This Quick Reference Guide is a summary of basic vehicle operations. It contains brief descriptions of fundamental operations so you can locate and use the vehicle’s main equipment quickly and easily.

The Quick Reference Guide is not intended as a substitute for the Owner’s Manual located in your vehicle’s glove box. We strongly encourage you to review the Owner’s Manual and supplementary manuals so you will have a better understanding of your vehicle’s capabilities and limitations.

Your dealership and the entire staff of Toyota Motor North America, Inc. wish you many years of satisfied driving in your new Sienna.

A word about safe vehicle operations

This Quick Reference Guide is not a full description of Sienna operations. Every Sienna owner should review the Owner’s Manual that accompanies this vehicle.

Pay special attention to the boxed information highlighted in color throughout the Owner’s Manual. Each box contains safe operating instructions to help you avoid injury or equipment malfunction.

All information in this Quick Reference Guide is current at the time of printing. Toyota reserves the right to make changes at any time without notice.

**OVERVIEW**

**FEATURES & OPERATION**

**TOYOTA SAFETY SENSE**

**SAFETY & EMERGENCY FEATURES**

- Turn signal indicator
- Fog light indicator
- High coolant temperature warning
- Low engine oil pressure warning
- Low Tire Pressure Warning
- Electric power steering system warning
- Lane Departure Alert (LDA) indicator
- Low fuel level warning light
- Low outside temperature indicator
- Low engine oil level warning
- Low engine oil pressure warning
- Malfunction/Check Engine indicator
- Pre-Collision System (PCS) warning
- Security indicator
- Slip indicator/Hill-start Assist Control indicator
- Third seat fold incomplete warning
- Vehicle Stability Control (VSC) OFF indicator
- ECO Driving Indicator Light
- ECT PWR indicator
- Headlight low/high beam indicator
- Low windshield washer fluid level warning
- Master warning light

---

1 If the indicator does not turn off within a few seconds of starting the engine, there may be a malfunction. Have the vehicle inspected by your Toyota dealer.

2 If the indicator flashes, there may be a malfunction. Refer to the Owner’s Manual.

3 If the indicator flashes, it indicates that the system is operating.

4 If equipped.
# Keyless (and remote) entry

## UNLOCKING OPERATION

<table>
<thead>
<tr>
<th>Type A</th>
<th>Type B</th>
<th>Type C