant glow for approx. 2 seconds.</td>
<td>System check when the engine is started.</td>
</tr>
<tr>
<td><img src="Image" alt="Symbol" /></td>
<td>Flashing light.</td>
<td>ESC system is being activated.</td>
</tr>
<tr>
<td><img src="Image" alt="Symbol" /></td>
<td>Constant glow.</td>
<td>Sport mode is selected. NOTE: The ESC system is not deactivated in this mode — it is partly reduced.</td>
</tr>
<tr>
<td><img src="Image" alt="Symbol" /></td>
<td>ESC Temporarily off</td>
<td>ESC system has been temporarily reduced due to excessive brake temperature - the function is reactivated automatically when the brakes have cooled. See the message in the driver display.</td>
</tr>
</tbody>
</table>
| ![Symbol](Image) | ESC Service required | ESC system disengaged.  
  - Stop the car in a safe place, switch off the engine and start it again.  
  - Visit a workshop if the message remains - an authorised Volvo workshop is recommended. |

A text message can be cleared by briefly pressing the button, located in the centre of the steering wheel's right-hand keypad.

If a message remains: Contact a workshop – an authorised Volvo workshop is recommended.

Related information
- Electronic stability control (p. 280)
Speed Limiter

A speed limiter (SL\textsuperscript{11}) can be likened to a reverse cruise control - the driver regulates the speed using the accelerator pedal but is prevented from accidentally exceeding a pre-selected/set maximum speed by the speed limiter.

Buttons and symbols for functions\textsuperscript{12}.

1 : Activates the speed limiter from standby mode and resumes stored maximum speed
2 \( \uparrow \) : Increases the stored maximum speed
3 \( \downarrow \) : Reduces stored maximum speed
4 Marker for stored max speed
5 The car’s current speed
6 Stored maximum speed

**WARNING**

- The Speed Limiter function is supplementary driver support intended to facilitate driving – it cannot handle all situations in all traffic, weather and road conditions.
- The driver must always pay attention to traffic conditions and take action if the Speed Limiter is not maintaining a suitable speed.
- The Speed Limiter is not a substitute for the driver’s attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

\textsuperscript{11} Speed Limiter

\textsuperscript{12} NOTE: The illustration is schematic - details may vary depending on car model.
Activating and starting the Speed Limiter
The speed limiter function (SL\textsuperscript{13}) must first be selected and activated in order to be able to regulate the speed.

Set the speed limiter in standby mode

NOTE: The illustration is schematic - details may vary depending on car model.

– Press \(\text{◀} \) (1) or \(\text{▶} \) (3) to browse to the symbol/function for speed limiter \(\text{(4)}\).

> Symbol (4) is shown and the speed limiter is set in standby mode.

Start the Speed Limiter
The speed limiter cannot be activated until after the engine has been started. The lowest maximum speed that can be stored is 30 km/h (20 mph).

– When the speed limiter is in standby mode and the \(\text{LM} \) symbol is shown - press the steering wheel button \(\text{(2)}\).

> The Speed Limiter starts and the current speed is stored as the maximum speed.

Related information
• Speed Limiter (p. 284)

Managing speed for the Speed Limiter
The speed limiter (SL\textsuperscript{14}) can be set to different speeds.

Setting/changing the stored speed

NOTE: The illustration is schematic - details may vary depending on car model.

– Change the set speed with short or long presses on steering wheel button \(\text{+} \) (1) or \(\text{-} \) (3):

• Short press: Each press changes the speed in increments of +/- 5 km/h (+/- 5 mph).

• Press and hold: Release the button when the set speed indicator (4) has moved to the desired speed.

\textsuperscript{13} Speed Limiter
\textsuperscript{14} Speed Limiter
• The speed set after the last button press is stored in the memory.

Related information
• Speed Limiter (p. 284)

Deactivate the Speed Limiter and set it in standby mode
The speed limiter (SL\textsuperscript{15}) can be temporarily deactivated and set in standby mode.

NOTE: The illustration is schematic - details may vary depending on car model.

To deactivate the Speed Limiter and set it in standby mode:

1. Press the steering wheel button (2).
   > The speed limit markings and symbols in the driver display change colour from WHITE to GREY - the speed limiter is now temporarily deactivated and the driver can exceed the maximum speed setting.

Temporary deactivation with the accelerator pedal
The speed limiter can also be temporarily deactivated and overridden with the accelerator pedal without the speed limiter first having to be set in standby mode - e.g. to be able to quickly accelerate the car out of a situation.

In which case, proceed as follows:

1. Fully depress the accelerator pedal and release it to interrupt acceleration when the desired speed has been reached.
   > In this mode, the speed limiter is still activated and the driver display’s symbol is therefore WHITE.

2. Fully release the accelerator pedal when the temporary acceleration is finished.
   > The car is then braked automatically below the last stored maximum speed.

Related information
• Speed Limiter (p. 284)

\textsuperscript{15} Speed Limiter
Reactivating the Speed Limiter from standby mode
The speed limiter (SL\textsuperscript{16}) can be reactivated after having been temporarily deactivated and placed in standby mode.

- Press the steering wheel button \(\bigcirc\) (2).
  > The Speed Limiter indicators and symbols in the driver display change colour from GREY to WHITE — the car will now apply its current speed as the maximum speed.

or

- Press the steering wheel button \(\bigcirc\) (1).
  > The driver display's speed limit markings change colour from GREY to WHITE - the car's speed is then limited again by the last stored maximum speed.

Related information
- Speed Limiter (p. 284)

Deactivating the Speed Limiter
The speed limiter (SL\textsuperscript{17}) can be deactivated.

1. Press the steering wheel button \(\bigcirc\) (2).
  > The speed limiter is set in standby mode.

2. Press the steering wheel button \(\downarrow\) (1) or \(\uparrow\) (3) to change to another function.
  > The driver display's symbol and indicator for speed limiter (4) are switched off — which deletes the set/stored maximum speed.

3. Press the steering wheel button \(\bigcirc\) (2) again.
  > Another function is activated.

\textsuperscript{16} Speed Limiter
\textsuperscript{17} Speed Limiter
Limitations for Speed Limiter
On steep downhill gradients the speed limiter’s braking effect may be inadequate and hence the stored maximum speed may be exceeded. In this case, the driver is alerted by the message **Speed limit exceeded** in the driver display.

**NOTE**
A text message that the maximum speed is exceeded will be activated if the speed has been exceeded by at least 3 km/h (approx. 2 mph).

Related information
- Speed Limiter (p. 284)

Automatic Speed Limiter
The Automatic Speed Limiter (ASL\(^\text{18}\)) function helps the driver to adapt the car’s maximum speed to the speed shown on the road signs.

The Speed Limiter function (SL\(^\text{19}\)) can be changed to Automatic Speed Limiter (ASL).

The automatic speed limiter uses speed information from the Road Sign Information\(^\text{20}\) function to automatically adapt the car’s maximum speed.

---
\(^{18}\) Automatic Speed Limiter
\(^{19}\) Speed Limiter
\(^{20}\) Road Sign Information – RSI
**WARNING**

- The ASL function is supplementary driver support intended to facilitate driving and make it safer – it cannot handle all situations in all traffic, weather and road conditions.
- Even if the driver clearly sees the speed-related road sign, the speed information from the Road Sign Information (RSI) function to ASL may be incorrect – in such cases the driver must intervene himself and accelerate or brake to a suitable speed.
- ASL is not a substitute for the driver's attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.
- See also the heading "Limitations for Road Sign Information".

---

**Is SL or ASL active?**

Symbols in the driver display show which speed limiter function is active:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>SL</th>
<th>ASL</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Symbol" /></td>
<td>✓</td>
<td>✓</td>
</tr>
</tbody>
</table>

Sign symbol after "70" = ASL is activated.

**The ASL symbol**

The sign symbol (displayed alongside the stored speed, "70", in the centre of the speedometer) can be shown in three colours with the following meanings:

<table>
<thead>
<tr>
<th>Colour of sign symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Greenish yellow</td>
<td>ASL is active</td>
</tr>
<tr>
<td>Grey</td>
<td>ASL has been set in standby mode</td>
</tr>
<tr>
<td>Amber/Orange</td>
<td>ASL is in temporary standby mode - e.g. due to a traffic sign not being read</td>
</tr>
</tbody>
</table>

---

Related information

- Speed Limiter (p. 284)
Activate/deactivate Automatic Speed Limiter

The automatic speed limiter function (ASL\textsuperscript{21}) can be activated and deactivated as a supplement to the speed limiter (SL\textsuperscript{22}).

Activate ASL

The Speed Sign Assist button is located in the function view of the centre display.

To activate the automatic speed limiter:
1. Press the Speed Sign Assist button.  
   > ASL is set in standby mode, a green indicator appears on the button, and the driver display shows a sign symbol in the centre of the speedometer.
2. Press the steering wheel button ( WebDriver) .  
   > ASL is activated with the car's current speed.

Deactivate ASL

To deactivate the automatic speed limiter:

- Tap on the Speed Sign Assist button in the function view.  
  > ASL is deactivated and the button's indication becomes GREY - SL is activated instead.

\begin{tcolorbox}
\textbf{WARNING}

After switching from ASL to SL the car will no longer follow the signed speed limit but only the maximum speed stored in memory.
\end{tcolorbox}

Related information

- Speed Limiter (p. 284)

\textsuperscript{21} Automatic Speed Limiter
\textsuperscript{22} Speed Limiter
Changing the tolerance for the Automatic Speed Limiter

The Automatic Speed Limiter function (ASL\textsuperscript{23}) can be set for different tolerance levels.

It is possible to increase/decrease the signed speed limit. If, for example, the car follows a signed speed limit of 70\text{km/h} (43\text{mph}) the driver can instead choose to allow the car to maintain 75\text{km/h} (47\text{mph}).

- Press the steering wheel button $+$ (1) until 70\text{km/h} (43\text{mph}) in the centre of the speedometer (4) changes to 75\text{km/h} (47\text{mph}).
  > After which, the car uses the selected tolerance 5\text{km/h} (4\text{mph}) as long as signs passed are showing 70\text{km/h} (43\text{mph}).

  The tolerance is followed until a road sign with a lower or higher speed is passed - then the car follows the new signed speed limit instead and the tolerance is deleted from the memory.

  If the Road Sign Information* function is activated, the signed speed limit will then be shown with a RED indicator on the speedometer.

  The tolerance is adjusted in the same way as the speed setting is in the speed limiter.

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The maximum selectable tolerance is +/- 10\text{km/h} (5\text{mph}).</td>
</tr>
</tbody>
</table>

Related information
- Speed Limiter (p. 284)

Limitations for Automatic Speed Limiter

Automatic speed limitation takes place using speed information from the RSI\textsuperscript{25} function - not from the speed limit road signs that the car passes.

If RSI\textsuperscript{25} cannot interpret and provide speed information to the ASL, then the ASL is set in standby mode and changes over to SL. In such cases the driver must intervene and brake to a suitable speed.

The ASL will be reactivated when the RSI\textsuperscript{25} function can once again interpret and provide speed information to the ASL.

See also the section "Limitations for Road Sign Information".

Related information
- Speed Limiter (p. 284)

\textsuperscript{23} Automatic Speed Limiter

\textsuperscript{25} Road Sign Information - RSI

* Option/accessory.
Cruise Control

The cruise control (CC\textsuperscript{26}) helps the driver maintain an even speed, resulting in more relaxed driving on motorways and long, straight roads in regular traffic flows.

Overview

![Diagram of cruise control buttons and symbols]

1. \( \odot \): Activates cruise control from standby mode and resumes stored speed
2. \( + \): Increases the stored speed
3. \( - \): Reduces stored speed
4. Marker for stored speed
5. The car's current speed
6. Stored speed

**NOTE**

In cars equipped with Adaptive Cruise Control*, it is possible to switch between cruise control and Adaptive Cruise Control – see the heading "Switch between CC and ACC".

**WARNING**

- The cruise control function is supplementary driver support intended to facilitate driving – it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual that relate to this function to learn about factors such as its limitations and what the driver should be aware of before using the system (see the list of links at the end of this article).
- Cruise control is not a substitute for the driver's attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

**Related information**

- Activating and starting Cruise Control (p. 293)
- Managing speed for the Cruise Control (p. 294)
- Deactivate Cruise Control and set it in standby mode (p. 295)

---

\textsuperscript{26} Cruise Control
\textsuperscript{27} NOTE: The illustration is schematic – details may vary depending on car model.
Activating and starting Cruise Control

The cruise control function (CC) must first be selected and activated in order to be able to regulate the speed.

Activating/starting cruise control

In order to start the Cruise control from the standby mode, the car’s current speed must be 30 km/h (20 mph) or higher. The lowest speed that can be stored is 30 km/h (20 mph).

To start the cruise control:

- With the symbol/function displayed, press the steering wheel button (2).
  > Cruise Control starts and the current speed becomes the stored speed.

NOTE
Cruise Control cannot be enabled at speeds below 30 km/h (20 mph).

Related information

- Cruise Control (p. 292)
Managing speed for the Cruise Control

Cruise control (CC\textsuperscript{29}) can be set to different speeds.

Setting/changing the stored speed

- Change the set speed with short or long presses on steering wheel button \( + \) (1) or \( - \) (3):
  - **Short** press: Each press changes the speed in increments of +/- 5 km/h ( +/- 5 mph).
  - **Press and hold**: Release the button when the speed indicator (4) has moved to the desired speed.

- The speed set after the last button press is stored in the memory.

If the driver increases the car’s speed using the accelerator pedal before pressing the steering wheel button \( + \) (1), the speed stored will be the car’s speed when the button is depressed, provided the driver’s foot is on the accelerator pedal at the moment when the button is depressed.

A temporary increase in speed with the accelerator pedal, e.g. during overtaking, does not affect the setting - the car returns to the last stored speed when the accelerator pedal is released.

**Using engine braking instead of the foot brake**

With Cruise Control, speed is regulated with less frequent application of the foot brake. On a downhill gradient it may sometimes be desirable to start moving a little faster and limit the acceleration by engine braking. In this case the driver can temporarily disable foot brake application by Cruise Control.

To do so, proceed as follows:

- Depress the accelerator pedal about halfway down and release.
  - Cruise Control will disengage its automatic foot braking and then uses engine braking only.

**Cruise control dependence on drive mode**

The cruise control’s way of maintaining a speed may vary depending on the selected drive mode\textsuperscript{30}.

**Cruise control Eco Cruise**

In ECO drive mode the cruise control’s accelerations and decelerations become smoother compared to other drive modes to optimise fuel and environmental economy. This can cause the car’s speed to be temporarily above or below the set speed.

See supplementary information in "ECO drive mode" under "Cruise control Eco Cruise".

**Cruise control Dynamic Cruise**

In Dynamic drive mode, the cruise control’s accelerations and decelerations are felt more strongly and seem more direct compared to other modes.

**Related information**

- Cruise Control (p. 292)

---

\textsuperscript{29} Cruise Control

\textsuperscript{30} See supplementary information in the section "Drive modes".
Deactivate Cruise Control and set it in standby mode

Cruise control (CC\textsuperscript{31}) can be temporarily deactivated so that it is set in the standby mode and can be reactivated later.

Deactivate Cruise Control and set in standby mode

![Image](image_url)

NOTE: The illustration is schematic - details may vary depending on car model.

To set cruise control in standby mode:
- Press the steering wheel button \( \bigcirc \) (2).
  > The cruise control markings and symbols in the driver display change colour from WHITE to GREY - cruise control is now temporarily deactivated and the driver must then manually control the speed.

Standby mode on driver intervention

The cruise control is temporarily deactivated and set in standby mode if:
- the foot brake is used
- the gear selector is moved to N position
- the clutch pedal is held depressed for longer than 1 minute
- the driver maintains a speed higher than the stored speed for longer than 1 minute.

The driver must then control the speed himself/herself.

A temporary increase in speed with the accelerator pedal, e.g. during overtaking, does not affect the setting - the car returns to the last stored speed when the accelerator pedal is released.

Automatic standby mode

Cruise control is temporarily disengaged and set in standby mode if:
- wheels lose traction
- engine speed is too low/high
- brake temperature is too high
- speed falls below 30 km/h (20 mph).

The driver must then control the speed himself/herself.

Related information
- Cruise Control (p. 292)

Reactivating Cruise Control from standby mode

Cruise control (CC\textsuperscript{32}) can be temporarily deactivated so that it is set in the standby mode and can be reactivated later.

Reactivating cruise control from standby mode

![Image](image_url)

NOTE: The illustration is schematic - details may vary depending on car model.

To start cruise control from standby mode:
- Press the steering wheel button \( \bigcirc \) (1).
  > The cruise control markings and symbols in the driver display change colour from GREY to WHITE — the car will now follow the most recently stored speed again.

---

\textsuperscript{31} Cruise Control
\textsuperscript{32} Cruise Control
To start cruise control from standby mode:

- Press the steering wheel button (2).
  > The cruise control markings and symbols in the driver display change colour from GREY to WHITE — the car will now follow the current speed.

**WARNING**
A significant increase in speed may follow when the speed is resumed with the steering wheel button.

Related information
- Cruise Control (p. 292)

---

**Deactivating Cruise Control**
Cruise Control — CC can be deactivated.

To deactivate cruise control:

1. Press the steering wheel button (2).
   > Cruise control is set in standby mode.

2. Press the steering wheel button ▼ (1) or ▶ (3) to change to another function.
   > The driver display's symbol for cruise control (4) is extinguished - which deletes the set/stored speed.

3. Press the steering wheel button (2) again.
   > Another function is activated.

---

**NOTE**
In cars equipped with Adaptive Cruise Control*, it is possible to switch between cruise control and Adaptive Cruise Control — see the heading "Switch between CC and ACC".

Related information
- Cruise Control (p. 292)

---

33 **NOTE**: The illustration is schematic - details may vary depending on car model.

* Option/accessory.
**Distance Warning***

The Distance Warning function can assist the driver to notice that the time interval to the vehicle ahead may be too short.

However, the requirement is that the car is equipped with a Head-up display to be able to show Distance Warning, which is then displayed with a symbol on the windscreen as long as the time interval to the vehicle ahead is shorter than the preselected value.

Distance warning is active at speeds above 30 km/h (20 mph) and only reacts to the vehicle ahead travelling in the same direction. No distance information is provided for oncoming, slow or stationary vehicles.

**WARNING**

Distance warning only reacts if the time window to the vehicle ahead is shorter than the preset value – the speed of the driver’s vehicle is not affected.

**NOTE**

This function can come as either Standard or an Option depending on the market.

### Related information

- Head-up display for Distance Warning (p. 297)
- Activating/deactivating Distance Warning (p. 298)
- Setting the time interval for Distance Warning (p. 298)
- Limitations of Distance Warning (p. 299)

**NOTE**

- Distance Alert is only available on cars that can display information on the windscreen with a Head-up Display.
- Distance warning is deactivated during the time the adaptive cruise control is active.

---

34 Distance Alert  
35 The Distance Warning function is only available in cars that can show information on the windscreen with a so-called Head-up display.  
36 NOTE: The illustration is schematic – details may vary depending on car model.
NOTE

Strong sunlight, reflections, extreme light contrasts, the use of sunglasses, or if the driver is not looking straight ahead may make the visual warning signal in the windscreen difficult to recognise.

Related information
- Distance Warning* (p. 297)
- Head-up display* (p. 138)

Activating/deactivating Distance Warning

The Distance Warning function can be set with different time intervals or switched off.

On/Off
Press the Distance Alert button in the centre display function view.

- GREEN button indication - Distance Warning is activated.
- GREY button indication - Distance Warning is deactivated.

Distance Warning is activated automatically each time the engine is started.

Related information
- Distance Warning* (p. 297)

Setting the time interval for Distance Warning

The Distance Warning function can be set with different time intervals.

Different time intervals to the vehicle in front can be selected and shown in the driver display as 1-5 horizontal lines - the more lines the longer the time interval. One line represents about 1 second to the vehicle in front, 5 lines represents about 3 seconds.

The same symbol is also shown when the adaptive cruise control function is activated.

37 The Distance Warning function is only available in cars that can display information on the windscreen with a so-called Head-up display.
38 The Distance Warning function is only available in cars that can display information on the windscreen with a so-called Head-up display.
Control for time interval.

1 Decrease time interval
2 Increase time interval
3 Distance indicator

- Press the steering wheel button (1) or (2) to increase or decrease the time interval.
- The distance indicator (3) shows the current time interval.

### NOTE
- The higher the speed the longer the calculated distance in metres for a given time interval.
- Only use the time intervals permitted by local traffic regulations.
- The set time window is also used by the adaptive cruise control and Pilot Assist functions.

### WARNING
- Only use a time window that suits the current traffic conditions.
- The driver should be aware that short time windows limit the amount of time available to react and take action if an unexpected traffic situation arises.

### RELATED INFORMATION
- Distance Warning* (p. 297)

### LIMITATIONS OF DISTANCE WARNING

The Distance Warning function may have limitations in certain situations.

- The Distance Warning function is supplementary driver support intended to facilitate driving and make it safer – it cannot handle all situations in all traffic, weather and road conditions.
- The vehicle's size may affect the ability to detect, e.g. motorcycles, which could mean that the warning lamp illuminates at a shorter time window than set or that the warning is temporarily absent.
- Extremely high speeds can cause the lamp to illuminate at a shorter time window than that set due to limitations in radar unit range.
- Distance Warning is not a substitute for the driver’s attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

---

39 The Distance Warning function is only available in cars that can display information on the windscreen with a so-called Head-up display.
NOTE
The function uses the car’s radar unit, which has some general limitations, see the section "Limitations for radar unit".

Related information
• Distance Warning* (p. 297)

Adaptive Cruise Control*
The adaptive cruise control (ACC) helps the driver to maintain an even speed combined with a pre-selected time interval to the vehicle ahead.

An adaptive cruise control provides a more relaxing driving experience on long journeys on motorways and long straight main roads in smooth traffic flows.

The camera and radar unit measures the distance to the vehicle ahead.

The driver selects the desired speed and a time interval to the vehicle ahead. If the camera and radar unit detects a slower vehicle in front of the car, the speed is adapted automatically via the preset time interval to the vehicle. When the road is clear again the car returns to the selected speed.

WARNING
• The adaptive cruise control function is supplementary driver support intended to facilitate driving and make it safer – it cannot handle all situations in all traffic, weather and road conditions.
• The driver is advised to read all sections in the Owner's Manual that relate to this function to learn about factors such as its limitations and what the driver should be aware of before using the system (see the list of links at the end of this article).
• The adaptive cruise control is not a substitute for the driver's attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

NOTE
This function can come as either Standard or an Option depending on the market.

40 Adaptive Cruise Control
41 NOTE: The illustration is schematic - details may vary depending on car model.
Adaptive cruise control regulates the speed with acceleration and braking. It is normal for the brakes to emit a low sound when they are being used to adjust the speed.

The adaptive cruise control aims to control the speed in a smooth way. In situations that demand sudden braking the driver must brake himself/herself. This applies in cases of large speed differences or if the vehicle in front brakes suddenly. Due to the limitations of the radar unit, braking may come unexpectedly or not at all.

The adaptive cruise control aims to follow the vehicle ahead in the same lane at a time interval set by the driver. If the radar unit cannot see any vehicle in front then the car will instead maintain the speed set and stored by the driver. This also takes place if the speed of the vehicle ahead increases and exceeds the stored speed.

The following applies for cars with automatic gearbox:

- Adaptive cruise control can follow another vehicle at speed from 0 km/h up to 200 km/h (125 mph).

The following applies for cars with manual gearbox:

- The Adaptive cruise control can follow another vehicle at speeds from 30 km/h (20 mph) up to 200 km/h (125 mph).

**WARNING**

- Adaptive cruise control is not a collision avoidance system. The driver is always responsible and must intervene if the system does not detect a vehicle ahead.
- The adaptive cruise control does not brake for humans or animals, and not for small vehicles such as bicycles and motorcycles. Nor for low trailers, oncoming, slow or stationary vehicles and objects.
- Do not use the adaptive cruise control in demanding situations, such as in city traffic, at junctions, on slippery surfaces, with a lot of water or slush on the road, in heavy rain/snow, in poor visibility, on winding roads or on slip roads.

**IMPORTANT**

Maintenance of adaptive cruise control components must only be performed at a workshop - an authorised Volvo workshop is recommended.

41 NOTE: The illustration is schematic - details may vary depending on car model.
5 Reduces the time interval to vehicles ahead

6 Target vehicle indicator: ACC has detected and is following a target vehicle at the preset time interval

7 Symbol for time interval to vehicles ahead

**NOTE**

In cars equipped with Adaptive Cruise Control*, it is possible to switch between cruise control and Adaptive Cruise Control – see the heading "Switch between CC and ACC".

### Driver display

**1** Stored speed

**2** Speed of vehicle ahead.

**3** Current speed of your car.

To see different combinations of symbols depending on traffic situation - see the heading "Symbols and messages for the adaptive cruise control".

### Related information

---

41 NOTE: The illustration is schematic - details may vary depending on car model.
Adaptive Cruise Control and Collision risk warning

1. Acoustic warning signal in the event of a risk of collision
2. Warning signal in the event of a risk of collision
3. Distance measurement with the camera and radar unit

Adaptive Cruise Control uses approx. 40% of the capacity of the foot brake. If the car needs to be braked more heavily than the adaptive cruise control is capable of and the driver does not brake, the warning lamp and acoustic warning are activated to alert the driver that immediate intervention is required.

**WARNING**
The adaptive cruise control only warns of vehicles which its radar unit has detected - hence a warning may not be given, or it may be given with a certain delay.

- Never wait for a warning. Apply the brakes when the situation requires.

Related information
- Adaptive Cruise Control* (p. 300)

---

Head-up display for Adaptive Cruise Control if there is a risk of collision

In cars equipped with a head up display*, the warning is shown on the windscreen by a flashing symbol.

Symbol for collision warning on the windscreen

**NOTE**

Strong sunlight, reflections, extreme light contrasts, the use of sunglasses, or if the driver is not looking straight ahead may make the visual warning signal in the windscreen difficult to recognise.

Related information
- Adaptive Cruise Control* (p. 300)

---

NOTE: The illustration is schematic - details may vary depending on car model.

NOTE: The illustration is schematic - details may vary depending on car model.
Activating and starting Adaptive Cruise Control

Adaptive cruise control (ACC\textsuperscript{44}) must first be activated and then started if it is to control the speed and distance.

Setting the adaptive cruise control in standby mode

![Diagram of the car's interior showing the Adaptive Cruise Control settings]

- Press steering wheel button ◀ (2) or ▶ (3) to scroll to the symbol/function ▼ (4).
- The symbol is displayed and Adaptive Cruise Control is set in standby mode.

Starting/activating the adaptive cruise control

In order to start the ACC the following requirements apply:

- The driver's seatbelt must be buckled and the driver's door must be closed.
- There must be a vehicle (the "target vehicle") within reasonable distance in front of the car, or the current speed must be at least 15 km/h (9 mph).
- For cars with manual gearbox, speed must be at the lowest 30 km/h (20 mph).

- With the symbol/function ▼ (4) displayed, press the steering wheel button ◀ (1).
- Adaptive cruise control starts and the current speed is stored, which is shown in figures in the centre of the speedometer.

The time interval is only adjusted to the vehicle ahead by the ACC when the distance symbol shows two vehicles.

At the same time a speed range is marked.

The higher speed is the stored/selected speed and the lower speed is that of the vehicle ahead (target vehicle).

Related information

- Adaptive Cruise Control* (p. 300)

\textsuperscript{44} Adaptive Cruise Control
Managing speed with Adaptive Cruise Control

The adaptive cruise control (ACC\textsuperscript{45}) can be set to different speeds.

Setting/Changing the stored speed

- Change the set speed with short or long presses on steering wheel button \( + \) (1) or \( - \) (2):
  - **Short** press: Each press changes the speed in increments of +/- 5 km/h (+/- 5 mph).
  - **Press and hold**: Release the button when the speed indicator (3) has moved to the desired speed.
  - The speed set after the last button press is stored in the memory.

If the driver increases the car’s speed using the accelerator pedal before pressing the steering wheel button \( + \), the speed stored will be the car’s speed when the button is depressed, provided the driver’s foot is on the accelerator pedal at the moment when the button is depressed.

A temporary increase in speed with the accelerator pedal, e.g. during overtaking, does not affect the setting - the car returns to the last stored speed when the accelerator pedal is released.

**Automatic gearbox**

Adaptive cruise control can follow another vehicle at speeds from 0 km/h up to 200 km/h (125 mph).

Note that the lowest programmable speed for the adaptive cruise control is 30 km/h (20 mph) - even though it is capable of following another vehicle down to 0 km/h, a speed lower than 30 km/h (20 mph) cannot be selected/stored.

The maximum speed selectable is 200 km/h (125 mph).

**Manual gearbox**

Adaptive cruise control can follow another vehicle at speeds from 30 km/h (20 mph) up to 200 km/h (125 mph).

The lowest programmable speed for the adaptive cruise control is 30 km/h (20 mph) - the maximum speed is 200 km/h (125 mph).

**Related information**

- Adaptive Cruise Control* (p. 300)

\textsuperscript{45} Adaptive Cruise Control

\* Option/accessory. 305
Setting time interval for Adaptive Cruise Control

The Adaptive Cruise Control (ACC\(^{46}\)) can be set to different time intervals.

Different time intervals to the vehicle in front can be selected and shown in the driver display as 1–5 horizontal lines - the more lines the longer the time interval. One line represents about 1 second to the vehicle in front, 5 lines represents about 3 seconds.

The same symbol is also shown when the Distance Warning function is activated.

**NOTE**

When the symbol in the driver display shows two cars, ACC is following the vehicle in front at a pre-set time interval.

When only one car is shown, there is no vehicle within a reasonable distance ahead.

Control for time interval\(^{47}\).

1. Decrease time interval
2. Increase time interval
3. Distance indicator

- Press the steering wheel button (1) or (2) to increase or decrease the time interval.
- The distance indicator (3) shows the current time interval.

The adaptive cruise control allows the time interval to vary significantly in certain situations in order to allow the car to follow the vehicle in front smoothly and comfortably. At low speed, when the distances are short, the adaptive cruise control increases the time interval slightly.

**NOTE**

- The higher the speed the longer the calculated distance in metres for a given time interval.
- Only use the time intervals permitted by local traffic regulations.
- If the adaptive cruise control does not seem to respond with a speed increase when activated, it may be because the time window to the vehicle ahead is shorter than the set time window.

**WARNING**

- Only use a time window that suits the current traffic conditions.
- The driver should be aware that short time windows limit the amount of time available to react and take action if an unexpected traffic situation arises.

Select how ACC shall maintain the distance* to the vehicle ahead

The driver can select different driving styles for how the Adaptive cruise control should maintain the preset time interval to the vehicle ahead. Selection is made via the drive mode control DRIVE MODE.

---

\(^{46}\) Adaptive Cruise Control

\(^{47}\) NOTE: The illustration is schematic - details may vary depending on car model.
Select one of the following options:

- **Eco** - ACC focuses on optimal fuel economy, which means longer time interval to the vehicle ahead.
- **Comfort** - ACC focuses on following the set time interval to the vehicle ahead as smoothly as possible.
- **Dynamic** - ACC focuses on following the set time interval to the vehicle ahead more closely, which in certain cases may mean heavier acceleration and braking.

See further information in the "Drive modes" sections.

Supplementary information can also be found in the sections "Managing speed for the cruise control" and "Drive mode ECO".

**Related information**

- Adaptive Cruise Control* (p. 300)

---

**Deactivating/reactivating Adaptive Cruise Control**

The Adaptive cruise control (ACC) can be temporarily deactivated so that it is set in the standby mode and can later be reactivated.

**Deactivate Adaptive Cruise Control and set it in standby mode**

To temporarily switch off Adaptive Cruise Control and set it in standby mode:

- Press the steering wheel button (2).

  > The symbol on the driver display changes colour from WHITE to GREY and the stored speed in the centre of the speedometer changes from BEIGE to GREY.

**WARNING**

- With the adaptive cruise control is in standby mode, the driver must intervene and regulate both speed and distance to the vehicle ahead.
- When the adaptive cruise control is in standby mode and the car comes too close to a vehicle ahead, the driver is warned of the short distance by the Distance Warning function instead.
**Standby mode on driver intervention**
The Adaptive cruise control is temporarily deacti-
vated and set in standby mode if:
- the foot brake is used.
- the gear selector is moved to **N** position.
- the driver maintains a speed higher than the
  stored speed for longer than 1 minute.
- the clutch pedal is depressed for approx. 1
  minute - applies to cars with manual gearbox.

A temporary increase in speed with the accelera-
tor pedal, e.g. during overtaking, does not affect
the setting - the car returns to the last stored
speed when the accelerator pedal is released.

**Automatic standby mode**
The adaptive cruise control is dependent on
other systems, e.g. Electronic Stability Control
ESC[^49]. If any of the other systems stops working,
the adaptive cruise control is deactivated auto-
matically.

---

**WARNING**

With automatic standby mode, the driver is
warned via an acoustic signal and a message
on the driver display.
- The driver must then regulate the car’s
  speed, apply the brakes as needed and
  maintain a safe distance to other vehicles.

[^49]: Electronic Stability Control

---

Automatic standby mode may occur if:
- the speed is below 5 km/h (3 mph) and ACC
  is uncertain whether the vehicle ahead is a
  stationary vehicle or an object, such as a
  speed bump.
- the speed is below 5 km/h (3 mph) and the
  vehicle ahead turns off so that ACC no
  longer has a vehicle to follow.
- speed is reduced to below 30 km/h
  (20 mph) - only applies to cars with manual
  gearbox.
- the driver opens the door.
- the driver takes off the seatbelt.
- engine speed is too low/high.
- one or more wheels lose traction.
- brake temperature is high.
- the parking brake is applied.
- the camera and radar unit is covered by e.g.
  snow or heavy rainfall (camera lens/radio
  waves are blocked).

---

**Reactivating adaptive cruise control from standby mode**

NOTE: The illustration is schematic - details may vary
depending on car model.

To reactivate ACC from standby mode:
- Press the steering wheel button (1).
  > The speed is then set to the most recently
  stored speed.

**WARNING**

A significant increase in speed may follow
when the speed is resumed with the steering wheel button.

---

**Related information**
- Adaptive Cruise Control* (p. 300)
Overtaking assistance with Adaptive Cruise Control

Adaptive cruise control (ACC\textsuperscript{50}) can assist the driver when overtaking other vehicles.

How overtaking assistance works

When ACC is following another vehicle and the driver indicates the intention to overtake by activating the direction indicator\textsuperscript{51}, adaptive cruise control helps by accelerating the vehicle towards the vehicle in front \textbf{before} the driver’s vehicle reaches the overtaking lane.

The function then delays reducing speed in order to avoid premature braking when the driver’s car is approaching a slower vehicle.

The function remains active until the driver’s vehicle has cleared the overtaken vehicle.

\textbf{WARNING}

Be aware that this function can be activated in more situations than during overtaking, e.g. when a direction indicator is used to indicate a change of lane or exit to another road – the car will then accelerate briefly.

Related information

\begin{itemize}
  \item Adaptive Cruise Control\textsuperscript{*} (p. 300)
\end{itemize}

Starting overtaking assistance with Adaptive Cruise Control

Continuation for Overtaking Assistance

The following conditions must exist for Overtaking Assistance to be activated:

\begin{itemize}
  \item there must be a vehicle in front (the “target vehicle”)
  \item your car’s current speed is at least 70 km/h (43 mph)
  \item the stored ACC speed must be high enough for overtaking to take place safely.
\end{itemize}

Starting Overtaking Assistance

To start the Overtaking Assistance:

\begin{itemize}
  \item Activate the direction indicator.
\end{itemize}

Use the left direction indicator in a car with the steering wheel on the left, or the right direction indicator in a car with the steering wheel on the right.

> Overtaking Assistance is started.

Related information

\begin{itemize}
  \item Adaptive Cruise Control\textsuperscript{*} (p. 300)
\end{itemize}

Limitations for overtaking assistance with Adaptive Cruise Control

The overtaking assistance function may have limited functionality in certain situations.

\textbf{WARNING}

When using the Overtaking Assistance System, the driver should be aware that there may be undesired acceleration if the conditions suddenly change.

Some situations should therefore be avoided, such as if:

\begin{itemize}
  \item the car is approaching an exit for turn-off that is in the same direction as overtaking would normally occur.
  \item the vehicle ahead slows down before the driver’s car has crossed over into the overtaking lane
  \item the traffic in the overtaking lane slows down
  \item a right-hand drive car is driven in a country with left-hand traffic (or vice versa).
\end{itemize}

Situations of this kind can be avoided by temporarily setting ACC\textsuperscript{52} in the standby mode.

Related information

\begin{itemize}
  \item Adaptive Cruise Control\textsuperscript{*} (p. 300)
\end{itemize}

\textsuperscript{50} Adaptive Cruise Control

\textsuperscript{51} On left flash only in left-hand-drive car, or right flash in right-hand-drive car.

\textsuperscript{52} Adaptive Cruise Control
Changing target with Adaptive Cruise Control
In combination with automatic gearbox, the adaptive cruise control (ACC\textsuperscript{53}) has functionality for change of target at certain speeds.

Change of target

If the target vehicle in front suddenly turns then there may be stationary traffic in front.

When adaptive cruise control is following another vehicle at speeds below 30 km/h (20 mph) and changes target from a moving to a stationary vehicle, the adaptive cruise control will slow down for the stationary vehicle.

**WARNING**
When the adaptive cruise control is following another vehicle at speeds in excess of approx. 30 km/h (20 mph) and the target is changed from a moving vehicle to a stationary vehicle, the adaptive cruise control will ignore the stationary vehicle and instead accelerate to the stored speed.

- The driver must then intervene him/herself and brake.

Automatic standby mode with change of target
The adaptive cruise control is disengaged and set in standby mode:
- when the speed is below 5 km/h (3 mph) and the adaptive cruise control is uncertain whether the target object is a stationary vehicle or some other object, such as a speed bump.
- when the speed is below 5 km/h (3 mph) and the vehicle ahead turns off so the adaptive cruise control no longer has a vehicle to follow.

Related information
- Adaptive Cruise Control* (p. 300)

Automatic braking with Adaptive Cruise Control
The Adaptive cruise control (ACC\textsuperscript{54}) has a special brake function in slow traffic and while stationary.

Brake function in slow queues and while stationary
For shorter stops in connection with inching in slow traffic or at traffic lights driving is automatically resumed if the stops do not exceed about 3 seconds - if it takes longer before the car in front starts moving again then the adaptive cruise control is set in standby mode with automatic braking.

- The Adaptive Cruise Control is reactivated in one of the following ways:
  - Press the steering wheel button 🌊.
  - Depress the accelerator pedal.
  > The Adaptive Cruise Control resumes following the vehicle ahead if it starts moving forward within 6 seconds.

---
\textsuperscript{53} Adaptive Cruise Control
\textsuperscript{54} Adaptive Cruise Control

* Option/accessory.
**NOTE**

ACC can keep the car stationary for a maximum of 5 minutes. After this the parking brake is applied and adaptive cruise control is disengaged.

The parking brake must be released before the adaptive cruise control can be reactivated.

---

**Cessation of automatic braking**

In some situations, automatic braking ceases on reaching 0 km/h and Adaptive Cruise Control is set in standby mode. This means that the brakes are released and the car may start to roll - the driver must therefore intervene and brake the car himself/herself to keep it stationary.

This may take place in the following situations:
- the driver puts his/her foot on the brake pedal
- the parking brake is applied
- the gear selector is moved to P, N, or R position
- the driver sets the adaptive cruise control in the standby mode.

**Automatic activation of parking brake**

In certain situations the parking brake is applied to keep the car stationary.

---

**Related information**

- Adaptive Cruise Control* (p. 300)
- Limitations for Adaptive Cruise Control

**Limitations for Adaptive Cruise Control**

Adaptive cruise control (ACC\(^{55}\)) may have limitations in certain situations.

**Steep roads and/or heavy load**

Bear in mind that the adaptive cruise control is primarily intended for use when driving on level road surfaces. The function may have difficulty in keeping the correct distance from the vehicle ahead when driving on steep downhill slopes - in which case, be extra attentive and ready to brake.

- Do not use adaptive cruise control if the car has a heavy load or a trailer is connected to the car.

**Miscellaneous**

- Drive mode Off Road cannot be selected when the adaptive cruise control is activated.

---

**NOTE**

The function uses the car's camera unit, which has some general limitations, see the "Limitations for camera unit" section.

---

**NOTE**

The function uses the car's radar unit, which has some general limitations, see the section "Limitations for radar unit".

---

\(^{55}\) Adaptive Cruise Control

* Option/accessory. 311
Change between Cruise Control and Adaptive Cruise Control

In a car with Adaptive Cruise Control (ACC\textsuperscript{56}) the driver can change between Cruise Control (CC\textsuperscript{57}) and ACC.

A symbol in the driver display shows which cruise control is active:

<table>
<thead>
<tr>
<th>CC</th>
<th>ACC</th>
</tr>
</thead>
<tbody>
<tr>
<td>![CC symbol]</td>
<td>![ACC symbol]</td>
</tr>
</tbody>
</table>

A WHITE symbol: Function active, GREY symbol: Standby mode

### Changing from ACC to CC

Proceed as follows:

1. Set adaptive cruise control to standby mode using steering wheel button \(\textcircled{\text{S}}\).

2. Press the **Cruise Control** button in the centre display’s function view - the button's indicator changes colour from GREY to GREEN.

   > The symbol in the driver display changes from ACC to CC. Adaptive Cruise Control is now switched off and Cruise Control is set to standby mode.

3. Press the steering wheel button \(\textcircled{\text{S}}\).

   > Cruise control starts and stores the current speed.

### WARNING

Switching from ACC to CC means that the car:

- no longer maintains a preset time interval to the vehicle ahead.
- only follows the stored speed, and the driver must therefore apply the brakes when necessary.

If CC is active when the engine is switched off, ACC will be activated automatically the next time the engine is started.

### Changing from CC to ACC

Proceed as follows:

1. Set cruise control to standby mode using the \(\textcircled{\text{S}}\) steering wheel button.

\textsuperscript{56} Adaptive Cruise Control

\textsuperscript{57} Cruise Control
2. Tap on the **Cruise Control** button in the function view - the button's indicator changes colour from GREEN to GREY.

   > The symbol in the driver display changes from [](#) CC to [](#) ACC. Adaptive Cruise Control is now activated and set to standby mode.

3. Press the steering wheel button [](#) .

   > Adaptive cruise control starts and stores the current speed, together with the preset time interval to the vehicle ahead.

**Related information**
- Adaptive Cruise Control* (p. 300)
Symbols and messages for Adaptive Cruise Control

A number of symbols and messages regarding the adaptive cruise control (ACC) can be shown via the driver display and/or the head-up display.

Here are some examples.

The previous illustration shows that the adaptive cruise control is set to maintain 110 km/h (68 mph) and that there is no vehicle ahead to follow.

The previous illustration shows that the adaptive cruise control is set to maintain 110 km/h (68 mph) and at the same time is following a vehicle ahead which is keeping the same speed.

---

58 Adaptive Cruise Control
59 In the following illustrative example, the RSI (Road Sign Information) function informs the driver that the maximum permitted speed is 130 km/h (80 mph).
60 NOTE: The illustration is schematic - details may vary depending on car model.

A text message can be cleared by briefly pressing the button, located in the centre of the steering wheel's right-hand keypad.

If a message remains: Contact a workshop – an authorised Volvo workshop is recommended.

**Related information**
- Adaptive Cruise Control* (p. 300)
Pilot Assist

Pilot Assist helps the driver to drive the car between the lane’s side markings using steering assistance as well as to maintain an even speed, combined with a preselected time interval to the vehicle ahead.

How Pilot Assist works

The Pilot Assist function is primarily intended for use on motorways and similar major roads where it can contribute to more comfortable driving and a more relaxed driving experience.

The driver selects the desired speed and a time interval to the vehicle ahead. Pilot Assist scans the distance to the vehicle ahead and the lane’s side markings on the road surface using the camera and radar unit. The preset time interval is maintained with automatic speed adjustment whilst the steering assistance helps to position the car in the lane.

Pilot Assist steering assistance takes into account the speed of the preceding car and the lane markings. The driver can at any time ignore the Pilot Assist steering recommendation and steer in another direction, e.g. to change lane or avoid an obstruction on the road.

If Pilot Assist cannot interpret the lane unambiguously, e.g. if the camera and radar unit does not see the lane’s side markings, Pilot Assist temporarily deactivates steering assistance, but resumes it if the lane can be interpreted again - although the speed and distance control functions remain active.

**WARNING**

Pilot Assist steering assistance is automatically deactivated and is resumed without prior warning.

The current status of steering assistance is indicated by the colour of the steering wheel’s symbol:

- GREEN steering wheel indicates active steering assistance
- GREY steering wheel (as in illustration) indicates deactivated steering assistance.

---

The camera and radar unit measures the distance to the vehicle ahead and detects side markings.

1. Camera and radar unit
2. Distance readers
3. Readers, side markings

---

*NOTE: The illustration is schematic - details may vary depending on car model.*
WARNING

- The Pilot Assist function is supplementary driver support intended to facilitate driving and make it safer – it cannot handle all situations in all traffic, weather and road conditions.
- The driver is advised to read all sections in the Owner's Manual that relate to this function to learn about factors such as its limitations and what the driver should be aware of before using the system (see the list of links at the end of this article).
- Pilot Assist must only be used if there are clear lane lines painted on each side of the lane. All other use involves increased risk of contact with surrounding obstacles that cannot be detected by the function.
- Pilot Assist is not a substitute for the driver's attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, positioned correctly in the lane, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

NOTE

This function can come as either Standard or an Option depending on the market.

Pilot Assist regulates the speed with acceleration and braking. It is normal for the brakes to emit a low sound when they are being used to adjust the speed.

Pilot Assist attempts to regulate the speed smoothly. In situations that demand sudden braking the driver must brake himself/herself. This applies in cases of large speed differences or if the car in front brakes suddenly. Due to the limitations of the camera and radar unit, braking may come unexpectedly or not at all.

Pilot Assist aims to follow the vehicle ahead in the same lane at a time interval set by the driver. If the radar unit cannot see any vehicle in front then the car will instead maintain the speed set and stored by the driver. This also takes place if the speed of the vehicle ahead increases and exceeds the stored speed.

The following applies for cars with automatic gearbox:
- Pilot Assist can follow another vehicle at speeds from 0 km/h up to 200 km/h (125 mph).
- Pilot Assist can give steering assistance from almost stationary up to 140 km/h (87 mph).

The following applies for cars with manual gearbox:
- Pilot Assist can follow another vehicle at speeds from 30 km/h (20 mph) up to 200 km/h (125 mph).
- Pilot Assist can give steering assistance from 30 km/h (20 mph) up to 140 km/h (87 mph).

WARNING

- Pilot Assist is not a collision avoidance system. The driver must intervene if the system does not detect a vehicle in front.
- Pilot Assist does not brake for people, animals, objects, small vehicles (e.g. cycles and motorcycles), low trailers as well as oncoming, slow or stationary vehicles.
- Do not use Pilot Assist in demanding situations, such as in city traffic, at junctions, on slippery surfaces, with a lot of water or slush on the road, in heavy rain/snow, in poor visibility, on winding roads, on slip roads, or with a trailer connected to the car.
**IMPORTANT**

Maintenance of Pilot Assist internal components must only be performed at a workshop - an authorised Volvo workshop is recommended.

**Round bends and when the road splits**

Pilot Assist interacts with the driver, who should therefore not await the steering assistance from Pilot Assist but should always be prepared to increase his/her own steering input, especially on bends.

When the car approaches an exit or if the lane splits, the driver should steer towards the desired lane so that Pilot Assist can specify the desired direction.

**Pilot Assist strives to keep the car in the middle of the lane**

When Pilot Assist helps to steer, it strives to position the car in between the lane markings and therefore it is recommended to let the car find the optimal placement to achieve as smooth a driving experience as possible. The driver checks that the car is positioned safely in the lane, and always has the ability to adjust the position by making his/her own steering corrections.

If Pilot Assist does not position the car in an appropriate way in the lane, it is recommended to turn Pilot Assist off or switch to Adaptive cruise control.

**Overview**

**Controls**

![Diagram of control symbols]

Collision risk warning

Audio and symbol for collision warning.

1. Acoustic warning signal in the event of a risk of collision
2. Warning signal in the event of a risk of collision
3. Distance measurement with the camera and radar unit

Pilot Assist uses approx. 40% of the foot brake's capacity. If the car needs to be braked more heavily than Pilot Assist is capable of and the driver does not brake, the warning lamp and acoustic warning are activated to alert the driver that immediate intervention is required.

**WARNING**

Pilot Assist only gives warning about vehicles detected by its camera and radar unit – therefore a warning may not occur or be delayed.

- Never wait for a warning. Apply the brakes when the situation requires!

Related information

- Pilot Assist (p. 316)

---

**Head-up display for Pilot Assist if there is a risk of collision**

In cars equipped with a head up display*, the warning is shown on the windscreen by a flashing symbol.

Symbol for collision warning on the windscreen.

**NOTE**

Strong sunlight, reflections, extreme light contrasts, the use of sunglasses, or if the driver is not looking straight ahead may make the visual warning signal in the windscreen difficult to recognise.

Related information

- Pilot Assist (p. 316)

---

* Option/accessory.

62 The figure is schematic - parts may vary depending on car model.

63 NOTE: The illustration is schematic - details may vary depending on car model.
Activating and starting Pilot Assist

Pilot Assist must first be activated and then started to be able to control speed and distance and to give steering assistance.

With the Adaptive cruise control in **standby mode**: 

1. Press the steering wheel button ▶ (6). 
   > The 🏁 symbol changes to Pilot Assist in standby mode (8).

2. Press the steering wheel button ⌁ (2). 
   > Pilot Assist is started and current speed is stored, which is shown with figures in the centre of the speedometer.

...or...

With the Adaptive cruise control **started**: 

– Press the steering wheel button ▶ (6). 
  > Pilot Assist is started.

Pilot Assist steering assistance is only active when the steering wheel symbol (2) has changed from GREY to GREEN.

Pilot Assist only regulates the time interval to the vehicle ahead when the distance symbol shows a vehicle (1) above the steering wheel symbol.

At the same time a speed range is marked.

The higher speed is the stored/selected speed and the lower speed is that of the vehicle ahead (target vehicle).

Hands on the steering wheel

In order for Pilot Assist to function, the driver’s hands must be on the steering wheel. If Pilot Assist detects that the driver is not holding the steering wheel, the driver is prompted to actively steer the car via a text message and an acoustic signal.

If Pilot Assist still cannot detect that the driver is holding the steering wheel, the function shifts to standby mode. Pilot Assist must then be restarted with the steering wheel button ⌁.

**NOTE**

Note that Pilot Assist only works when the driver has hands on the steering wheel.

Related information

– Pilot Assist (p. 316)
Managing speed for Pilot Assist
Pilot Assist can be set to different speeds.

Setting/changing the stored speed

- Change the set speed with short or long presses on steering wheel button ↧ (1) or ↩ (2):
  - **Short** press: Each press changes the speed in increments of +/- 5 km/h (+/- 5 mph).
  - **Press and hold**: Release the button when the speed indicator (3) has moved to the desired speed.
- The speed set after the last button press is stored in the memory.

If the driver increases the car’s speed using the accelerator pedal before pressing the steering wheel button ↧, the speed stored will be the car’s speed when the button is depressed, provided the driver’s foot is on the accelerator pedal at the moment when the button is depressed.

A temporary increase in speed with the accelerator pedal, e.g. during overtaking, does not affect the setting - the car returns to the last stored speed when the accelerator pedal is released.

**Automatic gearbox**
Pilot Assist can follow another vehicle at speeds from 0 km/h up to 200 km/h (125 mph).

The lowest programmable speed for Pilot Assist is 30 km/h (20 mph) - the maximum speed is 200 km/h (125 mph).

**Manual gearbox**
Pilot Assist can follow another vehicle at speeds from 30 km/h (20 mph) up to 200 km/h (125 mph).

The lowest programmable speed for Pilot Assist is 30 km/h (20 mph) - even though it is capable of following another vehicle down to 0 km/h, a speed lower than 30 km/h (20 mph) cannot be selected/stored.

**Related information**
- Pilot Assist (p. 316)
Setting the time interval for Pilot Assist

Pilot Assist can be set with different time intervals.

Different time intervals to the vehicle in front can be selected and shown in the driver display as 1–5 horizontal lines - the more lines the longer the time interval. One line represents about 1 second to the vehicle in front, 5 lines represents about 3 seconds.

NOTE

When the symbol in the driver display shows a car and a steering wheel, Pilot Assist follows a vehicle in front at a preset time gap.

When only one steering wheel is shown, there is no vehicle within a reasonable distance ahead.

Control for time interval.

1. Decrease time interval
2. Increase time interval
3. Distance indicator

- Press the steering wheel button (1) or (2) to increase or decrease the time interval.
  > The distance indicator (3) shows the current time interval.

In order to follow the vehicle ahead in a smooth and comfortable way, Pilot Assist allows the time interval to vary noticeably in certain conditions. For example, at low speed, when the distances become short, Pilot Assist increases the time interval slightly.

NOTE

- The higher the speed the longer the calculated distance in metres for a given time interval.
- Only use the time intervals permitted by local traffic regulations.
- If Pilot Assist does not seem to respond with a speed increase when activated, it may be because the time window to the vehicle ahead is shorter than the set time window.

WARNING

- Only use a time window that suits the current traffic conditions.
- The driver should be aware that short time windows limit the amount of time available to react and take action if an unexpected traffic situation arises.

Select how Pilot Assist shall maintain the distance* to the vehicle ahead

The driver can select different driving styles for how Pilot Assist should maintain the preset time interval to the vehicle ahead. Selection is made via the drive mode control DRIVE MODE.

NOTE: The illustration is schematic - details may vary depending on car model.

* Option/accessory.
Select one of the following options:

- **Eco** - Pilot Assist focuses on optimal fuel economy, which means longer time interval to the vehicle ahead.
- **Comfort** - Pilot Assist focuses on following the set time interval to the vehicle ahead as smoothly as possible.
- **Dynamic** - Pilot Assist focuses on following the set time interval to the vehicle ahead more closely, which in certain cases may mean heavier acceleration and braking.

See further information in the "Drive modes" sections.

Supplementary information can also be found in the sections "Managing speed for the cruise control" and "Drive mode ECO".

**Related information**
- Pilot Assist (p. 316)

---

**Deactivating/activating Pilot Assist**

Pilot Assist can be temporarily deactivated so that it is set in the standby mode and can be reactivated later.

**Deactivating and setting Pilot Assist in standby mode**

To temporarily switch off Pilot Assist and set it in standby mode:

- Press the steering wheel button  (2).

  > Pilot Assist is set in standby mode - the symbol (8) in the driver display changes colour from WHITE to GREY and the stored speed in the centre of the speedometer changes from BEIGE to GREY.

...or...

- Press the steering wheel button  (3).

  > Pilot Assist is switched off and changes to the Adaptive cruise control in active mode.

---

**WARNING**

- With Pilot Assist in standby mode, the driver must intervene and steer, regulating both speed and distance to the vehicle ahead.
- When Pilot Assist is in standby mode and the car comes too close to a vehicle ahead, the driver is warned of the short distance by the Distance Warning function instead.
Standby mode on driver intervention
Pilot Assist is temporarily deactivated and set in standby mode if:

- the foot brake is used.
- the gear selector is moved to N position.
- the direction indicators are used for longer than 1 minute.
- the driver maintains a speed higher than the stored speed for longer than 1 minute.
- the clutch pedal is depressed for approx. 1 minute - applies to cars with manual gearbox.

A temporary increase in speed with the accelerator pedal, e.g. during overtaking, does not affect the setting - the car returns to the last stored speed when the accelerator pedal is released.

When the direction indicators are used, Pilot Assist steering assistance is temporarily disengaged. When this is no longer the case, steering assistance is automatically reactivated if the lane’s side markings can still be detected.

Automatic standby mode
Pilot Assist is dependent on other systems, e.g. stability control/anti-skid ESC\(^{65}\). If any of these other systems stops working, Pilot Assist is switched off automatically.

⚠️ WARNING
With automatic standby mode, the driver is warned via an acoustic signal and a message on the driver display.
- The driver must then regulate the car’s speed, apply the brakes as needed and maintain a safe distance to other vehicles.

Automatic standby mode may occur if, for example:

- the driver opens the door.
- brake temperature is high.
- the driver’s hands are not on the steering wheel.
- the parking brake is applied.
- engine speed is too low/high.
- the driver takes off the seatbelt.
- one or more wheels lose traction.
- the camera and radar unit is covered by e.g. snow or heavy rainfall (camera lens/radio waves are blocked).
- the speed is below 5 km/h (3 mph) and Pilot Assist is uncertain whether the vehicle ahead is a stationary vehicle or an object, such as a speed bump.
- the speed is below 5 km/h (3 mph) and the vehicle ahead turns off so that Pilot Assist no longer has a vehicle to follow.
- speed is reduced to below 30 km/h (20 mph) - only applies to cars with manual gearbox.

Reactivating Pilot Assist from the standby mode

NOTE: The illustration is schematic - details may vary depending on car model.
To re activate Pilot Assist:

- Press the steering wheel button (1).
  > The speed is then set to the most recently stored speed.

---

\(^{65}\) Electronic Stability Control
WARNING
A significant increase in speed may follow when the speed is resumed with the steering wheel button.

Related information
- Pilot Assist (p. 316)

Overtaking assistance with Pilot Assist
Pilot Assist can help the driver when overtaking other vehicles.

How overtaking assistance works
When Pilot Assist is following another vehicle and the driver indicates the intention to overtake by activating the direction indicator, Pilot Assist helps by accelerating the vehicle towards the vehicle in front before the driver’s vehicle reaches the overtaking lane.

The function then delays reducing speed in order to avoid premature braking when the driver’s car is approaching a slower vehicle.

The function remains active until the driver’s vehicle has cleared the overtaken vehicle.

WARNING
Be aware that this function can be activated in more situations than during overtaking, e.g. when a direction indicator is used to indicate a change of lane or exit to another road – the car will then accelerate briefly.

Related information
- Pilot Assist (p. 316)

Start overtaking assistance with Pilot Assist

Continuation for Overtaking Assistance
The following conditions must exist for Overtaking Assistance to be activated:
- there must be a vehicle in front (the “target vehicle”)
- your car’s current speed is at least 70 km/h (43 mph)
- the stored Pilot Assist speed must be high enough for overtaking to take place safely.

Starting Overtaking Assistance
To start the Overtaking Assistance:
- Activate the direction indicator.
  Use the left direction indicator in a car with the steering wheel on the left, or the right direction indicator in a car with the steering wheel on the right.
  > Overtaking Assistance is started.

Related information
- Pilot Assist (p. 316)

---

66 On left flash only in left-hand-drive car, or right flash in right-hand-drive car.
Limitations for overtaking assistance with Pilot Assist

The overtaking assistance function may have limited functionality in certain situations.

**WARNING**

When using the Overtaking Assistance System, the driver should be aware that there may be undesired acceleration if the conditions suddenly change.

Some situations should therefore be avoided, such as if:

- the car is approaching an exit for turn-off that is in the same direction as overtaking would normally occur.
- the vehicle ahead slows down before the driver’s car has crossed over into the overtaking lane.
- the traffic in the overtaking lane slows down.
- a right-hand drive car is driven in a county with left-hand traffic (or vice versa).

Situations of this kind can be avoided by temporarily setting Pilot Assist in the standby mode.

**Related information**

- Pilot Assist (p. 316)

---

**Change the target with Pilot Assist**

In combination with automatic gearbox, Pilot Assist has functionality for change of target at certain speeds.

**Change of target**

If the target vehicle in front suddenly turns then there may be stationary traffic in front.

When Pilot Assist is following another vehicle at speeds **below** 30 km/h (20 mph) and changes target from a moving to a stationary vehicle, Pilot Assist will slow down for the stationary vehicle.

**WARNING**

When Pilot Assist is following another vehicle at speeds **in excess of** approx. 30 km/h (20 mph) and the target is changed from a moving vehicle to a stationary vehicle, Pilot Assist will **ignore** the stationary vehicle and instead accelerate to the stored speed.

- The driver must then intervene him/herself and brake.

**Automatic standby mode with change of target**

Pilot Assist is disengaged and set in standby mode:

- when the speed is below 5 km/h (3 mph) and Pilot Assist is uncertain whether the target object is a stationary vehicle or some other object, e.g. a speed bump.
- when the speed is below 5 km/h (3 mph) and the vehicle in front turns off so the Pilot Assist no longer has a vehicle to follow.

**Related information**

- Pilot Assist (p. 316)
**Automatic braking with Pilot Assist**

Pilot Assist has a special brake function in slow traffic and while stationary.

**Brake function in slow queues and while stationary**

For shorter stops in connection with inching in slow traffic or at traffic lights, driving is automatically resumed if the stops do not exceed approx. 3 seconds - if it takes longer before the vehicle in front starts moving again then Pilot Assist is set in standby mode with automatic braking.

- Pilot Assist is reactivated in the following way:
  - Press the steering wheel button 🔄.
  - Depress the accelerator pedal.
- Pilot Assist resumes following the vehicle ahead if it starts moving forward within 6 seconds.

**Cessation of automatic braking**

In some situations, automatic braking ceases on coming to a standstill and Pilot Assist is set in standby mode. This means that the brakes are released and the car may start to roll - the driver must therefore intervene and brake the car himself/herself to keep it stationary.

This may take place in the following situations:

- the driver puts his/her foot on the brake pedal
- the parking brake is applied
- the gear selector is moved to P, N, or R position
- the driver sets Pilot Assist in the standby mode.

**Automatic activation of parking brake**

In certain situations, the parking brake is applied in order to keep the car stationary.

This takes place if Pilot Assist is holding the car stationary with the foot brake and:

- the driver opens the door or takes off his/her seatbelt
- Pilot Assist has kept the car stationary for more than approx. 5 minutes
- the brakes have overheated
- the driver switches the engine off manually.

**Limitations of Pilot Assist**

The Pilot Assist function may have limitations in certain situations.

The Pilot Assist function is an aid which can help the driver in many situations. But the driver is at all times responsible for maintaining a safe distance to surrounding objects and a correct position in the lane.

---

**Related information**

- Pilot Assist (p. 316)
**WARNING**

In certain situations, Pilot Assist steering assistance may have difficulty helping the driver in the right way or it may be automatically deactivated - in which case, the use of Pilot Assist is not recommended. Examples of such situations may be that:

- the lane markings are worn, missing or cross each other.
- lane division is unclear, for example, when the lanes divide or merge or at exits or in the event of multiple sets of markings.
- edges or other lines than lane markings are present on or near the road, e.g. kerbs, joints or repairs to the road surface, edges of barriers, roadside edges or strong shadows.
- the lane is narrow or winding.
- the lane contains ridges or holes.
- weather conditions are poor, e.g. rain, snow or fog or slush or impaired view with poor light conditions, back-lighting, wet road surface etc.

The driver should also note that Pilot Assist has the following limitations:

- High kerbs, roadside barriers, temporary obstacles (traffic cones, safety barriers, etc.) are not detected. Alternatively, they may be detected incorrectly as lane markings, with a subsequent risk of contact between the car and such obstacles. The driver must ensure him/herself that the car is at a suitable distance from such obstacles.
- The camera and radar sensor does not have the capacity to detect all oncoming objects and obstacles in traffic environments, e.g. potholes, stationary obstacles or objects which completely or partially block the route.
- Pilot Assist does not "see" pedestrians, animals, etc.
- The recommended steering input is force limited, which means that it cannot always help the driver to steer and keep the car within the lane.
- Pilot Assist is switched off if the power steering is working with reduced power - e.g. during cooling due to overheating (see section "Speed-dependent steering force").

The driver always has the possibility of correcting or adjusting a steering intervention imposed by Pilot Assist and can turn the steering wheel to the desired position.

**Steep roads and/or heavy load**

Bear in mind that Pilot Assist is primarily intended for use when driving on level road surfaces. The function may have difficulty in keeping the correct distance from the vehicle ahead when driving on steep downhill slopes - in which case, be extra attentive and ready to brake.

- Do not use Pilot Assist if the car has a heavy load or a trailer is connected to the car.

**NOTE**

Pilot Assist cannot be activated if a trailer, bicycle rack or similar is connected to the car's electrical system.

**Miscellaneous**

- **Off Road** drive mode cannot be selected when Pilot Assist is activated.

**NOTE**

The function uses the car's camera unit, which has some general limitations, see the "Limitations for camera unit" section.

**NOTE**

The function uses the car's radar unit, which has some general limitations, see the section "Limitations for radar unit".

**Related information**

- Speed-dependent steering force (p. 278)
Symbols and messages for Pilot Assist*

A number of symbols and messages regarding Pilot Assist can be shown via the driver display and/or the head-up display*.

Here are some examples. The previous illustration shows that Pilot Assist is set to maintain 110 km/h (68 mph) and that there is no vehicle ahead to follow. Pilot Assist provides no steering assistance since the lane’s side markings cannot be detected.

The previous illustration shows that Pilot Assist is set to maintain 110 km/h (68 mph) and at the same time is following a vehicle ahead which is keeping the same speed. Pilot Assist provides no steering assistance since the lane’s side markings cannot be detected.

The previous illustration shows that Pilot Assist is set to maintain 110 km/h (68 mph) and at the same time is following a vehicle ahead which is keeping the same speed. Here, Pilot Assist also provides steering assistance since the lane’s side markings can be detected.

---

67 In the following illustrative example, the RSI (Road Sign Information) function informs the driver that the maximum permitted speed is 130 km/h (80 mph).
68 NOTE: The illustration is schematic - details may vary depending on car model.
The previous illustration\textsuperscript{68} shows that Pilot Assist is set to maintain 110 km/h (68 mph) and that there is no vehicle ahead to follow.

Here too, Pilot Assist provides steering assistance since the lane’s side markings can be detected.

\textbf{Related information}

- Pilot Assist (p. 316)

\textbf{Radar unit}

The radar unit is used by several driver support systems and has the task of sensing other vehicles.

\textbf{Related information}

- Limitations for radar device (p. 332)
- Recommended radar device maintenance (p. 335)
- Type approval for radar device (p. 336)

\textsuperscript{68} NOTE: The illustration is schematic - details may vary depending on car model.
Limitations for radar device
The radar unit has certain limitations - which in turn also limits those functions that use the unit.

Blocked unit
The radar unit is placed inside the upper section of the windscreen together with the car's camera unit.

![Image of blocked unit]

The marked area must be kept free from stickers, objects, shade film, etc.

IMPORTANT
Do not place, stick or mount anything on the outside or inside of the windscreen in front of or around the camera and radar unit — this can interfere with camera and radar-dependent functions.

This may mean that functions are reduced, deactivated completely or give incorrect function response.

If the driver display shows this symbol and the message "Windscreen sensor blocked, see Owner's manual", this means that the camera and radar unit cannot detect other vehicles, cyclists, pedestrians and larger animals in front of the car and that the car's camera-based and radar-based functions may be disrupted, reduced, completely deactivated or give an incorrect function response.

The following table presents examples of possible causes for a message being shown, along with the appropriate action:

<table>
<thead>
<tr>
<th>Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The windscreen surface in front of the camera and radar unit is dirty or covered with ice or snow.</td>
<td>Clean dirt, ice and snow from the windscreen surface in front of the camera and radar unit.</td>
</tr>
<tr>
<td>Thick fog and heavy rain or snow block the radar signals or the camera view.</td>
<td>No action. Sometimes the unit does not work during heavy rain or snowfall.</td>
</tr>
</tbody>
</table>

69 NOTE: The illustration is schematic - details may vary depending on car model.
## Driver Support

<table>
<thead>
<tr>
<th>Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Water or snow from the road surface swirls up and blocks the radar signals or camera view.</td>
<td>No action. Sometimes the unit does not work on a very wet or snow-covered road surface.</td>
</tr>
<tr>
<td>Dirt has appeared between the inside of the windscreen and the camera and radar unit.</td>
<td>Visit a workshop to have the windscreen inside the unit's cover cleaned - an authorised Volvo workshop is recommended.</td>
</tr>
</tbody>
</table>

### NOTE

Keep the windscreen clean in front of the camera and radar unit.

### Vehicle speed

The capacity of the radar unit to detect vehicles ahead is reduced significantly if:

- the speed of the vehicle ahead is significantly different from that of your own car

### Limited field of vision

The radar unit has a limited field of vision. In some situations another vehicle is not detected, or the detection is made later than expected.

1. Sometimes the radar unit is late at detecting vehicles at close distances - e.g. a vehicle that drives in between your car and the vehicle ahead.
2. Small vehicles, such as motorcycles, or vehicles not driving in the centre of the lane can remain undetected.
3. In bends, the radar unit may detect the wrong vehicle or lose a detected vehicle from view.

#### Low trailers

Low trailer in radar shadow.

Low trailers can also be difficult for the radar unit to detect, or are not detected at all - the driver should therefore be particularly careful when driving behind low trailers when the adaptive cruise control or Pilot Assist is activated.

![Diagrams](image-url)
**High temperature**
At very high temperatures the camera and radar unit can temporarily be switched off for about 15 minutes after the engine is started so as to protect the unit's electronics. The camera and radar unit restarts automatically when the temperature has fallen sufficiently.

**Damaged windscreen**

- **IMPORTANT**
  If a crack, scratch or stone chip in the windscreen in front of one of the camera and radar unit “windows” covers an area of approx. 0.5 × 3.0 mm (0.02 × 0.12 in.) or larger, a workshop must be contacted to have the windscreen replaced – an authorised Volvo workshop is recommended.

  If not rectified it can lead to reduced performance for the driver support systems that use the camera and radar unit.

  This may mean that functions are reduced, deactivated completely or give incorrect function response.

  To avoid the risk of failed, deficient or reduced operation of driver support systems that use the radar unit, the following also applies:

  - Volvo recommends against repairing cracks, scratches or stone chips in the area in front of the camera and radar unit. Instead, the whole windscreen should be replaced.

  - Before replacing a windscreen, contact an authorised Volvo workshop to verify that the correct windscreen is ordered and fitted.

- **IMPORTANT**
  When the windscreen is replaced, the camera and radar unit must be recalibrated at the workshop to ensure the functionality of all the car’s camera and radar-based systems. An authorised Volvo workshop is recommended.

**Related information**

- Radar unit (p. 331)
**Recommended radar device maintenance**

In order that the camera and radar unit shall function correctly, the windscreen in front of the unit must be kept clear of dirt, ice and snow, and be cleaned regularly with water and car shampoo.

**NOTE**

Dirt, ice and snow covering the camera and radar unit will reduce its function and may prevent measurement.

This may mean that functions are reduced, deactivated completely or give incorrect function response.

**Related information**

### Related information
- Radar unit (p. 331)
Camera unit
The camera unit is used by several driver support systems and has the task of for example detecting lane lines or traffic signs.

NOTE: The illustration is schematic - details may vary depending on car model.

The camera unit is used by the following functions:
- Adaptive cruise control*
- Pilot Assist*
- Lane assistance*
- Steering assistance at risk of collision
- City Safety
- Driver Alert Control*
- Road Sign Information*
- Active main beam*

Related information
- Limitations for camera unit (p. 341)
- Recommended camera device maintenance (p. 344)
Limitations for camera unit
The camera unit has certain limitations - which in turn also limits those functions that use the unit.

Impaired vision
The camera has limitations similar to the human eye, i.e. it can "see" worse in for example intense snowfall or rain, dense fog, heavy dust storms and snow flurries. Under such conditions, the functions of camera-dependent systems could be significantly reduced or temporarily disengaged.

Strong oncoming light, reflections in the carriageway, snow or ice on the road surface, dirty road surfaces or unclear lane markings can also significantly reduce camera function when it is used to scan the carriageway to detect pedestrians, cyclists, large animals and other vehicles.

Blocked unit
The marked area must be kept free from stickers, objects, shade film, etc.73.

The camera unit is placed inside the upper section of the windscreen together with the car's radar unit.

**IMPORTANT**

Do not place, stick or mount anything on the outside or inside of the windscreen in front of or around the camera and radar unit — this can interfere with camera and radar-dependent functions.

This may mean that functions are reduced, deactivated completely or give incorrect function response.

If the driver display shows this symbol and the message "Windscreen sensor Sensor blocked, see Owner's manual", this means that the camera and radar unit cannot detect other vehicles, cyclists, pedestrians and larger animals in front of the car and that the car's camera-based and radar-based functions may be disrupted, reduced, completely deactivated or give an incorrect function response.

The following table presents examples of possible causes for a message being shown, along with the appropriate action:

73 NOTE: The illustration is schematic - details may vary depending on car model.
<table>
<thead>
<tr>
<th>Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The windscreen surface in front of the camera and radar unit is dirty or covered with ice or snow.</td>
<td>Clean dirt, ice and snow from the windscreen surface in front of the camera and radar unit.</td>
</tr>
<tr>
<td>Thick fog and heavy rain or snow block the radar signals or the camera view.</td>
<td>No action. Sometimes the unit does not work during heavy rain or snowfall.</td>
</tr>
<tr>
<td>Water or snow from the road surface swirls up and blocks the radar signals or camera view.</td>
<td>No action. Sometimes the unit does not work on a very wet or snow-covered road surface.</td>
</tr>
<tr>
<td>Dirt has appeared between the inside of the windscreen and the camera and radar unit.</td>
<td>Visit a workshop to have the windscreen inside the unit's cover cleaned - an authorised Volvo workshop is recommended.</td>
</tr>
<tr>
<td>Strong oncoming light</td>
<td>No action. The camera unit is reset automatically in more favourable light conditions.</td>
</tr>
</tbody>
</table>

### NOTE
Keep the windscreen clean in front of the camera and radar unit.

### Damaged windscreen

#### IMPORTANT

If a crack, scratch or stone chip in the windscreen in front of one of the camera and radar unit “windows” covers an area of approx. 0.5 × 3.0 mm (0.02 × 0.12 in.) or larger, a workshop must be contacted to have the windscreen replaced – an authorised Volvo workshop is recommended.

If not rectified it can lead to reduced performance for the driver support systems that use the camera and radar unit.

This may mean that functions are reduced, deactivated completely or give incorrect function response.

To avoid the risk of failed, deficient or reduced operation of driver support systems that use the radar unit, the following also applies:

- Volvo recommends **against** repairing cracks, scratches or stone chips in the area in front of the camera and radar unit. Instead, the whole windscreen should be replaced.

- Before replacing a windscreen, contact an authorised Volvo workshop to verify
that the correct windscreen is ordered and fitted.

- The same type or Volvo-approved windscreen wipers must be fitted during replacement.

**IMPORTANT**

When the windscreen is replaced, the camera and radar unit must be recalibrated at the workshop to ensure the functionality of all the car’s camera and radar-based systems. An authorised Volvo workshop is recommended.

**Related information**

- Camera unit (p. 340)
Recommended camera device maintenance

In order that the camera and radar unit shall function correctly, the windscreen in front of the unit must be kept clear of dirt, ice and snow, and be cleaned regularly with water and car shampoo.

**NOTE**

Dirt, ice and snow covering the camera and radar unit will reduce its function and may prevent measurement.

This may mean that functions are reduced, deactivated completely or give incorrect function response.

Related information

---

**City Safety™**

City Safety can alert the driver using a visual, acoustic and brake pulse warning to help him/her detect pedestrians, cyclists, larger animals and vehicles that suddenly appear - the car then attempts to brake automatically unless the driver acts within a reasonable time him/herself.

City Safety can prevent a collision or reduce collision speed.

City Safety is an aid to assist a driver who is at risk of colliding with a pedestrian, large animal, cyclist or a vehicle.

The City Safety function can help the driver to avoid a collision when driving in queues, e.g. when changes in the traffic ahead, combined with a lapse in attention, could lead to an incident.

Location of the radar unit.

City Safety activates a short, sharp braking procedure, normally stopping the car just behind the vehicle in front.

City Safety is activated in situations where the driver should have started braking earlier, which is why it cannot help the driver in every situation.

City Safety is designed to be activated as late as possible in order to avoid unnecessary intervention.

The driver or passengers are not normally aware of City Safety - it only intervenes in a situation where a collision is immediately imminent.

---

74 NOTE: The illustration is schematic - details may vary depending on car model.
**WARNING**

- The City Safety is supplementary driver support intended to improve driving safety – it cannot handle all situations in all traffic, weather and road conditions.
- The City Safety auto-brake function can prevent a collision or reduce collision speed, but to ensure full brake performance the driver should always depress the brake pedal – even when the car auto-brakes.
- The warning and steering assistance are only activated if there is a high risk of collision – you must therefore never wait for a collision warning or for City Safety to intervene.
- The warning and brake intervention for pedestrians and cyclists are deactivated at vehicle speeds exceeding 80 km/h (50 mph).
- City Safety does not activates any auto-brake functions in the event of heavy acceleration.
- City Safety is not a substitute for the driver's attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

- The driver is advised to read all sections in the Owner’s Manual that relate to City Safety to learn about factors such as its limitations and what the driver should be aware of before using the system (see the list of links for all subsections).

**Related information**

- Parameters and subfunctions for City Safety (p. 345)
- Setting the warning distance for City Safety (p. 347)
- Detection of obstacles with City Safety (p. 348)
- City Safety in cross traffic (p. 350)
- Limitations for City Safety in cross traffic (p. 351)
- City Safety when evasive manoeuvres are prevented (p. 351)
- Limitations of City Safety (p. 352)
- Messages for City Safety (p. 355)

**Parameters and subfunctions for City Safety**

City Safety can avoid a collision with a vehicle, a cyclist, a pedestrian or a larger animal in front by reducing the car's speed with the auto-brake function.

If the speed difference is greater than the following specified speeds, the City Safety auto-brake function cannot prevent a collision but mitigates the consequences of it.

**Vehicles**

For a vehicle in front, City Safety can reduce the speed by up to 60 km/h (37 mph).

**cyclists**

For a cyclist, City Safety can reduce the speed by up to 50 km/h (30 mph).

**Pedestrians**

For a pedestrian, City Safety can reduce speed by up to 45 km/h (28 mph).

**Large animals**

In the event of a risk of a collision with a large animal, City Safety can reduce the car's speed by up to 15 km/h (9 mph).

The brake function for large animals is primarily intended to reduce the force of the impact at higher speeds and is most effective at speeds above 70 km/h (43 mph) but less effective at lower speed.
**Subfunctions for City Safety**

1. **Collision warning**
   The driver is first warned of a potentially imminent collision.
   City Safety can detect pedestrians, cyclists or vehicles that are stationary or moving in the same direction as the car and are ahead. City Safety can also detect pedestrians, cyclists or large animals that are crossing the road in front of the car.
   In the event of a risk of collision with a pedestrian, larger animal, cyclist or vehicle (including vehicles described in the "City Safety in cross traffic" section), the driver's attention is alerted by means of a visual, acoustic and brake pulse warning. There is no brake pulse warning at lower speeds, sudden driver braking or acceleration. The brake pulse frequency varies according to the car's speed.

2. **Brake support**
   If the risk of collision has increased further after the collision warning then the brake support is activated.
   Brake support reinforces the driver's braking action if the system considers that the braking is not sufficient to avoid a collision.

3. **Auto Brake**
   The automatic brake function is activated last.
   If in this situation the driver has not yet started to take evasive action and the risk of collision is imminent then the automatic braking function is deployed - this takes place irrespective of whether or not the driver brakes. Braking then takes place with full brake force in order to reduce collision speed, or with limited brake force if it is sufficient to avoid a collision.
   In connection with automatic braking the seatbelt tensioner may also be activated. For more information see the "Seatbelt tensioner" section.
   In some situations, the action of Auto-brake may begin with light braking and then progress to full brake action.
   When City Safety has prevented a collision with a stationary object, the car remains stationary in anticipation of positive action by the driver. If the car has been braked to avoid collision with a slower vehicle in front, its speed is reduced to match that of the vehicle in front.

**NOTE**
On cars with manual gearbox, the engine stops when the Auto-brake function has stopped the car, unless the driver has managed to depress the clutch pedal beforehand.

The driver can always interrupt a braking intervention by firmly depressing the accelerator pedal.

---

75 NOTE: The illustration is schematic - details may vary depending on car model.
NOTE
When City Safety brakes, the brake lights come on.

When City Safety is activated and brakes the vehicle, the driver display shows a text message to the effect that the function is/has been active.

WARNING
City Safety must not be used by the driver to change his/her driving style - the driver must not rely on City Safety alone and allow it to do the braking.

Related information
• City Safety™ (p. 344)

Setting the warning distance for City Safety
City Safety is always activated but the driver can select the warning distance for the function.

NOTE
The City Safety function cannot be deactivated. It is activated automatically when the engine/electric operation is started and remains switched on until the engine/electric operation is switched off.

The warning distance determines the sensitivity of the system and regulates the distance at which a visual, acoustic and brake pulse warning should be deployed.

To select warning distance:
1. Select Settings ➔ My Car ➔ IntelliSafe in the centre display’s top view.
2. Under City Safety Warning, select Late, Normal or Early to set the desired warning distance.

If the Early setting produces too many warnings, which could be perceived as irritating in certain situations, the Normal or Late warning distance can be selected.

When warnings are perceived as being too frequent or disturbing, the warning distance can be reduced, which reduces the total number of warnings and instead leads to City Safety giving a warning at a later stage.

The Late warning distance should therefore only be used in exceptional cases, as in dynamic driving.

WARNING
• No automatic system can guarantee 100 % correct function in all situations. Therefore, never test City Safety by driving at people, animals or vehicles - this may cause severe damage and injury and risk lives.
• City Safety warns the driver when there is a risk of a collision, but it cannot shorten the driver’s reaction time.
• Even if the warning distance has been set to Early warnings could be perceived as being late in certain situations, e.g. when there are large differences in speed or if vehicles ahead suddenly brake heavily.
• With the warning distance set at Early, the warnings will come more in advance. This may mean that the warnings come more frequently than at the warning distance Normal, but it is recommended since it can make City Safety more effective.
NOTE
The warning with direction indicators for Rear Collision Warning is deactivated if the warning distance for collision warning in the City Safety function is set at the lowest level "Late".
The seat belt pre-tensioning and braking functions are, however, still active.

Related information
• City Safety™ (p. 344)

Detection of obstacles with City Safety
The obstructions that City Safety can detect are vehicles, cyclists, large animals and pedestrians.

Vehicles
City Safety detects most vehicles that are either stationary or moving in the same direction as your car, as well as vehicles described in the "City Safety in cross traffic" section.

In order that City Safety shall be able to detect a vehicle in the dark, the vehicle's front and rear lights must be working and clearly illuminated.

Cyclists
Optimal examples of what City Safety interprets as a cyclist — with clear body outline and bicycle outline.

Optimal performance requires that the system function that detects a cyclist must receive the clearest possible information about the body and bicycle outline, requiring the ability to identify the bicycle, head, arms, shoulders, legs, upper and lower body plus a normal human pattern of movement.

If large parts of the cyclist's body or bicycle are not visible to the function's camera then the system cannot detect a cyclist.

For the function to be able to detect a cyclist, he/she must be an adult and riding a bicycle designed for adults.

WARNING
City Safety is supplementary driver support, but it cannot detect all cyclists in all situations and, for example, cannot see:

• partially obscured cyclists.
• cyclists if the background contrast of the cyclist is poor – warning and brake interventions may then be late or not occur at all.
• cyclists wearing clothing that obscures the body outline.
• bicycles loaded with large objects.

The driver is always responsible that the vehicle is driven correctly and with a safety distance adapted to the speed.
Pedestrians

Optimal examples of what the system regards as pedestrians with clear body outlines.

For optimal performance, the system function that detects pedestrians must receive the clearest possible information about the body outline, requiring the ability to identify the head, arms, shoulders, legs, upper and lower body plus a normal human pattern of movement.

In order that it shall be possible to detect a pedestrian there must be a contrast with the background and this will be affected by such things as clothes, the background and the weather. With poor contrast the pedestrian may either be detected late or not at all, which may mean that warnings and braking are late or omitted.

City Safety can also detect pedestrians in the dark if they are illuminated by the car’s headlamps.

WARNING

City Safety is supplementary driver support, but it cannot detect all pedestrians in all situations and, for example, cannot see:

- partially obscured pedestrians, people in clothing that hides their body contour or pedestrians shorter than 80 cm (32 in.).
- pedestrians if the background contrast of the pedestrians is poor – warning and brake interventions may then be late or not occur at all.
- pedestrians who are carrying larger objects.

The driver is always responsible that the vehicle is driven correctly and with a safety distance adapted to the speed.

Large animals

Optimum examples of what City Safety interprets as large animals - standing still or walking slowly and with clear body outline.

Optimal performance requires that the system function that detects a large animal (e.g. elk and horse) must receive the clearest possible information about the body outline, requiring the ability to identify the animal directly from the side in combination with what is a normal pattern of movement for the animal.

If parts of the animal's body are not visible to the function's camera then the system cannot detect the animal.

City Safety can also detect large animals in the dark if they are illuminated by the car's headlamps.
City Safety is supplementary driver support, but it cannot detect all large animals in all situations and, for example, cannot see:

- partially obscured large animals.
- larger animals seen from the front or from behind.
- large animals that run or move quickly.
- large animals if the background contrast of the animals is poor - warning and brake interventions may then be late or not occur at all.
- small animals such as dogs and cats, for example.

The driver is always responsible that the vehicle is driven correctly and with a safety distance adapted to the speed.

related information
- City Safety™ (p. 344)

City Safety in cross traffic
City Safety can help the driver when turning and crossing the path of another oncoming vehicle at an intersection.

![Diagram of City Safety in cross traffic](image)

1 Sector in which City Safety can detect oncoming crossing vehicles.

For City Safety to detect an oncoming vehicle on a collision course, the oncoming vehicle must first enter the sector in which City Safety can analyse the situation.

The following further criteria must also be fulfilled:

- your car must be travelling at no less than 4 km/h (3 mph)
- your car must turn to the left in markets with right-hand traffic (or to the right in left-hand traffic)

- the oncoming vehicle must have its headlamps switched on.

**WARNING**

- The "City Safety in crossing traffic" function is supplementary driver support intended to improve driving safety – it cannot handle all situations in all traffic, weather and road conditions.
- Warnings and brake interventions due to a collision risk with an oncoming vehicle often come very late.
- Never wait for a collision warning or for City Safety to intervene.
- City Safety is not a substitute for the driver’s attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

related information
- City Safety™ (p. 344)
Limitations for City Safety in cross traffic
In some cases City Safety may have difficulty helping the driver deal with collision risks due to oncoming cross traffic.

Examples are:
- stability control ESC intervenes in the event of slippery driving conditions
- if the oncoming vehicle is detected too late
- if the oncoming vehicle is obscured by something
- if the oncoming vehicle has headlamps switched off
- if the oncoming vehicle drives in an unpredictable manner, for example, abruptly changes lanes at a late stage.

Related information
- City Safety™ (p. 344)

City Safety when evasive manoeuvres are prevented
City Safety has the facility to assist the driver by automatically braking the car earlier when it is not possible to avoid a collision by only steering away.

City Safety assists the driver by continuously attempting to anticipate whether there are "escape routes" to the side in case a slow or stationary vehicle ahead is discovered at a late stage.

Your car (1) "sees" no options for evading the vehicle ahead (2) and can therefore auto-brake earlier.

1 Your car
2 Slow/stationary vehicle

City Safety does not intervene with the auto-brake function as long as the driver him/herself
has the opportunity to avoid a collision via a steering manoeuvre.

However, if City Safety anticipates that an evasive manoeuvre is not possible due to traffic in an adjacent lane, the function can assist the driver by automatically starting to brake at an earlier stage.

**WARNING**

- The ability of City Safety to be able to predict a specific situation is supplementary driver support intended to improve driving safety – it cannot handle all situations in all traffic, weather and road conditions.

- City Safety is not a substitute for the driver's attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

**Limitations for City Safety when evasive manoeuvres are prevented**

**NOTE**

The function uses the car's camera unit, which has some general limitations, see the "Limitations for camera unit" section.

**NOTE**

The function uses the car's radar unit, which has some general limitations, see the section "Limitations for radar unit".

**Related information**

- City Safety™ (p. 344)

**Limitations of City Safety**

The City Safety function may have limitations in certain situations.

**Surroundings**

**Low objects**

Low-hanging objects, e.g. a flag/pennant for projecting load, or accessories such as auxiliary lamps and bull bars that are higher than the bonnet limit the function.

**Skidding**

On slippery road surfaces the braking distance is extended, which may reduce the capacity of City Safety to avoid a collision. In such situations, the anti-lock brakes and the stability control ESC will give the best possible braking force with maintained stability.

**Oncoming light**

The visual warning signal in the windscreen may be difficult to notice in the event of strong sunlight, reflections, when sunglasses are being worn or if the driver is not looking straight ahead.

**Heat**

In the event of high passenger compartment temperature caused by e.g. strong sunlight, the visual warning signal in the windscreen may be temporarily disengaged.

---

76 Electronic Stability Control
The camera and radar unit’s field of view
The camera’s field of vision is limited, which is why pedestrians, large animals, cyclists and vehicles in some situations cannot be detected, or they are detected later than anticipated.
Dirty vehicles may be detected later than others and if it is dark, motorcycles may be detected late or not at all.
If a text message in the driver display indicates that the camera and radar unit is obstructed, City Safety may be unable to detect pedestrians, large animals, cyclists, vehicles or road lines ahead of the car. This means that the functionality of City Safety may be reduced.
However, an error message is not shown in all situations where the windscreen sensors are obstructed. The driver must therefore take care to keep the area of windscreen in front of the camera and radar unit clear.

Low speed
City Safety is not activated at very low speeds - below 4 km/h (3 mph) - and the system therefore does not intervene in situations where your car is approaching a vehicle ahead very slowly, e.g. when parking.
Active driver
Driver commands are always prioritised, which is why City Safety does not intervene or postpone warning/intervention in situations where the driver is steering and accelerating in a decisive manner, even if a collision is unavoidable.
Active and aware driving behaviour can therefore delay a collision warning and intervention in order to minimise unnecessary warnings.

Driver intervention
Reversing
When your own car is reversing, City Safety is temporarily deactivated.

| ! IMPORTANT |
| Maintenance and replacement of City Safety components must only be performed by a workshop - an authorised Volvo workshop is recommended. |

WARNING
- Warnings and brake interventions could be implemented late or not at all if a traffic situation or external influences mean that the camera and radar unit cannot detect pedestrians, cyclists, large animals or vehicles correctly.
- For vehicles to be detected at night, their headlamps and rear lamp cluster must be switched on and shining clearly.
- The camera and radar unit has a limited range for pedestrians and cyclists. The system can provide effective warnings and brake interventions as long as the relative speed is below 50 km/h (30 mph). For stationary or slow-moving vehicles, warnings and brake interventions are effective at vehicle speeds up to 70 km/h (43 mph). Speed reduction for large animals is less than 15 km/h (9 mph) and can be achieved at vehicle speeds above 70 km/h (43 mph). The warning and brake intervention for large animals is less effective at lower speeds.
- Warnings for stationary or slow-moving vehicles and large animals could be disengaged due to darkness or poor visibility.
• Warnings and brake interventions for pedestrians and cyclists are deactivated at vehicle speeds exceeding 80 km/h (50 mph).

• Do not place, stick or mount anything on the outside or inside of the windscreen in front of or around the camera and radar unit — this can interfere with camera-dependent functions.

• Objects, snow, ice or dirt in the area of the camera sensor may reduce its functionality, fully deactivate it or give incorrect function response.

**NOTE**
The function uses the car's camera unit, which has some general limitations, see the "Limitations for camera unit" section.

**NOTE**
The function uses the car's radar unit, which has some general limitations, see the section "Limitations for radar unit".

**Market limitation**
City Safety is not available in all countries. If City Safety does not appear in the centre display's Settings menu, the car is not equipped with this function.

Search path in the top view of the centre display:
• Settings ➔ My Car ➔ IntelliSafe

• City Safety™ (p. 344)
Messages for City Safety

A number of messages regarding City Safety can be shown in the driver display.
The following table shows some examples.

<table>
<thead>
<tr>
<th>Message</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>City Safety Automatic intervention</td>
<td>When City Safety brakes or has done an automatic braking, several of the driver display symbols may be illuminated in connection with a text message being shown.</td>
</tr>
<tr>
<td>City Safety Reduced functionality Service required</td>
<td>The system does not function as it should. A workshop should be contacted - an authorised Volvo workshop is recommended.</td>
</tr>
</tbody>
</table>

A text message can be cleared by briefly pressing the button, located in the centre of the steering wheel's right-hand keypad.

If a message remains: Contact a workshop – an authorised Volvo workshop is recommended.

Related information
- City Safety™ (p. 344)
Rear Collision Warning

The Rear Collision Warning (RCW) function can help the driver to avoid being hit by a vehicle approaching from behind.

RCW is activated automatically each time the engine is started.

The RCW can warn the driver in a vehicle approaching from behind that a collision is imminent by rapidly flashing the direction indicators.

If, at a speed below 30 km/h (20 mph), the RCW function detects that the car is in danger of being hit from behind, the seatbelt tensioners may tension the front seatbelts and activate the Whiplash Protection System safety system.

Immediately before a collision from behind, RCW may also activate the foot brake in order to reduce the forward acceleration of the car during the collision. However, the foot brake is only activated if the car is stationary. The foot brake releases immediately if the accelerator pedal is depressed.

Related information
- Limitations of Rear Collision Warning (p. 356)
- Whiplash Protection System (p. 43)

Limitations of Rear Collision Warning

In certain cases the RCW may have difficulty helping the driver in the event of a collision risk. This can be, for example, if:

- the vehicle approaching from behind is detected too late
- the vehicle approaching from behind changes lane at the last moment
- the vehicle approaching from behind has a speed exceeding 80 km/h (50 mph)
- a trailer, bicycle rack or similar is connected to the car's electrical system - the RCW function is then deactivated automatically.

NOTE

In certain markets, RCW does not give a warning with the direction indicators due to local traffic regulations - in such cases, this part of the function is deactivated.

NOTE

The warning with direction indicators for Rear Collision Warning is deactivated if the warning distance for collision warning in the City Safety function is set at the lowest level "Late".

The seat belt pre-tensioning and braking functions are, however, still active.

Related information
- Rear Collision Warning (p. 356)
BLIS*
The BLIS\(^{77}\) function is intended to help the driver detect vehicles diagonally behind and to the side of the car so as to provide assistance in heavy traffic on roads with several lanes in the same direction.

BLIS is a driver aid intended to give a warning of:
- vehicles in the car’s blind spot
- quickly approaching vehicles in the left and right lanes closest to the car.

The function is activated/deactivated using the BLIS button in the centre display’s function view.

**Principle of BLIS**

1. **Zone in blind spot**
2. **Zone for quickly approaching vehicle.**

The BLIS function is active at speeds above 10 km/h (6 mph).

The system is designed to react when:
- your car is overtaken by other vehicles
- another vehicle is quickly approaching your car.

When BLIS detects a vehicle in Zone 1 or a quickly approaching vehicle in Zone 2, the indicator lamp on the door mirror on the affected side illuminates with a constant glow. If the driver activates the direction indicator on the same side as the warning, the indicator lamp will change over from a constant glow to flashing with a more intense light.

**NOTE**
The lamp illuminates on the side of the car where the system has detected the vehicle. If the car is overtaken on both sides at the same time then both lamps illuminate.

**WARNING**
- The BLIS function is supplementary driver support intended to facilitate driving and make it safer – it cannot handle all situations in all traffic, weather and road conditions.
- The responsibility for changing lanes safely and using good judgement always rests with the driver.
- BLIS is not a substitute for the driver’s attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

\(^{77}\) Blind Spot Information Systems
\(^{78}\) NOTE: The illustration is schematic - details may vary depending on car model.
Activate/deactivate BLIS

The BLIS\textsuperscript{79} function can be activated/deactivated.

1. **Indicator lamp**

2. The function is activated/deactivated using the BLIS button in the centre display's function view.
   - Tap on the **BLIS** button in the function view.
     > BLIS is activated/deactivated - a green/grey indicator is shown in the button.

If BLIS is activated when starting the engine, the function is confirmed by the door mirror indicator lamps blinking once.

If BLIS was deactivated when the engine was switched off, it will continue to be deactivated when the engine is next started and no indicator lights will then be illuminated.

**Related information**
- BLIS* (p. 357)

---
\textsuperscript{79} Blind Spot Information
\textsuperscript{80} NOTE: The illustration is schematic - details may vary depending on car model.
Limitations of BLIS

The BLIS function may have limitations in certain situations.

Examples of limitations:

- Dirt, ice and snow covering the sensors may reduce the functions and deactivate alerts.
- The BLIS function is automatically deactivated if a trailer, bicycle rack or similar is connected to the car's electrical system.
- For optimal performance of BLIS, no bicycle rack, luggage carrier or similar should be mounted on the car's towbar.

⚠️ WARNING

- BLIS does not work on sharp bends.
- BLIS does not work when the car is reversing.

Related information

- BLIS* (p. 357)

Recommended maintenance for BLIS

- To ensure optimal functionality, the surfaces in front of the sensors must be kept clean.
- Do not affix any objects, tape or labels in the area of the sensors.

Keep the surface clean - on both the left and right-hand sides of the car.

The sensors for BLIS are located inside each corner of the rear wing/bumper. The sensors are also used by the Cross Traffic Alert (CTA) and Rear Collision Warning functions.

---

84 Blind Spot Information

* Option/accessory
**Cross Traffic Alert**

CTA is a driver support that supplements BLIS and is designed to help the driver detect traffic crossing behind the car when it is reversing.

CTA supplements BLIS by detecting the approach of crossing traffic during reversing, such as when reversing out of a parking space. CTA is primarily designed to detect vehicles. In favourable conditions it may also be able to detect smaller objects, such as cyclists and pedestrians.

CTA is only active if the car rolls backwards or if reverse gear has been selected. If CTA senses that something is approaching from the side, this is also indicated with:

- an acoustic signal - the sound is heard in the left-hand or right-hand speaker according to the direction from which the object approaches.
- an illuminated icon in the PAS graphic on the screen.
- an icon on the Park assist camera top view.

**WARNING**

- The Cross Traffic Alert function is supplementary driver support intended to facilitate driving and make it safer – it cannot handle all situations in all traffic, weather and road conditions.
- The responsibility for reversing the car safely and using good judgement always rests with the driver.
- Cross Traffic Alert is not a substitute for the driver’s attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

85 Cross Traffic Alert  
86 Blind Spot Information  
87 Park Assist System: Parking assistance system with reversing sensors  
88 NOTE: The illustration is schematic - details may vary depending on car model.
Activate/deactivate Cross Traffic Alert
The driver can choose to switch off the CTA function as follows:

- GREY button indication - CTA is deactivated.
- GREEN button indication - CTA is activated.

CTA is activated automatically each time the engine is started.

Related information
- Cross Traffic Alert* (p. 362)

Limitations of Cross Traffic Alert
The CTA function may have limitations in certain situations.

CTA does not perform optimally in all situations but has some limitations. For example, the CTA sensors cannot "see" through other parked vehicles or obstructing obstacles.

Here are some examples of situations where CTA's "field of vision" may be already limited and approaching vehicles cannot therefore be detected until they are very close:

1. The car is parked deep inside a parking slot.

   In an angled parking slot CTA may be completely "blind" on one side.

   1. Blind CTA sector.
   2. Sector in which CTA can detect/"see".

   However, as your car slowly reverses, the angle it makes with the obstructing vehicle/object changes and the blind sector rapidly decreases.

---

89 Cross Traffic Alert
90 Cross Traffic Alert

* Option/accessory.
Examples of further limitations

- Dirt, ice and snow covering the sensors may reduce the functions and deactivate alerts. See the supplementary information in the section "Recommended maintenance for Cross Traffic Alert".
- CTA is automatically deactivated if a trailer, bicycle rack or similar is connected to the car's electrical system.
- For optimal performance of CTA, no bicycle rack, luggage carrier or similar should be mounted on the car's towbar.

Related information

- Cross Traffic Alert* (p. 362)

Recommended maintenance for Cross Traffic Alert

- To ensure optimal functionality, the surfaces in front of the sensors must be kept clean.
- Do not affix any objects, tape or labels in the area of the sensors.

Keep the surface clean - on both the left and right-hand sides of the car[^91].

The sensors for CTA are located inside each corner of the rear wing/bumper. The sensors are also used by the BLIS[^92] and Rear Collision Warning functions.

Related information

- Cross Traffic Alert* (p. 362)

\textsuperscript{93} Cross Traffic Alert
Road Sign Information*

The Road Sign Information function (RSI) helps the driver to observe speed-related road signs and certain prohibition signs as the car passes them.

Examples of readable signs.

RSI provides information about such things as current speed, when a motorway or road is starting/ending, when overtaking is prohibited or when the direction of travel is one-way.

If both a sign for motorway/dual carriageway and a sign for the speed limit are passed at the same time, RSI selects to show a sign symbol for motorway/dual carriageway. The new speed limit is shown directly with a line in the driver display's speed scale.

NOTE

In certain markets, the Road Sign Information function (RSI) is only available in combination with Sensus Navigation.

WARNING

- The Road Sign Information function is supplementary driver support intended to facilitate driving and make it safer – it cannot handle all situations in all traffic, weather and road conditions.
- Road Sign Information is not a substitute for the driver's attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

- Limitations of Road Sign Information (p. 371)

94 Road Sign Information
95 Road signs are market-dependent - illustrations in these instructions only show a few examples.

* Option/accessory.
Activating/deactivating Road Sign Information

The Road Sign Information function is selectable - the driver can select **On** or **Off**.

Press the **Road Sign Information** button in the centre display function view.

- GREEN button indication - RSI is activated.
- GREY button indication - RSI is deactivated.

### NOTE

- If the Automatic Speed Limiter function is activated, road sign information is shown in the driver display even if RSI is not activated.
- To remove road sign information from the driver display, you must deactivate both Automatic Speed Limiter and RSI.
- When the Automatic Speed Limiter function is activated but RSI is deactivated, no warnings are given from RSI. In this situation, settings for RSI cannot be adjusted either - to be able to adjust settings as well as receive warnings, RSI must be activated.

**Related information**

- Road Sign Information* (p. 366)

**Road Sign Information and sign display**

The Road Sign Information function (RSI[^6]) registers and shows road signs in different ways depending on the sign and the situation.

When RSI detects a road sign with an imposed speed limit, the driver display shows the sign as a symbol in combination with a RED indication on the speedometer.

An additional[^7] sign, such as "no overtaking", may be shown together with the speed limit symbol.

* Option/accessory. 367
If the driver enters a road marked with a no-entry sign at the roadside, the symbol for this sign\(^97\) flashes on and off on the driver display as a warning.

If the car is equipped with Sensus Navigation then information from the map is also used to determine whether the car is being driven in the wrong direction.

The driver can also get an acoustic warning when driving towards a no-entry entrance if the Road Sign Audio Warning function is activated - see the heading "Activating/deactivating the acoustic warning" in the section "Activating/deactivating Road Sign Information".

**Speed limit or end of motorway**
When RSI detects an "indirect speed limit sign" stating the end of the current speed limit - e.g. at the end of a motorway - a symbol appears with the corresponding road sign in the driver's display.

Example of indirect speed limit sign\(^97\):

If the driver enters a road marked with a no-entry sign at the roadside, the symbol for this sign\(^97\) flashes on and off on the driver display as a warning.

If the car is equipped with Sensus Navigation then information from the map is also used to determine whether the car is being driven in the wrong direction.

The driver can also get an acoustic warning when driving towards a no-entry entrance if the Road Sign Audio Warning function is activated - see the heading "Activating/deactivating the acoustic warning" in the section "Activating/deactivating Road Sign Information".

**Speed limit or end of motorway**
When RSI detects an "indirect speed limit sign" stating the end of the current speed limit - e.g. at the end of a motorway - a symbol appears with the corresponding road sign in the driver's display.

Example of indirect speed limit sign\(^97\):

- **End of all restrictions.**
- **End of motorway.**

The driver display symbol extinguishes after about 5 minutes and remains so until the next speed related sign is passed.

**Additional signs**

Sometimes different speed limits are signed for the same road - an additional sign then indicates the circumstances under which the different speeds apply. The road section may be particularly susceptible to accidents in rain and/or fog, for example.

An additional sign relating to rain is displayed only if the windscreen wipers are in use.

If a trailer is connected to the car's electrical system and you pass a speed sign with the addi-

---

\(^96\) Road Sign Information
\(^97\) Road signs are market-dependent - the illustrations in these instructions only show examples.
tional sign “trailer”, the indicated speed will appear on the driver display.

Some speed limits only apply after a certain distance or at a certain time of day. The driver’s attention is drawn to this fact by means of a symbol for an additional sign below the speed symbol. The additional symbol in the driver display will show either “DIST” or “TIME”.

A symbol for additional sign in the form of an empty frame under the driver display's speed symbol means that the RSI has detected an additional sign with supplementary information for the current speed limit.

**Road Sign Information and Sensus Navigation**

If the car is equipped with Sensus Navigation, speed information is read from the navigation unit in the following cases:

- On detection of signs that indirectly indicate a speed limit, such as motorway, dual carriageway and city limit signs.
- If a previously detected speed sign is assumed not to apply any longer, but no new sign has been detected.

**NOTE**

In certain markets, the Road Sign Information function (RSI) is only available in combination with Sensus Navigation.

**NOTE**

If a downloaded third-party app is used for navigation then there is no support for speed-related information.

**Road Sign Information with Speed Warning and Settings**

The subfunction Speed Limit Warning for RSI is selectable - the driver can select On or Off.

**Speed Limit Warning** alerts the driver when the speed limit in force or the set "speed limit" is exceeded - after the warning has been repeated one extra time if the driver does not reduce speed.

**Sign for "School" and "Children at play"**

If the warning sign for "School" or "Children at play" is included in the satellite navigator's map data, the driver display shows a sign of this type.

**Related information**

- Road Sign Information* (p. 366)

---

97 Road signs are market-dependent - the illustrations in these instructions only show examples.

98 Only in cars with Sensus Navigation.

99 Road Sign Information
The speed warning is given by the driver display symbol\(^{100}\) showing the applicable maximum permitted speed temporarily flashing when this speed is exceeded.

A speed warning is always given if the speed limit is exceeded in connection with speed camera information.

**Settings**

**Adjust the limit for Speed Warning**

The driver can select to receive a warning at a higher speed than the signed speed.

Select limit for speed warning as follows:

1. Select **Settings ➔ My Car ➔ IntelliSafe ➔ Road Sign Information** in the centre display's top view.
2. Select **Speed Limit Warning**. > The function is activated and a speed limit selector appears.
3. Adjust the limit for Speed Warning by pressing the up/down arrows on the screen.

Note that the function does not give any consideration to selected limit adjustment when the driver display shows the speed camera symbol.

**Acoustic warning On/Off**

It is also possible to receive an acoustic warning in connection with Speed Warning.

Change setting for acoustic warning as follows:

1. Select **Settings ➔ My Car ➔ IntelliSafe ➔ Road Sign Information** in the centre display's top view.
2. Select/deselect **Road Sign Audio Warning** to activate/switch off the acoustic warning.

With the **Road Sign Audio Warning** function activated, the driver is also warned when driving towards one-way traffic/no-entry entrance.

**Related information**

Road Sign Information with Speed Camera Information

A car equipped with RSI\textsuperscript{101} and Sensus Navigation\textsuperscript{*} can provide information on an upcoming speed camera in the driver display.

"Road Sign Information with Speed Warning and Settings" and "Road Sign Information limitations".

\textbf{NOTE}

- To get an acoustic warning if you exceed the required speed, the Speed Limit Warning function must be activated and the Road Sign Audio Warning sub-function must be set to On. An acoustic warning is then given if the car's speed exceeds the speed indicated by the RSI function in the driver display.
- Information about speed cameras on the navigation map is not available for all markets/areas.

Related information

- Road Sign Information\textsuperscript{*} (p. 366)
- Road Sign Information with Speed Warning and Settings (p. 369)
- Limitations of Road Sign Information (p. 371)

Limitations of Road Sign Information

The Road Sign Information (RSI\textsuperscript{103}) function may have limitations in certain situations.

Examples of what can reduce the RSI are as follows:

- Faded signs
- Signs positioned on bends
- Rotated or damaged signs
- Signs positioned high above the roadway
- Fully/partially obscured or poorly positioned signs
- Signs completely or partly covered with frost, snow and/or dirt
- Digital road maps\textsuperscript{104} are out-of-date, inaccurate or have no speed information\textsuperscript{105}.

\textbf{NOTE}

The RSI function may interpret some types of bicycle rack, connected to the electrical socket for trailers, as a connected trailer. In such cases, the driver display may show incorrect speed information.

\textsuperscript{101}Road Sign Information
\textsuperscript{102}NOTE: The illustration is schematic - details may vary depending on car model and market/area.
\textsuperscript{103}Road Sign Information
\textsuperscript{104}digital road maps

NOTE
The function uses the car’s camera unit, which has some general limitations, see the "Limitations for camera unit" section.

Related information
• Road Sign Information* (p. 366)

Driver Alert Control
The Driver Alert Control (DAC) function is intended to help make the driver aware that he or she is starting to drive less consistently, e.g. if the driver becomes distracted or starts to fall asleep.

The objective for DAC is to detect slowly deteriorating driving ability and it is primarily intended for major roads. The function is not intended for city traffic.

The function is activated when speed exceeds 65 km/h (40 mph) and remains active as long as the speed is over 60 km/h (37 mph).

A camera detects the edge markings painted on the carriageway and compares the alignment of the road with the driver’s steering wheel movements.

When driving behaviour starts to become inconsistent, the driver is alerted by this symbol in the driver display, together with the text message Time for a break soon?

If driving behaviour does not improve but becomes noticeably inconsistent, the driver is alerted by the same symbol in the driver display, combined with an acoustic signal and the text message Time to take a break.

If the Rest Stop Guidance function is activated in Sensus Navigation*, suggestions for a suitable

105 Map data with speed information does not exist for all areas.

* Option/accessory.
location for a break are also shown with the Time to take a break warning. The warnings are repeated after a time if driving behaviour has not improved.

**WARNING**

- The Driver Alert Control function is supplementary driver support intended to facilitate driving and make it safer – it cannot handle all situations in all traffic, weather and road conditions.

- Driver Alert Control should not be used to extend a period of driving. The driver should instead plan for breaks at regular intervals and make sure they are well rested.

- Driver Alert Control is not a substitute for the driver’s attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

**WARNING**

An alarm from Driver Alert Control should be taken very seriously, as a sleepy driver is often not aware of his/her own condition.

If the alarm sounds or you feel fatigued:

- Stop the car safely as soon as possible and rest.

Studies have shown that it is just as dangerous to drive while tired as it is to drive under the influence of alcohol or other stimulants.

**Related information**

- Activate/deactivate Driver Alert Control (p. 373)
- Select rest stop guidance in the event of a warning with Driver Alert Control (p. 374)
- Limitations of Driver Alert Control (p. 374)

**Activate/deactivate Driver Alert Control**

The Driver Alert Control (DAC) function can be activated/deactivated.

**On/Off**

To change settings in DAC:

1. Tap on **Settings** in the centre display’s top view.
2. Select **My Car ➔ IntelliSafe ➔ Driver Alert Control**.
3. Select/deselect **Alertness Warning** to activate/deactivate DAC.

**Related information**

- Driver Alert Control (p. 372)
Select rest stop guidance in the event of a warning with Driver Alert Control

It is possible to set whether the Rest Stop Guidance function should be activated/deactivated.

With the guide activated, an automatic suggestion for an appropriate rest area is displayed while DAC issues a warning.

To select Rest Stop Guidance:
1. Tap on Settings in the centre display's top view.
2. Select My Car ➔ IntelliSafe ➔ Driver Alert Control.
3. Select/deselect Rest Stop Guidance to activate/deactivate the function.

Related information
• Driver Alert Control (p. 372)

Limitations of Driver Alert Control

The Driver Alert Control (DAC) function may have limitations in certain situations.

In some cases the system may issue a warning despite driving ability not deteriorating, for example:
- in strong side winds
- on rutted road surfaces.

WARNING

In some cases, driving behaviour is not affected despite driver fatigue — e.g. when using the Pilot Assist function — resulting in the driver not getting a warning from DAC.

It is therefore important to always stop and take a break at the slightest feeling of fatigue, whether the DAC function has given a warning or not.

NOTE

The function uses the car's camera unit, which has some general limitations, see the "Limitations for camera unit" section.

Related information
• Driver Alert Control (p. 372)

Lane assistance

The function of the Lane Keeping Aid (LKA106) is to help the driver to reduce the risk of the car accidentally leaving its own lane on motorways and similar major routes.

Lane Keeping Aid steers the car back into its lane and/or alerts the driver with vibrations in the steering wheel.

Lane Keeping Aid is active within the speed range 65-200 km/h (40-125 mph) on roads with clearly visible side lines.

On narrow roads the function may be unavailable, in which case it goes into standby mode. The function becomes available again when the road is wide enough.

106Lane Keeping Aid

A camera reads the side lines of the road/lane.
Depending on settings, lane assistance acts in accordance with the following:

- **Assist**[^108] activated: When the car is approaching a lane line, LKA will actively steer the car back into its lane by applying a slight torque to the steering wheel.
- **Warning**[^108] activated: If the car is about to cross a lane line, the driver is warned by means of vibrations in the steering wheel.

**NOTE**

When a direction indicator is switched on, there are no steering corrections or alerts from Lane assistance.

---

**WARNING**

- The Lane Keeping Aid function is supplementary driver support intended to improve driving safety – it cannot handle all situations in all traffic, weather and road conditions.
- The function is not a substitute for the driver’s attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

[^107]: The steering wheel vibration varies – the longer the car remains outside the lane lines, the longer the vibration.

[^108]: See the heading "Assistance alternatives for LKA" in the section "Activating/Deactivating Lane Keeping Aid".
Lane assistance does not intervene

Lane assistance does not engage on sharp inside curves.

In some situations, lane assistance allows lane lines to be crossed without intervening with either steering assistance or a warning - e.g. when using the direction indicators or cutting bends.

Related information
- Steering assistance with lane assistance (p. 376)
- Limitations of Lane assistance (p. 377)
- Activate/deactivate Lane Keeping Aid (p. 377)
- Select assistance option for lane assistance (p. 377)
- Symbols and messages for lane assistance (p. 379)

Steering assistance with lane assistance

For steering assistance LKA\textsuperscript{109} to function, the driver’s hands must be on the steering wheel. The system monitors this continuously.

If the driver does not keep his/her hands on the steering wheel, the driver display shows this symbol combined with a message, which prompts the driver to actively steer the car:

- Lane Keeping Aid Apply steering

If the driver does not then start to steer, the symbol is shown again, combined with a warning sound and this message:

- Lane Keeping Aid Standby until steering applied

If the driver then still does not follow the prompt to start steering, LKA\textsuperscript{109} is set in standby mode - the function will then be unavailable until the driver starts to steer the car again.

Related information
- Lane assistance (p. 374)

\textsuperscript{109}Lane Keeping Aid
Activate/deactivate Lane Keeping Aid

The lane assistance LKA\textsuperscript{110} function is selectable - the driver can select On or Off.

On/Off

Press the Lane Keeping Aid button in the centre display function view.

- GREEN button indication - LKA is activated.
- GREY button indication - LKA is deactivated.

Related information
- Lane assistance (p. 374)

Select assistance option for lane assistance

The driver can select how LKA\textsuperscript{111} should react if the car leaves its lane.

1. Select Settings ➔ My Car ➔ IntelliSafe in the centre display’s top view.

2. In the event of Lane Keeping Aid Mode, select how LKA should react:
   - Assist - the driver is given steering assistance without a warning.
   - Both - the driver is given both a warning and steering assistance.
   - Warning — warning to driver only.

Related information
- Lane assistance (p. 374)

Limitations of Lane assistance

In certain demanding conditions Lane assistance may have difficulty helping the driver correctly. In such cases it is recommended to switch off this function.

Examples of such conditions are:
- road works
- winter road conditions
- poor road surface
- a very “sporty” driving style
- poor weather with reduced visibility
- roads with unclear or non-existent side markings
- sharp edges or lines other than the lane’s side markings
- when the power steering works at reduced power - e.g. during cooling due to overheating (see section "Speed-dependent steering force").

\textbf{NOTE}

The function uses the car’s camera unit, which has some general limitations, see the "Limitations for camera unit" section.

A text message can be cleared by briefly pressing the button, located in the centre of the steering wheel’s right-hand keypad.

If a message remains: Contact a workshop – an authorised Volvo workshop is recommended.

**Related information**
- Lane assistance (p. 374)
**Lane assistance symbols in the driver display**

Lane assistance LKA\(^{113}\) is visualised by symbols in the driver display depending on the situation. Here are some examples of symbols and the situations in which they are shown:

**Available**

Available — the lane lines in the symbol are WHITE. Lane assistance is scanning one or both lane lines.

**Unavailable**

Unavailable — the lane lines in the symbol are GREY. The Lane assistance cannot detect the lane lines, the speed is too low or the road is too narrow.

**Indication of steering assistance/warning**

Steering assistance/warning - the lane lines in the symbol are COLOURED. Lane assistance indicates that the system is giving a warning and/or attempting to steer the car back into the lane.

\(^{113}\)Lane Keeping Aid

**Related information**

- Lane assistance (p. 374)
Steering assistance at risk of collision

The Collision avoidance assistance function is designed to help the driver reduce the risk of the car leaving its lane unintentionally and/or colliding with another vehicle or obstacle by actively steering the car back into its lane and/or swerving.

The **Collision avoidance assistance** function consists of three subfunctions:
- Steering assistance upon risk of run-off
- Steering assistance upon risk of head-on collision
- Steering assistance upon risk of rear-end collision*

After automatic engagement, the driver display indicates that this has occurred via a text message:
- **Collision avoidance assistance**
  - Automatic intervention

**Related information**
- Activating/deactivating Steering assistance in the event of a collision risk (p. 382)
- Symbols and messages for steering assistance upon risk of collision (p. 390)
- Steering assistance upon risk of run-off (p. 383)
- Steering assistance level in the event of a run-off risk (p. 383)
- Activating/deactivating Steering assistance in the event of run-off risk (p. 384)
- Limitations for steering assistance upon risk of running off the road (p. 384)
- Steering assistance upon risk of head-on collision (p. 385)
- Activating/deactivating Steering assistance in the event of a risk of a head-on collision (p. 386)
- Limitations for steering assistance upon risk of head-on collision (p. 386)
- Steering assistance upon risk of rear-end collision* (p. 387)
- Activating/deactivating Steering assistance on risk of rear-end collision* (p. 388)
- Limitations for steering assistance upon risk of rear-end collision (p. 388)

**Activating/deactivating Steering assistance in the event of a collision risk**

The function can be selected - the driver can choose to have it **On** or **Off**.

Proceed as follows to deactivate the function:

1. Select **Settings ➔ My Car ➔ IntelliSafe** in the centre display’s top view.
2. Deselect Collision avoidance assistance. > The function is then disengaged.

**NOTE**

When the **Collision avoidance assistance** function is deactivated, all subfunctions are switched off:
- Steering assistance at risk of road departure
- Steering assistance at risk of oncoming collision
- Steering assistance at risk of rear-end collision*

Even though it is possible to deactivate the function, it is advisable for the driver to always have it activated since it improves driving safety in most cases.

**Related information**
- Steering assistance at risk of collision (p. 382)
**Steering assistance upon risk of run-off**

The subfunction’s task is to help the driver reduce the risk of the car accidentally leaving the road by actively steering the car back onto the road.

The function is active within the speed range 65-140 km/h (40-87 mph) on roads with clearly visible lane markings/lines.

A camera scans the edges of the road and the painted side markings. If the car is about to leave the side of the road, the car is steered back onto the road and if the steering intervention is not enough to avoid run-off, the brakes are also activated.

However, the function does **not** intervene with either steering assistance or brake intervention if the direction indicators are used. And if the function detects that the driver is actively driving the car, activation of the function will be delayed.

After automatic engagement, the driver display indicates that this has occurred via a text message:

- Collision avoidance assistance
  - Automatic intervention

---

**WARNING**

- The "Steering assistance at risk of lane departure" subfunction is supplementary driver support intended to improve driving safety – it cannot handle all situations in all traffic, weather and road conditions.
- The function cannot detect barriers, rails or similar obstacles at the side of the road.
- "Steering assistance at risk of lane departure" is not a substitute for the driver's attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

---

**Steering assistance level in the event of a run-off risk**

The function has two activation levels on intervention:

- Steering assistance only
- Steering assistance with brake intervention

---

**Steering assistance only**

Intervention with steering assistance.

---

**Related information**

- Steering assistance at risk of collision (p. 382)
Steering assistance with brake intervention

Intervention with steering assistance and braking.

Brake intervention helps in situations where steering assistance alone is not sufficient. The brake force is adapted automatically depending on the situation at the time of road run-off.

Related information
- Steering assistance at risk of collision (p. 382)

Activating/deactivating Steering assistance in the event of run-off risk
The function can be selected - the driver can choose to have it On or Off.
Proceed as follows to deactivate the function:

1. Select Settings ➔ My Car ➔ IntelliSafe in the centre display's top view.
2. Deselect Collision avoidance assistance. > The function is then disengaged.

NOTE
When the Collision avoidance assistance function is deactivated, all subfunctions are switched off:
- Steering assistance at risk of road departure
- Steering assistance at risk of oncoming collision
- Steering assistance at risk of rear-end collision*

Even though it is possible to deactivate the function, it is advisable for the driver to always have it activated since it improves driving safety in most cases.

Related information
- Steering assistance at risk of collision (p. 382)

Limitations for steering assistance upon risk of running off the road
In certain demanding conditions the function may have difficulty helping the driver correctly. In such cases it is recommended to switch off this function.
Examples of such conditions are:
- road works
- winter road conditions
- narrow roads
- poor road surface
- a very "sporty" driving style
- poor weather with reduced visibility
- roads with unclear or non-existent side markings
- sharp edges or lines other than the lane's side markings
- when the power steering works at reduced power - e.g. during cooling due to overheating (see section "Speed-dependent steering force").

NOTE
The function uses the car's camera unit, which has some general limitations, see the "Limitations for camera unit" section.

* Option/accessory.
NOTE
The function uses the car's radar unit, which has some general limitations, see the section "Limitations for radar unit".

Related information
- Steering assistance at risk of collision (p. 382)
- Speed-dependent steering force (p. 278)

**Steering assistance upon risk of head-on collision**
The subfunction can help a distracted driver who does not notice that the car is drifting into the oncoming lane.

The function can assist by guiding the car back to its own lane.

1. Oncoming vehicles
2. Your car

The function is active within the speed range 60-140 km/h (37-87 mph) on roads with clearly visible lane markings/lines.

If the car is about to leave its own lane while an oncoming vehicle is approaching at the same time, the function can help the driver to steer the car back into its own lane.

However, the function does not intervene with steering assistance if the direction indicator is used. And if the function detects that the driver is actively driving the car, activation of the function will be delayed.

After automatic engagement, the driver display indicates that this has occurred via a text message:
- **Collision avoidance assistance**
  **Automatic intervention**

**WARNING**
- The "Steering assistance at risk of oncoming collision" subfunction is supplementary driver support intended to improve driving safety – it cannot handle all situations in all traffic, weather and road conditions.
- Steering assistance is only activated if there is a high risk of collision – you must therefore never wait for the function to intervene.
- The function is not a substitute for the driver's attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.
**Related information**

- Steering assistance at risk of collision (p. 382)

---

**Activating/deactivating Steering assistance in the event of a risk of a head-on collision**

The function can be selected - the driver can choose to have it On or Off.

Proceed as follows to deactivate the function:

1. Select **Settings ➔ My Car ➔ IntelliSafe** in the centre display’s top view.
2. Deselect **Collision avoidance assistance**.  
   > The function is then disengaged.

**NOTE**

When the **Collision avoidance assistance** function is deactivated, all subfunctions are switched off:

- Steering assistance at risk of road departure
- Steering assistance at risk of oncoming collision
- Steering assistance at risk of rear-end collision*

Even though it is possible to deactivate the function, it is advisable for the driver to always have it activated since it improves driving safety in most cases.

**Related information**

- Steering assistance at risk of collision (p. 382)

---

**Limitations for steering assistance upon risk of head-on collision**

In certain situations the function may have limited functionality and fail to intervene in the following cases, for example:

- for small vehicles, such as motorcycles
- on roads where the lane does not have clear lane markings
- if the majority of the car has steered into the adjacent lane
- outside the speed range 60-140 km/h (37-87 mph)
- when the power steering works at reduced power - e.g. during cooling due to overheating (see section "Speed-dependent steering force").

Other demanding situations can include:

- road works
- winter road conditions
- narrow roads
- poor road surface
- a very “sporty” driving style
- poor weather with reduced visibility.

In these demanding situations, the function may have difficulty helping the driver correctly. In such cases it is recommended to switch off this function.

* Option/accessory.
**NOTE**
The function uses the car's camera unit, which has some general limitations, see the "Limitations for camera unit" section.

**NOTE**
The function uses the car's radar unit, which has some general limitations, see the section "Limitations for radar unit".

### Related information
- Steering assistance at risk of collision (p. 382)
- Speed-dependent steering force (p. 278)

### Steering assistance upon risk of rear-end collision*

The subfunction can help a distracted driver who does not notice that the car is about to leave its own lane while an oncoming vehicle is approaching at the same time, either from behind or in the blind spot.

The function can assist by steering the car back to its own lane.

1. Other vehicle in the blind spot
2. Your car

If the car is about to leave its own lane while another vehicle is in the blind spot, or another vehicle is approaching rapidly in an adjacent lane at the same time, the function can help the driver to steer the car back into its own lane.

The function can even assist if the driver intentionally changes lanes using direction indicators without noticing that another vehicle is approaching.

The function is active within the speed range 60-140 km/h (37-87 mph) on roads with clearly visible lane markings/lines.

After automatic engagement, the driver display indicates that this has occurred via a text message:
- Collision avoidance assistance
  - Automatic intervention

### WARNING
- The "Steering assistance at risk of rear-end collision" subfunction is supplementary driver support intended to improve driving safety – it cannot handle all situations in all traffic, weather and road conditions.
- Steering assistance is only activated if there is a high risk of collision – you must therefore never wait for the function to intervene.
- The function is not a substitute for the driver’s attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.
Activating/deactivating Steering assistance on risk of rear-end collision*

The function can be selected - the driver can choose to have it On or Off.
Proceed as follows to switch it off:

1. Select Settings ➔ My Car ➔ IntelliSafe in the centre display's top view.
2. Deselect Collision avoidance assistance. > The function is then disengaged.

**NOTE**

When the Collision avoidance assistance function is deactivated, all subfunctions are switched off:

- Steering assistance at risk of road departure
- Steering assistance at risk of oncoming collision
- Steering assistance at risk of rear-end collision*

Even though it is possible to deactivate the function, it is advisable for the driver to always have it activated since it improves driving safety in most cases.

Related information

- Steering assistance at risk of collision (p. 382)

Limitations for steering assistance upon risk of rear-end collision

In certain situations the function may have limited functionality and fail to intervene in the following cases, for example:

- for small vehicles, such as motorcycles
- if the majority of the car has steered into the adjacent lane
- on roads/in lanes with unclear or non-existent lane markings
- outside the speed range 60-140 km/h (37-87 mph)
- when the power steering works at reduced power - e.g. during cooling due to overheating (see section "Speed-dependent steering force").

Other demanding situations can include:

- road works
- winter road conditions
- narrow roads
- poor road surface
- a very “sporty” driving style
- poor weather with reduced visibility.

In these demanding situations, the function may have difficulty helping the driver correctly. In such cases it is recommended to switch off this function.

* Option/accessory.
NOTE
The function uses the car’s camera unit, which has some general limitations, see the "Limitations for camera unit" section.

NOTE
The function uses the car’s radar unit, which has some general limitations, see the section "Limitations for radar unit".

In addition to the camera and radar unit, the function uses the car’s rear-facing radar, which has certain general limitations that a driver should be aware of - see supplementary information in the section "Limitations for BLIS".

Symbols and messages for steering assistance upon risk of collision
A number of symbols and messages regarding the function can be shown on the driver display. The following table shows some examples.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Message</th>
<th>Specification</th>
</tr>
</thead>
</table>
| ![Symbol](image) | Collision avoidance assistance  
Automatic intervention | When the function is activated, a message is shown to the driver indicating that the system has been activated. |
| ![Symbol](image) | Windscreen sensor  
Sensor blocked, see Owner's manual | The ability of the camera to scan the roadway in front of the car is reduced. |

A text message can be cleared by briefly pressing the button, located in the centre of the steering wheel's right-hand keypad.

If a message remains: Contact a workshop – an authorised Volvo workshop is recommended.

Related information
- Steering assistance at risk of collision (p. 382)
Park Assist*

The Park Assist Pilot function can assist the driver when manoeuvring in tight spaces by indicating the distance to obstacles through acoustic signals combined with a graphic in the centre display.

Screen view showing obstacle zones and sensor sectors.

The centre display shows an overview of the relationship between the car and detected obstacles.

The highlighted sector indicates the location of the obstacle. The closer the car symbol is to a highlighted sector box, the shorter the distance between the car and detected obstacle.

The shorter the distance to the obstacle, the faster the signal sounds. Other sound from the audio system is muted automatically.

The acoustic signal for obstacles ahead and to the sides is active when the car is moving but stops after the car has been stationary for approx. 2 seconds. The acoustic signal for obstacles behind is also active when the car is stationary.

At a distance within 30 cm (1 ft) from an obstacle behind or in front of the car, the tone is constant and the active sensor’s field closest to the car symbol is filled.

The volume of the parking assistance signal can be adjusted while the signal is sounding by means of the [>II] knob on the centre console. Adjustment can also be performed in the top view’s Settings menu option.

**NOTE**

- Acoustic warnings are only given for objects directly on the vehicle’s route.

**WARNING**

- The Park Assist function is supplementary driver support intended to facilitate driving and make it safer – it cannot handle all situations in all traffic, weather and road conditions.
- The parking sensors have blind spots where obstacles cannot be detected.
- Be particularly aware of people and animals near the car.
- The Park Assist system is not a substitute for the driver’s attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

- Recommended Park Assist Pilot maintenance (p. 394)
- Symbols and messages for Park Assist Pilot (p. 395)

* Option/accessory. 391
Park Assist Pilot front, rear and along the sides

Park Assist Pilot has different parameters depending on which part of the car is approaching an obstacle.

Backwards

NOTE: The illustration is schematic - details may vary depending on car model.

The sensors for reverse are activated if the car rolls backward without a gear engaged or when the gear lever is moved to reverse position.

The measuring range starts approx. 1.5 metres (5 ft) behind the car.

When reversing with a hitched trailer, parking assistance backward is deactivated automatically.

Along the sides

Parking assistance side sensors are activated automatically when the engine is started. They are active at speeds below 10 km/h (6 mph).

The measuring range starts approx. 30 cm (1 ft) from the sides. The acoustic signal for obstacles on the sides comes from the side loudspeakers.

Forwards

NOTE: The illustration is schematic - details may vary depending on car model.

The front parking assistance sensors are activated automatically when the engine is started. The front sensors are active at speeds below 10 km/h (6 mph).

The measuring range starts approx. 80 cm (2.5 ft) in front of the car.

NOTE

Parking assistance is deactivated when the parking brake is applied or P mode is selected in a car with an automatic gearbox.
When auxiliary lamps are fitted: Remember that these must not obscure the sensors - the auxiliary lamps may then be perceived as an obstacle.

Related information
- Park Assist* (p. 391)

Activating/deactivating Park Assist Pilot
The Park Assist Pilot function can be activated/deactivated.

On/Off
The front and side parking assistance sensors are activated automatically when the engine is started. The rear sensors activate if the car rolls backwards or if reverse gear is engaged.

The function is activated/deactivated in function view in the centre display.

- Tap on the Park Assist button in the function view.
  - Park Assist Pilot is activated/deactivated, a GREEN/GREY indicator is displayed in the button.

In cars equipped with a park assist camera, Park Assist Pilot can also be activated/deactivated from the relevant camera view.

Related information
- Park Assist* (p. 391)

Limitations of Parking assistance
The Parking Assistance System cannot detect everything in all situations and may therefore have limited functionality in some cases.

A driver should be aware about the following examples of Park Assist Pilot's limitations:

**WARNING**
Pay additional attention while reversing when this symbol is shown if a trailer, bicycle rack or similar is mounted and electrically connected to the car.

The symbol indicates that the parking assistance sensors rearward are switched off and will not warn of any obstacles.
**DRIVER SUPPORT**

**IMPORTANT**
Objects e.g. chains, thin glossy poles or low barriers may be in the "signal shadow" and are then temporarily not detected by the sensors - the pulsating tone may then unexpectedly stop instead of changing over to the expected constant tone.

The sensors cannot detect high objects, such as projecting loading docks.

- In such situations, pay extra attention and manoeuvre/reposition the car particularly slowly or stop the current parking manoeuvre - there may be a high risk of damage to vehicles or other objects since information from the sensors is not always reliable in such situations.

**IMPORTANT**
In certain conditions the parking assistance system may produce incorrect warning signals that are caused by external sound sources with the same ultrasonic frequencies that the system works with.

Examples of such sources include horns, wet tyres on asphalt, pneumatic brakes, exhaust noises from motorcycles, etc.

**NOTE**
Since a towbar is configured with the car's electrical system, towbar protrusion is included when the function measures the distance to an object behind the car.

**Related information**
- Park Assist* (p. 391)

**Recommended Park Assist Pilot maintenance**
For the Park Assist Pilot function to work optimally, its sensors must be cleaned regularly with water and car shampoo.

**NOTE**
Dirt, ice and snow covering the sensors may cause incorrect warning signals, reduced or no function.

**Related information**
- Park Assist* (p. 391)

114NOTE: The illustration is schematic - details may vary depending on car model.
Symbols and messages for Park Assist Pilot
Symbols and messages for Park Assist Pilot can be shown in the driver display and/or the centre display.
The following table shows some examples.

<table>
<thead>
<tr>
<th>Symbol</th>

Parking cameras' camera views

The function can display a composite 360° view and separate views for each of the four cameras: rear, front, left or right camera view.

360° view*

The "field of vision" of the parking cameras with approximate coverage area.

The 360° view function activates all parking cameras, whereupon the four sides of the car are shown simultaneously in the centre display, which helps the driver to observe what is around the car when manoeuvring at slow speeds.

From the 360° view, each camera view can be activated separately:

- Press the screen for the desired "field of vision" of the camera, e.g. on the surface in front of/above the front camera.

A camera symbol on the centre display's car symbol indicates which of the cameras is active.

If the car is also equipped with Park Assist System* then distance to detected obstacles is illustrated with fields in different colours.

The cameras can be activated automatically or manually, see the section "Starting the Park assist camera".

* Option/accessory.
The backwards-facing camera\textsuperscript{118} is fitted above the registration plate.

The backward-facing camera shows a wide area behind the car. For certain models, part of the bumper can be seen as well as the towbar in some cases.

Objects shown in the centre display may appear slightly tilted — this is normal.

---

**Forwards**

The forwards parking camera\textsuperscript{119} is located in the grille.

The front camera can be helpful on an exit road with limited visibility to the sides, e.g. when there are high hedges. It is active at speeds up to 25 km/h (16 mph) - following which, the front camera is switched off.

If the car does not reach 50 km/h (30 mph) and the speed falls below 22 km/h (14 mph) within 1 minute after the forward-facing camera has been extinguished, the camera is reactivated.

---

**The sides**

The side cameras\textsuperscript{119} are positioned in each door mirror.

The side cameras can show what is along each side of the car.

**Related information**

- Park assist camera\textsuperscript{*} (p. 396)

---

\textsuperscript{118}NOTE: The illustration is schematic - details may vary depending on car model.

\textsuperscript{119}NOTE: The illustration is schematic - details may vary depending on car model.
**Park assist lines for parking camera**

The Park assist cameras indicate the position of the car in relation to its surroundings by displaying lines on the screen.

The Park assist cameras indicate the position of the car in relation to its surroundings by displaying lines on the screen. The lines on the screen are projected as if they were at ground level behind the car and respond directly to steering wheel movements, showing the driver the path the car will take - also when the car is turning.

These park assist lines include the car's most protruding parts, e.g. towbar, door mirrors and corners.

**Example**

Example of park assist lines.

Park assist lines show the intended route for the car's external dimensions with the current steering wheel angle - this facilitates parallel parking, reversing into tight spaces and when connecting a trailer.

The lines on the screen are projected as if they were at ground level behind the car and respond directly to steering wheel movements, showing the driver the path the car will take - also when the car is turning.

These park assist lines include the car's most protruding parts, e.g. towbar, door mirrors and corners.

**NOTE**

- When reversing with a trailer which is not connected electrically to the car, the park assist lines on the display show the route the car will take - not the trailer.
- The screen shows no park assist lines when a trailer is connected electrically to the car's electrical system.
- Park assist lines are not shown when zooming in.

**IMPORTANT**

- Remember, that with the rear camera view selected, the monitor only displays the area behind the car. Be aware of the sides and front of the car when manoeuvring in reverse.
- The same applies vice versa - note what happens to the rear parts of the car when the front camera view is selected.
- Note that the park assist lines show the **shortest** route. Therefore, pay extra attention to the car's sides so that they do not go against/over something when the steering wheel is turned when driving forward or that the front sweeps against/over something when the steering wheel is turned when reversing.

---

120 The figure is schematic - parts may vary depending on car model.
**Park assist lines in 360° view**

With the 360° view, park assist lines are shown behind, in front of and at the side of the car (depending on the direction of travel):

- When driving forwards: Front lines
- When reversing: Side lines and reversing lines.

With front or rear camera selected, the park assist lines appear regardless of the car’s direction of travel.

With one side camera selected, the park assist lines only appear when reversing.

**Towbar assist line**

The camera can facilitate connecting up to a trailer by showing an assist line representing the towbar's intended "path" to the trailer.

1. Press **Towbar** (1).
   > The park assist lines for the towbar's intended "path" appear - the car's park assist lines disappear simultaneously.
   
   Park assist lines for both car and towbar cannot be shown at the same time.

2. Press **Zoom** (2) when a more precise manoeuvring is required.
   > The camera view zooms in.

**Related information**

- Park assist camera* (p. 396)

---

120The figure is schematic - parts may vary depending on car model.
Sensor fields from Park Assist Pilot for parking camera

If the car is equipped with Parking assistance then the distance is shown in the 360° view with coloured fields for each sensor that registers an obstacle.

Sensor fields backwards and forwards

The fields for the front and reversing sensors change colour as the distance to the obstacle decreases — from yellow through orange to red.

<table>
<thead>
<tr>
<th>Colours of front and reversing fields</th>
<th>Distance in metres (feet)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yellow</td>
<td>0,6-1,5 (2,0-4,9)</td>
</tr>
<tr>
<td>Orange</td>
<td>0,4-0,6 (1,3-2,0)</td>
</tr>
<tr>
<td>Red</td>
<td>0-0,4 (0-1,3)</td>
</tr>
</tbody>
</table>

Sensor field to the sides

The side fields are only shown in orange.

<table>
<thead>
<tr>
<th>Colour of side fields</th>
<th>Distance in metres (feet)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Orange</td>
<td>0-0,3 (0-1,0)</td>
</tr>
</tbody>
</table>

Related information

- Park assist camera* (p. 396)

Starting the park assist camera

The park assist camera starts automatically when reverse gear is engaged or manually with one of the centre display’s function buttons.

Camera view when reversing

When reverse gear is engaged, the screen shows the 360° view if it or any of the side views was the last used camera view, otherwise the rear view is shown.

Camera view for manual camera start

Start the parking camera with this button in the centre display's function view.

The screen then initially shows the last used camera view. However, after each engine start, the previously shown side view is replaced by the 360° view and the previously shown zoomed rear view is replaced by the rear view.

Automatic deactivation of camera

The front view extinguishes at 25 km/h (16 mph) to avoid distracting the driver - it reactivates automatically if the speed drops to 22 km/h (14 mph) within 1 minute, on the condition that the speed has not exceeded 50 km/h (31 mph).

Other camera views are extinguished at 15 km/h (9 mph) and not reactivated.

The figure is schematic - parts may vary depending on car model.

---

* Option/accessory.
Related information
- Park assist camera* (p. 396)

Limitations for park assist camera
The park assist camera cannot detect everything in all situations and may therefore have limited functionality.

A driver should be aware about the following examples of the park assist camera's limitations:

**WARNING**
Pay additional attention while reversing when this symbol is shown if a trailer, bicycle rack or similar is mounted and electrically connected to the car.

The symbol indicates that the parking assistance sensors rearward are switched off and will not warn of any obstacles.

**NOTE**
A bike carrier or other accessory mounted on the rear of the car could obscure the camera's view.

Blind sectors
There are "blind" sectors between the cameras' fields of vision.

In 360° view obstacles/objects can "vanish" in the gaps between the individual cameras.

**WARNING**
Pay attention to the possibility that, even if it only looks like a relatively small part of the image is obscured, a relatively large sector could be hidden from view. An obstacle could thereby go undetected until the car is very close to it.
Defective camera

If a camera sector is black and contains this symbol then it means that the camera is out of order.

The following illustration shows an example.

The car’s left-hand camera is out of order.

Black camera sector

A black camera sector is also shown in the following instances, but then without the symbol for defective camera:

- open door
- open boot lid
- folded-in door mirror.

Light conditions

The camera image is adjusted automatically according to prevailing light conditions. Because of this, the image may vary slightly in brightness and quality. Poor light conditions can result in reduced image quality.

Related information

- Park assist camera* (p. 396)

Recommended parking camera maintenance

The parking cameras positioned beside the rear number plate holder, in the grille and in both door mirrors need a certain amount of maintenance.

Clean camera lenses regularly with lukewarm water and car shampoo - be careful not to scratch the lenses.

NOTE

Keep the camera lens clear of dirt, snow and ice to ensure optimum function. This is particularly important in poor light.

Related information

- Park assist camera* (p. 396)
**Symbols and messages for Park assist camera**

Symbols and messages for Park assist camera can be shown in the driver display and/or the centre display. The following table shows examples.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Message</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Symbol]</td>
<td>The rearward parking assistance sensors are <strong>deactivated</strong>, so there are no acoustic warnings and field marks for obstacles/objects.</td>
<td></td>
</tr>
<tr>
<td>![Symbol]</td>
<td>The camera is disengaged.</td>
<td></td>
</tr>
<tr>
<td>Park Assist System Sensors blocked, cleaning needed</td>
<td>One or more of the function's sensors are blocked - check and correct as soon as possible.</td>
<td></td>
</tr>
<tr>
<td>Park Assist System Unavailable Service required</td>
<td>The system does not function as it should. A workshop should be contacted - an authorised Volvo workshop is recommended.</td>
<td></td>
</tr>
</tbody>
</table>

A text message can be cleared by briefly pressing the **button,** located in the centre of the steering wheel's right-hand keypad. If a message remains: Contact a workshop – an authorised Volvo workshop is recommended.

**Related information**

- Park assist camera* (p. 396)
Park Assist Pilot*  
Park Assist Pilot (PAP\(^{122}\)) helps the driver to park in or leave a parking space.

PAP first checks if a space is large enough and if so steers the car into the space.

The centre display indicates with symbols, graphics and text the various operations to be carried out and when to do so.

**WARNING**

- The PAP function is supplementary driver support intended to facilitate driving and make it safer – it cannot handle all situations in all traffic, weather and road conditions.
- Be particularly aware of people and animals near the car.
- PAP is not a substitute for the driver's attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

**NOTE**

The PAP function measures the space and steers the car - the driver's task is to:

- keep a close watch around the car
- follow the instructions in the centre display
- select gear (reverse/forward) - a "ping" sound indicates when the driver should change gear
- control and maintain a safe speed
- brake and stop.

**Related information**

- Parking variants with Park Assist Pilot
- Parking with Park Assist Pilot
- Leaving a car park with Park Assist Pilot
- Limitations of Park Assist Pilot* (p. 410)
- Recommended Park Assist Pilot maintenance (p. 411)
- Messages for Park Assist Pilot* (p. 412)

---

\(^{122}\)Park Assist Pilot
\(^{123}\)Park Assist Pilot

---

**Parking variants with Park Assist Pilot**

Park Assist Pilot PAP\(^{123}\) can be used for the following different parking situations.
**Parallel parking**

1. Identify and measure the parking space.
2. Reverse the car into the space.
3. Position the car in the space by driving forward/backward.

Using the Park Out function, a parallel-parked car can also be assisted by PAP to leave the parking space - see the heading "Leaving a parking space" in the section "Parking with Park Assist Pilot".

**Perpendicular parking**

1. Identify and measure the parking space.
2. Reverse the car into the space and then position in the space by driving forward/backward.

**Parking with Park Assist Pilot**

Park Assist Pilot (PAP) helps the driver park via three steps. The function can also help the driver to leave a parking space.

**NOTE**

- keep a close watch around the car
- follow the instructions in the centre display
- select gear (reverse/forward) - a "ping" sound indicates when the driver should change gear
- control and maintain a safe speed
- brake and stop.

A perpendicular-parked car cannot be assisted by the PAP Park Out function to leave a parking space - the function must only be used for a parallel-parked car.

**Related information**

- Park Assist Pilot* (p. 405)

---

124 Park Assist Pilot

* Option/accessory.
NOTE
The distance between the car and parking spaces should be 0.5-1.5 metres (1.6-5.0 ft) while PAP is searching for a parking space.

Parking
PAP parks the car using the following steps:
1. A parking space is identified and measured.
2. The car is reversed into the space.
3. The car is positioned into the space - the system may then request that the driver changes gear.

Finding and measuring parking spaces
The function can be activated in the centre display's function view.
It can also be accessed from the camera views.

Principle for parallel parking.

Principle for perpendicular parking.

Proceed as follows:
1. Drive no faster than 30 km/h (20 mph) for parallel parking or 20 km/h (12 mph) for perpendicular parking.

2. Tap on the Park In button in the function view or in the camera view.
> PAP searches for a parking space and checks whether it is big enough.

3. Be prepared to stop the car when the graphic and message on the centre display state that a suitable parking space has been found.
> A pop-up window is shown.

4. Select Parallel parking or Perpendicular parking and select reverse gear.

NOTE
PAP searches the area for parking, displays instructions and guides the car in on its passenger side. But if required the car can also be parked on the driver's side of the street:
- Activate the direction indicator to the driver's side - then the system searches for a parking space on that side of the car instead.
Perform the following to reverse the car into the parking space:

1. Check that the area behind the car is clear, then engage reverse gear.
2. Reverse slowly and carefully without touching the steering wheel - and no faster than 7 km/h (4 mph).
3. Be prepared to stop the car when instructed by the graphic and message on the centre display.

**NOTE**
- Keep your hands away from the steering wheel when the PAP function is activated.
- Make sure that the steering wheel is not hindered in any way and can rotate freely.
- To achieve optimum results - wait until the steering wheel is fully turned before starting to drive backward/forward.

Proceed as follows:

1. Move the gear selector into the D position, wait until the steering wheel has been turned and drive slowly forward.
2. Be prepared to stop the car when instructed by the graphic and message on the centre display.

3. Select reverse gear and drive slowly backwards.

4. Be prepared to stop the car when instructed by the graphic and message on the centre display.

The function is deactivated automatically and the graphics and message show that parking is complete. It may be necessary for the driver to correct the car's position. Only the driver can determine whether the car is properly parked.

**IMPORTANT**
The warning distance is shorter when the sensors are used by PAP compared with when Park Assist uses the sensors.

**Related information**
- Park Assist Pilot* (p. 405)

---

**Leaving a car park with Park Assist Pilot**
The function Park Out can also help the driver to leave a parking space.

**NOTE**
When leaving a parking space, the Park Out function must only be used for a parallel-parked car - it does not work for a perpendicular-parked car.

The Park Out function is activated in the centre display's function view or in the camera view.

Proceed as follows:
1. Tap on the Park Out button in the function view or in the camera view.
2. Use the direction indicator to select the direction in which the car should leave the parking space.
3. Be prepared to stop the car when instructed by the graphic and message on the centre display - follow the instructions in the same way as for the parking procedure.

Note the steering wheel can "spring" back when the function is completed - the driver may then need to turn the steering wheel back to the maximum steering angle in order to leave the parking space.

If PAP considers that the driver can leave the parking space without any extra manoeuvring then the function will be stopped, even if the driver may consider that the car is still in the parking space.

**Related information**
- Park Assist Pilot* (p. 405)
Limitations of Park Assist Pilot*

The Park Assist Pilot (PAP) function cannot detect everything in all situations and may therefore have limited functionality.

**WARNING**
- The PAP function is supplementary driver support intended to facilitate driving – it cannot handle all situations in all traffic, weather and road conditions.
- Be particularly aware of people and animals near the car.
- Bear in mind that the front of the car may swing out towards oncoming traffic during the parking manoeuvre.
- Objects situated higher than the sensor detection area are not included when calculating the parking manoeuvre, which could cause PAP to swing into the parking space too early – such parking spaces should be avoided for this reason.
- PAP is not a substitute for the driver’s attention and judgement. The driver is always responsible for ensuring the car is driven in a safe manner, at the appropriate speed, with an appropriate distance to other vehicles, and in accordance with current traffic rules and regulations.

A driver should be aware about the following examples of Park Assist Pilot limitations:

**Parking is discontinued**
A parking sequence will be discontinued:
- if the driver moves the steering wheel
- if the car is driven too quickly - above 7 km/h (4 mph)
- if the driver presses Cancel in the centre display
- when the anti-lock brakes or the Electronic stability control are engaged - e.g. when a wheel loses grip on a slippery road
- when the power steering works at reduced power - e.g. during cooling due to overheating (see section “Speed-dependent steering force”).

Where applicable, a message in the centre display states the reason for a parking sequence being discontinued.

**IMPORTANT**
Under certain circumstances, PAP is unable to find parking spaces - one reason for this may be the fact that there is interference with the sensors from external sound sources which emit the same ultrasound frequencies as those with which the system works.

Examples of such sources include horns, wet tyres on asphalt, pneumatic brakes and exhaust noises from motorcycles etc.

**NOTE**
Dirt, ice and snow covering the sensors will reduce their function and may prevent measurement.

**Driver responsibility**
The driver should bear in mind that the PAP is an aid – not an infallible, fully-automatic function. The driver must therefore be prepared to interrupt a parking step.

---

<sup>125</sup>Park Assist Pilot

* Option/accessory.
There are also a few details to bear in mind while parking, e.g.:

- The driver is always responsible for determining whether the space selected by PAP is suitable for parking.
- Do not use PAP if snow chains or a spare wheel are fitted.
- Do not use PAP if cargo items are protruding from the car.
- Heavy rain or snow may cause the system to measure the parking space incorrectly.
- During the search and check-measurement of the parking space, PAP may miss objects positioned deep in the parking space.
- Parking spaces on narrow streets are not always feasible, since the space required for manoeuvring may not be sufficient.
- Use approved tyres with the correct tyre pressure - this affects the ability of PAP to park the car.
- PAP bases itself on the locations of vehicles already parked nearby - if they are inappropriately parked, your own car’s tyres and wheel rims may be damaged by contact with the kerb.
- Perpendicular parking spaces may be missed or offered unnecessarily if one parked car is protruding more than other parked cars.

- PAP is designed for parking on straight streets - not sharp curves or bends. For this reason, make sure the car is parallel to the potential parking spaces when PAP measures the space.

**IMPORTANT**

Changing to another approved wheel rim and/or tyre dimension may involve a changed tyre circumference, which means that the PAP system’s parameters may then need to be updated. Consult a workshop - an authorised Volvo workshop is recommended.

**Related information**

- Park Assist Pilot* (p. 405)
- Speed-dependent steering force (p. 278)

Recommended Park Assist Pilot maintenance

For the Park Assist Pilot PAP function to work optimally, the parking assistance sensors must be cleaned regularly with water and car shampoo.

**NOTE**

Dirt, ice and snow covering the sensors may cause incorrect warning signals, reduced or no function.

**Related information**

- Park Assist Pilot* (p. 405)

126*Approved tyres* refers to tyres of the same type and make as those fitted new on delivery from the factory.
**Messages for Park Assist Pilot**

Messages for Park Assist Pilot PAP can be shown in the driver display and/or the centre display. The following table shows examples.

<table>
<thead>
<tr>
<th>Message</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Park Assist System</td>
<td></td>
</tr>
<tr>
<td>Sensors blocked, cleaning</td>
<td>One or more of the function's sensors are blocked - check and correct as soon as possible.</td>
</tr>
<tr>
<td>Park Assist System</td>
<td></td>
</tr>
<tr>
<td>Unavailable Service required</td>
<td>The system does not function as it should. A workshop should be contacted - an authorised Volvo workshop is recommended.</td>
</tr>
</tbody>
</table>

A text message can be cleared by briefly pressing the button, located in the centre of the steering wheel's right-hand keypad.

If a message remains: Contact a workshop – an authorised Volvo workshop is recommended.

**Related information**

- Park Assist Pilot* (p. 405)

---

127Park Assist Pilot
128NOTE: The illustration is schematic - details may vary depending on car model.
129Park Assist Pilot

* Option/accessory.
STARTING AND DRIVING
Starting the car
The car is started using the start knob in the tunnel console when the remote control key is in the passenger compartment.

WARNING
Before starting:
- Fasten the seatbelt.
- Adjust the seat, steering wheel and mirrors.
- Make sure that the brake pedal can be fully depressed.

The remote control key is not physically used when starting the car since it is equipped with support for keyless starting (Passive start).

To start the car:

1. The remote control key must be inside the car. For cars with Passive Start, the key needs to be located in the front part of the passenger compartment. With the option for keyless locking/unlocking* of the car, the key can be anywhere in the car.

2. Hold the brake pedal depressed\(^1\) fully. For cars with automatic gear changing, make sure that gear position \(P\) or \(N\) is selected. For cars with a manual gearbox, make sure that the gear lever is in neutral position or that the clutch pedal is depressed.

3. Turn the start knob clockwise and then release it. The control automatically returns to its starting position.

\(^1\) If the car is moving, the engine can be started by turning the start knob clockwise.

NOTE
For diesel-engined cars, there may be a slight delay before starting is initiated.

When the engine is started the starter motor works until the engine is started or until its overheating protection triggers.

NOTE
When the remote control key is positioned by the backup reader, make sure that there are no car keys, metal objects or electronic apparatus by the backup reader, (e.g. mobile phones, tablets, laptops or chargers). Several car keys close to one another by the backup reader may cause interference with each other.

If the Car key not found message is shown in the driver display when starting, place the remote control key by the backup reader. Then try to start the car again.

\* Option/accessory.
IMPORTANT
If the engine fails to start after 3 attempts - wait for 3 minutes before making a further attempt. Starting capacity increases if the battery is allowed to recover.

WARNING
Never remove the remote control key from the car while driving or during towing.

WARNING
Always take the remote control key out from the car when leaving the car and make sure the car’s electrical system is in ignition position 0 - especially if there are children in the car.

NOTE
The idling speed can be noticeably higher than normal for certain engine types during cold starting. This is done in order that the emissions system can reach normal operating temperature as quickly as possible, which minimises exhaust emissions and protects the environment.

Switching off the car
The car is switched off using the start knob in the tunnel console.

Start knob in the tunnel console.
To switch off the car:
– Turn the start knob clockwise and release it - the car is switched off. The control automatically returns to its starting position.

If the gear selector for cars with an automatic gearbox is not in position P or if the car rolls:
– Turn the knob clockwise and hold it until the car is switched off.

Related information
• Switching off the car (p. 415)
• Ignition positions (p. 416)
• Using jump starting with another battery (p. 461)
• Selecting ignition mode (p. 417)

### Ignition positions

The car's electrical system can be set in different levels/positions and in this way make the different functions available.

In order to facilitate the use of a limited number of functions with the engine switched off, the car's electrical system can be set in 3 different levels - 0, I and II. These levels are described with the denomination "ignition position" throughout the owner's manual.

The following table shows the functions available in each ignition position/level:

<table>
<thead>
<tr>
<th>Level</th>
<th>Functions</th>
</tr>
</thead>
</table>
| 0     | • Odometer, clock and temperature gauge are illuminated<sup>A</sup>.  
• The power seats* can be adjusted.  
• The power windows can be used.  
• The centre display is started and can be used<sup>A</sup>.  
• The infotainment system can be used<sup>A</sup>.  

The functions are time-controlled in this ignition position and are switched off automatically after a period of time. |
|-------|-----------|
| I     | • Sunroof, power windows, 12V socket in the passenger compartment, Bluetooth, navigation, phone, ventilation fan and windshield wipers can be used.  
• Power seats can be adjusted.  
• 12 V sockets in the cargo area can be used.  

**Power is taken from the battery in this ignition position.** |

* Option/accessory.
## Selecting ignition mode

The car’s electrical system can be set in different levels/positions and in this way make the different functions available.

### Selecting ignition position

- **Ignition position 0** - Unlock the car and store the remote control key inside the car.
- **Ignition position I** - Turn the start knob clockwise and release it. The control automatically returns to its starting position.
- **Ignition position II** - Turn the start knob clockwise and hold it in position for approx. 5 seconds. Then release the knob, which automatically returns to its starting position.
- **Back to ignition position 0** - To return to ignition position 0 from position I and II - Turn the start knob clockwise and release. The control automatically returns to its starting position.

### Related information

- Starting the car (p. 414)
- Switching off the car (p. 415)
- Ignition positions (p. 416)
- Ignition positions (p. 416)
- Adjusting the steering wheel (p. 192)
- Using jump starting with another battery (p. 461)

### NOTE

To reach level I or II without starting the engine - do not depress the brake pedal, or the clutch pedal for cars with manual gear changing, when these ignition positions are to be selected.
Alcohol lock*

The function of the alcohol lock is to prevent the car from being driven by individuals under the influence of alcohol. Before the engine can be started the driver must take a breath test that verifies that he/she is not under the influence of alcohol. Alcohol lock calibration takes place in accordance with each market's limit value in force for driving legally.

The car has an interface for the electrical connection of the different makes and models of alcohol lock recommended by Volvo. The interface facilitates alcohol lock connection, and gives the option of an integrated function including messages related to the alcohol lock in the car’s main display. For information about a specific alcohol lock, please refer to the owner’s manual from the respective alcohol lock manufacturer.

**WARNING**

The alcohol lock is an aid and does not exempt the driver from responsibility. It is always the responsibility of the driver to be sober and to drive the car safely.

**Related information**

- Bypass of the alcohol lock* (p. 418)
- Before starting the engine with the alcohol lock (p. 419)
- Starting the car (p. 414)
- Ignition positions (p. 416)

**Bypass of the alcohol lock***

In the event of an emergency situation or the alcohol lock is out of order, it is possible to bypass the alcohol lock in order to drive the car.

For deactivation via the alcohol lock, see the separate instructions for that specific lock.

**Activating the bypass function (Bypass)**

```
<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>All bypass activation is logged and saved in the memory in the alcohol lock's control unit. It is not possible to undo a bypass.</td>
</tr>
</tbody>
</table>
```

The message, **Blow into alcolock Bypass instead?**, is shown in the screen:

- If "Cancel/Yes" is shown - select bypass by pressing the right arrow button on the steering wheel's right-hand keypad and then on the O button.
- If "Yes" is shown - select bypass by pressing the O button.

The alcohol lock is now bypassed and the car can be started.

The number of bypasses possible before service is required is selected during alcohol lock installation.
**Before starting the engine with the alcohol lock**

The alcohol lock is activated automatically and is then ready for use when the car is opened.

**To bear in mind**

In order to obtain correct function and as accurate a measurement result as possible:

- Avoid eating or drinking approx. 5 minutes before the breath test.
- Avoid excess windscreen washing - the alcohol in the washer fluid may result in an incorrect measurement result.

**NOTE**

After a completed period of driving, the engine can be restarted within 30 minutes without a new breath test.

**Related information**

- Bypass of the alcohol lock* (p. 418)
- Alcohol lock* (p. 418)
- Starting the car (p. 414)
- Ignition positions (p. 416)

**Brake functions**

The car's brakes are used to reduce the speed or prevent the car from rolling.

Besides the foot brake and parking brake, the car is equipped with several automatic brake assist functions. These can assist the driver by not needing to keep his/her foot on the brake pedal when stationary at a traffic light, when starting on an uphill gradient or when driving on a downhill gradient.

Depending on the car’s equipment, the following auto braking functions are available:

- Automatic braking when stationary (Auto Hold)
- Hill start assist (Hill Start Assist)
- Auto braking after a collision
- City Safety

**Related information**

- Foot brake (p. 419)
- Parking brake (p. 422)
- Automatic braking when stationary (p. 425)
- Auto braking after a collision (p. 427)
- Help when starting on a hill (p. 426)
- City Safety™ (p. 344)

**Foot brake**

The foot brake is part of the brake system. The car is equipped with two brake circuits. If a brake circuit is damaged, the brake pedal will engage deeper. Higher pressure on the pedal will therefore be needed to produce the normal braking effect.

The driver's brake pedal pressure is assisted by a brake servo.

**WARNING**

The brake servo only works when the engine is running.

If the foot brake is used when the engine is switched off then the pedal will feel stiff and a higher pedal pressure must be used to brake the car.

In very hilly terrain or when driving with a heavy load the brakes can be relieved by using engine braking in manual gearshift mode. Engine braking is most efficiently used if the same gear is used downhill as up.

**Anti-lock braking system**

The car has anti-lock brakes, Anti-lock Braking System (ABS), which can prevent the wheels from locking while braking and allows maintained steering control. Vibration may be felt in the brake pedal when this is engaged and this is normal.
A short test of the ABS system is made automatically after the car has been started when the driver releases the brake pedal. A further automatic test of the system may be made at low speed. The test may be felt as pulses in the brake pedal.

### Symbols in the driver display

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Exclamation Mark]</td>
<td>Check the brake fluid level. If the level is low, fill with brake fluid and check for the cause of the brake fluid loss.</td>
</tr>
<tr>
<td>![ABS]</td>
<td>Constant glow for 2 seconds when the engine is started: Automatic function check. Constant glow for more than 2 seconds: Fault in the ABS system. The car's normal brake system is still working, but without the ABS function.</td>
</tr>
</tbody>
</table>

### WARNING

If both the warning lamps for brake fault and ABS fault illuminate at the same time, a fault has occurred in the brake system.

- If the level in the brake fluid reservoir is normal at this stage, drive carefully to the nearest workshop and have the brake system checked - an authorised Volvo workshop is recommended.
- If the brake fluid is below the MIN level in the brake fluid reservoir, do not drive further before topping up the brake fluid. The reason for the loss of brake fluid must be investigated.

### Brake assistance

The brake assist system, BAS (Brake Assist System), helps to increase brake force during braking, thereby shortening the braking distance. The system detects the way in which the driver brakes and increases brake force where necessary. The brake force can be boosted up to the level when the ABS system is engaged. The function is suspended when the pressure on the brake pedal decreases.

**NOTE**

When BAS is activated the brake pedal lowers slightly more than usual, depress (hold) the brake pedal as long as necessary.

When the brake pedal is released, all braking ceases.

### Related information

- Brake assistance (p. 420)
- Automatic braking when stationary (p. 425)
- Help when starting on a hill (p. 426)
- Braking on wet roads (p. 421)
- Braking on gritted roads (p. 421)
- Brake system maintenance (p. 421)
- Brake lights (p. 158)

- Foot brake (p. 419)
Braking on wet roads
When driving for a prolonged period of time in heavy rain without braking, the braking effect may be delayed slightly when next using the brakes.

This may also be the case after a car wash. It is then necessary to depress the brake pedal more forcefully. You should therefore maintain a greater distance to the vehicles in front.

Brake the car firmly after driving on wet roads or using a car wash. This warms up the brake discs, enabling them to dry faster and protecting them against corrosion. Bear in mind the current traffic situation when braking.

Related information
- Foot brake (p. 419)
- Braking on gritted roads (p. 421)

Braking on gritted roads
When driving on salted roads, a layer of salt may form on the brake discs and brake linings.

This may extend braking distance. You should therefore maintain a greater safety distance to vehicles in front. In addition, make sure you do the following:
- Brake now and again to remove any layer of salt. Make sure that other road users are not put at risk by the braking.
- Gently depress the brake pedal after finishing driving and before starting your next trip.

Related information
- Foot brake (p. 419)
- Braking on wet roads (p. 421)

Brake system maintenance
Check brake system components regularly for wear.

To keep the car as safe and reliable as possible, follow the Volvo service intervals as specified in the Service and Warranty Booklet. New and replaced brake linings and brake discs do not provide optimal braking effect until they have been "worn in" for a few hundred kilometres (miles). Compensate for the reduced braking effect by depressing the brake pedal harder. Volvo recommends only fitting brake linings that are approved for your Volvo.

IMPORTANT
The wear on the brake system's components must be checked regularly.

Contact a workshop for information about the procedure or engage a workshop to carry out the inspection - an authorised Volvo workshop is recommended.

Related information
- Foot brake (p. 419)
Parking brake

The parking brake prevents the car from rolling away from stationary by means of mechanically locking/blocking two wheels.

The control for the parking brake is located in the tunnel console between the seats.

A faint electric motor noise can be heard when the electrically-operated parking brake is being applied. The noise can also be heard during the automatic function checking of the parking brake.

If the car is stationary when the parking brake is applied then it only acts on the rear wheels. If it is applied when the car is moving then the normal foot brake is used, i.e. the brake acts on all four wheels. Brake function changes over to the rear wheels when the car is almost stationary.

Related information

- Activating and deactivating the parking brake (p. 422)
- Parking on a hill (p. 424)
- In the event of a fault in the parking brake (p. 424)
- Automatic braking when stationary (p. 425)

Activating and deactivating the parking brake

Use the parking brake to prevent the car from rolling from stationary.

Activating the parking brake

1. Pull the control upward.
   > The symbol in the driver display illuminates when the parking brake is activated.
2. Check that the car is stationary.

Symbol in the driver display

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="P" alt="Symbol" /></td>
<td>The symbol is illuminated when the parking brake is activated. If the symbol flashes, it indicates a fault has occurred. Read the message in the driver display.</td>
</tr>
</tbody>
</table>
Automatic activation
The parking brake is activated automatically:

- if the Auto hold function (automatic braking when stationary) is activated and the car has been stationary for a longer time (5-10 minutes).
- when gear position P is selected on a steep hill.
- when the car is switched off and the setting for automatic activation of the parking brake is activated in the centre display.

Emergency brake
In an emergency, the parking brake can be activated when the car is in motion by pulling and holding up the control. Braking stops when the control is released, or if the accelerator pedal is depressed.

Deactivating the parking brake

Deactivate manually
1. Depress the brake pedal firmly.
2. Press the control down.
   > The parking brake releases and the symbol in the driver display extinguishes.

Deactivate automatically
1. Put the seatbelt on.
2. Depress the brake pedal firmly.
3. Start the car.
4. With automatic gearbox:
   Select gear position D or R and depress the accelerator pedal.
   With manual gearbox:
   Engage a suitable gear, release the clutch and depress the accelerator pedal.
   > The parking brake releases and the symbol in the driver display extinguishes.

NOTE
When the car is first started, the parking brake can be released automatically without the seatbelt fastened.

Related information
- Automatic parking brake activation setting (p. 424)
- In the event of a fault in the parking brake (p. 424)
- Parking brake (p. 422)
- Parking on a hill (p. 424)

2 Applies to automatic gearbox.
Automatic parking brake activation setting
Choose whether the parking brake is to be activated automatically when the car is switched off.
This choice is made in the settings menu in the centre display.
1. Press **Settings** in the top view.
2. Press **My Car → Parking Brake and Suspension** to select or deselect the function **Auto Activate Parking Brake**.

Related information
- Activating and deactivating the parking brake (p. 422)
- Parking brake (p. 422)

Parking on a hill
Always use the parking brake when parking on a hill.

![WARNING]
Always use the parking brake when parking on an inclined surface. Engaging a gear or the automatic transmission’s P position is not sufficient to hold the car stationary in all situations.

If the car is parked facing uphill:
- Turn the wheels **away from** the kerb.

If the car is parked facing downhill:
- Turn the wheels **towards** the kerb.

Heavy load uphill
A heavy load, such as a trailer, can cause the car to roll backward when the parking brake is released automatically on a steep incline. Avoid this by pulling the control upwards while driving the car away. Release the control when the engine achieves traction.

Related information
- Activating and deactivating the parking brake (p. 422)

In the event of a fault in the parking brake
Contact an authorised Volvo workshop if it is not possible to deactivate or activate the parking brake after several attempts.
An acoustic warning signal sounds when driving with the parking brake applied.
If the car has to be parked before a possible fault is rectified then the wheels must be turned as if parking on a hill and the gear selector must be in position P, or engage first gear if the car has a manual gearbox.

Low battery voltage
If the battery voltage is too low then the parking brake can neither be released nor applied. Connect a donor battery if the battery voltage is too low.

Replacing the brake linings
The rear brake linings must be replaced at a workshop due to the design of the electrically-operated parking brake - an authorised Volvo workshop is recommended.
### Symbols in the driver display

<table>

<td>Information message in driver display.</td>
</tr>
</tbody>
</table>

### Automatic braking when stationary

Automatic braking when stationary (Auto hold) means that the driver can release the brake pedal while maintaining braking effect when the car has stopped at traffic lights or a junction. When the car has stopped, the brakes are activated automatically. The function can use either foot brake or parking brake to hold the car stationary and it works on all gradients. When driving away, the brakes disengage automatically if the driver is wearing the seatbelt.

### Symbols in the driver display

<table>

### Related information

- Activating and deactivating the automatic brake at a standstill (p. 426)
- Foot brake (p. 419)
- Parking brake (p. 422)
- Help when starting on a hill (p. 426)

### NOTE

When braking to a standstill on an uphill or downhill slope, the brake pedal should be depressed a little harder before being released to ensure the car does not roll.

The parking brake is activated if:

- the car is switched off
- the driver's door is opened
- the driver's seatbelt is unbuckled
- the car has been stationary for a longer time (5-10 minutes).
The automatic brake function at a standstill is activated using the button in the tunnel console.

- Press the button in the tunnel console to activate or deactivate the function.
  > The indicator in the button illuminates when the function is activated. Activated function remains even when the car is started next time.

**Applicable when switching off**

If the function is active and holds the car with the foot brake (A-symbol illuminated) then the brake pedal must be depressed at the same time as the button is depressed in order to deactivate.

- The function remains deactivated until it is reactivated.
- When the function is deactivated, hill start assist (HSA) remains active to prevent the car from rolling backwards when starting on an uphill gradient.

**Related information**

- Automatic braking when stationary (p. 425)

**Help when starting on a hill**

Hill start assist, Hill Start Assist (HSA), prevents the car from rolling backwards when starting on an uphill gradient. When reversing uphill, it prevents the car from rolling forwards.

The function means that the pedal pressure in the brake system remains for several seconds while the driver’s foot is moved from brake pedal to accelerator pedal.

The temporary braking effect releases after several seconds or when the driver starts to drive away.

Hill start assist is available even if the function for automatic braking when stationary (Auto hold) is deactivated.

**Related information**

- Automatic braking when stationary (p. 425)
- Foot brake (p. 419)
Auto braking after a collision

In the event of a collision in which the activation level is reached for the pyrotechnic seatbelt tensioners or airbags, or if a collision with a large animal is detected, the car's brakes are automatically applied. This function is to prevent or reduce the effects of any subsequent collision.

After a serious collision there is a risk that it is no longer possible to control and steer the car. In order to avoid or mitigate a possible further collision with a vehicle or an object in the vehicle's path, the auto braking system is activated automatically and brakes the car in a safe manner.

Brake lights and hazard warning lights are activated during braking. When the car has stopped, the hazard warning lights continue to flash and the parking brake is applied.

If braking is not appropriate, e.g. if there is a risk of being hit by following traffic, the system can be overridden by the driver depressing the accelerator pedal.

The function assumes that the brake system is intact after the collision.

Brake assist is included in the Rear Collision Warning and Blind Spot Information safety systems.

Related information
- Rear Collision Warning (p. 356)
- BLIS* (p. 357)

Gearbox

The gearbox is part of the car's powertrain (power transmission) between engine and drive wheels. The function of the gearbox is to change the gear ratio depending on speed and power requirements.

There are two main types of gearbox, manual and automatic.

The manual gearbox has six gears. The automatic gearbox can have either eight gears or six gears depending on which engine the car is equipped with. The number of gear changes means that the engine's torque and power range can be used effectively.

It is also possible to select gears manually with the automatic gearbox. The driver display respectively shows which gear or gear position is currently in use.

IMPORTANT

To prevent damage to any drive system components, the working temperature of the gearbox is checked. If there is a risk of overheating, a warning symbol illuminates in the driver display and a text message is shown - follow the recommendation given.

Symbols in the driver display

If a fault should occur in the gearbox, the driver display shows a symbol and a message.

* Option/accessory.
Manual gearbox
With a manual gearbox, the driver selects a suitable gear manually, according to speed and power requirements at the time.

Changing gear

Neutral position (N)
The manual gearbox has six gears; the shifting pattern is shown on the gear lever.

- Depress the clutch pedal fully during each gear change.
- Take your foot off the clutch pedal between gear changes.

Reverse gear inhibitor
The reverse gear inhibitor hinders the possibility of mistakenly attempting to engage reverse gear during normal forward travel.

- Follow the gearing pattern on the gear lever and start from neutral position, N, before moving it to the R position.
- Engage reverse gear only when the car is stationary.

During parking

**WARNING**
Always apply the parking brake when parking on a slope - leaving the car in gear is not sufficient to hold the car in all situations.

Related information

</tr>
</tbody>
</table>

Related information
- Gear positions for automatic gearbox (p. 429)
- Manual gearbox (p. 428)
- Gear shift indicator* (p. 433)
Gear positions for automatic gearbox
With an automatic gearbox, the system chooses the gear so that driving is optimal. The gearbox also has a manual gearshift mode.

The driver display shows the gear position selected:

- **P**, R, N, D or M.

In manual gearshift mode, the gear being used is also shown.

**Gear positions**

**Park position - P**
The gearbox is mechanically blocked when the P position is engaged.

Select the P position when the car is parked or when starting the engine. The car must be stationary when the park position is selected.

To be able to move the gear selector from the park position, the brake pedal must be depressed and the ignition position must be II.

To park - first apply the parking brake and then select park position.

**WARNING**
Always use the parking brake when parking on an inclined surface. Engaging a gear or the automatic transmission's P position is not sufficient to hold the car stationary in all situations.

**NOTE**
The gear selector must be in P position to allow the car to be locked and alarmed.

**Reverse position - R**
Select position R to reverse. The car must be stationary when reverse position is selected.

**Neutral position - N**
No gear is engaged and the engine can be started. Apply the parking brake if the car is stationary with the gear selector in N position.

To be able to change from the neutral position to another gear position, the brake pedal must be depressed and the ignition position must be II.

**Drive position - D**
D is the normal driving position. Shifting up and down takes place automatically based on the level of acceleration and speed. The car must be stationary when changing gear from R position to D position.
Manual gearshift mode - M

The manual gearshift mode can be selected at any time while driving. The car engine-brakes when the accelerator pedal is released.

Select manual gearshift mode by moving the gear selector sideways from position D to the end position at “±”. The driver display shows which gear is engaged at the time.

- Press the gear selector forwards to “+” (plus) to change up one step and release it.
- Press the gear selector backwards to “−” (minus) to change down one step and release it.

The gearbox automatically shifts down if the speed decreases to a level lower than appropriate for the selected gear, in order to avoid jerking and stalling.

To return to automatic gear changing, press the gear selector sideways to the end position at D.

Related information
- Gear selector inhibitor (p. 432)
- Changing gear with steering wheel paddles* (p. 430)
- Kick-down function (p. 433)
- Gear shift indicator* (p. 433)

Changing gear with steering wheel paddles*

The steering wheel paddles are a complement to the gear selector and make it possible to change gear manually without releasing hands from the steering wheel.

Activating the steering wheel paddles

To be able to change gear with the steering wheel paddles they must first be activated:

- Pull one of the paddles toward the steering wheel.

> A figure in the driver display indicates current gear.

Driver display when changing gear with steering wheel paddles.

3 The figure is schematic - parts may vary depending on car model.

* Option/accessory.
In gear position M the steering wheel paddles are automatically activated.

Driver display when changing gear with steering wheel paddles in manual gearshift mode.

**Switch**

To change gear one step:

- Pull one of the paddles backwards - towards the steering wheel - and release.

1 "-": Selects the next lower gear.

2 "+": Selects the next higher gear.

A gear change occurs at each pull of the paddle provided that the engine speed does not leave the permitted range.

After each gear change the figure in the driver display changes to show the current gear.

**Deactivating the function**

**Manual deactivation in gear position D.**

- Deactivate the steering wheel paddles by pulling the right-hand paddle (+) toward the steering wheel and holding in place until the figure in the driver display for the current gear extinguishes.

**Automatic deactivation**

In gear position D the steering wheel paddles are deactivated after a short time if they are not used.

This is indicated by means of the figure for the current gear extinguishing. The exception is during engine braking - then the paddles are activated for as long as engine braking is in progress.

In gear position M there is no automatic deactivation.

**Related information**

- Gear positions for automatic gearbox (p. 429)
- Gear shift indicator* (p. 433)
Gear selector inhibitor
The gear selector inhibitor prevents accidental changing between different gear positions in an automatic gearbox.

There are two different types of gear selector inhibitor - mechanical and automatic.

Mechanical gear selector inhibitor
The gear selector can be moved forward and back freely between N and D. Other positions are locked with a latch that is released with the inhibitor button on the gear selector.

With the inhibitor button depressed the lever can be moved forwards or backwards between P, R, N and D.

Automatic gear selector inhibitor
The automatic gear selector inhibitor has special safety systems.

From park position - P
To be able to move the gear selector from the P position, the brake pedal must be depressed and the ignition position must be II.

From neutral position - N
If the gear selector is in the N position and the car has been stationary for at least 3 seconds (irrespective of whether the engine is running) then the gear selector is locked.

To be able to move the gear selector from the N position to another gear position, the brake pedal must be depressed and the ignition position must be II.

Related information
• Gear positions for automatic gearbox (p. 429)
• Deactivate automatic gear selector inhibitor (p. 432)

Deactivate automatic gear selector inhibitor
If there is no power to the car, the automatic gear selector inhibitor can nevertheless be disengaged.

1. Lift the rubber mat in the compartment in front of the gear selector. Locate the hole with a spring-loaded button in the bottom of the compartment.
2. Press a small screwdriver into the hole and hold.

If the car cannot be driven, e.g. due to a discharged battery, the gear selector must be moved to the N position so that the car can be moved.
Move the gear selector to position N and release the button.

4. Put the rubber mat back in place.

Related information
- Gear selector inhibitor (p. 432)
- Gear positions for automatic gearbox (p. 429)

**Kick-down function**

Kick-down is used when maximum acceleration is needed, such as for overtaking. When the accelerator pedal is pressed all the way to the floor (beyond the position normally regarded as full acceleration) a lower gear is immediately engaged. This is known as kick-down.

If the accelerator is released from the kick-down position, the gearbox automatically changes up.

**Safety function**

To prevent over-revving of the engine, the gearbox control program has a protective downshift inhibitor.

The gearbox does not permit downshifting/kick-down which would result in an engine speed high enough to damage the engine. Nothing happens if the driver still tries to shift down in this way at high engine speed – the original gear remains engaged.

On kick-down the car can shift down one or more steps at a time, depending in engine speed. The car shifts up when the engine has reached its maximum engine speed in order to prevent engine damage.

**Gear shift indicator**

The gear shift indicator in the driver display shows the current gear during manual gearshifting and when it is appropriate to engage the next gear for optimum fuel economy. For eco-driving during manual gear changing, it is important to drive in the right gear and to change gear in good time.

* Only possible with automatic gearbox.
STARTING AND DRIVING

**With automatic gearbox**
The gear shift indicator shows the current gear in the driver display and uses an up arrow to indicate when shifting to a higher gear is recommended.

**With manual gearbox**
An up-arrow indicates a recommended change to a higher gear, and a down-arrow a recommended change to a lower gear.

**Related information**
- Gear positions for automatic gearbox (p. 429)
- Manual gearbox (p. 428)
All-wheel drive*

All-wheel drive, AWD (All Wheel Drive), means that the car is driving all four wheels at the same time, which improves traction.

To achieve the best possible traction, the motive force is distributed automatically to the wheels with the best grip. The system continuously calculates the need for torque to the rear wheels, and can immediately redistribute up to half of the motor’s torque to the rear wheels.

All-wheel drive also has a stabilising effect at higher speeds. Under normal driving conditions, the majority of power is transmitted to the front wheels. When stationary, the all-wheel drive is always engaged in preparation for maximum traction during acceleration.

All-wheel drive characteristics vary depending on the selected drive mode*.

Related information
- Drive modes* (p. 435)
- Gearbox (p. 427)

Drive modes*

Selection of drive mode affects the car’s driving characteristics in order to enhance the driving experience and facilitate driving in special situations.

Using the drive modes it is possible to quickly have access to the car’s numerous functions and settings for different driving needs. The following systems are adapted to obtain the best possible driving characteristics in each respective drive mode:

- Steering
- Engine/gearbox⁵/all-wheel drive*
- Brakes
- Shock absorption
- Driver display
- Start/Stop function
- Climate settings

Select the drive mode that best suits the current driving conditions. Remember that not all drive modes are available in all situations.

Selectable drive modes

COMFORT
- This is the car’s normal mode.

When the car starts, it is in Comfort mode and the Start/Stop function is activated. These settings mean that the car feels comfortable, the steering is light, the shock absorption is soft and body’s movement is smooth.

This drive mode is the certification mode for carbon dioxide emissions.

ECO
- Adapt the car for more energy-efficient and environmentally-conscious driving with the Eco mode.

The drive mode means, for example, that the Start/Stop function is activated and the output of certain climate settings is reduced.

The driver display has an ECO gauge that facilitates fuel-efficient driving.

DYNAMIC
- Dynamic mode means that the car has sportier characteristics and faster response to accelerating.

The gear changes become faster and more distinct, and the gearbox prioritises a gear with greater traction.

Steering response is faster and shock absorption is harder⁶ which means that the body follows the roadway in order to reduce roll during cornering.

Start/Stop function is deactivated.

---

⁵ Applies to automatic gearbox.
⁶ Applies to Four-C.
**INDIVIDUAL**

- Adapting a drive mode according to individual preferences.

Select a drive mode to start from, and then adjust the settings according to the desired driving characteristics. These settings are saved in an individual driver profile.

An individual drive mode is only available if it is first activated in the centre display.

3. In **Presets**, select a drive mode to start from: **Eco**, **Comfort** or **Dynamic**.

   Possible adjustments apply to settings for:
   - **Driver Display**
   - **Steering force**
   - **Powertrain Characteristics**
   - **Brake Characteristics**
   - **Suspension Control**
   - **ECO Climate**
   - **Start/Stop**.

**Related information**

- Changing drive mode* (p. 437)
- Drive mode ECO (p. 437)
- Economical driving (p. 446)
- Start/Stop function (p. 440)
- All-wheel drive* (p. 435)

---

7 The figure is schematic - details may vary depending on car model or updated software.
Changing drive mode*

Change the drive mode using the control in the centre console. Select the drive mode that best suits the current driving conditions. Remember that not all drive modes are available in all situations.

To change drive mode:

1. Press the drive mode control DRIVE MODE. > A pop-up menu is opened in the centre display.
2. Roll the wheel upward or downward until the desired drive mode is highlighted.
3. Press the drive mode control or tap directly on the touch screen to confirm the selection. > The selected drive mode is indicated in the driver display.

If a drive mode is greyed-out in the pop-up menu then it cannot be selected.

Related information
- Drive modes* (p. 435)
- Activating and deactivating drive mode ECO with the function button (p. 439)

Drive mode ECO

Drive mode Eco optimises the car’s driving characteristics for more fuel efficient and environmentally-conscious driving. Use this drive mode to save fuel and the environment.

The following properties are adapted for Eco driving:
- Gearbox gearshift points*.
- Engine management and response from the accelerator pedal.
- The Eco Coast* freewheel function is activated and engine braking is deactivated when the accelerator pedal is released at speeds between 65 and 140 km/h (40 and 87 mph).
- Some of the climate control system’s settings work at reduced power or are deactivated.
- The driver display shows information in an ECO gauge which facilitates environmentally-conscious and fuel-efficient driving.

Free-wheel function Eco Coast*

The freewheel function Eco Coast means in practice that engine braking ceases, meaning in turn that the car’s kinetic energy is used to freewheel for longer distances. When the driver releases the accelerator pedal the gearbox is automatically

---

* Option/accessory.

---

* Only cars with automatic gearbox.
**STARTING AND DRIVING**

**disengaged from the engine whose speed is reduced to idling speed with reduced consumption.**

The function is best used where it is possible to freewheel a long way, e.g. roads with a slight downhill gradient or when there is a predictable speed reduction to freewheel into a zone with a lower speed limit.

**Activating the freewheel function**

The function is activated when the accelerator pedal is fully released, in combination with the following parameters:

- Drive mode Eco is activated.
- The gear selector is in **D** position.
- Speed within the range of approx. 65-140 km/h (40-87 mph).
- The road's downhill gradient is not steeper than approx. 6%.

The driver display shows **COASTING** when the freewheel function is being used.

**Limitations**

The freewheel function is not available if:

- Engine and/or gearbox are not at normal operating temperature.
- The gear selector is moved from the **D** position and the manual position.
- The speed is outside the range of approx. 65-140 km/h (40-87 mph).
- The road's downhill gradient is steeper than approx. 6%.
- Manual gear changing is performed with the steering wheel paddles*.

**Deactivating and switching off the freewheel function**

In certain situations it may be desirable to deactivate or switch off the function in order to use engine braking. Examples of such situations may be on steep downhill gradients or before an imminent overtaking manoeuvre - in order to be able to do it in the safest way possible.

Deactivate the freewheel function as follows:

- Actuate the accelerator or brake pedal.
- Move the gear selector to manual position.
- Changing gear with steering wheel paddles*.

Switch off the freewheel function as follows:

- Change drive mode*, or switch off the Eco drive mode in the function view.

Even without the freewheel function, it is possible to freewheel for short distances. This, in turn, reduces consumption. However, for the best fuel economy it is better to have the freewheel function activated and be able to freewheel for longer distances.

---

**Cruise control Eco Cruise**

When using the cruise control in the Eco drive mode, the car's acceleration and deceleration will be lower compared to other drive modes, which enables further fuel savings. This means that the car's speed can be slightly above or below the set speed.

- On a smooth road, the car's speed can deviate from the set speed when the cruise control is active and the car free-rolls.
- On a steep uphill slope, the car's speed drops until a downshift is made⁸, then reduced acceleration starts in order to achieve the set speed.
- On a downhill slope where the car free-rolls, the car's speed can be slightly above or below the set speed. The function uses normal engine braking to maintain the set speed. The foot brake is also used if necessary.

**Eco gauge in the driver display**

The ECO gauge indicates how fuel-efficient the driving is:

- With fuel-efficient driving, the gauge shows a low value with the pointer in the green zone.
- With non-fuel-efficient driving, e.g. during heavy braking or heavy acceleration, the gauge shows a high value.

---

⁸ Only cars with automatic gearbox.

* Option/accessory.
The ECO gauge also has an indicator to show how a reference driver would drive the car under the same driving conditions. This is indicated with the short pointer on the gauge.

ECO climate control
In the Eco drive mode, Eco climate control is activated automatically in the passenger compartment in order to reduce energy consumption.

**NOTE**
When the ECO function is activated, several parameters in the climate control system's settings are changed, and several electricity consumer functions are reduced. Certain settings can be reset manually, but full functionality is only regained by switching off the ECO function or adapting Individual* drive mode with full climate functionality.

In the event of difficulties due to misting, press the button for max. defroster which has normal functionality.

Related information
- Changing drive mode* (p. 437)
- Activating and deactivating drive mode ECO with the function button (p. 439)
- Drive modes* (p. 435)
- Economical driving (p. 446)
- Start/Stop function (p. 440)

Activating and deactivating drive mode ECO with the function button
Any car that is not equipped with a drive mode control in the tunnel console has a function button for Eco drive mode in the centre display function view.

The Eco mode is deactivated when the engine is switched off, and it must therefore be activated after each time the engine is started. The driver display shows ECO when the function is activated.

Selecting Eco drive mode in the centre display function view
- Press the Driving Mode ECO button to activate or deactivate the function.

> An indicator in the button illuminates when the function is activated.

Related information
- Drive mode ECO (p. 437)
- Changing drive mode* (p. 437)
- Drive modes* (p. 435)
**Start/Stop function**

With the Start/Stop function, the engine switches off temporarily when the car has stopped e.g. at traffic lights or in a traffic queue, and then starts again automatically when the journey is resumed.

The start/stop function reduces fuel consumption, which in turn contributes to reduced exhaust emissions.

The system makes it possible to adopt an environmentally-conscious driving style by allowing the car to engine auto-stop when possible.

**Related information**

- Driving with start/stop function (p. 440)
- Conditions for the Start/Stop function (p. 442)
- Drive modes* (p. 435)

**Driving with start/stop function**

The Start/Stop function temporarily switches off the engine when stationary and then restarts it automatically when the journey is resumed. The Start/Stop function is available when the engine is started and can be activated if certain conditions have been met. The driver display indicates whether the function is available, active or not available.

All of the car's normal systems such as lighting, radio, etc. work normally, even when the engine is auto-stopped. However, some equipment may have its output temporarily reduced, e.g. the climate control system's fan speed or extremely high volume on the audio system.

**Auto-stop**

The following is required for the engine to auto-stop:

- With automatic gearbox
  - Stop the car with the foot brake and then keep your foot on the brake pedal - the engine stops automatically.

- With manual gearbox
  - Declutch, set the gear lever in neutral position and release the clutch pedal - the engine stops automatically.

In drive mode Eco or Comfort9, the engine may auto-stop before the car is completely stationary.

With adaptive cruise control or Pilot Assist activated, the engine will auto-stop after approximately three seconds.

**Autostart**

The following is required for the engine to autostart:

---

9 Normal start mode.

* Option/accessory.
With automatic gearbox
- Release the brake pedal - the engine will autostart and you can continue driving. On an uphill gradient hill start assist (HSA) engages, which prevents the car from rolling backwards.
- When the Auto Hold function is activated, auto-start is delayed until the accelerator pedal is depressed.
- When adaptive cruise control or Pilot Assist is activated, the engine will auto-start when the accelerator pedal is depressed, or by pressing the button on the left keypad of the steering wheel.
- Maintain foot pressure on the brake pedal and depress the accelerator pedal - the engine auto-starts.
- On a downhill gradient: Release pressure on the brake pedal slightly so that the car begins to roll - the engine will auto-start after a slight speed increase.

With manual gearbox
- With the gear lever in neutral position: Depress the clutch pedal or depress the accelerator pedal - the engine starts.
- On a downhill gradient: Release pressure on the brake pedal slightly so that the car begins to roll - the engine will auto-start after a slight speed increase.

### Symbols in the driver display

#### With 12-inch driver display
- The text READY is shown in the tachometer when the function is available.
- A pointer in the tachometer points to READY when the function is active and the engine is auto-stopped.
- The text READY is greyed out when the function is not available.
- No text is shown when the function is deactivated.

#### With 8-inch driver display
The symbol is shown in the lower edge of the speedometer.

- Conditions for the Start/Stop function (p. 442)
- Start/Stop function (p. 440)
- Help when starting on a hill (p. 426)
- Automatic braking when stationary (p. 425)
Deactivating the Start/Stop function temporarily
In certain situations it may be desirable to temporarily deactivate the start/stop function.

Deactivate using the Start/Stop function button in the centre display's function view. The indication in the button is switched off when the function is deactivated.

The function is deactivated until
- it is reactivated
- the drive mode is changed to Eco or Comfort
- the next time the car is started.

Related information
- Driving with start/stop function (p. 440)
- Conditions for the Start/Stop function (p. 442)

Conditions for the Start/Stop function
For the Start/Stop function to work requires that a number of conditions are met.

If any condition is not met, this will be indicated in the driver display.

The engine does not auto-stop
The engine does not auto-stop in the following cases:

- The car has not reached approx. 10 km/h (6 mph) after starting.
- After a number of repeated auto stops, speed must again exceed approx. 10 km/h (6 mph) before the next auto stop.
- The driver has unfastened the seatbelt.
- The capacity of the starter battery is below the minimum permissible level.
- The engine is not at normal operating temperature.
- The ambient temperature is under -5 °C (23 °F) or above approx. 30 °C (86 °F).
- The windscreen's electric heating is activated.
- The environment in the passenger compartment deviates from the set values.
- The car is reversed.
- The starter battery's temperature is below or above the permitted limit values.
- The driver makes sweeping steering wheel movements.
- The road is very steep.
- The bonnet is opened.
- When driving at high altitudes when the engine has not reached operating temperature.
- The ABS system has been activated.
- In the event of heavy braking (even without the ABS system having been activated).
- Many starts during a short period of time have activated the starter motor's thermal protection.
- The exhaust system's particulate filter is full.
- A trailer is connected electrically to the car's electrical system.

The following applies to automatic gearbox:

- The gearbox is not at normal operating temperature.
- The gear selector is in M (±) position.

The engine does not auto-start
In the following cases the engine does not auto-start after having auto-stopped:

10 Applies to cars with diesel engines.
With automatic gearbox:

- The driver is unbelted, the gear selector is in P position and the driver's door is open - a normal start must take place.

With manual gearbox:

- The driver is unrestrained.
- A gear is engaged without declutching.

**Involuntary stop with manual gearbox**

If a start-up fails and the engine stops, proceed as follows:

1. Check that the driver side's seatbelt is locked in the seatbelt buckle.
2. Depress the clutch pedal again - the engine starts automatically.
3. In certain cases the gear lever must be set in neutral position. A message is shown in the driver display - follow the recommendation given.

**The engine auto-starts without the brake pedal having been released**

In the following cases, the engine auto-starts even if the driver does not take his/her foot off the brake pedal:

- High humidity in the passenger compartment forms misting on the windows.
- The environment in the passenger compartment deviates from the set values.
- There is a temporarily high current take-off or starter battery capacity drops below the lowest permissible level.
- Repeated pumping of the brake pedal.
- The bonnet is opened.
- The car starts to roll or increase speed slightly if the car auto-stopped without being completely stationary.

The following applies to automatic gearbox:

- The driver's seatbelt buckle is opened with the gear selector in D or N position.
- The gear selector is moved from D to R or M (±) position.
- The driver's door is opened with the gear selector in D position - a "ping" sound and text message indicate that the ignition is on.

**WARNING**

Do not open the bonnet when the engine has auto-stopped. Switch off the engine normally before lifting up the bonnet.

**Related information**

- Start/Stop function (p. 440)
- Driving with start/stop function (p. 440)
- Deactivating the Start/Stop function temporarily (p. 442)
Level control* and shock absorption
Level control and shock absorption are regulated automatically in the car. With rear level control, the car maintains the same height at the rear regardless of load. Level control can also occur even after the car has been parked.

Shock absorption(Four-C)
The shock absorption is adapted according to the selected drive mode and according to the speed of the car. Shock absorption is normally set for the best possible comfort and is regulated continuously depending on the road surface, the car's acceleration, braking and cornering.

During transport
During transport of the car on a ferry, train or truck, the car must be lashed around the tyres and not around other parts of the chassis. Changes in the air suspension may occur during transport, which could affect the lashing negatively.

Economical driving
Drive economically and eco-consciously by driving smoothly, thinking ahead, and adjusting your driving style and speed to the prevailing conditions.

- For lower fuel consumption, activate Eco drive mode.
- Use the Eco Coast freewheel function in Eco drive mode - engine braking ceases, meaning that the car’s kinetic energy is used to freewheel for longer distances.
- Drive in the highest gear\(^{11}\) possible, adapted to the current traffic situation and road - lower engine speeds result in lower fuel consumption. Use the gear shift indicator.
- Drive at a steady speed and keep a good distance to other vehicles and objects to minimise braking.
- High speed results in increased fuel consumption - the wind resistance increases with speed.
- Drive with the correct air pressure in the tyres and check this regularly - select ECO tyre pressure for best results.
- Choice of tyres can affect fuel consumption - seek advice on suitable tyres from a retailer.
- Remove unnecessary items from the car - the greater the load the higher the consumption.

\(^{11}\) Applies to driving with manual gear changing.

Related information
- Drive-E - cleaner driving pleasure (p. 28)
- Drive mode ECO (p. 437)
- Checking tyre pressure (p. 540)

WARNING
Never switch off the engine while moving, such as downhill, this deactivates important systems such as the power steering and brake servo.

- Use engine braking to slow down, when it can take place without risk to other road users.
- A roof load and space box increase wind resistance, leading to higher consumption - remove the load carriers when not in use.
- Avoid driving with open windows.
Preparations for a long trip
Before a driving holiday or some other type of long journey, it is important to check the car’s functions and equipment particularly carefully. Check that:
- the engine is working normally and that fuel consumption is normal
- there are no leaks (fuel, oil or other fluid)
- brake force during braking is optimal
- all lamps are working - adjust headlamp level if the car is heavily laden
- the tyres have sufficient tread depth and pressure. Change to winter tyres when driving to areas where there is a risk of snowy or icy road surfaces.
- starter battery charging is good
- the wiper blades are in good condition
- a warning triangle and high-visibility vest are located in the car - legally required in certain countries.

Related information
- Checking tyre pressure (p. 540)

- Driving with a trailer (p. 466)
- Pilot Assist (p. 316)
- Speed Limiter (p. 284)
- Emergency puncture repair kit (p. 555)

Winter driving
For winter driving it is important to perform certain checks of the car in order to ensure that it can be driven safely.
Check the following in particular before the cold season:
- The engine coolant must contain 50% glycol. This mixture protects the engine against frost down to approx. -35°C (-31°F). To avoid health risks, different types of glycol must not be mixed.
- The fuel tank must be kept filled to prevent condensation.
- Engine oil viscosity is important. Oils with lower viscosity (thinner oils) facilitate starting in cold weather and also reduce fuel consumption while the engine is cold.

**IMPORTANT**
Low viscosity oil must not be used for hard driving or in hot weather.

- The condition of the starter battery and charge level must be inspected. Cold weather places great demands on the starter battery and its capacity is reduced by the cold.
- Use washer fluid with antifreeze to avoid ice forming in the washer fluid reservoir.
Slippery driving conditions
To achieve optimum roadholding Volvo recommends using winter tyres on all wheels if there is a risk of snow or ice.

NOTE
The use of winter tyres is a legal requirement in certain countries. Studded tyres are not permitted in all countries.

Practise driving on slippery surfaces under controlled conditions to learn how the car reacts.

Related information
• Winter wheels (p. 553)

• Topping up coolant (p. 586)
• Adverse driving conditions for engine oil (p. 645)

Driving in water
Driving in water means that the car is driven in a deeper amount of water on a road that is under water. Driving in water must be performed with great caution.

The car can be driven through water to a maximum depth of 25 cm (9.8 inches) at no more than walking speed. Extra caution should be exercised when passing through flowing water.

During driving in water, maintain a low speed and do not stop the car. When the water has been passed, depress the brake pedal lightly and check that full brake function is achieved. Water and mud for example can make the brake linings wet resulting in delayed brake function.

• If necessary, clean the contacts for the electric heater and trailer coupling after driving in water and mud.
• Do not let the car stand with water over the sills for any long period of time - this could cause electrical malfunctions.

IMPORTANT
• Engine damage can occur if water enters the air filter.
• If water enters the transmission, it reduces the lubricating ability of the oil, which shortens the service life of related systems.
• Damage to any component, engine, transmission, turbocharger, differential or its internal components caused by flooding, hydrostatic locking or oil shortage, is not covered by the warranty.
• In the event of the engine stalling in water, do not try restart - tow the car from the water to a workshop - an authorised Volvo workshop is recommended. Risk of engine breakdown.

Related information
• Recovery (p. 473)
Opening and closing the fuel filler flap
The car must be unlocked for the fuel filler flap to be opened. In the driver display, the arrow next to the tank symbol indicates which side of the car the fuel filler flap is located.

1. Open the fuel filler flap with a gentle press on the rear of the flap.
2. After refuelling is finished - close the flap with a gentle press.

Related information
- Filling fuel (p. 449)
- Checking and filling with AdBlue® (p. 456)

Filling fuel
The fuel tank is fitted with a coverless fuel filler system.

Refuelling the car at a petrol station

Fuel filling is performed in the following way.

1. Switch off the car and open the fuel filler flap.
2. Choose fuel that is approved for use in the car in accordance with the identifier on the inside of the fuel filler flap. See information on approved fuels and the identifier in the sections on "Petrol" and "Diesel" respectively.
3. Insert the pump nozzle in the fuel filler opening. The filler pipe has two opening caps. The pump nozzle must be pushed past both caps before refuelling is started.
4. Do not overfill the tank but fill until the pump nozzle cuts out the first time.＞The tank is full.

NOTE
Overfilled fuel in the tank can overflow in hot weather.

Topping up fuel from a fuel can
When filling with a fuel can, use the funnel located in the foam block under the floor hatch in the cargo area.

1. Open the fuel filler flap.
2. Insert the funnel in the fuel filler opening. The filler pipe has two opening caps. The funnel's pipe must be pushed past both caps before filling can be started.

Applies to cars with fuel-driven heater*
Never use the fuel-driven heater when the car is in a filling station area.

---

12 Only locking and unlocking with the remote control key, keyless or via Volvo On Call affects the status of the fuel filler flap.
13 The identifier in accordance with the CEN standard EN16942 is located on the inside of the fuel filler flap, and will be on corresponding fuel pumps and their nozzles at filling stations throughout Europe by the end of 2018 at the latest.
Handling of fuel

Do not use fuel with a lower quality than that recommended by Volvo, as this will negatively affect engine power and fuel consumption.

**WARNING**

Always avoid inhaling fuel vapour and getting fuel splashes in the eyes.

In the event of fuel in the eyes, remove any contact lenses and rinse the eyes in plenty of water for at least 15 minutes and seek medical attention.

Never swallow fuel. Fuels such as petrol, bioethanol and mixtures of them and diesel are highly toxic and could cause permanent injury or be fatal if swallowed. Seek medical attention immediately if fuel has been swallowed.

**IMPORTANT**

Mixtures of various fuel types or use of fuels which are not recommended will invalidate Volvo’s guarantees and any supplementary service agreements; this is applicable to all engines.

Related information

- Opening and closing the fuel filler flap (p. 449)
- Petrol (p. 451)
- Diesel (p. 452)
- Empty tank and diesel engine (p. 453)
**Petrol**

Petrol is a type of engine fuel that is intended for cars with a petrol engine. Only use petrol from well-known producers. Never use fuel of dubious quality. The petrol must fulfil the EN 228 standard.

**Identifier for petrol**

The identifier in accordance with the CEN standard EN16942 is located on the inside of the fuel filler flap, and will be on corresponding fuel pumps and their nozzles at filling stations throughout Europe by the end of 2018 at the latest.

These are the identifiers that apply for current standard fuels in Europe. Petrol with the following identifiers may be used in cars with petrol engine:

- **E5** is a petrol with maximum 2.7% oxygen and maximum 5 volume % ethanol.

- **E10** is a petrol with maximum 3.7% oxygen and maximum 10 volume % ethanol.

**IMPORTANT**

- Fuel that contains up to 10 percent by volume ethanol is permitted.
- EN 228 E10 petrol (max 10 percent by volume ethanol) is approved for use.
- Ethanol higher than E10 (max. 10 percent by volume ethanol) is not permitted, e.g. E85 is not permitted.

**Octane rating**

- 95 RON can be used for normal driving.
- 98 RON is recommended for optimum performance and minimum fuel consumption.
- An octane rating lower than RON 95 must not be used.

When driving in temperatures above +38 °C (100 °F), fuel with the highest octane rating is recommended for optimum performance and fuel economy.

**IMPORTANT**

- Use only unleaded petrol to avoid damaging the catalytic converter.
- Fuel containing metallic additives must not be used.
- Do not use any additives which have not been recommended by Volvo.

**Related information**

- Handling of fuel (p. 450)
- Filling fuel (p. 449)
- Petrol particle filter (p. 452)
- Fuel consumption and CO2 emissions (p. 649)
Petrol particle filter
Petrol cars are fitted with particle filters for more efficient emission control.

Particles in the exhaust gases are collected in the petrol particle filter during normal driving. In normal driving conditions, passive regeneration takes place, which leads to the particles being oxidised and burned away. The filter is emptied in this way.

If the car is driven at low speed or with repeated cold starts in low outside temperature, active regeneration may be necessary. Regeneration of the particulate filter is automatic and normally takes 10-20 minutes. There may be a smell of burning during regeneration.

Use the parking heater in cold weather - the engine then reaches normal operating temperature more quickly.

When driving short distances at low speeds in a petrol car
The capacity of the petrol emission control system is affected by how the car is driven. It is important to drive varying distances at different speeds to achieve optimal performance.

Driving short distances at low speeds (or in cold climates) frequently, where the engine does not reach normal operating temperature, can lead to problems that can eventually cause a malfunction and trigger a warning message. If the vehicle is mostly driven in city traffic, it is important to regularly drive at higher speeds to allow the petrol emission control system to regenerate.

• The car should be driven on A-roads at speeds in excess of 60 km/h (38 mph) for at least 20 minutes between each refuelling.

Related information
• Petrol (p. 451)

Diesel
Diesel is a type of engine fuel that is intended for cars with a diesel engine.

Only use diesel fuel from well-known producers. Never use fuel of dubious quality. Diesel fuel must fulfil the EN 590 or SS 155435 standard. Diesel engines are sensitive to contaminants in the fuel, such as excessively high volumes of sulphur and metals.

Identifier
The identifier in accordance with the CEN standard EN16942 is located on the inside of the fuel filler flap, and will be on corresponding fuel pumps and their nozzles at filling stations throughout Europe by the end of 2018 at the latest.

This is the identifier that applies for current standard fuel in Europe. Diesel with the following identifiers may be used in cars with diesel engine:

B7 is diesel with maximum 7 volume % fatty acid methyl ester (FAME).

At low temperatures (lower than 0 °C (32 °F)) a paraffin precipitate may form in the diesel fuel, which may lead to starting problems. The fuel qualities that are sold must be adapted for sea-
son and climate zone, but for extreme weather conditions, old fuel or moving between climate zones, paraffin precipitate may occur.

The risk of condensation in the fuel tank is reduced if the tank is kept well filled.

When refuelling, check that the area around the fuel filler pipe is clean. Avoid spilling fuel onto the paintwork. Wash off any spillage with detergent and water.

**IMPORTANT**

Diesel fuel must:

- fulfil the EN 590 and/or SS 155435 standards
- have a sulphur content not exceeding 10 mg/kg
- have a maximum of 7 vol % FAME\(^{14}\) (B7).

---

**IMPORTANT**

Diesel type fuels that must not be used:

- Special additives
- Marine diesel fuel
- Heating oil
- FAME\(^{15}\) and vegetable oil.

These fuels do not fulfil the requirements in accordance with Volvo recommendations and generate increased wear and engine damage that is not covered by the Volvo warranty.

**Related information**

- Handling of fuel (p. 450)
- Filling fuel (p. 449)
- Empty tank and diesel engine (p. 453)
- Diesel particulate filter (p. 454)
- Emission control with AdBlue® (p. 455)
- Fuel consumption and CO2 emissions (p. 649)

---

**Empty tank and diesel engine**

Once the engine has stopped due to fuel starvation, the fuel system needs a few moments to carry out a check.

Before starting the car after the fuel tank has been filled with diesel - proceed as follows:

1. The remote control key must be inside the car.
2. Put the car in the ignition position II - turn the start knob clockwise without pressing the brake pedal or clutch pedal for cars with manual gearbox, and hold the start knob for approx. 4 seconds. Then release the knob, which automatically returns to its starting position.
3. Wait approx. one minute.
4. Start the engine.

**NOTE**

Before filling with fuel in the event of fuel shortage:

- Stop the car on as flat/level ground as possible - if the car is tilting there is a risk of air pockets in the fuel supply.

---

\(^{14}\) Fatty Acid Methyl Ester

\(^{15}\) Diesel fuel with maximum 7 vol % FAME (B7) is permitted.
Points to remember when filling with a fuel can
When filling diesel with a fuel can, use the funnel located under the floor hatch in the cargo area. Make sure you insert the funnel’s pipe firmly into the filler pipe. The filler pipe has two opening caps. The funnel’s pipe must be pushed past both caps before filling can be started.

Related information
• Filling fuel (p. 449)
• Diesel (p. 452)
• Tool kit (p. 547)

Diesel particulate filter
Diesel cars are fitted with particle filters for more efficient emission control. Particles in the exhaust gases are collected in the diesel particle filter during normal driving. When these conditions have been met, regeneration starts to burn off the particles and empty the filter. To start regeneration, the engine must have reached normal operating temperature. Regeneration of the particulate filter is automatic and normally takes 10-20 minutes.

NOTE
The following may arise during regeneration:
• a smaller reduction of engine power may be noticed temporarily
• fuel consumption may increase temporarily
• a smell of burning may arise.

Use the parking heater* in cold weather - the engine then reaches normal operating temperature more quickly.

IMPORTANT
If the filter is completely filled with particles, it may be difficult to start the engine and the filter is non-functional. Then there is a risk that the filter will need to be replaced.

When driving short distances at low speeds in a diesel car
The capacity of the diesel emission control system is affected by how the car is driven. It is important to drive varying distances at different speeds to achieve optimal performance.

Driving short distances at low speeds (or in cold climates) frequently, where the engine does not reach normal operating temperature, can lead to problems that can eventually cause a malfunction and trigger a warning message. If the vehicle is mostly driven in city traffic, it is important to regularly drive at higher speeds to allow the diesel emission control system to regenerate.

• The car should be driven on A-roads at speeds in excess of 60 km/h (38 mph) for at least 20 minutes between each refuelling.

Related information
• Diesel (p. 452)
• Emission control with AdBlue® (p. 455)
• Fuel consumption and CO2 emissions (p. 649)
Emission control with AdBlue®

AdBlue is an additive used in the SCR system to reduce emissions of noxious substances from a diesel engine.

In the SCR system, the AdBlue and the nitrous oxide exhaust gas substance are converted to nitrogen and water vapour, which significantly reduces the emissions of harmful nitrous oxides.

AdBlue

AdBlue is a colourless fluid that consists of 32.5% urea in deionised water and is produced in accordance with the ISO 22241 standard. It is specially developed for SCR cleaning technology for diesel engines.

AdBlue has its own tank in the car and is topped up via a separate filler pipe behind the fuel filler flap. Consumption depends on driving style, outside temperature and the operating temperature of the system.

Conditions for driving with AdBlue

There must always be AdBlue of the correct quality in the tank before the car can be started. The SCR system is very sensitive to contaminants.

The emission control system continuously monitors the tank level, quality and dosage of AdBlue.

If something is wrong, a message is shown in the driver display.

**IMPORTANT**

AdBlue is required for the function of the SCR system and legal emissions compliance. It is illegal to modify or manipulate the AdBlue supply system in any way so that no AdBlue reagent is consumed when it is required for legal exhaust emissions compliance. Any such tampering may be a criminal offence which may lead to legal prosecution actions.

It is not permitted to operate the car with an empty AdBlue tank, since it will no longer be compliant with the legal requirements for exhaust emissions. Therefore, the car is equipped with a warning system to inform when AdBlue refilling is required. When the fill level in the AdBlue tank is getting low, warnings are displayed to inform that AdBlue refilling is needed.

Related information

- Handling AdBlue® (p. 455)
- Checking and filling with AdBlue® (p. 456)
- Symbols and messages for AdBlue® (p. 458)

Handling AdBlue®

AdBlue consists primarily of water (approx. 67.5% water and 32.5% urea). The fluid is not flammable but should be handled with care since it can irritate the eyes and skin.

Points to remember when handling

Avoid inhaling vapour as well as contact with skin and eyes. Preferably use gloves that prevent irritation to sensitive skin when handling the fluid.

**WARNING**

Action for first aid:

- For inhalation - get fresh air.
- For skin contact - wash the skin with soap and water.
- For contact with the eyes - rinse immediately with a lot of water.
- For ingestion - rinse the mouth thoroughly. Do not induce vomiting.

Seek medical attention if the discomfort remains or if a large quantity has been ingested.

Action in the event of a spill

AdBlue spilled on the ground, the car or painted surfaces must be rinsed thoroughly with water. Avoid releasing into the drainage system.

---

16 Registered trademark that belongs to Verband der Automobilindustrie e.V. (VDA)
17 Selective Catalytic Reduction
18 CO(NH₂)₂
**Storage**
AdBlue must be stored in tightly sealed original packaging at a temperature above -11 °C (12 °F) and below 30 °C (86 °F). The fluid must not be stored in direct sunlight.
AdBlue freezes at -11 °C (12 °F) but can be used again when the solution has thawed.

**Related information**
- Checking and filling with AdBlue® (p. 456)
- Emission control with AdBlue® (p. 455)

---

**Checking and filling with AdBlue®**
Check the AdBlue level regularly and top up if the message for low AdBlue level is shown in the driver display.
The Volvo workshop tops up AdBlue when the car is serviced, however, it must also be topped up several times between services depending on driving style. If the AdBlue tank is allowed to drain completely then it will no longer be possible to start the car.

**NOTE**
Never run the AdBlue tank dry. Fill the tank in good time before it is empty.
If the tank is run dry, it will not be possible to start the engine after it is switched off – not the regular way or using aids.
The only way to restart the car after the tank has been run dry is to refill with AdBlue of the specified quality, minimum 3 litres.

---

**Checking AdBlue level**
1. Open the **Car status** app in the app view.
2. Press **Status** to show the AdBlue level.

Graphic for AdBlue level in the centre display.

Each cursor represents approx. 25% of a full tank.

When less than 25 % of the tank remains available, the colour of the remaining cursor changes to amber, and at less than 10 % it turns red.

### Filling

When the AdBlue level starts to become low, a symbol illuminates in the driver display and the **AdBlue level low** message is shown.

1. Open the fuel filler flap with a gentle press on the rear of the flap.
2. Open the blue cover for the smaller filler pipe intended for AdBlue.

### WARNING

When filling from the AdBlue pump at a filling station, it is advisable to use the pump adapted for passenger cars. The AdBlue pump for heavy vehicles can also be used.

### IMPORTANT

Exercise caution to prevent AdBlue from coming into contact with the car's paintwork. If it does, rinse with plenty of water since the fluid can affect the paintwork.

Overheating in the engine and drive system

Under special conditions, for example hard driving in hilly terrain and hot climate, there is a risk that the engine and drive system may overheat - in particular with a heavy load.

- In the event of overheating, the engine's power may be limited temporarily.
- Remove any auxiliary lamps from in front of the grille when driving in hot climates.
- If the temperature in the engine's cooling system becomes too high then a warning symbol is illuminated and the driver display shows the message **Engine temperature High temperature Stop safely.** Stop the car in a safe way and allow the engine to run at idling speed for several minutes and cool down.
- If the message **Engine temperature High temperature Turn off engine or Engine coolant Level low, turn off engine** is shown, stop the car and switch off the engine.
- In the event of overheating in the gearbox, an alternative gear shift program will be selected\(^{20}\). In addition, a built-in protection function is activated that, amongst other things, illuminates a warning symbol and the driver display shows the message **Transmission warm Reduce speed to lower temperature or Transmission hot Stop safely, wait for cooling.** Follow the recommendation given, reduce speed or stop the car in a safe way and allow the engine to run at idling speed for several minutes to enable the gearbox to cool down.
- If the car overheats, the air conditioning may be switched off temporarily.
- Do not turn the engine off immediately you stop after a hard drive.

**NOTE**

It is normal for the engine's cooling fan to operate for a time after the engine has been switched off.

\(^{20}\) Applies to automatic gearbox.

### Symbols in the driver display

- Gear shift indicator* (p. 433)
**Overloading the starter battery**
The electrical functions in the car load the starter battery to varying degrees. Avoid using the ignition position II when the car is switched off. Instead, use ignition position I - which uses less power.

Also, be aware of different accessories that load the electrical system. Do not use functions which use a lot of power when the car is switched off. Examples of such functions are:

- ventilation fan
- headlamps
- windscreen wiper
- audio system (high volume).

If the starter battery voltage is low, a message is shown in the driver display. The energy-saving function then shuts down certain functions or reduces certain functions such as the ventilation fan and/or audio system.

- In which case, charge the starter battery by starting the car and then running it for at least 15 minutes - starter battery charging is more effective during driving than running the engine at idling speed while stationary.

**Related information**
- Starter battery (p. 598)
- Ignition positions (p. 416)

---

**Using jump starting with another battery**
If the starter battery is discharged then the car can be started with current from another battery.

1. Set the car's electrical system in ignition position 0.
2. Check that the donor battery has a voltage of 12 V.
3. If the donor battery is installed in another car - switch off the donor car's engine and make sure that the two cars do not touch each other.

---

**IMPORTANT**
Connect the start cable carefully to avoid short circuits with other components in the engine compartment.

4. Connect one of the red jump lead's clamps to the donor battery's positive terminal (1).

5. Open the positive jump-starting point's cover (2).

6. Connect the red jump lead's other clamp onto the car's positive jump-starting point (2).

7. Connect one of the black jump lead's clamps to the donor battery's negative terminal (3).

8. Connect the black jump lead's other clamp onto the car's negative jump-starting point (4).

9. Check that the jump lead clamps are affixed securely so that there are no sparks during the starting attempt.

10. Start the engine of the "donor car" and allow it to run a few minutes at a speed slightly higher than idle approx. 1500 rpm.
11. Start the engine in the car with the discharged battery.

**IMPORTANT**
Do not touch the connections between cable and car during the starting attempt. There is a risk of sparks forming.

12. Remove the jump leads in reverse order - first the black and then the red.
Make sure that none of the black jump lead's clamps comes into contact with the car's positive jump-starting point/donor battery's positive terminal or the clamp connected to the red jump lead.

**WARNING**
- The battery can generate oxyhydrogen gas, which is highly explosive. A spark can be formed if a jump lead is connected incorrectly, and this can be enough for the battery to explode.
- Do not connect the jump leads to any fuel system component or any moving part. Be careful of hot engine parts.
- The battery contains sulphuric acid, which can cause serious burns.
- If sulphuric acid comes into contact with eyes, skin or clothing, flush with large quantities of water. If acid splashes into the eyes - seek medical attention immediately.
- Never smoke near the battery.

**Related information**

- Adjusting the steering wheel (p. 192)
- Selecting ignition mode (p. 417)

**Towbar**
The car can be equipped with a towbar that makes it possible to tow e.g. a trailer behind the car.

There may be different towbar variants available for the car. Contact a Volvo dealer for more information.

**IMPORTANT**
When the engine is switched off, the constant battery voltage to the trailer connector can be switched off automatically so as not to drain the starter battery.

**IMPORTANT**
The towball needs regular cleaning and lubrication with grease in order to prevent wear.

**NOTE**
When a hitch with a vibration damper is used, the towball must not be lubricated.
This also applies when fitting a bicycle rack that is clamped in around the towball.

**NOTE**
If the car is equipped with a towbar, there is no rear mounting for a towing eye.

* Option/accessory.

**Extendable and retractable towbar**

The extendable/retractable towbar is always easily accessible and simple to extend or retract as needed. In the retracted position, the towbar is completely concealed.

**WARNING**

Follow the instructions for retracting and extending the towbar carefully.

**Extending the towbar**

**WARNING**

Avoid standing close to the bumper in the centre behind the car when extending the towing hitch.

1. Open the boot lid. A button for extending/retracting the towbar is located on the right-hand side at the rear of the cargo area. An indicator lamp in the button must illuminate with a constant orange glow for the extension function to be active.

2. Press and release the button - extension might not start if the button is pressed for too long.

> The towbar extends out and down in an unlocked position - the indicator lamp flashes orange.

**WARNING**

Do not press the extend/retract button if a trailer is attached to the towbar.

**NOTE**

The towbar must finish the extension procedure before it can then be moved to locked position. This procedure may take several seconds. If the towbar is not fixed in locked position, wait a few seconds and try again.
Move the towbar to its end position, where it is secured and locked in place - the indicator lamp illuminates with a constant orange glow.

> The towbar is ready for use.

**WARNING**

Take care to secure the trailer's safety cable in the intended bracket.

**NOTE**

Power save mode activates after a while and the indicator lamp goes out. The system is reactivated by closing and reopening the boot lid. This applies when retracting or extending the towbar.

If the car detects a connected trailer electrically, the indicator lamp stops illuminating with a constant glow.

---

### Retracting the towbar

**IMPORTANT**

Make sure that there is no plug or adapter in the electrical socket when retracting the towbar.

1. Open the boot lid. Press and release the button on the right-hand side at the rear of the cargo area - retraction might not start if the button is pressed for too long.

> The towbar automatically lowers in an unlocked position - the indicator lamp in the button flashes orange.

2. Lock the towbar by moving it back to its retracted position, where it is locked.

> The indicator lamp will now illuminate with a constant glow if the towbar is correctly retracted.

---

**Related information**

- Driving with a trailer (p. 466)
- Towbar* (p. 462)
**Driving with a trailer**

When driving with a trailer, there are a number of points that are important to think about regarding the towbar, the trailer and how the load is positioned in the trailer.

Payload depends on the car's kerb weight. The total of the weight of the passengers and all accessories, e.g. towbar, reduces the car's payload by a corresponding weight.

The car is supplied with the necessary equipment for towing a trailer.

- The car's towbar must be of an approved type.
- Distribute the load on the trailer so that the weight on the towbar complies with the specified maximum towball load. Towball load is calculated as part of the car's payload.
- Increase the tyre pressure to the recommended pressure for a full load.
- The engine is loaded more heavily than usual when driving with a trailer.
- Do not tow a heavy trailer when the car is brand new. Wait until it has been driven at least 1000 km (620 miles).
- The brakes are loaded much more than usual on long and steep downhill slopes. Downshift to a lower gear when shifting manually and adjust your speed.
- Follow the regulations in force for the permitted speeds and weights.
- Maintain a low speed when driving with a trailer up long, steep ascents.
- The maximum indicated trailer weight only applies to heights up to 1000 metres above sea level (3280 ft). At higher elevations, the engine output and the vehicle's climbing ability are reduced due to the reduced air density, and the maximum trailer load must therefore be reduced. The weight of the car and trailer must be decreased by 10% for each additional 1000 m (3280 ft) (or part thereof).
- Avoid driving with a trailer on inclines of more than 12%.

**NOTE**

Extremely high altitudes and poor road conditions can increase the risk of breakdowns and accidents. Be especially careful with fans, brake system, and suspension. Regular maintenance is therefore essential.

**IMPORTANT**

When the engine is switched off, the constant battery voltage to the trailer connector can be switched off automatically so as not to drain the starter battery.

**Trailer weights**

**WARNING**

Follow the stated recommendations for trailer weights. Otherwise, the car and trailer may be difficult to control in the event of sudden movement and braking.

**NOTE**

The stated maximum permitted trailer weights are those permitted by Volvo. National vehicle regulations can further limit trailer weights and speeds. Towbars can be certified for higher towing weights than the car can actually tow.

**Level control**

The car's system for level control endeavours to maintain a constant height regardless of load (up to the maximum permissible weight). When the car is stationary the rear of the car lowers slightly, which is normal.
When driving in hilly terrain and hot climates
Under certain circumstances, there may be a risk of overheating when towing a trailer. If the engine and drive system overheats, a warning symbol comes on in the driver display together with a message.

The following only applies to cars with automatic gearbox.

The automatic gearbox selects the optimum gear related to load and engine speed.

Steep inclines
Do not lock the automatic gearbox in a higher gear than the engine "can cope with" - it is not always a good idea to drive at a high gear with low engine speed.

Parking on a hill
1. Depress the brake pedal fully.
2. Activate the parking brake.
3. Select gear position P.
4. Release the brake pedal.

Block the wheels with chocks when parking a car with hitched trailer on a hill.

Starting on a hill
1. Depress the brake pedal fully.
2. Select gear position D.
3. Releasing the parking brake.
4. Release the brake pedal and start driving off.

Related information
- Trailer stability assist* (p. 467)
- Checking trailer lamps (p. 468)
- Towing capacity and towball load (p. 640)
- Overheating in the engine and drive system (p. 460)
- Adverse driving conditions for engine oil (p. 645)

Trailer stability assist*
The function of trailer stability assist (TSA) is to stabilise cars towing trailers in situations where they begin snaking. The function is included in the stability system ESC.

Reasons for snaking
The snaking phenomenon can occur with any car/trailer combination. Snaking normally occurs at high speeds. But, there is a risk of it occurring at lower speeds if the trailer is overloaded or the load is improperly distributed, e.g. too far back.

In order for snaking to occur, there must be a triggering factor, e.g.:
- Car with trailer subjected to a sudden and powerful side wind.
- Car with trailer drives on an uneven road surface or in a pothole.
- Sweeping steering wheel movements.

If snaking has started, it could be difficult or even impossible to suppress. This makes the car/trailer combination difficult to control and there is a risk that you could, for example, end up in the wrong lane or leave the carriageway.

Trailer stability assist function
The trailer stability assist function continually monitors the car's movements, particularly lateral movements. If snaking is detected, the front wheels are individually braked. This serves to stabilise the car/trailer combination. This is often
enough to help the driver regain control of the car.

If snaking is not eliminated the first time that trailer stability assist intervenes, the car/trailer combination is braked with all wheels and engine power is reduced. Once snaking has been gradually suppressed and the car/trailer combination is stable once again, the system stops regulating and the driver once again has full control of the car.

**NOTE**
The stability function is deactivated if the driver selects Sport mode by deactivating ESC via the menu system in the centre display.

Trailer stability assist may fail to intervene if the driver uses severe steering wheel movements to try to rectify the snaking because in such a situation the system cannot determine whether it is the trailer or the driver causing the snaking.

When trailer stability assist is operating, the ESC symbol flashes in the driver display.

---

**Related information**
- Driving with a trailer (p. 466)
- Electronic stability control (p. 280)

**Checking trailer lamps**
When connecting a trailer - check that all the trailer lamps work before departure.

**Direction indicators and brake lights on the trailer**
If one or more of the trailer’s direction indicators or brake light bulbs is broken, the driver display shows a symbol and a message. Other lights on the trailer must be checked manually by the driver before setting off.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Message</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Trailer turn indicator Right turn indicator malfunction</td>
</tr>
<tr>
<td></td>
<td>• Trailer turn indicator Left turn indicator malfunction</td>
</tr>
<tr>
<td></td>
<td>• Trailer brake light Malfunction</td>
</tr>
</tbody>
</table>

If any lamp for the trailer’s direction indicators is broken, the driver display symbol for direction indicators will also flash more quickly than normal.

---

21 Trailer Stability Assist
22 Electronic Stability Control
Rear fog lamp on trailer
When connecting the trailer, the rear fog lamp may not light up on the car. In such cases, the rear fog lamp function switches to the trailer. Upon activation of the rear fog lamp, check therefore that the trailer is equipped with a rear fog lamp to travel safely.

Checking trailer lamps*

**Automatic checking**
After a trailer is connected electrically, it is possible to check that the trailer lamps are working via an automatic lamp activation. The function helps the driver check that the trailer lamps are working before starting off.

The engine must be switched off to perform the check.

1. When a trailer is connected to the towbar, the **Automatic Trailer Lamp Check** message is shown in the driver display.
   > The lamp check starts.
2. Confirm the message by pressing the right-hand steering wheel keypad’s **O** button.
   > The lamp check starts.
3. Exit the car to check lamp functionality.
   > All trailer lamps start to flash - then the lamps are switched on one at a time.
4. Visually check that all lamps available on the trailer are operational.

5. After a moment, all lamps on the trailer flash again.
   > The check is complete.

**Switching off automatic checking**
The automatic checking function can be switched off in the centre display.

1. Press **Settings** in the top view.
2. Press **My Car ➔ Lights and Lighting**.
3. Deselect **Automatic Trailer Lamp Check**.

**Manual checking**
If the automatic checking is switched off then it is possible to start the check manually.

1. Press **Settings** in the top view.
2. Press **My Car ➔ Lights and Lighting**.
3. Select **Manual Trailer Lamp Check**.
   > The lamp check starts. Exit the car to check lamp functionality.

**Related information**
- Driving with a trailer (p. 466)

---

**Towbar-mounted bicycle rack***
When using a bicycle rack, the bicycle racks that Volvo has developed are recommended.

This is in order to avoid damage to the car and in order to achieve the maximum possible safety during a journey. Volvo's bicycle racks are available for purchase at authorised Volvo dealers.

Carefully follow the instructions enclosed with the bicycle rack.

- Bicycle rack including load must weigh a maximum of 75 kg (165 pounds).
- The bicycle rack may be designed for a maximum of three bicycles.

**WARNING**
Incorrect use of the bicycle rack may cause damage to the towbar and car.

The bicycle rack can loosen from the towbar if it:
- is incorrectly fitted on the towball
- is overloaded, see the bicycle rack’s instructions for maximum load weight
- is used for carrying something other than bicycles.

---

* Option/accessory. 469
The car's driving characteristics are affected when a bicycle rack is fitted on the towbar. For example, due to:

- increased weight
- reduced acceleration capacity
- reduced ground clearance
- changed braking capacity.

**Recommendations for loading bicycles on the bicycle rack**

The larger the distance between the load's centre of gravity and the towball, the greater the load on the towbar.

Load according to the following recommendations:

- Fit the heaviest bicycle furthest in, closest to the car.
- Keep the load symmetrical and as close to the centre of the car as possible, e.g. by loading the bicycles facing alternately if several bicycles are loaded.
- Remove loose objects from the bicycle for transportation, e.g. bicycle basket, battery, child seat. Partly to reduce the load on the towbar and bicycle rack, and partly to reduce the wind resistance, which affects fuel consumption.
- Do not use protective covers on the bicycles. This may affect manoeuvrability, impair visibility and increase fuel consumption. It may also lead to an increased load on the towbar.

**Related information**

- Towbar* (p. 462)

**Towing**

During towing, the car is towed by another vehicle by means of a towline.

Find out the statutory maximum speed limit for towing before the towing begins.

**Preparations and towing**

**IMPORTANT**

- Note that the car must always be towed with the wheels rolling forward.
- Do not tow cars with automatic transmission at speeds higher than 80 km/h (50 mph) or for distances in excess of 80 km (50 miles).

**WARNING**

- Check that the steering lock is unlocked before towing.
- Ignition position II must be active - in ignition position I all airbags are deactivated.
- Always keep the remote control key in the car when it is being towed.
WARNING

The brake servo and power steering do not work when the engine is switched off - the brake pedal needs to be depressed about 5 times more heavily and the steering is considerably heavier than normal.

1. Activate the car’s hazard warning flashers.
2. Secure the towline in the towing eye.
3. Deactivate the steering lock by unlocking the car.
4. Put the car in the ignition position II - turn the start knob clockwise without pressing the brake pedal or clutch pedal for cars with manual gearbox, and hold the start knob for approx. 4 seconds. Then release the knob, which automatically returns to its starting position.
5. Move the gear selector to neutral position N and release the parking brake.
   If the battery voltage is too low, the parking brake cannot be disengaged. Connect a donor battery if the battery voltage is too low.
   > The towing vehicle can now start towing.
6. Keep the towline taut when the towing vehicle reduces speed by holding your foot gently pressed on the brake pedal - thereby avoiding unnecessary jerking.
7. Be prepared to brake to stop.

Jump starting

Do not tow the car to jump start the engine. Use a donor battery if the starter battery is discharged and the engine does not start.

IMPORTANT

The catalytic converter may be damaged during attempts to tow-start the engine.

Related information

- Fitting and removing the towing eye (p. 471)
- Hazard warning flashers (p. 158)
- Recovery (p. 473)
- Using jump starting with another battery (p. 461)
- Selecting ignition mode (p. 417)

Fitting and removing the towing eye

Use the towing eye for towing. The towing eye is screwed into a threaded socket behind a cover on the right-hand side of the bumper, front or rear.

NOTE

If the car is equipped with a towbar, there is no rear mounting for a towing eye.

Fitting the towing eye

1. Take out the towing eye from the foam block under the floor in the cargo area.
2 Front: Remove the cover - press on the marking with a finger.
   > The cover pivots around its centre line and can then be removed.

3 Rear: Remove the cover - press on the marking with a finger and, at the same time, fold out the opposite side/corner using a coin or similar.
   > The cover pivots around its centre line and can then be removed.

4. Screw the towing eye right in until it stops. Screw the eye in firmly. For example, thread through the wheel bolt wrench* and use it as a lever.

   IMPORTANT
   It is important that the towing eye is firmly screwed into place - right in until it stops.

Removing the towing eye:
- After use, unscrew the towing eye and return it to its place.
  Finish by refitting the cover onto the bumper.
The towing eye may be used to pull the car up onto a recovery vehicle with a flatbed platform. The car's position and ground clearance determine whether it is possible.

If the slope of the recovery vehicle's ramp is too steep, or if the ground clearance under the car is inadequate, then the car may be damaged if you try to pull it up using the towing eye.

If necessary, raise the car by using the recovery vehicle's lifting device. Do not use the towing eye.

**WARNING**
No one/nothing is allowed to remain behind the recovery vehicle while the car pulled up onto the flatbed platform.

**IMPORTANT**
The towing eye is only designed for towing on roads - not for pulling the car unstuck or out of a ditch. Call a recovery service for recovery assistance.

**IMPORTANT**
Note that the car must always be transported with the wheels rolling forward.

Related information
- Towing (p. 470)
- Recovery (p. 473)
- Tool kit (p. 547)

---

**Recovery**
For recovery, the car is taken away with the help of another vehicle. Call a recovery service for recovery assistance. The towing eye can be used to pull the car up onto a recovery vehicle with a flatbed platform.

**Applies to cars with level control**: If the car is equipped with air suspension, this must be disabled before the car is raised. Deactivating the function via the centre display.

1. Press **Settings** in the top view.
2. Press **My Car** ➔ **Parking Brake and Suspension**.
3. Select **Disable Leveling Control**.

The car's position and ground clearance determine whether it is possible to pull it up onto a flatbed platform. If the slope of the recovery vehicle's ramp is too steep, or if the ground clearance under the car is inadequate, then the car may be damaged if you try to pull it up. The car should then be lifted using the recovery vehicle's lifting device.

**WARNING**
No one/nothing is allowed to remain behind the recovery vehicle while the car pulled up onto the flatbed platform.
HomeLink®

HomeLink® is a programmable remote control, integrated in the car's electrical system, which can remotely control up to three different devices (e.g. garage door opener, alarm system, outdoor and indoor lighting, etc.) and thereby replace the remote controls for them.

General

HomeLink® is supplied built-in to the interior rearview mirror. The HomeLink® panel consists of three programmable buttons and one indicator lamp in the mirror glass.

For more information about HomeLink®, visit www.HomeLink.com, www.youtube.com/HomeLinkGentex or call the toll-free number 00 8000 466 354 65 (or the toll number +49 6838 907 277).  

Save the original remote controls for future programming (e.g. when changing to another car or for use in another vehicle). It is also recommended that the programming for the buttons is deleted when the car is sold.

Related information

- Using HomeLink (p. 476)
- Programming HomeLink® (p. 474)
- Type approval for HomeLink® (p. 477)

Programming HomeLink®

Follow these instructions to program HomeLink®, reset all programming or reprogram individual buttons.

**NOTE**

In certain vehicles the ignition must be switched on or in "accessory position" before HomeLink® can be programmed or used. If possible, fit new batteries in the remote control that shall be replaced by HomeLink® for faster programming and improved transmission of the radio signal. The HomeLink® buttons should be reset before programming.

**WARNING**

While programming HomeLink®, the garage door or gate being programmed may activate. For this reason, make sure that nobody is in the vicinity of the door or gate while programming is in progress. The car should be outside the garage while a garage door opener is being programmed.

---

23 Applies to certain markets.
24 HomeLink and the HomeLink house symbol are registered trademarks of Gentex Corporation.
25 Note that the toll-free number may not be available depending on operator.
26 Applies to certain markets.
1. Aim the remote control towards the HomeLink® button to be programmed and hold it approx. 2-8 cm (approx. 1-3 inches) from the button. Do not obstruct the indicator lamp on HomeLink®.

   **Note:** The ability of some remote controls to program HomeLink® is improved at a distance of approx. 15-20 cm (approx. 6-12 inches). Bear this in mind if you encounter problems during programming.

2. Press and hold depressed both the button on the remote control and the button to be reprogrammed on HomeLink®.

3. Do not release the buttons until the indicator lamp has switched from flashing slowly (approx. once per second) to either flashing quickly (approx. 10 times per second) or illuminating with a constant glow.

   > **If it illuminates with a constant glow:** Indication that the programming has finished. Press the programmed button twice to activate.

   > **If it flashes quickly:** The device to be programmed to HomeLink® may have a security function that requires extra steps. Test by pressing the programmed button twice to see whether the programming is working. Otherwise, continue with the following steps.

4. Locate programming button27 on the receiver for the garage door or similar. It is normally located close to the antenna's bracket on the receiver.

5. Depress and release the receiver's programming button once. The programming must be completed within 30 seconds of the button being depressed.

6. Press and release the button on HomeLink® that you want to program. Repeat the sequence of pressing/holding/releasing a second time and, depending on the receiver model, even a third time.

   > Programming is now be complete and the garage door, gate or similar should now be activated when the programmed button is depressed.

In the event of programming problems, contact HomeLink® at www.HomeLink.com,

---

27 Button designation and colour varies between manufacturers.
www.youtube.com/HomeLinkGentex or call the toll-free number 00 8000 466 354 65 (or the toll number +49 6838 907 277).28

Reprogramming individual buttons
To reprogram an individual HomeLink® button, proceed as follows:

1. Press the desired button and hold it depressed for approx. 20 seconds.
2. Once the indicator lamp on HomeLink® starts to flash slowly, programming can continue as normal.

**Note:** If the button to be reprogrammed is not programmed with a new unit, it will resume the previously saved programming.

Resetting the HomeLink® buttons
It is only possible to reset all of the HomeLink® buttons at the same time, not each button individually. Individual buttons can only be reprogrammed.

- Press and hold depressed the outer buttons (1 and 3) on HomeLink® for approx. 10 seconds.
- When the indicator lamp changes over from a constant glow to starting to flash, the buttons are reset and ready to be reprogrammed.

**Related information**
- Using HomeLink (p. 476)
- HomeLink®* (p. 474)
- Type approval for HomeLink®* (p. 477)

**Using HomeLink**
When HomeLink® is fully programmed it can be used in place of the separate original remote controls.
Depress the programmed button. The garage door, gate, alarm system or similar is activated (may take a few seconds). If the button is depressed for more than 20 seconds then the reprogramming is started. The indicator lamp illuminates or flashes when the button has been depressed. Naturally the original remote controls can still be used in parallel with HomeLink® if required.

**NOTE**
If the ignition is switched off, HomeLink® will work for 30 minutes after the driver’s door has been opened.

**WARNING**
- If HomeLink® is used to control a garage door or gate, ensure that nobody is near the door or gate while it is in motion.
- Do not use HomeLink® for any garage door that does not have safety stop and safety reverse.

---

* Option/accessory.

28 Note that the toll-free number may not be available depending on operator.
Starting and Driving

Type approval for HomeLink®

Type approval for EU
Gentex Corporation hereby declares that HomeLink® Model UAHL5 complies with the Radio equipment directive 2014/53/EU.

Wavelength within which the radio equipment functions:

- 433.05MHz-434.79MHz <10mW E.R.P.
- 868.00MHz-868.60MHz <25mW E.R.P.
- 868.70MHz-868.20MHz <25mW E.R.P.
- 869.40MHz-869.65MHz <25mW E.R.P.
- 869.70MHz-870.00MHz <25mW E.R.P.

Certificate holder address: Gentex Corporation, 600 North Centennial Street, Zeeland MI 49464, USA

For more information, see support.volvocars.com.

Compass
The upper right-hand corner of the rearview mirror has an integrated display that shows the compass direction in which the front of the car is pointing.

Rearview mirror with compass.

Eight different compass directions are shown by their English abbreviations: N (north), NE (north east), E (east), SE (south east), S (south), SW (south west), W (west) and NW (north west).

29 Applies to certain markets.
Activating and deactivating the compass
The upper right-hand corner of the rearview mirror has an integrated display that shows the compass direction in which the front of the car is pointing.

Activating and deactivating the compass
The compass is activated automatically when the car is started.

To deactivate/activate the compass manually:
– Depress the button on the underside of the rearview mirror using e.g. a paper clip.

Related information
● Compass (p. 477)
● Calibrating the compass (p. 478)

Calibrating the compass
The earth is divided into 15 magnetic zones. The compass should be calibrated if the car is moved between several magnetic zones.

Proceed as follows to perform calibration:
1. Stop the car in a large open area free from steel structures and high-voltage power lines.
2. Start the car and switch off all electrical equipment (air conditioning, wipers, etc.) and ensure that all doors are closed.

NOTE
Calibration may fail or not start at all if electrical equipment is not switched off.

3. Hold the button on the underside of the rearview mirror depressed for approx. 3 seconds (use a paper clip, for example). The number for the current magnetic zone is shown.

4. Press the button repeatedly until the required magnetic zone (1–15) is shown. See the map of magnetic zones for the compass.

5. Wait until the display returns to showing the character C, or hold the button on the underside of the rearview mirror depressed for approx. 6 seconds until the character C is shown.

6. Drive slowly in a circle at a speed of no more than 10 km/h (6 mph) until a compass direction is shown in the display, indicating that calibration is complete. Then drive a further 2 circles to fine-tune calibration.
7. **Cars with heated windscreen**: If the character C is shown in the display when the heated windscreen is activated, perform the calibration in accordance with point 6 above with the heated windscreen activated.

8. Repeat the above procedure as necessary.

SOUND, MEDIA AND INTERNET
Sound, media and Internet
The audio and media system consists of media player and radio. You can also connect a phone via Bluetooth to use handsfree functions or play music wirelessly in the car. When the car is connected to the Internet you can also use apps for media playback.

Overview of audio and media
Control the functions with your voice, steering wheel keypad or the centre display. The number of speakers and amplifiers depends on which audio system the car is equipped with.

System updating
The audio and media system is continuously improved. When the car is connected to the Internet, it is possible to download system updates for optimal functionality, see support.volvocars.com.

Related information
- Media player (p. 492)
- Radio (p. 486)
- Phone (p. 507)
- Internet-connected car* (p. 516)
- Apps (p. 483)
- Voice recognition (p. 141)
- Ignition positions (p. 416)
- Driver distraction (p. 39)
- Managing system updates via the Download Centre (p. 575)
- License agreement for audio and media (p. 525)

Audio settings
The audio system is preset for optimal sound reproduction but can be adapted according to needs.

The volume is normally adjusted with the volume control below the centre display or with the right-hand steering wheel keypad. This applies, for example, during playback of music, radio, ongoing phone calls and active traffic messages.

Optimum sound reproduction
The audio system is pre-calibrated for optimum sound reproduction by means of digital signal processing. This calibration takes into account loudspeakers, amplifiers, passenger compartment acoustics, listener position, etc., for each combination of car model and audio system. There is also a dynamic calibration that takes into account the setting of the volume control and vehicle speed.

Audio settings as required
The following settings can be selected in the top view under Settings ➔ Sound:
- **Tone** — personal preference for bass, treble, equaliser for example.
- **Balance** - balance between right/left loudspeakers and balance between front/rear loudspeakers.
- **System Volumes** - adjusts volume in the various systems of the car, e.g. Voice Control, Park Assist and Phone Ringtone.

* Option/accessory.
Sound experience*

Recreating the acoustics from Gothenburg Concert Hall.

**Sound Experience** is opened from the centre display's app view and gives access to further audio settings. The following settings can be made:

- **Studio** - the sound can be optimised for Driver, All and Rear.
- **Individual stage** - surround sound mode with settings for intensity and enclosure.
- **Concert hall** - reproduces the acoustics from Gothenburg's Concert Hall.

**Active noise reduction***

Certain cars are equipped with an active noise reduction function that suppresses engine noise in the passenger compartment via the audio system. Microphones in the car's roof detect disruptive noise and the audio system outputs anti-noise in order to dampen the noise.

**Apps**

The app view contains applications (apps) that give access to certain of the car’s services.

**Related information**

- Media player (p. 492)
- Settings for voice recognition (p. 144)
- Settings for phone (p. 515)
- Sound, media and Internet (p. 482)
- Internet-connected car* (p. 516)

**NOTE**

Do not cover the car's microphones.
Swipe from right to left\(^1\) across the centre display's screen in order to access the app view from the home view. Apps that have been downloaded (third-party apps) and apps for embedded functions, such as FM radio, are found here.

Some basic apps are always available. More apps such as web radio and music services can be downloaded when the car is connected to the Internet.

Certain apps are only available for use if the car is connected to the Internet.

Start an app by pressing the app in the centre display's app view.

---

**Downloading apps**

New apps can be downloaded when the car is connected to the Internet.

**NOTE**

Data download may affect other services that transmit data, e.g. Internet radio. If the effect on other services is experienced as disruptive then the download can be interrupted. Alternatively, it may be appropriate to switch off or interrupt other services.

**NOTE**

When downloading using a phone, pay extra attention to the data traffic costs.

1. Open the **Download Centre** app in the app view.

2. Select **New apps** in order to open a list of apps that are available but not installed in the car.

---

\(^1\) Applies to left-hand drive cars. For right-hand drive cars - swipe in the opposite direction.
3. Tap on the row for an app in order to expand in the list and get more information about the app.

4. Select Install in order to start the download and installation of the desired app.
   - The status of the download and installation is shown while it is in progress.
     A message is shown if a download cannot be started for the moment. The app will remain in the list and it is possible to try to start a download again.

Cancelling the download
- Tap on Abort to cancel a download in progress.

Note that only the download can be cancelled, when the installation phase has started, this cannot be cancelled.

</table>

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>When downloading using a phone, pay extra attention to the data traffic costs.</td>
</tr>
</tbody>
</table>

If an app is being used during an ongoing update, it will be restarted in order for the installation to be completed.

#### Update all

1. Open the Download Centre app in the app view.
2. Select Install all.
   > Updating is started.

#### Update some

1. Open the Download Centre app in the app view.
2. Select Application updates in order to open a list of all available updates.
3. Locate the desired app and select Install.
   > Updating is started.

### Related information

Deleting apps
Apps can be uninstalled when the car is connected to the Internet.
An app that is being used must be closed in order for the uninstallation to be completed.

1. Open the Download Centre app in the app view.
2. Select Application updates in order to open a list of all installed apps.
3. Locate the desired app and select Uninstall in order to start the uninstallation of the app.
   > When the app has been uninstalled, it disappears from the list.

• RDS radio (p. 491)
• Internet-connected car* (p. 516)
• Voice control of radio and media (p. 144)
• Media player (p. 492)
Start radio
The radio is started from the centre display app view.
1. Open the required frequency band (e.g. FM) from the app view.
2. Select a radio station.

Related information
- Radio (p. 486)
- Searching for radio stations (p. 488)
- Changing radio band and radio station (p. 487)
- Setting radio favourites (p. 489)
- Settings for radio (p. 489)
- Voice control of radio and media (p. 144)

Changing radio band and radio station
There are instructions here for changing the radio band, the list in the radio band and the radio station in the selected list.

Changing radio band
Swipe to show the app view in the centre display and select the preferred radio band (e.g. FM), or open the driver display’s app menu using the right-hand keypad on the steering wheel and make your selection from there.

Changing lists within the frequency band
1. Press Library.
2. Select playback from Stations, Favourites, Genres or Ensembles\(^2\).

3. Tap on the desired station from the list.

**Favourites** - only plays back selected favourite channels.

**Genres** — only plays back channels broadcasting the selected genre/programme type, e.g. pop or classical.

**Changing stations within the selected list**
- Press on ▲ or ▼ under the centre display or the steering wheel’s right-hand keypad.
  > The highlight moves up or down one place in the selected playlist.

You can also change radio station in the selected list via the centre display.

**Related information**
- Radio (p. 486)
- Searching for radio stations (p. 488)
- Voice control of radio and media (p. 144)
- Setting radio favourites (p. 489)
- Settings for radio (p. 489)
- Application menu in driver display (p. 99)

---

**Searching for radio stations**
The radio automatically compiles a station list of the radio stations within the area that are transmitting the strongest signals.

The parameters you can search on depend on the frequency band selected:
- AM — station and frequency.
- FM — station, genre and frequency.
- DAB\(^*\) - ensembles and stations.

1. Press Library.
2. Press ▼.
   > Search view with keyboard is opened.
3. Enter the search terms.
   > Searching takes place with each input of a character and the search results are shown by category.

**Manual tuning**

On changing over to manual tuning, the radio no longer changes frequency automatically when reception is poor.

- Press Manual tuning, pull the control or press ▲ or ▼. With a long press, the search jumps to the next available station in the frequency band. It is also possible to use the right keypad on the steering wheel.

**Related information**
- Radio (p. 486)
- Start radio (p. 487)
- Changing radio band and radio station (p. 487)
- Voice control of radio and media (p. 144)
- Settings for radio (p. 489)

---

\(^2\) Only applies to digital radio (DAB\(^*\)).

* Option/accessory.
Setting radio favourites
It is possible to add a radio channel to the Radio favourites app and the favourites list for the radio band (e.g. FM). Instructions on how to add and remove favourites can be found below.

Radio Favourites
Radio Favourites shows saved favourites from all frequency bands.

1. Open the app Radio favourites from the app view.
2. Tap on the desired station in the list to start listening.

Adding and removing radio favourites
- Tap on ★ to add or remove a channel to or from frequency band favourites and Radio Favourites.

When a favourite is saved from a station list, the radio will automatically search for the best frequency. But if a favourite is saved from a manual station search, the radio does not automatically change to a stronger frequency.

When you remove a favourite, it will also be removed from frequency band favourites.

Related information
- Radio (p. 486)
- Start radio (p. 487)
- Searching for radio stations (p. 488)
- Changing radio band and radio station (p. 487)
- Voice control of radio and media (p. 144)
- Settings for radio (p. 489)
- Application menu in driver display (p. 99)

Settings for radio
There are various radio functions to activate and deactivate.

Cancelling traffic messages
The broadcast of traffic messages etc. can be temporarily interrupted by tapping on ☐ in the right-hand steering wheel keypad or by tapping on Cancel in the centre display.

Activating and deactivating radio functions
Drag down the top view and select Settings ➔ Media and the desired radio band to view available functions.
AM/FM Radio

- **Show Broadcast Information**: shows information on programme content, artists, etc.
- **Freeze Program Name**: select to stop the programme service name from scrolling continuously. Instead it freezes after 20 seconds.
- **Select Announcements**:
  - **Local Interruptions**: interrupts the current media playback and broadcasts information about traffic disruptions in the neighbourhood. Playback of previous media source is resumed when the message is finished. The **Local Interruptions** function is a geographically restricted version of the **Traffic Announcements** function. The **Traffic Announcements** function must be activated at the same time.
  - **News**: interrupts the current media playback and broadcasts news. Playback of previous media source is resumed when the news broadcast is finished.
  - **Alarm**: interrupts the current media playback and sends alerts about major accidents and disasters. Playback of previous media source is resumed when the message is finished.
  - **Traffic Announcements**: interrupts the current media playback and broadcasts information about traffic disruptions. Playback of previous media source is resumed when the message is finished.

DAB* (digital radio)

- **Sort Services**: option for how channels will be sorted. Either alphabetically or by service number.
- **DAB To DAB Handover**: starts the function for linking within DAB. If reception of a radio channel is lost, another channel is found automatically in another channel group (ensemble).
- **DAB To FM Handover**: starts the function for linking between DAB and FM. If reception of a radio channel is lost, an alternative FM frequency is searched for automatically.
- **Show Broadcast Information**: select to show radio text or selected types of radio text, e.g. artist.
- **Show Program Related Images**: select whether or not to show images for programmes on the screen.
- **Select Announcements**: select the types of messages to be received while DAB is playing. Selected messages will interrupt the current media playback to play back the message. Playback of previous media source is resumed when the message is finished.
- **Traffic Flash**: receives information about traffic disruptions.
- **News Flash**: receives news.
- **Transport Flash**: receives information about public transport, e.g. ferry and train timetables.
- **Warning/Services**: receives information about incidents of lower significance than the Alarm function, e.g. power failures.

Related information

- **Radio** (p. 486)
- **Digital radio* (p. 491)
- **Symbols in the centre display’s status bar** (p. 120)
RDS radio
RDS (Radio Data System) means that the radio automatically changes to the strongest transmitter. RDS provides the ability to receive e.g. traffic information and to search for certain programme types.

RDS links FM transmitters into a network. An FM transmitter in such a network sends information that gives an RDS radio the following functions:

- Switch automatically to a stronger transmitter if reception in the area is poor.
- Search for programme category, e.g. programme types or traffic information.
- Receive text information on current radio programme.

**NOTE**
Some radio stations do not use RDS or only selected parts of its functionality.

When broadcasting news or traffic messages, the radio can switch stations, interrupting the audio source currently in use. For example, if the CD player* is in use, it is paused. The radio returns to the previous audio source and volume when the set programme type is no longer broadcast. To go back earlier, press **O** on the right-hand steering wheel keypad or tap **Cancel** in the centre display.

Related information
- Radio (p. 486)
- Settings for radio (p. 489)

Digital radio*
Digital radio (DAB³) is a digital broadcasting system for radio. The radio supports DAB, DAB+ and DMB⁴.

The radio can be operated using voice recognition, the steering wheel keypad or the centre display.

The digital radio app is launched from app view in the centre display.

Digital radio is played back in the same way as other radio bands, such as FM. Besides the option to select playback from Stations, Favourites and Genres, there is also the option to select playback from subchannels and Ensembles. An ensemble is a set of radio channels (a channel group) broadcasting on the same frequency.

In the cases where the radio channel transmits its logotype, it is downloaded and shown beside the station name (download time varies).

* Option/accessory.
DAB subchannel
Secondary components are usually named sub-channels. These are temporary and can contain e.g. translations of the main programme into other languages. Subchannels are indicated with an arrow symbol in the channel list.

Related information

- Setting radio favourites (p. 489)
- Voice control of radio and media (p. 144)
- Settings for radio (p. 489)

Link between FM and digital radio*
The function enables the digital radio (DAB) to switch from a channel with poor or no reception to the same channel in another channel group (ensemble) with better reception, within DAB and/or between DAB and FM.

DAB to DAB and DAB to FM linking
1. Press Settings in the top view.
2. Press Media ➔ DAB.
3. Tick/untick DAB To DAB Handover and/or DAB To FM Handover in order to activate/deactivate the respective functions.

Related information
- Digital radio* (p. 491)
- Radio (p. 486)
- Settings for radio (p. 489)

Media player
The media player can play back audio from the CD player* and from external audio sources connected via the USB port or Bluetooth. It can also play back video format via the USB port. When the car is connected to the internet, it is also possible to listen to web radio, audio books and music services via apps.

The media player is operated from the centre display, but several functions can be operated using the steering wheel's right-hand keypad or voice control.

The radio is operated in the media player and is described in a separate section.

Media playback
The media player is controlled from the centre display. Several functions can also be operated using the steering wheel's right-hand keypad or voice control.

The media player also operates the radio, which is described in a separate section.

Starting the media source

App view. (Generic image, basic apps vary by market and model.)

CD*
1. Insert a CD.
2. Open the app CD from the app view.
3. Select what to play back.
   > Playback begins.

USB memory
1. Insert the USB memory.
2. Open the app USB from the app view.
3. Select what to play back.
   > Playback begins.

Mp3 player and iPod®

NOTE
To start playback from iPod, use the iPod app (not USB).

When an iPod is used as audio source, the car's audio and media system has a menu structure that is similar to the iPod player's own menu structure.

1. Connect media source.
2. Start playback from the connected media source.
3. Open the app (iPod, USB) from the app view.
   > Playback begins.

* Option/accessory. 493
**Bluetooth connected device**
1. Activate Bluetooth in the media source.
2. Connect media source.
3. Start playback from the connected media source.
4. Open the app Bluetooth from the app view.
   > Playback begins.

**Media with Internet connection**
Play back media from Internet-connected apps:
1. Connect the car to the Internet.
2. Open the current app from the app view.
   > Playback begins.

Read the separate section on how apps are downloaded.

**Video**
1. Connect media source.
2. Open the app USB from the app view.
3. Tap on the title of the desired item to play back.
   > Playback begins.

**Apple CarPlay**
CarPlay is described in a separate section.

**Android Auto**
Android Auto is described in a separate section.

**Controlling and changing media**
The playback of media can be controlled with voice control, steering wheel keypad or the centre display.

The media player can be operated by voice recognition, from the steering wheel keypad or the centre display.

Volume - turn the control knob under the centre display or press ▲ ▼ on the steering wheel’s right-hand keypad in order to increase or decrease the volume.

Play/pause - tap on the image belonging to the song being played back, the physical button under the centre display or 〇 on the steering wheel’s right-hand keypad.

* Option/accessory.
Change track/song - tap on the desired track in the centre display, press on \(\leftarrow\) or \(\rightarrow\) under the centre display or on the steering wheel's right-hand keypad.

Fast forward/move in time - tap on the time axis in the centre display and drag sideways, or press and hold \(\leftarrow\) or \(\rightarrow\) under the centre display or on the steering wheel's right-hand keypad.

Changing media - select from previous sources in the app, in the app view, press on the desired app or select with the steering wheel's right-hand keypad via the app menu.

**Library** - tap on the button to play back from the library.

**Shuffle** - tap on the button to shuffle the playback order.

**Similar** - tap on the button in order to use Gracenote to search for similar music on the USB device and to create a playlist from it. The playlist can contain a maximum of 50 songs.

**Change device** - tap on the button in order to switch between USB devices when several are connected.

**Searching media**
It is possible to search by artist, composer, song titles, album, video, audio book, playlist and, when the car is connected to the Internet, podcasts (digital media via Internet).

1. Press \(\mathcal{Q}\).
   > Search view with keyboard is opened.
2. Enter the search terms.
3. Press **Search**.
   > Connected devices are searched and the search results are listed by category.

Swipe sideways across the screen to show each category separately.

Gracenote®
Gracenote identifies artist, album, song titles and associated images, which are shown during playback.

Gracenote MusicID® is a standard for music recognition.

1. Press Settings in the top view.
2. Press Media ➔ Gracenote®.
3. Select settings for Gracenote data:
   - Gracenote® Online Search - searches in Gracenote’s online database for playing media.
   - Gracenote® Multiple Results - selects how to display Gracenote data if there are more than one search results.
     1 - the file’s original data are used.
     2 - Gracenote data are used.
     3 - Gracenote or original data can be selected.
   - None - no results are shown.

Updating Gracenote
The content of the Gracenote database is updated continuously. Download the latest update for optimal functionality. For information and download, see support.volvocars.com.

**Apple® CarPlay®**
CarPlay gives you the option to listen to music, make phone calls, get directions, send/receive messages and use Siri, all while you stay focused on your driving.

CarPlay works with selected Apple devices. If the car does not already support CarPlay there is the option to install it retroactively. Contact a Volvo retailer to install CarPlay.

Information about which apps are supported and which phones are compatible is available on Apple’s website: www.apple.com/ios/carplay/.

Using apps that are not compatible with CarPlay may sometimes mean that the connection between an iPhone and the car is broken. Please note that Volvo is not responsible for the content in CarPlay.

When using map navigation via CarPlay, there is no guidance in the driver display or head-up display, but only in the centre display.

The CarPlay apps can be controlled via the centre display, phone or using the steering wheel’s right-hand keypad (applies to certain functions). The apps can also be voice-controlled using Siri.

A long press on the steering wheel button ``` applies to certain markets.```
starts voice control using Siri and a short press activates the car’s own voice control. If Siri breaks off too early, hold the steering wheel button depressed.

By using Apple CarPlay you acknowledge the following: Apple CarPlay is a service provided by Apple Inc. under its terms and conditions. Volvo Cars is thus not responsible for Apple CarPlay or its features/applications. When using Apple CarPlay, certain information from your car (including its position) is transferred to your iPhone. In relation to Volvo Cars, you are fully responsible for your and any others person’s use of Apple CarPlay.

Using Apple® CarPlay®

To use CarPlay, Siri voice control must be activated in your phone. The phone must also have an Internet connection via Wi-Fi or the mobile network.

Connect an iPhone and start CarPlay

NOTE

CarPlay can only be used if Bluetooth is deactivated. A phone or media player connected to the car via Bluetooth will therefore not be available when CarPlay is active. An alternative Internet source must be used to connect to the Internet for the car’s apps. Use Wi-Fi or the car’s built-in modem.

1. Connect an iPhone to the USB port. In the cases where there are two USB ports, the one with the white frame around the port must be used.
2. Read the information in the pop-up window and then tap on OK.
3. Tap on Apple CarPlay in the app view.
4. Read the terms and conditions and then tap on Accept to connect.
   > The tile with CarPlay is opened and compatible apps are shown.
5. Tap on the desired app.
   > The app starts.

Starting CarPlay

CarPlay is started according to the following after an iPhone has been connected.

1. Connect an iPhone to the USB port. In the cases where there are two USB ports, the one with the white frame around the port must be used.
   > If the setting for automatic start is selected - the name of the phone is shown.
2. Tap on the phone name - the tile with CarPlay is opened and compatible apps are shown.
3. If the tile with CarPlay is not opened, tap on Apple CarPlay in the app view.
   > The tile with CarPlay is opened and compatible apps are shown.
4. Tap on the desired app.
   > The app starts.

CarPlay runs in the background if another app is started in the same tile. To show CarPlay in the tile again - tap on the CarPlay icon in the app view.

Tips for using Apple® CarPlay®*
Here are some useful tips for using CarPlay®.
• Update your iPhone with the latest version of iOS operating system and ensure that the apps have been updated.
• In the event of a problem with CarPlay, disconnect the telephone from the USB port and reconnect. Otherwise, try to close the app on the telephone that is not working and then restart the app, or try closing all apps and restart your phone.
• If the apps do not appear when CarPlay starts (black screen), try minimising and expanding the tile for CarPlay.
• Using apps that are not compatible with CarPlay may sometimes mean that the connection between the phone and the car is broken. Information about supported apps and compatible telephone models can be found on Apple’s website. You can also search for CarPlay in the App Store to find information about apps that are compatible with CarPlay on your market.
• CarPlay only works with iPhone 11.

NOTE
Availability and functionality may vary depending on market.

Android Auto*

Android Auto gives you the option to listen to music, make phone calls, get directions and use car-adapted apps from an Android device. Android Auto works with selected Android devices.

Information about which apps are supported and which phones are compatible is available on the website: www.android.com/auto/. For third-party apps, see Google Play. Please note that Volvo is not responsible for the content in Android Auto.

Android Auto is started from the app view. After Android Auto has been started once, the app will be started automatically the next time the device is connected. Automatic start can be deactivated under settings.

Using Android Auto*

To use the app Android Auto, the telephone must be connected to the car's USB port.

The first time an Android is connected
1. Connect the Android phone to the USB port.
   In the cases where there are two USB ports, the one with the white frame around the port must be used.
2. Read the information in the pop-up window and then tap on OK.
3. Tap on Android Auto in the app view.
4. Read the terms and conditions and then tap on Accept to connect.
   > The tile with Android Auto is opened and compatible apps are shown.
5. Tap on the desired app.
   > The app starts.

- Managing text messages (p. 513)
- Connecting a phone to the car via Bluetooth for the first time (p. 508)
Connecting a phone to the car via Bluetooth for the first time

Connect a phone with Bluetooth activated to then be able to make calls from the car, send/receive messages, play back media wirelessly and connect the car to the Internet.

It is possible to have two Bluetooth devices connected at once, in which case one of them can only play back wirelessly. The most recently connected phone will automatically be connected to make calls, send/receive messages, play back media and provide an Internet connection. It is possible to change the use of the phone in the settings for Bluetooth Devices.

After the device has been connected/registered a first time via Bluetooth, it no longer needs to be visible/discoverable, but only have Bluetooth activated. To connect the car to the Internet via a phone, tethering must also be activated on the phone. A maximum of 20 connected Bluetooth devices can be stored in the car.

There are two options for connecting. Either search the phone from the car or search the car from the phone.

Option 1 - search phone from car
1. Make the phone searchable/visible via Bluetooth.

2. To connect the car to the Internet via the phone’s Bluetooth, activate tethering (portable/personal hotspot) via Bluetooth on the phone.

3. Open the tile for the phone.
   - If there is no phone connected to the car, tap on Add phone.
   - If there is a phone connected to the car, tap on Change . In the pop-up window, tap on Add phone.

   > Available Bluetooth devices are listed. The list is updated as new devices are detected.

4. Tap on the name of the phone to be connected.

5. Check that the specified number code in the car matches that in the phone. In which case, choose to accept in both places.

6. On the phone, choose to accept or reject any options for phone contacts and messages.

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>• The message function must be activated in certain phones.</td>
</tr>
<tr>
<td>• Not all mobile phones are fully compatible and may therefore not show contacts and messages in the car.</td>
</tr>
</tbody>
</table>
Option 2 - search car from phone
1. Open the tile for the phone.
   • If there is no phone connected to the car, tap on Add phone ➔ Make car discoverable.
   • If there is a phone connected to the car, tap on Change ➔. In the pop-up window, tap on Add phone ➔ Make car discoverable.
2. Activate Bluetooth on the phone.
3. To connect the car to the Internet via the phone’s Bluetooth, activate tethering (portable/personal hotspot) via Bluetooth on the phone.
4. Search on the phone for Bluetooth devices.
   > Available Bluetooth devices are listed.
5. Select the name of the car on the phone.
6. A pop-up window for the connection is shown in the car. Confirm the connection.
7. Check that the specified number code in the car matches that in the external device. In which case, choose to accept in both places.
8. On the phone, choose to accept or reject any options for phone contacts and messages.

**NOTE**
- The message function must be activated in certain phones.
- Not all mobile phones are fully compatible and may therefore not show contacts and messages in the car.

If the phone’s operating system is updated then the connection may be broken. In which case, delete the phone from the car and then connect again.

**Compatible phones**
Many phones on the market now have wireless Bluetooth technology, but not all of them are fully compatible with the car. For compatibility, see support.volvocars.com.

Managing phone calls
Call handling in the car for a Bluetooth-connected phone.

Making phone calls
1. Open the tile for the phone.
2. Select call from: call history, enter number using the keypad or via the contact list. It is possible to search or browse in the contact list. Tap on ★ in the contact list in order to add a contact under **Favourites**.
3. Press 📞.
4. Tap on 🔴 to end the call.

You can also make calls from the call log via the app menu, which is accessed from the right-hand steering wheel keypad 📞.

Making multi-party calls
During a call:
1. Press **Add call**.
2. Choose to make a call from the call log, favourites or the contact list.
3. Tap on an entry/row in the call log, or tap on ★ alongside the contact in the contact list.
4. Tap on **Swap call** to switch between the parties.
5. Tap on 🔴 to end the active call.

Conference calls
During an active multi-party call:
1. Tap on **Join calls** to merge the active multi-party call.
2. Tap on 🔴 to end the call.

Incoming phone calls
Incoming phone calls are shown in the driver display and the centre display. Manage the call on the right-hand steering wheel keypad or in the centre display.
1. Tap on **Answer/Reject**.
2. Tap on 🔴 to end the call.

Incoming phone call during an active call
1. Tap on **Answer/Reject**.
2. Tap on 🔴 to end the call.
Private call
- During the current call, press Privacy and select setting:
  - **Switch to mobile phone** - the hands-free function is disconnected and the call continues on your mobile phone.
  - **Driver focused** - the microphone in the roof on the passenger side is switched off and the call continues with the car's hands-free function.

Managing text messages
Message handling in the car for a Bluetooth-connected phone.
In some phones, the message function must be activated. Not all phones are compatible. In such cases, they cannot display contacts and messages in the car. For compatibility, see support.volvocars.com.

Managing text messages in the centre display
Text messages are only shown in the centre display if the setting is selected.
Press Messages in the app view to manage text messages in the centre display.

Sending text messages in the centre display\(^\text{12}\)
1. You can reply to a message or create a new message.
   - Reply to message — tap on the contact whose message you wish to reply to, then tap on Answer.
   - Create new message - tap on Create new. Select a contact or enter a number.
2. Compose the message.
3. Press Send.

Managing text messages in the driver display
Text messages are only shown in the driver display if the setting is selected.

Reading a new text message in the driver display
- To have the message read aloud - select Read out with the steering wheel keypad.

Dictating a reply in the driver display
After the text message has been read out, it is possible to reply briefly with dictation if the car is connected to the Internet.
- Press Answer with the steering wheel keypad. A dictation dialogue starts.

---

\(^{12}\) Only certain phones can broadcast messages from the car. For compatibility, see support.volvocars.com.
Message notification
It is possible to activate and deactivate notifications in the text message settings.

- Settings for phone (p. 515)

Managing the phone book
Contact handling in the car for a Bluetooth-connected phone.

1. Browse between the letters and 📜 to find a matching contact. Depending on existing contacts in the phone book, only matching letters are shown.
2. **Search contacts** - tap on 🔍 to search for a phone number or name in the contact list.
3. **Favourites** - tap on ⭐ to add/remove a contact to/from the favourites list.

**NOTE**
Only contacts from an active Bluetooth-connected phone are shown in the centre display. Up to 3000 contacts can be shown.

* Option/accessory.
**Sorting**
The contact list is sorted in alphabetical order where special characters and numbers are sorted under `#`. It is possible to sort by first name or surname, and this setting is adjusted in the telephone setup.

Settings for Bluetooth devices
Settings for Bluetooth-connected devices.
1. Press Settings in the top view.
2. Press Communication ➔ Bluetooth Devices and select settings:
   - **Add device** - starts the pairing of a new device.
   - **Previously paired devices** - lists connected devices.
   - **Remove device** - removes the connected device.
   - **Allowed services for this device** - sets device usage options: calling, sending/receiving messages, streaming media and as Internet connection.
   - **Internet connection** - connects the car to the Internet via the device's Bluetooth connection.

Related information
- Phone (p. 507)
- Settings for phone (p. 515)
- Internet-connected car* (p. 516)
- Connecting a phone to the car via Bluetooth for the first time (p. 508)

Internet-connected car*
When the car is connected to the Internet, it is possible – for example – to use web radio and music services via apps, download software and contact your retailer from the car.

The car is connected via Bluetooth, Wi-Fi or with the car’s built-in modem*.

When the car is online, its Internet connection (Wi-Fi hotspot) can be shared to allow other devices to use the Internet connection

Connection status is indicated by a symbol in the centre display’s status bar.

NOTE
Data is transferred when using the internet (data traffic), which can have a cost.
Activation of data roaming can result in further charges.
Contact your network operator about the cost for data traffic.

NOTE
When using Apple CarPlay, it is only possible to connect the car to the Internet using Wi-Fi or the car modem*.

NOTE
When using Android Auto, it is possible to connect the car to the Internet using Wi-Fi, Bluetooth or the car modem*.

Read Terms and Conditions for Services and Customer Privacy Policy at support.volvocars.com before connecting the car to the Internet.

13 This does not apply in the case of connection with Wi-Fi.
Connecting the car to the Internet via a mobile device (Bluetooth)

Create an Internet connection via Bluetooth by sharing your phone’s Internet access and access several online services in the car. The phone and network operator must support tethering (sharing the Internet connection) and the subscription plan must include data.

1. To be able to connect the car to the Internet via a Bluetooth-connected phone, the phone has to have already been connected to the car via Bluetooth for a first time. Ensure that the personal hotspot (portable/personal hotspot) is activated in your phone.

2. If the phone has been connected via Bluetooth previously, press Settings in the centre display top view.

3. In the centre display: Press Communication ➔ Bluetooth Devices.

4. Tick the box for Bluetooth Internet connection under the heading Internet connection.

> Your car is now connected to the Internet via the Bluetooth-connected phone.

**NOTE**

When using Apple CarPlay, it is only possible to connect the car to the Internet using Wi-Fi or the car modem*.

Connecting the car to the Internet via a mobile device (Wi-Fi)
Create an Internet connection via Wi-Fi by sharing your phone’s Internet access and access several online services in the car. The phone and network operator must support tethering (sharing the Internet connection) and the subscription plan must include data.

1. Activate tethering (portable/personal hotspot) on the phone.
2. Press Settings in the top view.
3. Continue to Communication → Wi-Fi.
4. Activate/deactivate by ticking/unticking the box for Wi-Fi.
5. Tap on the network name of the network to be connected.
6. Enter the network password.
7. If another connection source has been used in the past - confirm the option to change connection.
   > The car connects to the network.

Note that certain phones switch off tethering after the contact with the car has been disconnected, e.g. when leaving the car and until the next time it is used. The tethering in the phone therefore needs to be reactivated the next time it is used.

When a phone is connected to the car, it is saved for future use. When the maximum number of saved phones (50) is reached, the first connected phones are deleted. To show a list of saved networks or manually delete saved networks, go to Settings → Communication → Wi-Fi → Saved networks.

Technical and safety requirements for Wi-Fi connection, are described in a separate section.

Related information
- Internet-connected car* (p. 516)

Connect the car to the Internet via car modem (SIM card)
For cars equipped with Volvo On Call*, it is possible to establish an Internet connection via the car modem and a personal SIM card (P-SIM). When the car is connected to the Internet via the car modem, Volvo On Call services will use this connection.

1. Fit a personal SIM card into the holder under the cargo area floor.
2. Press Settings in the top view.
3. Press Communication → Car Modem Internet.
4. Activate/deactivate by ticking/unticking the box for Car modem Internet.

* Option/accessory.
5. If another connection source has been used in the past - confirm the option to change connection.
6. Enter the SIM card’s PIN code. > The car connects to the network.

**Related information**
- Internet-connected car* (p. 516)
- No or poor Internet connection (p. 521)
- Settings for car modem (p. 519)

---

**Settings for car modem**

The car is equipped with a modem that can be used to connect the car to the Internet. It is also possible to share the Internet connection via Wi-Fi.

1. Press **Settings** in the top view.
2. Press **Communication ➔ Car Modem Internet** and select settings:
   - **Car modem Internet** - select whether to use the car modem as Internet connection.
   - **Data usage** - tap on **Reset** resets the counters for received and sent data volume.
   - **Network**
     - **Select network operator** - automatic or manual selection of network operator.
     - **Data roaming** - if the box is ticked, the car modem will attempt to connect to the Internet when the car is abroad and outside its home network. Note that this may result in heavy costs. Check your roaming agreement for data traffic abroad with your network provider in your home country.
   - **SIM card PIN**
     - **Change PIN** - a maximum of 4 digits can be entered.
     - **Disable PIN** - select whether the PIN code shall be required for access to the SIM card.

---

* Send request code — used e.g. to top up or check the balance on a prepaid card. Functionality depends on the provider.

**Related information**
- Connect the car to the Internet via car modem (SIM card) (p. 518)
- No or poor Internet connection (p. 521)

---

* Only cars with Volvo On Call.
Sharing Internet access from the car via a Wi-Fi hotspot

When the car is online, its Internet connection can be shared to allow other devices to use the Internet connection.\(^{15}\)

1. Press **Settings** in the top view.
2. Press **Communication** ➔ **Car Wi-Fi Hotspot**.
3. Tap on **Network name** and name the shared connection.
4. Tap on **Password** and select a password to be entered on connecting devices.
5. Tap on **Frequency band** and select the frequency on which the hotspot is to transmit data. Note that selection of frequency band is not available in all markets.
6. Activate/deactivate by ticking/unticking the box for **Car Wi-Fi Hotspot**.
7. If Wi-Fi has previously been used as a connection source, confirm the option to change connection.
   > It is now possible for external devices to connect to the car's tethering (Wi-Fi hotspot).

The network operator (SIM card) must support tethering (sharing of the Internet connection).

**NOTE**

Activation of Wi-Fi-hotspot can result in further charges from your network operator.

Contact your network operator about the cost for data traffic.

Connection status is indicated by the symbol in the centre display’s status bar.

Press **Connected devices** to see a list of the currently connected devices.

**Related information**

- Symbols in the centre display’s status bar (p. 120)
- Internet-connected car* (p. 516)
- No or poor Internet connection (p. 521)
No or poor Internet connection
Factors that affect the Internet connection.

The amount of data transferred is dependent on the services or apps in use in the car. For example, streaming audio can require large amounts of data which requires a good connection and good signal strength.

Phone to car
The speed of the Internet connection may vary depending on the location of the phone in the car. Move the phone closer to the centre display in order to increase the signal strength. Ensure that there is no source of interference in between.

Phone to network operator
The speed of the mobile network varies depending on the coverage in the present location. Poor network coverage may occur, for example in tunnels, in mountainous country, in deep valleys or indoors. The speed also depends on the agreement you have with your network.

NOTE
In the event of problems with data traffic, contact your network operator.

Restarting the phone
If there are problems with the Internet connection then it may help to restart the phone.

Related information
• Internet-connected car* (p. 516)
• Wi-Fi technologies and security (p. 522)

Remove Wi-Fi network
Removing a network that is not to be used.

1. Press Settings in the top view.
2. Continue to Communication ➔ Wi-Fi ➔ Saved networks.
3. Tap on Forget alongside the network to be removed.
4. Confirm the selection.
   > The car will no longer connect to the network in future.

Remove all networks
All networks can be removed simultaneously by restoring factory settings. Please note that all user data and system settings are reset to original factory settings.

Related information
• Internet-connected car* (p. 516)
• No or poor Internet connection (p. 521)
• Resetting settings in the centre display (p. 131)
• Connecting the car to the Internet via a mobile device (Wi-Fi) (p. 518)
Wi-Fi technologies and security
Possible network types to connect to.
It is only possible to connect to the following types of network:
- Frequency — 2.4 or 5 GHz.
- Standards — 802.11 a/b/g/n.
- Security type - WPA2-AES-CCMP.
The car's Wi-Fi system is designed to handle Wi-Fi devices inside the car.
If several devices operate on the frequency at the same time then it may result in reduced performance.

Related information
- Internet-connected car* (p. 516)

User terms and conditions and data sharing
The first time certain services and apps are started, a pop-up window with the headings Terms and conditions and Data sharing may be shown.
The purpose is to inform about Volvo’s user terms and conditions and policy for data sharing.
By accepting data sharing, the user accepts that certain information is sent from the car. This is required so that certain services and apps can have full functionality.
Data sharing can be set from the centre display's settings menu.

Related information
- Activating and deactivating data sharing (p. 522)

Activating and deactivating data sharing
Data sharing for services and apps required can be set in the centre display's settings menu.
1. Press Settings in the top view in the centre display.
2. Press System → Privacy and data.
3. Select Data sharing to activate or deactivate data sharing.
4. When data sharing is activated, settings for individual services and apps can be changed in the list below.
When data sharing is deactivated, the earlier settings for individual services and apps remain available when data sharing is reactivated.

Related information
- User terms and conditions and data sharing (p. 522)

License agreement for audio and media

A license is an agreement for the right to operate a certain activity or the right to use someone else's entitlement according to the terms and conditions in the agreement. The following texts are Volvo's agreements with manufacturers/developers.

Bowers & Wilkins

Bowers & Wilkins and B&W are trademarks of the B&W Group Ltd. Nautilus is a trademark of B&W Group Ltd. Kevlar is a registered trademark of DuPont.

Dirac Unison®

Dirac Unison co-optimises the loudspeakers in frequency, time and space for the best possible bass integration and clarity. It enables a faithful reproduction of the acoustic characteristics of specific performance venues. Using advanced algorithms, Dirac Unison controls all loudspeakers digitally based on acoustic high-precision measurements. Like a conductor of an orchestra, it guarantees that the loudspeakers perform in perfect unison.

DivX®

DivX®, DivX Certified® and associated logotypes are trademarks belonging to DivX, LLC and are used under licence.

This DivX Certified® device can play back DivX® Home Theater video files up to 576p (including .avi, .divx). Download free software on www.divx.com to create, play back and stream digital video.

ABOUT DIVX VIDEO-ON-DEMAND: This DivX Certified® device must be registered in order to play back purchased DivX Video-on-Demand (VOD) films. Get the registration code by locating the DivX VOD section in the device’s settings menu. Go to vod.divx.com for more information on how to complete the registration.

Patent numbers

Protected by one or more of the following US patents. 7,295,673; 7,460,668; 7,515,710; 8,656,183; 8,731,369; RE45,052.

Gracenote®

Gracenote®
Parts of the content are copyright © of Gracenote or its suppliers.

Gracenote, Gracenote logo and logotype, "Powered by Gracenote" and Gracenote MusicID are either registered trademarks or trademarks of Gracenote, Inc. in the USA and/or other countries.

**Gracenote® End User License Agreement**

This program or device contains software from Gracenote, Inc. of Emeryville, California, USA ("Gracenote"). The software from Gracenote ("Gracenote software") activates this program to perform disc and/or file identification and obtain music-related information, including name, artist, track and title ("Gracenote data") from online servers or embedded databases (together called "Gracenote servers") and in order to perform other actions. You may only use Gracenote data in accordance with the intended end-user functions for this program or this device.

You agree to only use Gracenote data, Gracenote software and Gracenote servers for your own personal non-commercial use. You agree not to assign, copy, transfer or transmit this Gracenote software or any Gracenote data to any third party. YOU AGREE NOT TO USE OR EXPLOIT GRACENOTE DATA, GRACENOTE SOFTWARE OR GRACENOTE SERVERS, EXCEPT AS EXPRESSLY PERMITTED IN THIS AGREEMENT.

You agree that your non-exclusive right to use Gracenote data, Gracenote software and Gracenote servers will be terminated if you violate these restrictions. If your license is terminated you agree to cease all use of Gracenote data, Gracenote software and Gracenote servers. Gracenote holds exclusive rights to all Gracenote data, all Gracenote software and all Gracenote servers, including all ownership rights. Gracenote will under no circumstances have any obligation to pay you for any information you provide. You agree that Gracenote, Inc. may enforce the company’s rights under this agreement against you directly in its own name.

The Gracenote service uses a unique identifier to track enquiries for statistical purposes. The purpose of a randomly assigned numeric identifier is to enable the Gracenote service to count enquiries without knowing anything about who you are. Additional information is available on the web page for Gracenote’s privacy policy for the Gracenote service.

The Gracenote software and everything included in Gracenote data are licensed to you "as is". Gracenote provides no undertakings or warranties, express or implied, as to the accuracy of the Gracenote data contained in the Gracenote servers. Gracenote reserves the right to delete data from the Gracenote servers or to change data categories for any reason that Gracenote deems sufficient. No warranty is provided that the Gracenote software or Gracenote servers are fault-free or that the Gracenote software or Gracenote servers will operate without interruption. Gracenote has no obligation to provide you with new, improved or additional data types or categories that Gracenote may provide in the future, and the company reserves the right to discontinue its services at any time.

GRACENOTE DISCLAIMS ALL WARRANTIES, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE AND NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. GRACENOTE DOES NOT GUARANTEE THE RESULTS OBTAINED THROUGH YOUR USE OF THE GRACENOTE SOFTWARE OR A GRACENOTE SERVER. GRACENOTE WILL IN NO EVENT BE LIABLE FOR ANY CONSEQUENTIAL DAMAGE OR FOR ANY LOST PROFITS OR REVENUES.

WHEELS AND TYRES
WHEELS AND TYRES

Tyres
Amongst other things, the function of the tyres is to carry load, provide grip on the road surface, dampen vibration and protect the wheel from wear.
The tyres greatly affect the car’s driving characteristics. The type of tyre, dimensions, tyre pressure and speed rating are important for how the car performs.
The car is fitted with tyres according to the tyre information sticker found on the driver’s side door pillar (between the front door and the rear door).

WARNING
A damaged tyre may lead to loss of control over the car.

Recommended tyres
On delivery, the car is equipped with Volvo original tyres that have the VOL marking on the side of the tyres. These tyres are carefully adapted to the car. In the event of changing tyres, it is therefore important that the new tyres also have this marking in order for the car’s driving characteristics, comfort and fuel consumption to be maintained.

New tyres
Tyres are perishable. After a few years they begin to harden at the same time as the friction capacity/characteristics gradually deteriorate. For this reason, aim to get as fresh tyres as possible when you replace them. This is especially important with regard to winter tyres. The last four digits in the sequence mean the week and year of manufacture. This is the tyre’s DOT marking (Department of Transportation), and this is stated with four digits, for example 0717. The tyre is then manufactured in week 07, year 2017.

Tyre age
All tyres older than 6 years old should be checked by an expert even if they seem undamaged. Tyres age and decompose, even if they are hardly ever or never used. The function can therefore be affected. This applies to all tyres that are stored for future use. Examples of external signs which indicate that the tyre is unsuitable for use are cracks or discolouration.

Tyre economy
• Maintain the correct tyre pressure.
• Avoid fast starts, heavy braking and squealing tyres.
• Tyre wear increases with speed.
• Correct wheel alignment is very important.
• Unbalanced wheels worsen tyre economy and travelling comfort.
• The tyres must have the same direction of rotation during their entire service life.
• When you change tyres, the tyres with the best tread must be fitted on the rear wheels to reduce the risk of oversteer during heavy braking.
• If you drive over kerbstones or deep holes you can damage the tyres and/or wheel rims permanently.

Tyre rotation
The car has no mandatory tyre rotation. Driving style, tyre pressure, climate and road condition affect how quickly the tyres age and wear. Correct tyre pressure results in more even wear.
To avoid differences in tread depth and to prevent wear patterns forming on the tyres, the front

1 There may be deviations for certain tyre dimensions.
and rear wheels should be switched with each other. A suitable distance for the first change is approx. 5000 km (approx. 3100 miles) and then at 10000 km (approx. 6200 miles) intervals.

Volvo recommends the an authorised Volvo workshop is contacted for checking if you are uncertain about tread depth. If significant differences in wear (> 1 mm difference in tread depth) between tyres have already occurred, then the least worn tyres must always be fitted on the rear. Understeer is normally easier to correct than oversteer, and leads to the car continuing forwards in a straight line rather than having the rear end skidding to one side, resulting in possible complete loss of control over the car. This is why it is important for the rear wheels never to lose grip before the front wheels.

Storing wheels and tyres
When you store complete wheels (tyres fitted on wheel rims) they should be hung up or positioned lying on their sides on the floor.

Tyres not fitted on rims must be stored lying on their sides or standing upright, but not hung up.

**IMPORTANT**
Tyres should be stored in a cool, dry and dark place, and should never be stored close to solvents, petrol, oils, etc.

### WARNING
- Wheel rim size and tyre size for your Volvo are specified to meet stringent requirements for stability and driving characteristics. Unapproved combinations of wheel rim size and tyre size may have a negative effect on the car's stability and driving characteristics.
- Any damage caused by the fitting of unapproved combinations of wheel rim size and tyre size is not covered by the new car warranty. Volvo accepts no liability for death, personal injury or any costs caused by such installations.

### Dimension designation for tyre
Designations for tyre dimension, load index and speed rating.

The car has an approval for the complete vehicle with certain combinations of wheel rims and tyres.

### Designation of dimensions
All tyres have a dimension designation, such as: 255/40 R19 100 W.

<table>
<thead>
<tr>
<th>255</th>
<th>Tyre width (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>40</td>
<td>Ratio between tyre wall height and tyre width (%)</td>
</tr>
<tr>

<td>Codes for the maximum permitted tyre load, tyre load index (LI)</td>
</tr>
<tr>
<td>W</td>
<td>Speed rating for maximum permitted speed, speed rating (SS). (In this case 270 km/h (168 mph).)</td>
</tr>
</tbody>
</table>

### Load index
Each tyre has a certain capacity to carry a load, a load index (LI). The car's weight determines the load capacity required of the tyres.

WHEELS AND TYRES

**Speed rating**
Each tyre can withstand a certain maximum speed. Tyre speed rating, SS (Speed Symbol), must at least correspond with the car’s top speed. The table below shows the maximum permitted speed for each speed rating (SS). The only exception to these regulations is winter tyres\(^2\), where a lower speed rating may be used. If such a tyre is chosen, the car must not be driven faster than the speed rating of the tyre (for example, class Q can be driven at a maximum of 160 km/h (100 mph).) The top speed at which the car can be driven depends on road conditions, not the speed rating of the tyres.

<table>
<thead>
<tr>

<td>300 km/h (186 mph)</td>
</tr>
</tbody>
</table>

\(^2\) Both those with metal studs and those without.

**WARNING**
The lowest permitted tyre load index (LI) and speed rating (SS) for the tyres for each respective engine variant are shown in the specifications, which can be found in the printed owner’s manual. If a tyre with too low a load index or speed rating is used, it may overheat and be damaged.

Tyres' rotation direction
Tyres with a tread pattern which are designed to only turn in one direction have the direction of rotation marked with an arrow.

The arrow shows the tyre's direction of rotation.

• The tyre must always rotate in the same direction throughout its lifespan.

• Tyres should only be switched between front and rear positions, never between left and right-hand sides, or vice versa.

• If the tyres are fitted incorrectly, the car's braking characteristics and capacity to force rain and slush out of the way are adversely affected.

• Tyres with the greatest tread depth should always be fitted to the rear of the car (to decrease the risk of skidding).

NOTE
Make sure that both pairs of wheels have the same type and dimension, and also the same make.

Related information
• Tyres (p. 536)

Tread wear indicators on the tyres
Tread wear indicators show the status of the tyre's tread depth.

A tread wear indicator is a narrow elevation across the longitudinal grooves of the tyre's tread pattern. On the side of the tyre are the letters TWI (Tread Wear Indicator). When the tyre's tread depth is down to 1.6 mm (1/16 inch), the tread will be level in height with the tread wear indicators. Change to new tyres as soon as possible. Remember that tyres with little tread depth provide very poor grip in rain and snow.

Related information
• Tyres (p. 536)
Checking tyre pressure
Correct tyre pressure helps to improve driving stability, saves fuel and extends the service life of the tyres.

Tyre pressure decreases over time, this is a natural phenomenon. Tyre pressure also varies depending on ambient temperature. Driving on tyres with tyre pressure that is too low could result in the tyres overheating and being damaged. Tyre pressure affects travelling comfort, road noise and driving characteristics.

Check the tyre pressures monthly. Use the tyre pressure recommended for cold tyres in order to achieve optimal tyre performance and optimal wear. Tyre pressure that is too low or too high may cause uneven wear on the tyres.

**WARNING**
- Tyre pressure that is too low is the most common cause of tyre failure and may result in serious cracks in the tyre, the tread loosening or the tyre exploding, with unexpected loss of control of the car and increased risk of personal injury.
- Tyres with pressure that is too low reduce the load capacity of the car.

Cold tyres
The tyre pressure must be checked when the tyres are cold.

Tyres are considered cold when they have the same temperature as the surrounding air. This temperature is normally reached when the car has been parked for at least three hours. After having driven approximately 1.6 km (1 mile) these tyres are considered as warm. If you have to drive further than this to inflate the tyres, first check and record the tyre pressure and inflate to a suitable tyre pressure when you arrive at the pump.

When the outside temperature changes, the tyre pressure also changes. A decrease in temperature of 10 degrees causes the tyre pressure to decrease 1 psi (7 kPa). Check the tyre pressure regularly and adjust to the correct pressure, which is specified on the car’s tyre information plate or certification label.

If you check the tyre pressure when the tyres are warm then you must never release any air. The tyres are warm due to driving and it is normal for the pressure to increase above the recommended pressure for cold tyres. A warm tyre with tyre pressure equal to or below the recommendation for cold tyres may have a pressure that is far too low.

**Adjusting tyre pressure**
Tyre pressure decreases over time, this is a natural phenomenon. The tyre pressure must therefore sometimes be adjusted in order to maintain the recommended tyre pressure. Use the tyre pressure recommended for cold tyres in order to achieve optimal tyre performance and optimal wear.

**NOTE**
To avoid incorrect tyre pressure, the pressure should be checked on cold tyres. "Cold tyres" means the tyres are the same temperature as the ambient temperature (approx. 3 hours after the car has been driven). After a few kilometres of driving, the tyres warm up and the pressure increases.

1. Remove the cap from the valve on one tyre and then press the tyre pressure gauge firmly down onto the valve.
2. Inflate to the recommended pressure.

**Related information**
- Adjusting tyre pressure (p. 540)
- Recommended tyre pressure (p. 541)
- Tyre pressure monitoring system* (p. 542)
- Tyres (p. 536)

* Option/accessory.
3. Refit the dust cap.

**NOTE**
- After a tyre has been inflated, always refit the dust cap in order to avoid damage to the valve from gravel, dirt, etc.
- Only use plastic dust caps. Metal dust caps can rust and become difficult to unscrew.

4. Check the tyres visually for any implanted nails or other objects that could puncture the tyre and cause leakage.

5. Check the sidewalls for any cavities, cuts, bumps or other irregularities.

6. Repeat this for all tyres, including the spare tyre*.

**NOTE**
If you have over-inflated, release air by pressing in the metal pin in the centre of the valve. Then check the pressure again using the tyre pressure gauge.

Some spare tyres require a higher tyre pressure than other tyres. Check in the tyre pressure table or on the tyre pressure plate.

---

**Recommended tyre pressure**

The tyre pressure label on the driver’s side door pillar (between frame and rear door) shows which pressures the tyres should have at different loads and speed conditions.

The plate displays the designation for the factory-fitted tyres on the car, as well as load limits and tyre pressure.

**Improved fuel economy with ECO pressure**

For a light load (max. 3 people) and a speed of up to 160 km/h (100 mph), the ECO pressures can be chosen for optimum fuel economy. However, the lower comfort pressures are recommended instead if optimum noise and travelling comfort are desired.

**Related information**

WHEELS AND TYRES

Tyre pressure monitoring system*
The tyre pressure monitoring system, Indirect Tyre Pressure Monitoring System (ITPMS), gives a warning with an indicator symbol in the driver display when the pressure in one or more of the car’s tyres is too low.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Symbol]</td>
<td>The symbol illuminates to indicate low tyre pressure. If there is a fault in the system the tyre pressure warning symbol flashes for approximately one minute and then remains illuminated.</td>
</tr>
</tbody>
</table>

System description
The tyre pressure monitoring system measures differences in rotation speed between the different wheels via the ABS system in order to be able to determine whether they have the correct tyre pressure. If the tyre pressure is too low, the tyre’s diameter is changed and, as a result, so is its rotation speed. By comparing the tyres with each other the system can determine whether one or more tyres have pressure that is too low.

General information on the tyre monitoring system
In the information below, the tyre monitoring system is referred to generically as TPMS.

Each tyre, including the spare tyre*, should be checked once a month. When checking, the tyre should be cold and have the air pressure recommended by the car manufacturer specified on the tyre pressure label or in the tyre pressure table. If the car has tyres of a different size than that recommended by the manufacturer, find out what the correct air pressure level is for these.

As an extra safety feature, the car is equipped with a tyre pressure monitoring system (TPMS), which shows when the air pressure in one or more tyres is too low. When the indicator symbol for low air pressure is lit, stop and check the tyres as soon as possible and inflate to the correct air pressure.

Driving with tyres that have tyre pressure that is too low may cause the tyre to overheat, which can cause a puncture. Low tyre pressure also reduces fuel efficiency as well as tyre service life, and can affect car handling and stopping ability. Note that TPMS does not replace regular tyre maintenance. It is the driver's responsibility to maintain correct tyre pressure, even if the limit for low tyre pressure has not been reached so that the indicator symbol illuminates.

The car is also equipped with a TPMS system fault indicator, which indicates when the system is not functioning correctly. The TPMS system fault indicator is combined with the indicator symbol for low tyre pressure. When the system detects a fault, the symbol in the driver display will flash for about one minute and then remain illuminated. This procedure will be repeated when the car is started until the fault has been rectified. When the symbol is illuminated, the system’s ability to detect or warn of low tyre pressure may be affected.

A TPMS system fault can occur for several reasons, such as after changing to a spare tyre, or changing tyres or wheels that prevent TPMS from functioning correctly.

Always check the indicator symbol for TPMS after changing one or more tyres in order to ensure the new tyre or wheel is working correctly with TPMS.

Messages on the instrument panel
When the tyre pressure is too low, the indicator symbol for low tyre pressure is illuminated in the driver display and a message is shown.

- Tyre pressure low Check tyres, calibrate after fill
- Tyre pressure system Temporarily unavailable
- Tyre pressure system Service required

To bear in mind
- Always calibrate the system after a wheel change or tyre pressure adjustment. See the tyre pressure label on the driver's side door
pillar for Volvo's recommended tyre pressures.

- If you change to tyres of a different size to the ones fitted at the factory, the system must be calibrated for these tyres to avoid false warnings.
- If a spare wheel* is used, it is possible that the tyre pressure monitoring system does not work correctly due to the differences between the wheels.
- The system does not replace the need for regular tyre inspection and maintenance.
- It is not possible to switch off the tyre pressure monitoring system.

**WARNING**

- Incorrect tyre pressure may lead to tyre failure, which could result in the driver losing control of the car.
- The system cannot indicate sudden tyre damage in advance.

**Calibrate the system for tyre pressure monitoring***

In order for the system for tyre pressure monitoring, Indirect Tyre Pressure Monitoring System (ITPMS) to work correctly, a reference value for the tyre pressure must be determined. This must be performed each time the tyres are changed or the tyre pressure is changed.

For example, when driving with a heavy load or at high speed above 160 km/h (100 mph), the tyre pressure should be adjusted in accordance with Volvo's recommended tyre pressure values. Following which, the system must be recalibrated.

1. Switch off the car.
2. Inflate the tyres to the desired pressure in accordance with the tyre pressure label on the door pillar on the driver's side.
3. Start the car.
4. Open the Car status app in the app view.

**Related information**

- Recommended tyre pressure (p. 541)
- See tyre pressure statue in the centre display*** (p. 545)
- Action in the event of warning for low tyre pressure (p. 546)
5. Press TPMS.

6. Press Calibrate.

7. Tap on OK to confirm that the tyre pressure in all four tyres has been checked and adjusted.

8. Run the car until calibration is complete.

   Calibration is performed when the car is driven at a speed above 35 km/h (22 mph).

   > When sufficient data has been collected to enable the system to detect low tyre pressure, the tyres in the centre display change colour from grey to green. The system provides no additional confirmation that the calibration is complete.

   If the car's ignition is switched off before calibration is complete, the tyres in the centre display change colour from grey to green upon next start-up, even if calibration is not complete. Perform calibration again and allow it to complete within the same operating cycle to ensure that the calibration is carried out correctly.

   If start-up of calibration fails, the following message appears: Calibration unsuccessful. Try again.

   NOTE

   Remember to always calibrate the tyre pressure monitoring system when you have changed a wheel or if the tyre pressure has been changed according to the tyre pressure label or tyre pressure table.

   If correct reference values have not been set, the system may not warn correctly about low tyre pressure.

   The car must be stationary with the engine running for you to have access to the calibration button and start the calibration process.

   WARNING

   The exhaust gases contain carbon monoxide, which is invisible and odourless, but highly toxic. For this reason, calibration must always be performed outside or in a workshop with exhaust extraction.

   Related information

   - Recommended tyre pressure (p. 541)
   - Adjusting tyre pressure (p. 540)
   - See tyre pressure statue in the centre display* (p. 545)
   - Action in the event of warning for low tyre pressure (p. 546)
   - Tyre pressure monitoring system* (p. 542)
See tyre pressure statue in the centre display*
With the system for tyre pressure monitoring, Indirect Tyre Pressure Monitoring System (ITPMS), tyre pressure status can be viewed in the centre display.

Checking status
1. Open the Car status app in the app view.

2. Tap on TPMS to show the status of the tyres.

Status indication
The graphics in the centre display show the status for each tyre^3.

Green tyre:
- The tyre pressure is above the limit value for a warning.

Yellow tyre:
- The tyre's pressure is too low. Stop and check/rectify the tyre pressure by inflating as soon as possible. Calibrate the system after the tyre pressure has been adjusted.

All tyres yellow:
- The pressure is too low in two or more tyres. Stop and check/rectify the tyre pressures by inflating as soon as possible. Calibrate the system after the tyre pressures have been adjusted.

All tyres grey:
- Calibration in progress.
- Unknown status.

Several minutes driving above 35 km/h (22 mph) may be required for the system to become active.

All tyres grey and a message:
- Tyre pressure system Temporarily unavailable. The indicator symbol flashes and changes to constant glow after approx. 1 minute. The system is currently unavailable, activated shortly.
- Tyre pressure system Service required. The indicator symbol flashes and changes to constant glow after approx. 1 minute. The system is not working correctly, contact a workshop^4.

Related information
- Calibrate the system for tyre pressure monitoring* (p. 543)
- Action in the event of warning for low tyre pressure (p. 546)
- Tyre pressure monitoring system* (p. 542)
- Car status (p. 576)

^3 The figure is schematic. Layout may vary depending on car model or updated software.
^4 An authorised Volvo workshop is recommended.
Action in the event of warning for low tyre pressure

When the tyre pressure monitoring system, Indirect Tyre Pressure Monitoring System (ITPMS) gives a warning, the tyre pressure in one or more of the car’s tyres is too low and action is required.

Check and rectify the tyre pressure when the indicator symbol for the system is illuminated and the Tyre pressure low message is shown.

1. Switch off the car.
2. Check the tyre pressure in all four tyres with a tyre pressure gauge.
3. Inflate the tyres to the correct pressure as indicated on the tyre pressure label on the door pillar on the driver's side.
4. Perform calibration of the system via the centre display after tyre pressure adjustment.

Note that the indicator symbol does not extinguish until the low tyre pressure has been rectified and new calibration has been performed.

**NOTE**

To avoid incorrect tyre pressure, the pressure should be checked on cold tyres. "Cold tyres" means the tyres are the same temperature as the ambient temperature (approx. 3 hours after the car has been driven). After a few kilometres of driving, the tyres warm up and the pressure increases.

**NOTE**

- After a tyre has been inflated, always refit the dust cap in order to avoid damage to the valve from gravel, dirt, etc.
- Only use plastic dust caps. Metal dust caps can rust and become difficult to unscrew.

**WARNING**

- Incorrect tyre pressure may lead to tyre failure, which could result in the driver losing control of the car.
- The system cannot indicate sudden tyre damage in advance.

Related information

- Recommended tyre pressure (p. 541)
- Adjusting tyre pressure (p. 540)
**When changing wheels**
The car's wheels can be changed, e.g. to winter wheels or a spare wheel. Follow the relevant instructions for removing and fitting wheels.

**When changing to another tyre dimension**
Check that the tyre dimension is approved for use on the car.

Contact an authorised Volvo workshop for updating the software at each change of tyre dimension. A software download may be necessary both when changing to larger and smaller dimensions, and also when switching between summer and winter wheels.

**Related information**
- Removing a wheel (p. 549)
- Fitting the wheels (p. 551)
- Approved wheel and tyre sizes (p. 652)
- Tool kit (p. 547)
- Winter wheels (p. 553)
- Spare wheel* (p. 552)
- Wheel bolts (p. 548)

**Tool kit**
Tools that can be useful during towing, wheel changes or similar are stored in the car's cargo area.

The foam block under the cargo area floor contains the car's towing eye, puncture repair kit, tool for removing the plastic caps from the wheel bolts and a socket for the lockable wheel bolts.

If the car is equipped with spare wheel* then a jack and wheel wrench are included, as well as a package with disposable gloves and a bag for the damaged wheel.

**Related information**
- When changing wheels (p. 547)
- Jack* (p. 547)

**Jack**
The jack can be used to raise the car, for example, to change to the spare wheel.

* Option/accessory.
IMPORTANT

- When the jack* is not in use it must be stored in its storage space under the cargo area floor.
- The jack included with the car is only designed for occasional, short-term use, such as when changing a wheel after a puncture. Only the jack belonging to the specific model is to be used to jack up the car. If the car is to be jacked up more often, or for a longer time than is required just to change a wheel, use of a garage jack is recommended. In this instance, follow the instructions for use that come with the equipment.

The jack needs to be cranked together to the correct position in order to have space.

Models with self-levelling*

If the car is equipped with the air suspension option then this function must be deactivated before the car is raised with the jack.

Wheel bolts

Wheel bolts are used to attach the wheels to the hubs.

IMPORTANT

The wheel bolts must be tightened to 140 Nm (103 ft. lbs.). Overtightening or loose tightening may damage the nuts and the bolts.

Only use rims that are tested and approved by Volvo and which are Volvo genuine accessories.

Check the tightening torque of the wheel bolts with a torque wrench.

Do not use lubricant on the threads of the wheel bolts.

WARNING

The wheel bolts may need to be re-tightened several days after the change. Temperature differences and vibration may mean that they are not attached equally as tightly.

Locking wheel bolts*

In the foam wheel block under the cargo area floor there is space for the sleeve for the lockable wheel bolts.

Related information

- Removing a wheel (p. 549)
- Fitting the wheels (p. 551)
Removing a wheel
Instructions for removing a wheel when changing wheels. Wheel changes must always be performed correctly.

**IMPORTANT**
- When the jack* is not in use it must be stored in its storage space under the cargo area floor.
- The jack included with the car is only designed for occasional, short-term use, such as when changing a wheel after a puncture. Only the jack belonging to the specific model is to be used to jack up the car. If the car is to be jacked up more often, or for a longer time than is required just to change a wheel, use of a garage jack is recommended. In this instance, follow the instructions for use that come with the equipment.

**WARNING**
- Apply the parking brake and set the gear selector in Park position (P).
- Chock the wheels standing on the ground using solid wood blocks or large stones.
- Check that the jack is not damaged, that the threads are thoroughly lubricated and that it is free from dirt.
- Check that the jack is resting on a firm, level surface that is not slippery and is not slanted.
- The jack must be correctly attached in the jack's bracket.
- Never position anything between the ground and the jack, nor between the jack and the car’s jacking point.
- Passengers must leave the car when it is raised on the jack.
- If a wheel must be changed in a trafficked environment, passengers must stand in a safe place.
- Use a jack designed for the car when changing tyres. Use supports to secure the car for all other work.
- Never crawl under the car or reach under with a part of your body when it is raised on a jack.

1. Set up the warning triangle and activate the hazard warning lights if a tyre is being changed in a trafficked location.
2. Apply the parking brake and engage gear position P, or engage first gear if the car has a manual gearbox.
   Applies to cars with Leveling Control*: If the car is equipped with air suspension, this must be disabled before the car is raised with a jack*.
3. Take out the jack*, wheel wrench* and tools for the wheel bolts' plastic caps that are fitted in the foam block.
4. Chock in front of and behind the wheels that remain on the ground. Use, for example, heavy wooden blocks or large stones.

* Option/accessory.
5. Screw together the towing eye with the wheel wrench* until the stop position as per the instructions.

6. Remove the plastic caps from the wheel bolts with the intended tool.

7. With the car still on the ground, use the wheel bolt wrench/towing eye to undo the wheel bolts ½–1 turn by pressing downwards (anticlockwise).

8. When raising the car, it is important that the jack* or lifting arms are fitted in the intended points on the car's underbody. The triangle markings in the plastic cover indicate the locations of the jacking/lifting points. There are two jacking points on each side of the car. There is a recess for the jack at each point.

9. Position the jack on level, firm and non-slippery ground under the jacking point that will be used.

10. Crank up until it is correctly aligned and so that it makes contact with the car's jacking point. Check that the head of the jack (or the lift arms at a workshop) is correctly positioned in the jacking point so that the bump in the centre of the head fits into the jacking point hole and the base is positioned vertically below the jacking point.

11. Turn the jack so that the crank is as far away from the side of the car as possible, at which point the jack's arms are perpendicular to the direction of the car.

12. Raise the car high enough to allow the wheel to be removed to move freely. Remove the wheel bolts and lift off the wheel.

Related information

- Fitting the wheels (p. 551)

* Option/accessory.
Fitting the wheels

Instructions for fitting a wheel when changing wheels.

NOTE

The jack included with the car is only designed for occasional, short-term use, such as when changing a wheel after a puncture. Only the jack belonging to the specific model is to be used to jack up the car. If the car is to be jacked up more often, or for a longer time than is required just to change a wheel, use of a garage jack is recommended. In this instance, follow the instructions for use that come with the equipment.

WARNING

- Apply the parking brake and set the gear selector in Park position (P).
- Chock the wheels standing on the ground using solid wood blocks or large stones.
- Check that the jack is not damaged, that the threads are thoroughly lubricated and that it is free from dirt.
- Check that the jack is resting on a firm, level surface that is not slippery and is not slanted.
- The jack must be correctly attached in the jack's bracket.
- Never position anything between the ground and the jack, nor between the jack and the car's jacking point.
- Passengers must leave the car when it is raised on the jack.
- If a wheel must be changed in a trafficked environment, passengers must stand in a safe place.
- Use a jack designed for the car when changing tyres. Use supports to secure the car for all other work.
- Never crawl under the car or reach under with a part of your body when it is raised on a jack.

1. Clean the contact surfaces between wheel and hub.
2. Put on the wheel. Tighten the wheel bolts thoroughly. Do not use lubricant on the threads of the wheel bolts.
3. Lower the car so that the wheels cannot rotate.
4. Tighten the wheel bolts crosswise. It is important that the wheel bolts are tightened properly. Tighten to 140 Nm (103 ft.lbs.). Check the tightening torque with a torque wrench.
5. Refit the plastic caps on the wheel bolts.

1. Clean the contact surfaces between wheel and hub.
2. Put on the wheel. Tighten the wheel bolts thoroughly. Do not use lubricant on the threads of the wheel bolts.
3. Lower the car so that the wheels cannot rotate.
4. Tighten the wheel bolts crosswise. It is important that the wheel bolts are tightened properly. Tighten to 140 Nm (103 ft.lbs.). Check the tightening torque with a torque wrench.
5. Refit the plastic caps on the wheel bolts.
**Spare wheel**

The spare wheel, the Temporary spare type, can be used to temporarily replace a punctured normal wheel. The spare tyre is only designed for temporary use. Replace it with a normal wheel as soon as possible.

The car's driving characteristics can be changed when the spare wheel is used and the ground clearance is reduced. Do not wash the car in an automatic car wash if the Temporary Spare is being used.

Recommended tyre pressure must be maintained regardless of the position of the temporary spare wheel on the car.

If the spare tyre is damaged then a new one can be purchased from a Volvo dealer.

---

**WARNING**

The wheel bolts may need to be re-tightened several days after the change. Temperature differences and vibration may mean that they are not attached equally as tightly.

**NOTE**

- After a tyre has been inflated, always refit the dust cap in order to avoid damage to the valve from gravel, dirt, etc.
- Only use plastic dust caps. Metal dust caps can rust and become difficult to unscrew.

**Related information**

- Settings for level control* (p. 446)
- When changing wheels (p. 547)
- Raise the car (p. 579)
- Jack* (p. 547)
- Tool kit (p. 547)
- Removing a wheel (p. 549)

---

**WARNING**

- Never drive faster than 80 km/h (50 mph) with a spare wheel fitted on the car.
- The car must never be driven fitted with more than one spare wheel of the type "Temporary Spare" at the same time.
- The car may have different driving characteristics while driving with the spare wheel. The spare wheel must be replaced with a normal wheel as soon as possible.
- The spare wheel is smaller than the normal wheel, which affects the car's ground clearance. Look out for high kerbs and do not machine-wash the car.
- Follow the manufacturer's recommended tyre pressure for the spare wheel.
- On all-wheel drive cars, the drive on the rear axle can be disengaged.
- If the spare wheel is fitted to the front axle then it is not possible to use snow chains at the same time.
- The spare wheel must not be repaired.

* Option/accessory.
WHEELS AND TYRES

**IMPORTANT**
The car must not be driven with tyres of different sizes or with a spare tyre other than the one supplied with the car. Using differently sized wheels can cause serious damage to the car's transmission.

The illustration is schematic - the shape of the foam block may vary depending on car model.

The spare wheel is located in the spare wheel well with the outside down. The same bolt runs through to secure the spare wheel and the foam block. The foam block contains all the tools for changing a wheel.

**Related information**
- When changing wheels (p. 547)
- Recommended tyre pressure (p. 541)

---

**Taking out the spare wheel**
Follow these instructions for handling the spare wheel.
1. Fold up the cargo area floor, from the rear and forwards.
2. Undo the retaining screw.
3. Lift out the foam block with its tools.
4. Lift out the spare wheel.

**Storing the punctured tyre**
1. Take out the wheel bag enclosed in the foam block and put the wheel in the bag.
2. Put the tools back in their right place in the foam block and lift it back into the car.
3. Screw in the foam block using the mounting screws and then fold down the cargo area floor.
4. Place the punctured tyre in the cargo area.

**Related information**
- Spare wheel* (p. 552)

---

**Winter wheels**
Winter wheels are adapted for winter road conditions.

Volvo recommends winter tyres with particular dimensions. Tyre dimensions are dependent on engine variant. When driving on winter tyres, the correct type of tyres must be fitted to all four wheels.

**NOTE**
Contact a Volvo dealer for advice about which wheel rim and type of tyre are most suitable.

**Tips for changing to winter tyres**
When summer and winter wheels are changed, mark which side of the car they were mounted on, for example L for left and R for right.

**Studded tyres**
Studded winter tyres should be run in gently for 500-1000 km (300-600 miles), so the studs settle properly into the tyres. This gives the tyre, and especially the studs, a longer service life.

**NOTE**
The legal provisions for the use of studded tyres vary from country to country.
WHEELS AND TYRES

Tread depth
Road conditions with ice, slush and low temperatures place considerably higher demands on tyres than summer conditions. Volvo therefore recommends not to drive on winter tyres that have a tread depth of less than 4 mm (0.15 inches).

Related information
- When changing wheels (p. 547)
- Winter driving (p. 447)
- Tread wear indicators on the tyres (p. 539)

Snow chains
Use of snow chains and/or winter tyres can help to improve the traction in winter conditions.

⚠️ WARNING
Use Volvo genuine snow chains or equivalent chains designed for the car model, and tyre and rim dimensions. Only single-sided snow chains are permitted.
In the event of uncertainty about the snow chain, Volvo recommends that an authorised Volvo workshop should be contacted. The wrong snow chains may cause serious damage to the car and lead to an accident.

⚠️ IMPORTANT
Snow chains can be used on the car with the following restrictions:
- Volvo does not recommend the use of show chains on wheel dimensions greater than 18 inches.
- Always follow the mounting instructions from the manufacturer carefully. Fit the chains as tensioned as possible and tension them at regular intervals.
- Snow chains must only be used on the front wheels (also applies to all-wheel drive cars).
- In some cases, snow chains must NOT be used, such as if accessory, aftermarket or "special" tyres and wheels are fitted that have a different size to the original tyres and wheels. Sufficient distance must be maintained between the chains and brakes, suspension and body components.
- Check local regulations with regard to using snow chains before fitting them.
- Never exceed the chain manufacturer's specified maximum speed. You must never exceed 50 km/h (30 mph) under any circumstances.
- Avoid bumps, holes or sharp turns when driving with snow chains.
Avoid driving on bare ground as this wears out both the snow chains and tyres.

Driving with snow chains may have a negative effect on the car’s driving characteristics. Avoid fast or sharp turns, as well as braking with locked wheels.

Some types of chain that are firmly tensioned affect brake components and must therefore NOT be used.

You can obtain more information on snow chains from a Volvo retailer.

Related information
- Winter driving (p. 447)

---

**Emergency puncture repair kit**

The emergency puncture repair kit\(^5\), is used to seal a puncture as well as to check and adjust the air pressure in the tyre.

Cars equipped with spare tyre\(^*\) do not have the puncture repair kit.

The puncture repair kit consists of a compressor and a bottle with sealing fluid. The sealing works as a temporary repair.

---

**NOTE**

The sealing fluid is effective at sealing tyres with tread punctures but has limited ability to seal tyres with sidewall punctures. Do not use the emergency puncture repair kit on tyres displaying larger slits, cracks or similar damage.

---

**NOTE**

The compressor is intended for temporary emergency puncture repair and is approved by Volvo.

---

**Location**

The puncture repair kit is located in the foam block under the floor in the cargo area.

---

**Sealing fluid bottle**

The bottle of sealing fluid must be replaced if the bottle’s expiry date has passed (see the decal on the bottle). Treat the old bottle as environmentally hazardous waste.

The sealing fluid bottle must be replaced after use. Volvo recommends that the replacement is performed by an authorised Volvo workshop.

Related information

---

\(^5\) Temporary Mobility Kit (TMK)
Using a puncture repair kit
Seal a puncture with the emergency puncture repair kit, Temporary Mobility Kit (TMK).

Overview

1. Electrical cable
2. Air hose
3. Pressure reducing valve
4. Protective cap
5. Label, maximum permitted speed
6. Bottle holder (orange cap)
7. Pressure gauge
8. Sealing fluid bottle
9. Switch

Connecting

NOTE
Do not break the bottle’s seal before use. The seal is broken automatically when the bottle is screwed in.

WARNING
Please keep the following points in mind when using the tyre sealing system:

- The sealing fluid bottle contains 1) rubber latex, natural and 2) ethanediol. These substances are harmful if swallowed.
- The contents of this bottle may cause allergic skin reactions or otherwise be potentially harmful to the respiratory tract, the skin, the central nervous system, and the eyes.

Precautions:

- Store out of the reach of children.
- Harmful if ingested.
- Avoid prolonged or repeated contact with the skin. If sealing fluid has come into contact with your clothes, remove them.
- Wash thoroughly after handling.

First aid:

- Skin: Wash affected areas of skin with soap and water. Get medical attention if symptoms occur.
- Eyes: Flush with plenty of water for least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical attention if symptoms occur.
• Inhalation: Move the exposed person to fresh air. If irritation persists, get medical attention.
• Ingestion: Do NOT induce vomiting unless directed to do so by medical personnel. Get medical attention.
• Disposal: Dispose of this material and its container at a hazardous or special waste collection point.

**WARNING**
• Do not remove the bottle when the puncture repair kit is being used.
• Do not remove the air hose when the puncture repair kit is being used.

1. Set up the warning triangle and activate the hazard warning lights if a tyre is being sealed in a trafficked location.

   If the puncture was caused by a nail or similar, allow this to remain in the tyre. It helps to seal the hole.

2. Detach the decal for maximum permitted speed that is affixed on one side of the compressor. Affix it visibly on the windscreen as a reminder to observe the speed limit. You should not drive faster than 80 km/h (50 mph) after the emergency tyre repair kit has been used.

3. Check that the switch is in position 0 (Off), and locate the electrical cable and the air hose.

4. Unscrew the orange-coloured cap from the compressor, and unscrew the cork from the sealing fluid bottle.

5. Screw in the bottle to the bottom of the bottle holder.

   The bottle and the bottle holder are equipped with a reverse catch to prevent sealant leakage. When the bottle is screwed in it cannot be unscrewed from the bottle holder again. Bottle removal must be performed at a workshop, Volvo recommends an authorised Volvo workshop.

**WARNING**
Do not unscrew the bottle, it is equipped with a reverse catch to prevent leakage.

6. Unscrew the tyre's dust cap and screw in the air hose's valve connection to the bottom of the thread on the tyre's air valve.

   Check that the pressure reducing valve on the air hose is fully screwed in.

7. Connect the electrical cable to the closest 12 V socket and start the car.

**NOTE**
Make sure that none of the other 12 V sockets is in use when the compressor is operating.

**WARNING**
Do not leave children in the car without supervision when the engine is running.
8. Start the compressor by flicking the switch to position I (On).

**WARNING**

Never stand next to the tyre when the compressor is running. If cracks or unevenness arise then the compressor must be switched off immediately. The journey should not be continued. Call roadside assistance for recovery to a tyre centre. Volvo recommends an authorised tyre centre.

**NOTE**

When the compressor starts, the pressure can increase up to 6 bar (88 psi) but the pressure drops after approximately 30 seconds.

9. Inflate the tyre for 7 minutes.

**IMPORTANT**

The compressor must not be operated for longer than 10 minutes - risk of overheating.

10. Switch off the compressor to check the pressure on the pressure gauge. Minimum pressure is 1.8 bar (22 psi) and maximum is 3.5 bar (51 psi). Release air using the pressure reducing valve if the tyre pressure is too high.

**WARNING**

If the bottle is removed in the wrong order, sealing fluid could spill out.

**WARNING**

If the pressure is below 1.8 bar (22 psi) then the hole in the tyre is too big. The journey should not be continued. Call roadside assistance for recovery to a tyre centre. Volvo recommends an authorised tyre centre.

11. Switch off the compressor and detach the electrical cable.

12. Unscrew the air hose from the tyre valve and refit the dust cap on the tyre.

13. Fit the protective cap on the air hose in order to avoid leakage of the remaining sealing fluid. Place the equipment in the cargo area.

14. As soon as possible, drive at least 3 km (2 miles) at a maximum speed of 80 km/h (50 mph) so that the sealing fluid can seal the tyre, and then perform a follow-up check.

**NOTE**

Sealant will spurt out of the puncture during the first few rotations of the tyre.

**WARNING**

Make sure that nobody is standing near the car and gets the sealing fluid splashed onto them when the car is driven away. The distance should be at least 2 metres (7 feet).

15. **Follow-up inspection**

Connect the air hose on the tyre valve and screw in the valve connection to the bottom of the tyre valve’s thread. The compressor must be switched off.
16. Read the tyre pressure on the pressure gauge.

- If it is below 1.3 bar (19 psi) then the tyre is insufficiently sealed. The journey should not be continued. Call roadside assistance for recovery.
- If the tyre pressure is higher than 1.3 bar (19 psi), the tyre must be inflated to the pressure specified in accordance with the tyre pressure label on the driver's side door pillar (1 bar = 100 kPa = 14.5 psi). Release air using the pressure reducing valve if the tyre pressure is too high.

![NOTE]
The sealing fluid bottle and the hose must be replaced after use. Volvo recommends that this replacement is performed by an authorised Volvo workshop.

![WARNING]
Check the tyre pressure regularly.

Volvo recommends that the car is driven to the nearest authorised Volvo workshop for the replacement/repair of the damaged tyre. Advise the workshop that the tyre contains sealing fluid.

**Inflating tyres with the compressor from the puncture repair kit**
The car's original tyres can be inflated using the compressor in the emergency puncture repair kit.

1. The compressor must be switched off. Make sure that the switch is in position 0 (Off), and take out the electrical cable and the air hose.
2. Unscrew the tyre’s dust cap and screw in the air hose’s valve connection to the bottom of the thread on the tyre’s air valve. Check that the pressure reducing valve on the air hose is fully screwed in.
3. Connect the electrical cable to the closest 12 V socket and start the car.

![WARNING]
Inhaling car exhaust fumes could result in danger to life. Never leave the engine running in sealed areas or areas that lack sufficient ventilation.

![WARNING]
Do not leave children in the car without supervision when the engine is running.

4. Start the compressor by flicking the switch to position I (On).
5. Inflate the tyre to the pressure specified on the tyre pressure label on the driver side door pillar. Release air using the pressure reducing valve if the tyre pressure is too high.

6. Switch off the compressor. Detach the air hose and the electrical cable.

7. Refit the dust cap on the tyre.

**NOTE**

- After a tyre has been inflated, always refit the dust cap in order to avoid damage to the valve from gravel, dirt, etc.
- Only use plastic dust caps. Metal dust caps can rust and become difficult to unscrew.

**NOTE**

The compressor is an electrical device. Follow local regulations related to waste management.

LOADING, STORAGE AND PASSENGER COMPARTMENT
Passenger compartment interior
Overview of the passenger compartment's interior and storage locations.

Front seat

Storage compartment in the door panel and by the steering wheel, glovebox and sun visors.

Storage spaces with cup holder, electrical socket, mesh pocket* and USB port in the tunnel console.

Rear seat

Storage compartment in the door panel, cup holder* in the centre seat backrest, storage pocket* on the front seat backrest and also electrical sockets in the tunnel console.

WARNING
Keep loose objects such as mobile phones, cameras, remote controls for accessories, etc. in the glove compartment or other compartments. Otherwise they may injure people in the car in the event of sudden braking or a collision.

IMPORTANT
Keep in mind that high gloss surfaces, for example, are easily scratched by metal objects. Do not place keys, phones and other items on sensitive surfaces.

Related information
• Electrical sockets (p. 564)
• Using the glovebox (p. 567)
• Sun visors (p. 569)
• Tunnel console (p. 563)
• Connecting a device via USB port (p. 499)
Tunnel console

The tunnel console is located between the front seats.

⚠️ WARNING
Keep loose objects such as mobile phones, cameras, remote controls for accessories, etc. in the glove compartment or other compartments. Otherwise they may injure people in the car in the event of sudden braking or a collision.

ℹ️ NOTE
One of the detectors for the alarm* is located under the tunnel console's cup holder. Avoid leaving coins, keys and other metal objects in the cup holder, since this may trigger the alarm.

⚠️ IMPORTANT
Keep in mind that high gloss surfaces, for example, are easily scratched by metal objects. Do not place keys, phones and other items on sensitive surfaces.

Related information
- Passenger compartment interior (p. 562)
- Electrical sockets (p. 564)
- Climate controls (p. 206)
**Electrical sockets**

There are two 12 V electrical sockets and one 230 V electrical socket* in the tunnel console, and there is one 12 V electrical socket* in the cargo area.

If a problem occurs with an electrical socket, contact a workshop - an authorised Volvo workshop is recommended.

**12 V electrical socket**

The 12 V sockets can be used for various accessories designed for this, such as music players, cooler boxes and mobile phones.

**High voltage socket**

The high-voltage socket* can be used for various accessories designed for this, such as chargers or laptops.

**Status indication, high-voltage socket**

An LED¹ lamp on the socket indicates the status of the socket:

---

¹ LED (Light Emitting Diode)
<table>
<thead>
<tr>
<th>Status indication</th>
<th>Reason</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Steady green light</td>
<td>The socket is delivering current to a connected device.</td>
<td>None.</td>
</tr>
<tr>
<td>Blinking orange light</td>
<td>The temperature of the socket's voltage converter is too high (because for example the accessory draws too high a current or the passenger compartment is too warm).</td>
<td>Remove the plug and let the voltage converter cool down before reinserting the plug.</td>
</tr>
<tr>
<td></td>
<td>The connected accessory draws too much current (intermittently or continuously) or is defective.</td>
<td>None. The accessory cannot be connected to the socket.</td>
</tr>
<tr>
<td>Extinguished lamp</td>
<td>The socket does not sense that a plug has been inserted.</td>
<td>Check that the plug is properly inserted into the socket.</td>
</tr>
<tr>
<td></td>
<td>The socket is not active.</td>
<td>Switch the car's electrical system to the lowest ignition position I.</td>
</tr>
<tr>
<td></td>
<td>The socket has been active but is now deactivated.</td>
<td>Start the engine and/or charge the starter battery.</td>
</tr>
</tbody>
</table>

**Related information**
- Passenger compartment interior (p. 562)
- Using electrical sockets (p. 566)
Using electrical sockets

12 V sockets can be used for various accessories designed for this, such as music players, cooler boxes and mobile phones.

High-voltage sockets* can be used for various accessories designed for this, such as chargers and portable computers.

For the sockets to supply current, the car's electrical system must be set in the lowest ignition position I. The sockets are then active as long as the starter battery level does not become too low.

If the engine is switched off and the car is locked, the sockets are deactivated. If the engine is switched off and the car is not locked, or is locked with double lock temporarily deactivated, then the sockets continue to be active for a further seven minutes.

**NOTE**

Remember that use of the electrical socket with the engine switched off entails a risk of discharging the starter battery, which can limit functionality.

Accessories that are connected to the electrical sockets may be activated even when the car's electrical system is disconnected or if preconditioning is used. For this reason, disconnect the connectors when they are not in use in order to avoid the starter battery being discharged.

**WARNING**

- Do not use accessories with large or heavy connectors - they can damage the socket or come loose when driving.
- Do not use accessories that can cause interference to the car's radio receiver or electrical system for example.
- Position the accessory so that it is not at risk of injuring the driver or passengers in the event of heavy braking or collision.
- Keep an eye on connected accessories as they can generate heat that can burn passengers or the interior.

**Using 12 V sockets**

1. Remove the blanking plug (tunnel console) or fold down the cover (cargo area) in front of the socket and plug in the accessory's connector.
2. Unplug the accessory's connector and refit the blanking plug (tunnel console) or fold up the cover (cargo area) when the socket is not in use or if the socket is left unattended.

**IMPORTANT**

Maximum socket output is 120 W (10 A) per socket.

**Using high-voltage sockets**

1. Pull down the socket cover and insert the accessory's plug.
   > The LED\(^2\) lamp on the socket indicates the status.
2. Check that the lamp is illuminated with a steady green light - only then is current available at the socket.
3. Disconnect the accessory by pulling out the plug - do not pull on the cable.

Pull up the cover when the socket is not being used or the socket is left unattended.

---

\(^2\) LED (Light Emitting Diode)
**IMPORTANT**

Maximum socket output is 150 W.

**WARNING**

Never modify or repair the high-voltage socket yourself. Volvo recommends that an authorised Volvo workshop should be contacted.

**WARNING**

- Only use accessories that are undamaged and fault-free. The accessories must be rated for 230 V and 50 Hz with connectors designed for the socket. The accessories must have a CE marking, UL marking or an equivalent safety marking.
- Never allow sockets, connectors or accessories to come into contact with water or other liquids. Do not touch or use the socket if it appears to be damaged or has come into contact with water or other liquid.
- Do not connect junction sockets, adaptors or extension cables to the socket as these can override the socket's safety features.
- The socket is equipped with a protective cover, ensure that nothing protrudes in or damages the socket preventing the cover from doing its job. Do not leave children in the car unsupervised when the socket is active.

Failure to follow the advice given above can lead to severe or fatal electric shocks.

**Related information**

- Electrical sockets (p. 564)
- Passenger compartment interior (p. 562)

**Using the glovebox**

The glovebox is located on the passenger side. The printed owner's manual and maps can be kept in the glovebox, for example. There is also space for a pen and card holder.
**Locking and unlocking the glovebox**

The glovebox can be locked, e.g. when the car is taken in for service, left at a hotel or similar. The glovebox can only be locked/unlocked with the accompanying key.

The key's designated storage space. The figure is schematic - the design may vary.

**Locking the glovebox:**

1. Insert the key in the glovebox lock cylinder.
2. Turn the key 90 degrees clockwise.
3. Pull out the key.

– Unlock by carrying this out in reverse order.

**Using the glovebox as a cooled area**

The glovebox can be used for cooling of e.g. drinks or food. The cooling works when the climate control system is active (i.e. when the car is set in ignition position II or when the engine is running).

The figure is schematic - the design may vary.

**Activating cooling**

**Deactivating cooling**

– Activate or deactivate the cooling by moving the control to the end position toward the passenger compartment/glovebox.

**Related information**

- Passenger compartment interior (p. 562)
- Private locking (p. 269)
**Sun visors**

There are sun visors in the roof in front of the driver and the front seat passenger which can be folded down and angled out to the side when necessary.

The figure is schematic - the design may vary.

The mirror lighting* is switched on automatically when the lid is lifted.

The mirror frame incorporates a holder for e.g. cards or tickets.

Related information

- Passenger compartment interior (p. 562)

---

**Cargo area**

Inside the car’s cargo area, it is possible to secure the load so that it stays in place while driving.

With folding* backrests in the rear seat, the cargo area can be made more spacious. There are load retaining eyelets and bag holders available for holding the load securely in place.

The car’s towing eye and puncture repair kit or spare wheel* are stored under the cargo area floor.

Related information

- Recommendations for loading (p. 569)
- Bag hooks (p. 571)
- Load retaining eyelets (p. 571)

---

**Recommendations for loading**

There are a number of things to remember when loading the car.

Payload depends on the car’s kerb weight. The total of the weight of the passengers and all accessories reduces the car’s payload by a corresponding weight.

**WARNING**

The car’s driving properties change depending on the weight and positioning of the load.

**Loading in the cargo area**

- Position the load firmly against the rear seat’s backrest.
- Centre the load.
- Heavy objects should be placed as low as possible. Avoid placing heavy loads on lowered backrests.
- Cover sharp edges with something soft to avoid damaging the upholstery.
- Secure all loads to the load retaining eyelets with straps or web lashings.

**WARNING**

A loose object weighing 20 kg (44 pounds) can, in a frontal collision at a speed of 50 km/h (30 mph) carry the impact of an item weighing 1000 kg (2200 pounds).
LOADING, STORAGE AND PASSENGER COMPARTMENT

**WARNING**
Leave 10 cm (4 inches) space between the load and the side windows if the car is loaded to above the top edge of the door windows. Otherwise, the intended protection of the inflatable curtain, which is concealed in the headlining, may be compromised.

**WARNING**
Always secure the load. During heavy braking the load may otherwise shift, causing injury to the car's occupants.

- Cover sharp edges and sharp corners with something soft.
- Switch off the engine and apply the parking brake when loading/unloading long items. Otherwise you may accidentally knock the gear lever or gear selector with the load into a drive position - and the car could then move off.

### Increasing the space in the cargo area
To expand the cargo area and simplify loading, the rear seat's backrest can be lowered*. Note that objects must not prevent the function of the WHIPS system for the front seats if any of the rear seat's backrests is folded down.

A through-load hatch* in the rear seat can be folded down for carrying long and narrow loads.

### Related information
- Load retaining eyelets (p. 571)
- Lowering the backrests in the rear seat* (p. 188)
- Through-load hatch in the rear seat* (p. 571)
- Roof load and loading on load carriers (p. 570)
- Level control* and shock absorption (p. 444)
- Weights (p. 639)

### Roof load and loading on load carriers
For loading on the car's roof, the load carriers that Volvo have developed are recommended. This is in order to avoid damage to the car and in order to achieve the maximum possible safety during a journey. Volvo's load carriers are available for purchase at authorised Volvo retailers.

- Carefully follow the installation instructions supplied with the carriers.
  - Check periodically that the load carriers and load are properly secured. Lash the load securely with retaining straps.
  - Distribute the load evenly over the load carriers. Put the heaviest objects at the bottom.
  - The size of the area exposed to the wind, and therefore fuel consumption, increase with the size of the load.
  - Drive gently. Avoid quick acceleration, heavy braking and hard cornering.

**WARNING**
The car's centre of gravity and driving characteristics are altered by roof loads.

Follow the car's specifications with regard to weights and maximum permitted load.

### Related information
- Recommendations for loading (p. 569)
- Weights (p. 639)

* Option/accessory.
Bag hooks
Bag hooks keep carrier bags in place and prevent them from overturning and spreading their contents across the cargo area.

Along the sides
There is a bag hook in the side panel on each side of the cargo area.

**IMPORTANT**
The bag hooks may be loaded with a maximum of 5 kg (11 lbs).

Related information
- Recommendations for loading (p. 569)

Load retaining eyelets
The folding load retaining eyelets are used to fasten straps in order to anchor items in the cargo area.

**WARNING**
Hard, sharp and/or heavy objects which protrude may cause injury under violent braking.
Always secure large and heavy objects with a seatbelt or cargo retaining straps.

Related information
- Recommendations for loading (p. 569)
- Weights (p. 639)

Through-load hatch in the rear seat*
The hatch in the rear seat's backrest can be opened to transport long narrow items, e.g. skis.

1. In the cargo area, grip the hatch's handle and fold down the hatch.
2. Fold forward the armrest in the rear seat.
If the private locking* function is used then the hatch must be closed.

Related information
- Recommendations for loading (p. 569)
- Private locking (p. 269)
- Load retaining eyelets (p. 571)
First aid kit
The first aid kit contains first aid equipment. Store the first aid kit in the space on the right-hand side of the cargo area. The first aid kit has Velcro straps and can be attached directly to the panel.

Related information
- Cargo area (p. 569)

Warning triangle
Use the warning triangle to warn other road users if the car is stationary in traffic. Also activate the hazard warning flashers.

Storage spaces
The warning triangle is fitted with two clips on the inside of the boot lid.

Folding up the warning triangle
1. Remove the warning triangle's case by opening both latches.
2. Remove the warning triangle from the case, unfold it and put the ends together.
3. Fold out the warning triangle's support legs.

Follow the regulations for the use of a warning triangle. Position the warning triangle in a suitable place with regard to traffic.

Replace the warning triangle with case on the inside of the boot lid after use.

Related information
- Cargo area (p. 569)
- Hazard warning flashers (p. 158)
MAINTENANCE AND SERVICE
Volvo service programme

To keep the car as safe and reliable as possible, follow the Volvo service programme as specified in the Service and Warranty Booklet.

Volvo recommends engaging an authorised Volvo workshop to perform the service and maintenance work. Volvo workshops have the personnel, special tools and service literature to guarantee the highest quality of service.

IMPORTANT

For the Volvo warranty to apply, check and follow the instructions in the Service and Warranty Booklet.

Related information

Data transfer between car and workshop via Wi-Fi

Volvo’s workshops have a specific Wi-Fi network for secure data transfer between your car and the workshop. Your workshop visit will be simpler and more efficient when the transfer of diagnostic information and software can take place via the workshop’s network.

When you reach the workshop for your visit, your technician may want to connect your car to the workshop’s network via Wi-Fi to perform fault-tracing and software download. For this type of communication, the car only connects to the workshop’s network. It is therefore not possible to connect the car to another Wi-Fi network, such as at home, but only the workshop’s specific network.

Manual connection to the workshop

Manual connection is normally handled by the service technician. The technician uses your remote control key’s buttons to connect the car, which is why it is important to bring a key with buttons with you for the workshop visit. Press three times on the lock button on the remote control key to connect the car to the workshop’s network via Wi-Fi.

When the car is connected to a Wi-Fi network, the symbol appears in the centre display.

WARNING

The car must not be driven when connected to the workshop’s networks and systems.

Related information

- Managing system updates via the Download Centre (p. 575)
- Book service and repair (p. 576)
Download Center
Several of the car’s systems can be updated from the centre display with an online car.

The Download Centre app is started from app view in the centre display and enables:

- searching for and updating system software
- updating map data for Sensus Navigation*
- downloading, updating and uninstalling apps.

Related information
- Managing system updates via the Download Centre (p. 575)
- Downloading apps (p. 484)
- Updating apps (p. 485)
- Deleting apps (p. 486)
- Internet-connected car* (p. 516)
- Navigating in the centre display’s views (p. 111)

Managing system updates via the Download Centre
System updates are intended for the online and infotainment components in the car. If system software updates are available, the updates can be made all at once or one at a time.

Searching for update
For system updates to be possible, the car must be connected to the Internet.

System updates are handled via the Download Centre app in the centre display’s application view. If no search for available updates has been performed since the last time the infotainment system was started, a search is performed. No search is performed if a software installation is in progress. A number on the System updates button shows how many updates are available. A tap on the button shows a list of the updates that can be installed in the car. If an update is available, the New software updates available message is also shown in the centre display’s status bar.

NOTE
Data download may affect other services that transmit data, e.g. Internet radio. If the effect on other services is experienced as disruptive then the download can be interrupted. Alternatively, it may be appropriate to switch off or interrupt other services.

NOTE
An update can be interrupted when the ignition is switched off and the car is left. However, the update does not have to be completed before the car is left, this is because the update is resumed the next time the car is used.

Update all system software
- Select Install all at the bottom of the list.

If no list is desired, then the Install all option can be selected at the System updates button instead.

Update individual system software programs
- Select Install for the software required.

1 Data is transferred (data traffic) when using the Internet, and this may involve a cost.
2 Data is transferred (data traffic) when using the Internet, and this may involve a cost.
Cancelling software download

Tap on X in the activity indicator that has replaced the button Install at the start of the download.

Note that only the download can be cancelled, when the installation phase has started, this cannot be cancelled.

Deactivating the background search for software update

Automatic background search for software updates is activated when the car is delivered from the factory, but this function can be deactivated.

1. Tap on Settings in the centre display's top view.
2. Press System ➔ Download Centre.
3. Deselect Auto Software Update.

Related information

- Download Center (p. 575)
- Internet-connected car* (p. 516)
- Navigating in the centre display's views (p. 111)

Car status

The car's general status can be shown in the centre display along with the opportunity to book service.

The Car status app is started from app view in the centre display and has four tabs:

- Messages - status messages
- Status - checking the oil level
- TPMS - checking the tyre pressure
- Appointments - appointment information and car information

Related information

- Handling a message saved from the driver display (p. 103)
- Checking and filling with engine oil (p. 585)
- Tyre pressure monitoring system* (p. 542)
- Book service and repair (p. 576)
- Sending car information to a workshop (p. 578)
- Navigating in the centre display's views (p. 111)

Book service and repair

This service provides a convenient way to book a service and workshop visit directly in the car. When it is time for service, and in some cases when the car is in need of repair, a message will appear in the driver display and at the top of the centre display. The service date is determined by how much time has passed, hours that the engine has been running, or distance driven since the last service.

3 Applies to certain markets.
4 Applies to certain markets.

* Option/accessory.
Before the service can be used

- Create a Volvo ID and register the Volvo ID to the car.
- Select the Volvo retailer you would like to contact by going to www.volvocars.com and logging in.
- To send and receive booking information, the car must be connected to the Internet.

Book a service

When you decide to book a service from your car, the information will be sent via your Internet connection.

Fill in the appointment request when desired or when a message stating that service or repairs are needed is shown in the driver display and at the top of the centre display.

1. Open the Car status app from the app view in the centre display.
2. Press the Appointments button.
3. Press the Request appointment button.
4. Make sure that the correct Volvo ID is filled in.
5. Make sure that the desired Workshop is filled in.
6. Fill in the field Tap to write information to the workshop if there is anything you would like done during the workshop visit or any other important information to your workshop.
7. Press the Send appointment request button.
   > You will receive an appointment suggestion to your car within a couple of days.
   You will also receive the same communication via e-mail and when you go to www.volvocars.com and log in.
   In certain markets, once you have sent the appointment request, the message that the car needs service is extinguished in the driver display.
8. Press the Cancel request button to cancel your request.

The retailer comes back with a digital booking proposal. You also have information on your retailer available in the car and can contact your workshop at any time.

Accept the appointment suggestion

When the car has received an appointment suggestion, a message will be shown at the top of the centre display.

1. Tap the message.
2. If the suggested booking is acceptable, tap on the Accept button. Otherwise press either of the Send new proposal or Decline buttons.

For certain markets, the system reminds you of a scheduled appointment time as it approaches and the navigation system can also guide you to the workshop when the time comes.

---

5 Data is transferred (data traffic) when using the Internet, and this may involve a cost.
6 This time frame may vary depending on market.
7 Applies to Sensus Navigation*.
Sending car information to a workshop

It is possible to send information for the car at any time, e.g. if you book a workshop appointment and want to help your workshop by providing them with better data so that your visit can be planned. Sending car information is not the same as booking a service appointment.

1. Open the Car status app from the app view in the centre display.
2. Press the Appointments button.
3. Press the Send car data button.

> A message that vehicle data are being sent is shown at the top of the centre display. You can cancel data transmission by tapping the X in the activity indicator.

The information is sent via the car's Internet connection.

This car information can be accessed by any retailer if they have the car's identification number (VIN).

Car information content

The data sent is the last information saved (the last time the car was running) and includes information in the following areas:

- service requirement
- time since last service
- function status
- fluid levels
- meter reading
- the car’s vehicle identification number (VIN)
- the car’s software version
- the car’s diagnostics data.

Related information

---

8 Applies to certain markets.
9 Data is transferred (data traffic) when using the Internet, and this may involve a cost.
10 Vehicle Identification Number.
Raise the car

When raising the car it is important that the car jack or the workshop/garage jack is fitted to the intended points on the car’s underbody.

For cars with level control*, air suspension, if fitted, must be switched off before the car is raised. Deactivating the function via the centre display.

⚠️ WARNING

If the car is raised using a workshop jack, this must be placed beneath one of the four jacking points. Take care to position the workshop jack so that the car cannot slip off. Make sure that the jack plate is fitted with a rubber guard so that the car remains stable and is not damaged. Always use axle stands or similar.

NOTE

Volvo recommends only using the jack that belongs to the car model in question. If a jack is selected other than the one recommended by Volvo, follow the instructions supplied with the equipment.

The normal car jack is only designed for occasional, short-term use, such as when changing a wheel after a puncture. If the car is to be jacked up more often, or for a longer time than is required just to change a wheel, use of a garage jack is recommended. In this instance, follow the instructions for use that come with the equipment.

* Option/accessory.
The triangles in the plastic cover indicate the locations of the lifting points (marked in red).

**Related information**
- Removing a wheel (p. 549)
- Jack* (p. 547)

* Option/accessory.
Opening and closing the bonnet

The bonnet can be opened using the handle in the passenger compartment and a handle under the bonnet.

Open the bonnet

Pull the handle near the foot pedals to release the bonnet from its fully closed position.

Turn the handle under the bonnet anticlockwise to release the bonnet from the lock catches and lift the bonnet.

Warning - bonnet not closed

When the bonnet is released, the warning symbol and the graphics in the driver display will light up and an acoustic reminder will sound. If the car starts rolling, an acoustic warning signal will repeat.

NOTE

If the warning symbol is lit or the warning signal is heard despite the bonnet being closed properly, contact an authorised Volvo workshop.

Close the bonnet

1. Push the bonnet down until it starts to fall from its own weight.
2. When the bonnet stops against the lock catch, push the bonnet to close it completely.

WARNING

Risk of crushing! Ensure that the closing path under the bonnet is not obstructed, otherwise there is a risk of personal injury.

WARNING

Check that the bonnet locks properly when closed. The bonnet must engage at both sides audibly.

Bonnet not completely closed. The figure is schematic - parts may vary depending on car model.
Bonnet completely closed. The figure is schematic - parts may vary depending on car model.

**WARNING**

Never drive with an open bonnet!
If there are any signs that the bonnet is not properly closed whilst driving, stop immediately and close it.

**Related information**
- Engine compartment overview (p. 583)
- Door and seatbelt reminder (p. 48)

**Servicing the climate control system**
The air conditioning system must only be serviced and repaired by an authorised workshop.

**Troubleshooting and repair**
The air conditioning system contains fluorescent tracing agents. Ultraviolet light must be used during leak detection.

Volvo recommends that an authorised Volvo workshop is contacted.

**Cars with R134a refrigerant**

**WARNING**
The air conditioning system contains pressurised refrigerant R134a. This system must only be serviced and repaired by an authorised workshop.

**Cars with R1234yf refrigerant**

**WARNING**
The air conditioning system contains pressurised refrigerant R1234yf. In accordance with SAE J2845 (Technician Training for Safe Service and Containment of Refrigerants Used in Mobile A/C System), service and repair of the refrigerant system must only be performed by trained and certified technicians in order to ensure the safety of the system.
Head-up display when replacing the windscreen*

Cars with head-up display are equipped with a special type of windscreen that meets the requirements for displaying the projected image.

Volvo recommends that you contact an authorised Volvo workshop when replacing the windscreen. The correct version of the windscreen must be fitted in order that the head-up display’s graphics shall be displayed correctly.

Related information
- Head-up display* (p. 138)
- Cleaning the head up display* (p. 616)

Engine compartment overview
The overview shows some service-related components.

1 Coolant expansion tank
2 Reservoir for brake fluid (located on the driver's side)
3 Washer fluid filler pipe
4 Central electrical unit
5 Air filter
6 Engine oil filler pipe

The appearance of the engine compartment may differ depending on model and engine variant.

11 Fill the washer fluid at regular intervals, e.g. when refuelling.

WARNING
Remember that the radiator fan (located at the front of the engine compartment, behind the radiator) may start or continue to operate automatically for up to approx. 6 minutes after the engine has been switched off.

Always have the engine cleaned by a workshop - an authorised Volvo workshop is recommended. There is a risk of fire if the engine is hot.

The ignition system works at a very high and hazardous voltage. The car’s electrical system must always be in ignition position 0 when work is being performed in the engine compartment.

Do not touch the spark plugs or ignition coil when the car’s electrical system is in ignition position II or when the engine is hot.

Related information
- Opening and closing the bonnet (p. 581)

- Topping up coolant (p. 586)
- Fuses in engine compartment (p. 605)
- Checking and filling with engine oil (p. 585)
- Ignition positions (p. 416)
Engine oil

An approved engine oil must be used in order that the recommended service intervals and warranty can be applied.

Volvo recommends:

If the engine oil cannot be checked on a regular basis and the level falls too low, there is a risk that this will cause serious damage to the engine.

**IMPORTANT**

In order to fulfil the requirements for the engine's service intervals all engines are filled with a specially adapted synthetic engine oil at the factory. The choice of oil has been made very carefully with regard to service life, starting characteristics, fuel consumption and environmental impact.

An approved engine oil must be used in order that the recommended service intervals can be applied. Only use a prescribed grade of oil for both filling and oil change, otherwise there is a risk of the service life, starting characteristics, fuel consumption and environmental impact of the car being affected.

If engine oil of the prescribed grade and viscosity is not used, engine related components may become damaged. Volvo Car Corporation disclaims any liability for any such damage.

Volvo recommends that oil changes are carried out at an authorised Volvo workshop.

Volvo uses different systems to warn about the oil level if it is too low/high, or in the event of low oil pressure. Certain engine variants have an oil pressure sensor, and then the driver display's warning symbol for low oil pressure is used. Other variants have an oil level sensor, when the driver is informed via the driver display's warning symbol and display texts. Certain variants have both systems. Contact a Volvo retailer for more information.

Change the engine oil and oil filter in accordance with the intervals specified in the Service and Warranty Booklet. Using oil of a higher than specified grade is permitted. If the car is driven in adverse conditions, Volvo recommends using an oil of a higher grade than the one specified.

**Related information**

- Checking and filling with engine oil (p. 585)
- Engine oil — specifications (p. 643)
- Adverse driving conditions for engine oil (p. 645)
Checking and filling with engine oil

The oil level is detected with the electronic oil level sensor.

Filler pipe\(^\text{12}\).

In some cases, oil may need to be topped up between service intervals.

No action with regard to engine oil level needs to be taken until a message is shown in the driver display.

<table>
<thead>
<tr>
<th>IMPORTANT</th>
</tr>
</thead>
<tbody>
<tr>
<td>If this symbol is shown together with a message about low oil level, such as Engine oil level low Refill 1 litre for example, then only fill the volume specified, e.g. 1 litre (1 quart).</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not spill oil onto the hot exhaust manifold due to the risk of fire.</td>
</tr>
</tbody>
</table>

### See oil level in the centre display

The oil level is visualised using the electronic oil level gauge in the centre display when the car has been started. The oil level should be checked regularly.

1. Open the Car status app from the app view in the centre display.
2. Press Status to show the oil level.

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The system cannot directly detect changes when the oil is filled or drained. The car must have been driven approx. 30 km (approx. 20 miles) and have been stationary for 5 minutes with the engine switched off and on level ground before the oil level indication is correct.</td>
</tr>
</tbody>
</table>

\(^\text{12}\) Engines with electronic oil level sensor do not have a dipstick.
NOTE
If the right conditions for measuring the oil level (time after engine shutdown, the car's inclination, outside temperature, etc.) are not met, then the message **No value available** will be shown in the centre display. This does not mean that there is something wrong in the car's systems.

---

**Topping up coolant**

The coolant cools the internal combustion engine to the correct operating temperature. The heat that is transferred from the engine to the coolant can be used to heat the passenger compartment.

When topping up the coolant, follow the instructions on the packaging. Never top up with water only. The risk of freezing increases with both too little and too much coolant concentrate.

If there is coolant under the car, if there is coolant smoke, or if more than 2 litres (approx. 2 quarts) have been filled, always call for recovery to avoid the risk of engine damage due to a defective cooling system when attempting to start the car.

**WARNING**

The coolant may be very hot. Never open the cap when the coolant is hot. If a top-up is required, unscrew the expansion tank cap slowly to allow any overpressure to disappear.
Screw off the cap in the plastic cover.

Screw off the cap and top up with coolant if necessary. The coolant level must not exceed the yellow MAX mark inside the expansion tank.

Reinstall the parts in reverse order.

Grip the hatch's handle and lift/jiggle the hatch from the plastic cover.

Screw off the cap and top up with coolant if necessary. The coolant level must not exceed the yellow MAX mark inside the expansion tank.

Reinstall the parts in reverse order.

**IMPORTANT**

- Mix the coolant with approved quality water. In the event of any doubt about water quality, used ready-mixed coolant in accordance with Volvo recommendations.
- Make sure that the coolant mixture is 50% water and 50% coolant.
- Always use coolant with anti-corrosion agent as recommended by Volvo.
- Only new coolant should be used when replacing major cooling system components to ensure the system has sufficient corrosion protection.
- The engine must only be run with a well-filled cooling system. Otherwise, temperatures that are too high may occur resulting in the risk of damage (cracks) in the cylinder head.
- A high content of chlorine, chlorides and other salts may cause corrosion in the cooling system.

**Related information**

- Engine compartment overview (p. 583)
- Coolant — specifications (p. 646)
Bulb replacement

The bulb in the halogen headlamp and rear fog lamp can be replaced without assistance from a workshop.

Halogen headlamps are not available for all models and markets. Contact a Volvo retailer for more information.

An LED type lamp must be replaced by a workshop. An authorised Volvo workshop is recommended.

**NOTE**
For information about bulbs not covered in this article, contact a Volvo dealer or a certified Volvo service technician.

The bulb in the halogen headlamp can be replaced without the help of a workshop, but the plastic cover over the headlamp must be removed before a bulb can be replaced.

Contact a workshop if faults other than bulbs occur in lamps. If a fault occurs in LED lamps, the entire lamp unit usually must be replaced.

**WARNING**

The car's electrical system must be in ignition position 0 when replacing bulbs.

**IMPORTANT**

Never touch the glass part of the bulbs with your fingers. Grease from your fingers is vaporised by the heat, coating the reflector and then causing damage.

**NOTE**

If an error message remains after the broken bulb has been replaced then we recommend visiting an authorised Volvo workshop.

**NOTE**

Outside lighting such as headlamps and rear lamps may temporarily have condensation on the inside of the lens. This is normal, all exterior lighting is designed to withstand this. Condensation is normally vented out of the lamp housing when the lamp has been switched on for a time.

14 An authorised Volvo workshop is recommended.
Removing the plastic cover for bulb replacement

The bulb in the halogen headlamp can be replaced without the help of a workshop, but the plastic cover over the headlamp must be removed before a bulb can be replaced.

- Press down the pins into the plastic cover's four clips using a screwdriver or similar and lift away the cover.

### NOTE

Points to remember when the cover is refitted:

- The pin in the clip needs to be pressed back fully before the clip is refitted in the cover.
- When the cover is refitted, the pin must be pressed in until the end surface is level with the surface of the clip.

### Replacing the dipped beam bulb

The dipped beam bulb in the halogen headlamp can be replaced without assistance from a workshop.

Before the bulb can be replaced, the plastic cover over the headlamp must be removed.

#### IMPORTANT

Never touch the glass part of the bulbs with your fingers. Grease from your fingers is vaporised by the heat, coating the reflector and then causing damage.

Left-hand headlamp.

1. Detach the headlamp’s rubber cover for the dipped beam bulb.

---

\(^{15}\) LED (Light Emitting Diode)

\(^{16}\) Contact a workshop for replacement - an authorised Volvo workshop is recommended.
2. Unplug the connector from the bulb.
3. Detach the bulb by pushing it gently upwards and pulling it straight out.
4. Fit a new bulb in the socket. The bulb’s guide pin must be aimed straight upwards.
5. Press in the connector.
6. Refit the headlamp's rubber cover.

---

Replacing the main beam lamp

The main beam bulb in the halogen headlamp can be replaced without assistance from a workshop.

Before the bulb can be replaced, the plastic cover over the headlamp must be removed.

![Left-hand headlamp.](image)

1. Detach the headlamp's rubber cover for the main beam bulb.
2. Detach the bulb by turning the bulb holder upward and then pulling straight out.
3. Carefully prize the plastic cover at the connector's lock lug so that the lock lug releases.
4. Unplug the connector from the bulb.
5. Replace the bulb.
6. Fit the bulb in the socket and screw in.
7. Refit the headlamp's rubber cover.

Related information

- Removing the plastic cover for bulb replacement (p. 589)
- Bulb specifications (p. 597)
Replacing daytime running light bulb/position lamp bulb, front
The daytime running light bulb/position lamp bulb in the halogen headlamp can be replaced without assistance from a workshop.

Before the bulb can be replaced, the plastic cover over the headlamp must be removed.

NOTE
The bulb for the daytime running light/position lamp is easier to access if the main beam bulb is detached. The main beam bulb is fitted diagonally above the daytime running light bulb/position lamp bulb. Detach the main beam bulb by rotating its bulb holder upwards and then pulling straight out.

IMPORTANT
Never touch the glass part of the bulbs with your fingers. Grease from your fingers is vaporised by the heat, coating the reflector and then causing damage.

Left-hand headlamp.
1. Detach the headlamp's rubber cover for the daytime running light bulb/position lamp bulb.
2. Pull the bulb holder for the daytime running light bulb/position lamp bulb straight out.
3. Detach the bulb by pulling it straight out.
4. Replace the bulb.
5. Fit the bulb holder into the socket and press it into place.
6. If the main beam bulb's bulb holder has been removed, fit it into the socket and screw in.
7. Refit the headlamp's rubber cover.

Related information

- Removing the plastic cover for bulb replacement (p. 589)
- Bulb specifications (p. 597)
Replacing the front direction indicator bulb

The direction indicator bulb in the halogen headlamp can be replaced without assistance from a workshop.

Before the bulb can be replaced, the plastic cover over the headlamp must be removed.

1. Detach the headlamp’s rubber cover for the indicator bulb.
2. Press the catches together and pull the bulb holder straight out.
3. Replace with a new bulb holder with bulb.
4. Fit the bulb holder into the socket and press it into place.
5. Refit the headlamp’s rubber cover.

Related information
- Exterior lamp positions (p. 589)
- Removing the plastic cover for bulb replacement (p. 589)
- Bulb specifications (p. 597)

Replacing the rear fog lamp bulb

The bulb for the rear fog lamp is located behind a hatch in the boot lid panel on the driver’s side.

NOTE
Replacing the rear fog lamp bulb should be performed by a workshop - an authorised Volvo workshop is recommended.

The rear fog lamp bulb is replaced as follows:

1. Remove the rubber casing over the boot lid lock by folding it to the sides and at the same time pulling it straight off. Refit it by pressing it into place.
MAINTENANCE AND SERVICE

Boot lid keypad.

2. Loosen the boot lid's keypad by inserting a flat object, such as a table knife or a screwdriver, on each short side of the keypad and then prise it out. The keypad's electrical connector does not need to be unplugged.

Boot lid closing handle.

The closing handle on the inside of the boot lid must be removed on the side where the lamp is fitted.

3. Press in a wide flat object, such as a table knife edgeways, to press in 2 lock lugs, and fold out the handle at the same time. When refitting, a fairly hard pressure on the closing handle is required so that the lock lugs click into place again.

IMPORTANT

Both of the closing handle's lock lugs must be pressed in simultaneously before the handle can be folded out and removed.

The panel's fastening clips.

4. Remove the three outside panel clips on the inside of the boot lid, on the side the lamp is fitted.

The rectangular section of the clips is aligned in the longitudinal direction of the car.

5. To remove a clip: Insert a flat object, such as a table knife or a screwdriver, on the short
sides of the clip so that both of the clip's lock lugs are pressed in simultaneously and then prize/pull out the clip.

6. To remove the hinge's plastic guard on the side where the lamp is fitted: Press in the pin in the centre of the plastic rivet using a screwdriver or similar: Then pull/prize out the plastic rivet.

7. After that, open the plastic guard's three latches using a small screwdriver, for example, and place the plastic guard to one side.

8. Carefully pull/fold down the detached part of the panel in order to access the bulb.

**NOTE**

Points to remember when the plastic rivet for the hinge's plastic guard is refitted:

- Before you can use the plastic rivet for refitting, you must first press its centre pin backwards as far as it protrudes from the plastic rivet.
- When the hinge's plastic guard has been fixed in place, press the plastic rivet into the hole in the plastic guard.
- Finally, press the pin into the plastic rivet until the end surface is level with the surface of the plastic rivet.

Rear fog lamp on left-hand side

Lamp housing on left-hand side.

1. Undo the bulb holder by turning it a quarter turn anticlockwise and pulling it out.
2. Remove the blown bulb from the bulb holder by pressing it in and turning anticlockwise.
3. Fit a new bulb by pressing it in and turning it clockwise.
4. Wipe the bulb's lens clean of any dirt, grease or moisture.
5. Attach the bulb holder by turning it a quarter turn clockwise.
6. Fold back the panel and refit the hinge's plastic guard as well as the other parts in reverse order.
Rear fog lamp on right-hand side
Cars with the rear fog lamp on the right-hand side have a cover over the bulb holder - which is why there are several additional steps before the bulb can be replaced.

1. Detach the cable that is routed in through the cover's opening by pressing in the catch on the side of the connector and pulling at the same time.
2. Unscrew the cover using a Torx T25 screwdriver and place the cover and screw to one side.
3. Detach the bulb holder by turning it a quarter turn anticlockwise.
4. Pull out the bulb holder.
5. Remove the blown bulb by pressing it in and turning anticlockwise.
6. Fit a new bulb by pressing it in and turning it clockwise.
7. Wipe the bulb's lens clean of any dirt, grease or moisture.
8. Attach the bulb holder by turning it a quarter turn clockwise.
9. Realign and screw in the cover.
10. Fold back the panel and refit the hinge's plastic guard as well as the other parts in reverse order.

Related information
- Exterior lamp positions (p. 589)

**Related information**

- Exterior lamp positions (p. 589)
- Bulb replacement (p. 588)

---

\(^{17}\) An authorised Volvo workshop is recommended.
Starter battery
The electrical system is single-pole and uses the chassis and engine casing as a conductor.

The starter battery is used to start up the electrical system and drive the starter motor as well as other electrical equipment in the car.

The starter battery should be replaced by a workshop.

The car has a voltage-regulated AC alternator.

The starter battery is a 12 V battery, designed for the carbon dioxide reducing functions Start/Stop and regenerative charging, and to support the functionality of the car's different systems.

The service life and function of the starter battery is influenced by factors such as the number of starts, discharging, driving style, driving conditions, climatic conditions etc.

- Never disconnect the starter battery when the engine is running.
- Check that the cables to the starter battery are correctly connected and properly tightened.

**WARNING**

- The battery can generate oxyhydrogen gas, which is highly explosive. A spark can be formed if a jump lead is connected incorrectly, and this can be enough for the battery to explode.
- Do not connect the jump leads to any fuel system component or any moving part. Be careful of hot engine parts.
- The battery contains sulphuric acid, which can cause serious burns.
- If sulphuric acid comes into contact with eyes, skin or clothing, flush with large quantities of water. If acid splashes into the eyes - seek medical attention immediately.
- Never smoke near the battery.

**Charging points**
When connecting an external starter battery or battery charger, use the car's charging points in the engine compartment.

The battery terminals on the car's starter battery in the luggage/cargo area must not be used.

During charging, both the starter battery and the support battery are charged.

---

18 An authorised Volvo workshop is recommended.
If the following instruction is not observed then the energy saving function for infotainment may be temporarily disengaged, and/or the message in the driver display about the starter battery's state of charge may be temporarily inapplicable, following the connection of an external starter battery or battery charger:

- The negative battery terminal on the car's starter battery must **never** be used for connecting an external starter battery or battery charger - only the **car's negative charging point** may be used as the grounding point.

**NOTE**

The life of the battery is shortened if it becomes discharged repeatedly.

The life of the battery is affected by several factors, including driving conditions and climate. Battery starting capacity decreases gradually with time and therefore needs to be recharged if the car is not used for a longer time or when it is only driven short distances. Extreme cold further limits starting capacity.

To maintain the battery in good condition, at least 15 minutes of driving/week is recommended or that the battery is connected to a battery charger with automatic trickle charging.

A battery that is kept fully charged has a maximum service life.

**Location**

The starter battery is located in the cargo area.

**WARNING**

If the starter battery is disconnected, the automatic opening and closing function must be reset to work properly. A reset must take place for pinch protection to work.

**IMPORTANT**

On certain models, the battery is attached with a retaining strap. Make sure the retaining strap is properly tightened.

\(^A\) According to EN standard.
\(^B\) Cold Cranking Amperes.

Volvo recommends entrusting battery replacement to an authorised Volvo workshop.

**IMPORTANT**

When replacing the starter battery or support battery, a battery of AGM\(^{19}\) type must be fitted.

**IMPORTANT**

If the starter battery is replaced, make sure you replace it with a battery with the same cold starting capacity and type as the original battery (see the label on the battery).

**NOTE**

The starter battery's container size must be consistent with the dimensions for the original battery.

**Related information**

- Symbols on the batteries (p. 602)
- Support battery (p. 601)
- Using jump starting with another battery (p. 461)

\(^{19}\) Absorbed Glass Mat.
Support battery
Cars with Start/Stop function, in addition to the starter battery, are equipped with a support battery.

Cars with the Start/Stop function are equipped with two 12 V batteries - one extra powerful starter battery for starting and one support battery that helps during the Start/Stop function's starting sequence.

The support battery is located in a box next to the strut tower.

NOTE
- The higher the current take-off in the car, the more the alternator must be working and the batteries charging = Increased fuel consumption.
- When the capacity of the starter battery has fallen below the lowest permissible level then the Start/Stop function is dis-engaged.

Temporarily reduced Start/Stop function due to high current take-off means:
- The engine starts automatically\(^{20}\) without the driver depressing the clutch pedal (manual gearbox).
- The engine starts automatically without the driver lifting his/her foot off the foot brake pedal (automatic gearbox).

The support battery normally requires no more service than the normal starter battery. A workshop should be contacted in the event of questions or problems - an authorised Volvo workshop is recommended.

IMPORTANT
If the following instruction is not observed then the Start/Stop function may temporarily cease to work after the connection of an external starter battery or battery charger:
- The negative battery terminal on the car's starter battery must never be used for connecting an external starter battery or battery charger - only the car's negative charging point may be used as the grounding point.

\(^{20}\) Automatic starting can only take place if the gear lever is in neutral position.
NOTE
If the starter battery has been discharged so much that the car has no normal electrical functions and the engine is then jump-started with an external battery or a battery charger, the Start/Stop function may continue to be activated. If the Start/Stop function then auto-stops the engine shortly after, there is a great risk that engine auto-start will fail due to insufficient battery capacity, because the battery has not had the opportunity to recharge.

If the car has been jump-started, or if there is insufficient time to charge the battery with a battery charger, the recommendation is to temporarily deactivate the Start/Stop function until the battery has been recharged by the car. In an outside temperature of approx. +15 °C (approx. 60 °F), the battery needs to be charged for at least 1 hour by the car. In a lower outside temperature, the charging time may increase to 3-4 hours. The recommendation is to charge the battery using an external battery charger.

Symbols on the batteries

There are information and warning symbols on the batteries.

- Use protective goggles.
- Further information in the owner’s manual for the car.
- Store the battery out of the reach of children.
- The battery contains corrosive acid.

---

\(^{21}\) Absorbed Glass Mat.
**Avoid sparks and naked flames.**

**Risk of explosion.**

**Must be taken for recycling.**

### NOTE

An expended starter battery or support battery must be recycled in an environmentally safe manner since it contains lead.

### Related information

- Starter battery (p. 598)
- Support battery (p. 601)

### Fuses and central electrical units

All electrical functions and components are protected by a number of fuses in order to protect the car's electrical system from damage by short circuiting or overloading.

**WARNING**

Never use a foreign object or a fuse with an amperage higher than that specified when replacing a fuse. This could cause significant damage to the electrical system and possibly lead to fire.

If an electrical component or function does not work, it may be because the component's fuse was temporarily overloaded and failed. If the same fuse fails repeatedly then there is a fault in the circuit. Volvo recommends contacting an authorised Volvo workshop for checking.

### Location of central electrical units

The figure is schematic - appearance may vary depending on car model.

Central electrical unit locations in a left-hand drive car. In a right-hand drive car the central electrical units under the glovebox change sides.

1. Engine compartment
2. Under the glovebox
3. Cargo area

Replacing a fuse
All electrical functions and components are protected by a number of fuses in order to protect the car's electrical system from damage by short circuiting or overloading.

1. Look in the fuse diagram to locate the fuse.
2. Pull out the fuse and check from the side to see whether the curved wire has blown.
3. If this is the case, replace it with a new fuse of the same colour and amperage.

**WARNING**
Never use a foreign object or a fuse with an amperage higher than that specified when replacing a fuse. This could cause significant damage to the electrical system and possibly lead to fire.

**WARNING**
Contact an authorised Volvo workshop about the fuses not mentioned in the owner's manual. If this is not performed correctly, it can cause serious damage to the electrical systems.

Related information
- Fuses and central electrical units (p. 603)
- Fuses in cargo area (p. 611)
- Fuses in engine compartment (p. 605)
Fuses in engine compartment
Fuses in the engine compartment protect engine and brake functions, amongst other things.
On the inside of the cover there are tweezers that facilitate the procedure for the removal and fitting of fuses. The fuse box also provides space for several spare fuses.

**Positions**
On the inside of the cover is a label that shows the location of the fuses.

- Fuses 1-13, 18-30, 35-37 and 46-54 are of the "Micro" type.
- Fuses 14-17, 31-34 and 38-45 are of the "MCase" type and should be replaced by a workshop.

### Related information
- Fuses and central electrical units (p. 603)
- Replacing a fuse (p. 604)
**Fuses in cargo area**
Fuses in the cargo area protect, amongst other things, power seats*, airbags and seatbelt tensioners.

* Option/accessory.
The central electrical unit is located on the right-hand side.

On the inside of the cover there are tweezers that facilitate the procedure for the removal and fitting of fuses.

The **fuse box in the engine compartment** also provides space for several spare fuses.
### Positions

- Fuses 13-17 and 21-36 are of the "Micro" type.
- Fuses 1-12, 18-20 and 37 are of the "MCase" type and should be replaced by a workshop\(^2\).

- Option/accessory.
**Cleaning the interior**

Only use cleaning agents and car care products recommended by Volvo. Clean regularly and treat stains at once for best results. Vacuuming is important prior to using cleaning agents.

**IMPORTANT**

- Certain items of coloured clothing (e.g. dark jeans and suede garments) may stain the upholstery. If this occurs, it is important to clean and treat these parts of the upholstery as soon as possible.
- Never use strong solvents such as washer fluid, pure petrol or white spirit or concentrated alcohol to clean the interior, since this may damage the upholstery as well as other interior materials.
- Never spray the cleaning agent directly onto components that have electrical buttons and controls. Wipe them instead using a moistened cloth containing the cleaning agent.
- Sharp objects and Velcro may damage the fabric upholstery.

**Related information**

- Cleaning the centre display (p. 615)
- Cleaning fabric upholstery and headlining (p. 617)
- Cleaning the seatbelts (p. 617)
- Cleaning floor mats and inlay mats (p. 617)
- Cleaning leather upholstery (p. 618)
- Cleaning the leather steering wheel (p. 619)
- Cleaning interior plastic, metal and wood parts (p. 619)

**Cleaning the centre display**

Dirt, stains and grease from fingers can affect the centre display’s performance and readability. Clean the screen frequently with a microfibre cloth.

To clean the centre display:

1. Turn off the centre display with a long press on the home button.
2. Wipe the screen with the microfibre cloth supplied or use another microfibre cloth of equivalent quality. The screen should be wiped with a clean and dry microfibre cloth with small circular movements. If necessary, lightly moisten the microfibre cloth with clean water.
3. Activate the display with a short press on the home button.
**IMPORTANT**
The microfibre cloth used to clean the centre display must be free from sand and dirt.

**IMPORTANT**
When cleaning the centre display, only use gentle pressure on the screen. Heavy pressure can damage the screen.

**IMPORTANT**
Do not spray any liquid or caustic chemicals directly on the centre display. Do not use window cleaning agent, other cleaning agents, aerosol spray, solvents, alcohol, ammonia or cleaning agent containing abrasive.

Never use abrasive cloths, paper towels or tissue paper, these can scratch the centre display.

Related information
- Cleaning the interior (p. 615)
- Cleaning fabric upholstery and headlining (p. 617)
- Cleaning the seatbelts (p. 617)

- Cleaning leather upholstery (p. 618)

- Cleaning the leather steering wheel (p. 619)
- Cleaning interior plastic, metal and wood parts (p. 619)

**Cleaning the head up display**
Gently wipe the display's cover glass with a clean and dry microfibre cloth. If necessary, lightly moisten the microfibre cloth.

Never use strong stain removers. A special cleaning agent available from Volvo retailers can be used for more difficult cleaning.

Related information
- Activating and deactivating the head-up display* (p. 140)
- Head-up display* (p. 138)
Cleaning fabric upholstery and headlining
Only use cleaning agents and car care products recommended by Volvo. Clean regularly and treat stains at once for best results. Vacuuming is important prior to using cleaning agents.

Fabric upholstery and ceiling upholstery
Never scrape or rub a stain since this risks destroying the upholstery. Never use strong stain removers since this risks destroying the colour of the upholstery.

Related information
• Cleaning the interior (p. 615)
• Cleaning the centre display (p. 615)
• Cleaning the seatbelts (p. 617)

• Cleaning the leather steering wheel (p. 619)
• Cleaning interior plastic, metal and wood parts (p. 619)

Cleaning the seatbelts
Only use cleaning agents and car care products recommended by Volvo. Clean regularly and treat stains at once for best results. Vacuuming is important prior to using cleaning agents.

Seatbelts
Use water and a synthetic detergent. A special textile cleaning agent is available from Volvo retailers. Ensure that the seatbelt is dry before allowing it to retract.

Related information
• Cleaning the interior (p. 615)
• Cleaning the centre display (p. 615)
• Cleaning fabric upholstery and headlining (p. 617)
• Cleaning floor mats and inlay mats (p. 617)
• Cleaning leather upholstery (p. 618)
• Cleaning the leather steering wheel (p. 619)
• Cleaning interior plastic, metal and wood parts (p. 619)

Cleaning floor mats and inlay mats
Only use cleaning agents and car care products recommended by Volvo. Clean regularly and treat stains at once for best results. Vacuuming is important prior to using cleaning agents.

Inlay mats and floor mat
Remove inlaid carpets for separate cleaning of the floor carpet and the inlaid carpets. Use a vacuum cleaner to remove dust and dirt. Each inlay mat is secured with pins.

Remove the inlay mat by taking hold of the inlay mat at each pin and lifting the mat straight up.

Fit the inlay mat in place by pressing it in at each pin.

WARNING
Only use one inlaid mat at each seat, and check before setting off that the mat by the driver's seat is firmly affixed and secured in the pins so that it does not get caught adjacent to and under the pedals.

A special textile cleaner is recommended for stains on the floor mat after vacuuming. Floor mats should be cleaned with agents recommended by Volvo retailers.

Cleaning leather upholstery

Only use cleaning agents and car care products recommended by Volvo. Clean regularly and treat stains at once for best results. Vacuuming is important prior to using cleaning agents.

Leather upholstery*

Volvo's leather upholstery is treated to preserve its original appearance.

Leather upholstery is a natural product that changes and acquires a beautiful patina over time. Regular cleaning and treatment are required in order that the properties and colours of the leather shall be preserved. Volvo offers a comprehensive product – Volvo Leather Care Kit/Wipes – for the cleaning and treatment of leather upholstery which, when used in accordance with the instructions, preserves the leather's protective coating.

To achieve best results, Volvo recommends cleaning and application of the protective cream one to four times per year (or more if required). Volvo Leather Care Kit/Wipes is available from Volvo retailers.

Cleaning the leather upholstery

1. Apply the leather cleaner to a damp sponge and squeeze until a foam is created.
2. Use the sponge on the stain in a circular motion.
3. Thoroughly dampen the stain using the sponge, allow the sponge to absorb the stain without scrubbing.
4. Wipe the stain with a soft cloth and allow the leather to dry thoroughly.

Protecting the leather upholstery

1. Apply a small amount of leather protective agent to a cloth and then apply it to the leather in light circular motions.
2. Allow to dry for about 20 minutes.

Protecting the leather upholstery makes it more resistant to the stresses from the sun's UV radiation.

Cleaning the leather steering wheel
Only use cleaning agents and car care products recommended by Volvo. Clean regularly and treat stains at once for best results. Vacuuming is important prior to using cleaning agents.

Leather steering wheel
Leather needs to breathe. Never cover the leather steering wheel with protective plastic. We recommend Volvo Leather Care Kit/Wipes for cleaning the leather steering wheel. First remove dirt, dust, etc. with a damp sponge or cloth.

Important
Sharp objects, e.g. rings, can damage the leather on the steering wheel.

Cleaning interior plastic, metal and wood parts
Only use cleaning agents and car care products recommended by Volvo. Clean regularly and treat stains at once for best results.

Interior plastic, metal and wood parts
A fibrillated fibre or microfibre cloth, lightly moistened with water, available from Volvo retailers, is recommended for cleaning interior parts and surfaces.

Do not scrape or rub stains. Never use strong stain removers.

Important
Do not use solvent that contains alcohol when cleaning the glass for the driver display.

Important
Keep in mind that high gloss surfaces are easily scratched. Clean these surfaces with a clean, dry microfibre cloth using small, circular motions. If needed, dampen the microfibre cloth with a little clean water.

Cleaning the exterior
The car should be washed as soon as it becomes dirty. This means that the car is easier to clean since the dirt does not attach as firmly. It also reduces the risk of scratches and keeps the car fresh. Wash the car in a car wash with oil separator. Use car shampoo.

Related information
- Cleaning the exterior (p. 620)

- Cleaning the wiper blades (p. 623)
- Cleaning exterior plastic, rubber and trim components (p. 624)
- Cleaning wheel rims (p. 625)
- Rustproofing (p. 625)

Polishing and waxing
Polish and wax the car if the paintwork is dull or to give the paintwork extra protection. The car does not need to be polished until it is at least one year old. However, the car can be waxed during this time. Do not polish or wax the car in direct sunlight, the surface being polished should be a maximum of 45 °C (113 °F).

- Wash and dry the car thoroughly before you begin polishing or waxing. Clean off asphalt and tar stains using tar remover or white spirit. More stubborn stains can be removed using fine rubbing paste designed for car paintwork.
- Polish first with a polish and then wax with liquid or solid wax. Follow the instructions on the packaging carefully. Many preparations contain both polish and wax.

⚠️ IMPORTANT
Avoid waxing and polishing on plastic and rubber.
When using degreasant on plastic and rubber, only rub with light pressure if it is necessary. Use a soft washing sponge.
Polishing glossy trim mouldings could wear away or damage the glossy surface layer.
Polishing agent that contains abrasive must not be used.

Related information
- Cleaning the exterior (p. 620)
- Handwashing (p. 621)
- Automatic car wash (p. 622)
- High-pressure washing (p. 623)

- Rustproofing (p. 625)
Handwashing
The car should be washed as soon as it becomes dirty. This means that the car is easier to clean since the dirt does not attach as firmly. It also reduces the risk of scratches and keeps the car fresh. Wash the car in a car wash with oil separator. Use car shampoo.

Handwashing
The following steps are good to remember when washing the car:

- Avoid washing the car in direct sunlight. This can cause the detergent or wax to dry and have an abrasive effect.
- Remove bird droppings from the paintwork as soon as possible. Bird droppings contain chemicals that affect and discolour paintwork very quickly. For example, use soft paper or sponge soaked in plenty of water. An authorised Volvo workshop is recommended for the removal of any discolouration.
- Wash the underbody, including wheel housings and bumpers.
- Rinse the entire car until the dissolved dirt has been removed so as to reduce the risk of scratches from washing. Do not spray directly onto the locks.
- If necessary, use cold degreasing agent on very dirty surfaces. Note that in this case, the surfaces must not be hot from the sun.
- Wash using a sponge, car shampoo and plenty of lukewarm water.
- Clean the wiper blades with a lukewarm soap solution or car shampoo.
- Dry the car using a clean, soft chamois or a water scraper. If you avoid allowing drops of water to dry in strong sunlight, you reduce the risk of water drying stains which may need to be polished out.
- After the car has been washed, tar from asphalt may remain. Use tar remover to get rid of the last spots after the car has been washed.

**WARNING**
Always have the engine cleaned by a workshop. There is a risk of fire if the engine is hot.

**IMPORTANT**
Dirty headlamps have impaired functionality. Clean them regularly, e.g. when refuelling.
Do not use any corrosive cleaning agents but use water and a non-scratching sponge instead.

**NOTE**
Outside lighting such as headlamps and rear lamps may temporarily have condensation on the inside of the lens. This is normal, all exterior lighting is designed to withstand this. Condensation is normally vented out of the lamp housing when the lamp has been switched on for a time.

**IMPORTANT**
- Make sure that the panoramic roof and sun visor are closed before washing the car.
- Never use polishing agent with abrasive properties on the panoramic roof.
- Never use wax on the rubber mouldings around the panoramic roof.

**IMPORTANT**
Remember to remove dirt from the drain holes in the doors and in the sills after washing the car.

Related information
- Cleaning the exterior (p. 620)
- Polishing and waxing (p. 620)
- Automatic car wash (p. 622)
- High-pressure washing (p. 623)
Automatic car wash

The car should be washed as soon as it becomes dirty. This means that the car is easier to clean since the dirt does not attach as firmly. It also reduces the risk of scratches and keeps the car fresh.

Automatic car wash
An automatic car wash is a simple and quick way of washing the car, but it cannot reach everywhere. Washing the car by hand is recommended to achieve a good result, or to supplement automatic car washes with washing by hand.

NOTE
Volvo recommends that the car is not washed in an automatic car wash during the first few months (this is because the paintwork has not fully hardened).

IMPORTANT
Before driving the car into an automatic car wash, deactivate the functions for automatic braking when stationary and automatic parking brake application. If these functions are not deactivated, the brake system will jam when the car is stationary and the car will not be able to move.

IMPORTANT
For car washes where the car is pulled forward with rolling wheels, the following applies:

1. Before washing the car, make sure that the automatic rain sensor is deactivated, otherwise there is the risk of it starting and damaging the wiper arms.
2. Make sure that the door mirrors are retracted, any auxiliary lamps secured, antennas retracted or removed, otherwise they risk being damaged by the automatic car wash.
3. Drive into the car wash.
4. Switch off the "Automatic braking at standstill" function using the switch on the tunnel console.
5. Switch off the "Automatic parking brake application" function via the top view of the centre display.
6. Switch off the engine by turning the start knob in the tunnel console clockwise. Hold the knob in place for at least 2 seconds.

The car is ready for the car wash.

Related information
- Cleaning the exterior (p. 620)
- Polishing and waxing (p. 620)
High-pressure washing
The car should be washed as soon as it becomes dirty. This means that the car is easier to clean since the dirt does not attach as firmly. It also reduces the risk of scratches and keeps the car fresh. Wash the car in a car wash with oil separator. Use car shampoo.

Wiper blades
Asphalt, dust and salt residue on wiper blades, as well as insects, ice etc. on the windscreen, impair the service life of wiper blades.

When cleaning, set the wiper blades in service position.

NOTE
Wash the wiper blades and windscreen regularly with a lukewarm soap solution or car shampoo. Do not use any strong solvents.

Related information
- Cleaning the exterior (p. 620)
- Polishing and waxing (p. 620)
- Handwashing (p. 621)

- Rustproofing (p. 625)
Cleaning exterior plastic, rubber and trim components

The car should be washed as soon as it becomes dirty. This means that the car is easier to clean since the dirt does not attach as firmly. It also reduces the risk of scratches and keeps the car fresh. Wash the car in a car wash with oil separator. Use car shampoo.

Exterior plastic, rubber and trim components

A special cleaning agent available from Volvo retailers is recommended for the cleaning and care of coloured plastic parts, rubber and trim components, e.g. glossy trim mouldings. When using such a cleaning agent the instructions must be followed carefully.

Avoid washing the car with detergent with a pH value below 3.5 or above 11.5. This can cause discolouration of anodised aluminium components*, as illustrated. We advise against use of abrasive polishing agents, as illustrated.

IMPORTANT

Avoid waxing and polishing on plastic and rubber.

When using degreasant on plastic and rubber, only rub with light pressure if it is necessary. Use a soft washing sponge.

Polishing glossy trim mouldings could wear away or damage the glossy surface layer.

Polishing agent that contains abrasive must not be used.

* Option/accessory.
IMPORTANT
Avoid washing the car with cleaning agent with a pH value lower than 3.5 or higher than 11.5. This may result in discolouration of anodised aluminium parts such as roof rack and around the side windows.

Never use metal polishing agent on anodised aluminium parts, this can result in discolouration and destroy the surface treatment.

Related information
- Cleaning the exterior (p. 620)
- Polishing and waxing (p. 620)
- Handwashing (p. 621)
- Automatic car wash (p. 622)
- High-pressure washing (p. 623)
- Cleaning the wiper blades (p. 623)
- Cleaning wheel rims (p. 625)
- Rustproofing (p. 625)

Cleaning wheel rims
The car should be washed as soon as it becomes dirty. This means that the car is easier to clean since the dirt does not attach as firmly. It also reduces the risk of scratches and keeps the car fresh. Wash the car in a car wash with oil separator. Use car shampoo.

Rims
Only use rim cleaning agent recommended by Volvo.

Strong rim cleaning agents can damage the surface and cause stains on chrome-plated aluminium rims.

Related information
- Cleaning the exterior (p. 620)
- Polishing and waxing (p. 620)
- Handwashing (p. 621)
- Automatic car wash (p. 622)
- High-pressure washing (p. 623)
- Cleaning exterior plastic, rubber and trim components (p. 624)
- Cleaning wheel rims (p. 625)
- Rustproofing (p. 625)

Rustproofing
The car has effective protection against corrosion.

Anti-corrosion protection for the body consists of metallic protective coatings on the sheet metal, a high-quality painting process, corrosion-protected and minimised metal overlap, and shielding plastic components, abrasion protection and supplemental rust inhibitor on exposed areas. In the chassis, exposed components of the wheel suspension are made of corrosion-resistant cast aluminium.

Inspection and maintenance
The car's anti-corrosion protection normally requires no maintenance, but a good way to further reduce the risk of corrosion is to keep the car clean. Strong alkaline or acidic cleaning solutions must always be avoided on glossy trim components. Any stone chips should be rectified as soon as they are discovered.

Related information
- Cleaning the exterior (p. 620)
- Polishing and waxing (p. 620)

• Cleaning exterior plastic, rubber and trim components (p. 624)
• Cleaning wheel rims (p. 625)

Car paintwork
The paintwork consists of several layers and is an important part of the car’s rustproofing, and should therefore be checked regularly.

The most common types of paintwork damage are stone chips, scratches, and marks on the edges of wings, doors and bumpers. To avoid the onset of rust, damaged paintwork should be rectified immediately.

Related information
• Touching up minor paintwork damage (p. 626)
• Colour codes (p. 628)

Touching up minor paintwork damage
Paint is an important part of the car’s rustproofing and should therefore be checked regularly. The most common types of paintwork damage are stone chips, scratches, and marks on the edges of wings, doors and bumpers.

When repairing paint damage, the car must be clean, dry and have a temperature of over 15 °C.

Touching up minor paintwork damage
To avoid the onset of rust, damaged paintwork should be rectified immediately.

NOTE
When repairing the paintwork, it must be clean and dry and at a temperature of at least 15°C.
**Materials that may be needed**

- Primer\(^\text{25}\) - a special adhesive primer in a spray can is available for e.g. plastic-coated bumpers.
- Basecoat and clearcoat - available in spray cans or as touch-up pens/sticks\(^\text{26}\).
- Masking tape.
- Fine sand paper\(^\text{25}\).

If the damage has not reached down to the metal, the touch-up paint can be applied directly after the surface has been cleaned.

1. Apply a piece of masking tape over the damaged surface. Then remove the tape to remove any loose paint.
2. Before painting, gentle polishing using a very fine polishing agent may be carried out locally if required (e.g. if there are any uneven edges). The surface is cleaned thoroughly and left to dry.
3. Stir the primer well and apply using a fine brush, a matchstick or similar. Finish off with a basecoat and clearcoat once the primer has dried.

For scratches, proceed as described above, but mask around the damaged area to protect the undamaged paintwork.

Touch-up pens and spray paints are available from Volvo retailers.

**NOTE**

If the stone chip has not penetrated down to the metal and an undamaged layer of paint remains in place, fill in with base coat and clear coat as soon as the surface has been cleaned.

**Related information**

- Car paintwork (p. 626)
- Colour codes (p. 628)

\(^{25}\) If required.  
\(^{26}\) Follow the instructions that are included with the package for the touch-up pen/stick.
**Colour codes**

**Colour code**
The colour code label is located on the car’s right-hand rear door pillar and becomes visible when the right-hand rear door is opened.

![Colour code label](image)

1. Exterior colour code
2. Any secondary exterior colour code

It is important that the correct colour is used.

**Related information**
- Car paintwork (p. 626)
- Touching up minor paintwork damage (p. 626)

---

**Replacing windscreen wiper blades**
The wiper blades sweep water away from the windscreen. Together with the washer fluid, they clean the windscreen and ensure visibility for driving. The wiper blades can be replaced.

**Replacing a windscreen wiper blade**

1. Fold up the wiper arm when it is in service position. Service position is activated/deactivated via the function view in the centre display when the car is stationary and the windscreen wipers are not on. Press the button located on the wiper blade mounting and pull straight out parallel with the wiper arm.

2. Slide in the new wiper blade until a "click" is heard.

3. Check that the blade is firmly installed.

4. Fold the wiper arm back towards the windscreen.

---

![Wiper blade installation](image)

The wiper blades are different lengths.

---

**NOTE**
The wiper blades are different lengths. The blade on the driver’s side is longer than on the passenger side.
Related information
• Using the rain sensor (p. 176)
• Using windscreen and headlamp washers (p. 177)
• Heated windscreen wiper nozzles* (p. 176)
• Using the rain sensor’s memory function (p. 177)
• Filling washer fluid (p. 630)
• Wiper blades in service position (p. 629)
• Using windscreen wipers (p. 175)

Wiper blades in service position
The windscreen wiper blades must be in service position (vertical position) when, for example, they are being replaced.

In order to change, clean or lift the wiper blades (e.g. for scraping off ice from the windscreen) they must be in service position.

** IMPORTANT**
Before placing the wiper blades in the service position, make sure that they are not frozen down.

Activating/deactivating service mode
Service mode can be activated/deactivated when the car is stationary and the windscreen wipers are not on. Service mode is activated/deactivated via the function view in the centre display:

Press the **Wiper Service Position** button. The light indicator in the button illuminates when the service position is activated. Upon activation, the wipers move to standing straight up. To deactivate the service mode, press **Wiper Service Position** again. The light indicator in the button extinguishes when the service position is deactivated.

The wiper blades also exit service position if:
• Windscreen wiping is activated.
• Windscreen washing is activated.
• Rain sensor activated.
• The car is driven away.

** IMPORTANT**
If the wiper arms in service position have been folded up from the windscreen, they must be folded back down onto the windscreen before the activation of wiping, washing or the rain sensor, as well as before driving. This is to avoid scraping the paint on the bonnet.

* Option/accessory. 629

Filling washer fluid
Washer fluid is used for cleaning the headlamps and windshield. Washer fluid with antifreeze must be used when the temperature is under the freezing point.

Filling of washer fluid takes place in the reservoir with a blue cap. The reservoir is used for both windshield washer and headlamp washers*

NOTE
When approx. 1 litre (1 qt) of washer fluid remains in the reservoir, the message Washer fluid Level low, refill is shown in the driver display, together with the symbol.

Prescribed grade: Washer fluid recommended by Volvo - with frost protection during cold weather and below freezing point.

IMPORTANT
Use Volvo genuine washer fluid or equivalent with a recommended pH of between 6 and 8, in working dilution (e.g. 1:1 with neutral water).

IMPORTANT
Use washer fluid with antifreeze when the temperature is below freezing to avoid freezing in the pump, reservoir and hoses.

Volume:
- Cars with headlamp washing: 5.5 litres (5.8 qts).
- Cars without headlamp washing: 3.5 litres (3.7 qts).

**Type designations**

The decals in the car contain information such as chassis number, type designation, colour code, etc.

**Label location**

The illustration is schematic - details may vary depending on market and model.

Knowing the car’s type designation, vehicle identification and engine numbers can facilitate all contact with an authorised Volvo retailer regarding the car and when ordering spare parts and accessories.
Decal for type designation, vehicle identification number, permissible maximum weights and code designation for exterior colour and type approval number. The decal is positioned on the door pillar, and will be visible when the right-hand rear door is opened.

Decal A/C system for cars with refrigerant R1234yf.

Decal A/C system for cars with refrigerant R134a.

Label for parking heater.

Decal for engine code and the engine's serial number.

Label for engine oil.
6 Decal for gearbox type designation and serial number.

7 Decal for the car’s identification number - VIN (Vehicle Identification Number).

Further information on the car is presented in the registration document.

---

**NOTE**

It is not intended that the decals illustrated in the owner’s manual should be exact replicas of those in the car. They are included to show their approximate appearance and locations in the car. The information that applies to your particular car can be found on the decal on the car.

A For kerb weight + 2 people. Varies slightly depending on tyre dimension, chassis alternative, etc.
B Applies to cars with 17/18 inch wheels.
C Applies to cars with 19 inch wheels.
D Applies to cars with 20 inch wheels.
E Applies to cars with 21 inch wheels.
F Body width.
G At door mouldings.

**Related information**
- Weights (p. 639)
Weights
Max. gross vehicle weight, etc. can be read on a label in the car.

Kerb weight includes the driver, the fuel tank 90% full and all fluids.
The weight of passengers and accessories, and towball load (when a trailer is hitched) influence the load capacity and are not included in the kerb weight.
Permitted max. load = Gross vehicle weight - Kerb weight.

NOTE
The documented kerb weight applies to cars in the standard version - i.e. a car without extra equipment or accessories. This means that for every accessory added the loading capacity of the car is reduced correspondingly by the weight of the accessory.
Examples of accessories that reduce load capacity are the different equipment levels (e.g. Kinetic, Momentum, Summum), as well as other accessories such as towbar, load carrier, space box, audio system, auxiliary lamps, GPS, fuel-driven heater, safety grille, carpets, cargo cover, power seats, etc.
Weighing the car is a certain way of ascertaining the kerb weight of your own particular car.

WARNING
The car’s driving characteristics change depending on how heavily it is loaded and how the load is distributed.

Max. gross vehicle weight
Max. train weight (car+trailer)
Max. front axle load
Max. rear axle load
Equipment level
Max. load: See registration document.
Max. roof load: 100 kg.

- Engine oil (p. 584)
Adverse driving conditions for engine oil

Adverse driving conditions can lead to abnormally high oil temperature or oil consumption. Below are some examples of adverse driving conditions.

Check the oil level more frequently for long journeys:

- towing a caravan or trailer
- in mountainous regions
- at high speeds
- in temperatures colder than -30 °C (-22 °F) or hotter than +40 °C (+104 °F).

The above also apply to shorter driving distances at low temperatures.

Choose a fully synthetic engine oil for adverse driving conditions. It provides extra protection for the engine.

Volvo recommends:

![Castrol EDGE Professional](image)

**IMPORTANT**

In order to fulfil the requirements for the engine’s service intervals all engines are filled with a specially adapted synthetic engine oil at the factory. The choice of oil has been made very carefully with regard to service life, starting characteristics, fuel consumption and environmental impact.

An approved engine oil must be used in order that the recommended service intervals can be applied. Only use a prescribed grade of oil for both filling and oil change, otherwise there is a risk of the service life, starting characteristics, fuel consumption and environmental impact of the car being affected.

If engine oil of the prescribed grade and viscosity is not used, engine related components may become damaged. Volvo Car Corporation disclaims any liability for any such damage.

Volvo recommends that oil changes are carried out at an authorised Volvo workshop.

**Related information**

- Engine oil specifications (p. 643)
- Engine oil (p. 584)
Coolant — specifications
Prescribed grade: Coolant recommended by Volvo mixed with 50% water\(^1\), see the packaging. Consult a Volvo retailer if unsure.

To avoid health risks, different types of glycol must not be mixed.

Related information
- Topping up coolant (p. 586)

Transmission fluid — specifications
Under normal driving conditions, the transmission fluid does not need to be changed during its service life. However, it may be necessary in adverse driving conditions.

<table>

**NOTE**

If the consumption and emission data is missing then it is included in the enclosed supplement.
The fuel consumption and emission values in the above table are based on special EU driving cycles (see below), which apply for cars with kerb weight in basic version and without extra equipment. The car’s weight may increase depending on its equipment level. This, along with how heavily the car is loaded, increases its fuel consumption and CO2 emissions.

There are several reasons for fuel consumption that is higher than the values in the table. Examples of these include:

- If the car is equipped with extra equipment that affects its weight.
- Driving style.
- If the customer chooses wheels other than those mounted as standard on the basic version of the model, as this could increase rolling resistance.
- High speed causes increased air resistance.
- Fuel quality, road and traffic conditions, weather and the condition of the car.

A combination of the examples above could increase consumption considerably.

There may be huge deviations in fuel consumption if comparing to the EU driving cycles (see below), which are used in the certification of the car and on which consumption figures in the table are based. For further information, please refer to the referenced regulations.

### NOTE

Extreme weather conditions, driving with a trailer or driving at high altitudes in combination with fuel quality are factors that considerably increase the car’s fuel consumption.
EU driving cycles
The official fuel consumption figures are based on two standardised driving cycles in a laboratory environment ("EU driving cycles"), all in accordance with EU Regulation no 692/2008 and 715/2007 (Euro 5 / Euro 6), 2017/1151 and 2017/1153. Since the driving cycles are also used for quality control, there are stringent requirements for test repeatability. Testing is therefore conducted in a controlled manner and only with the car's basic functions (e.g. air conditioning, radio, etc. switched off). The results of the official figures are therefore not naturally representative of what the customer sees in actual use.

The regulations cover the driving cycles "Urban driving" and "Motorway driving":

- **Urban driving** – the measurement starts with a cold start of the engine. The driving is simulated.

- **Motorway driving** – the car is accelerated and braked at speed of 0-120 km/h (0-75 mph). The driving is simulated.

The official value for mixed driving, which is shown in the table, is a combination of the results from the "Urban driving" and "Motorway driving" driving cycles in accordance with legal requirements.

To determine the carbon dioxide emissions (CO₂ emissions) during the two driving cycles, the exhaust gases were collected. These were then analysed to determine the value for CO₂ emissions.
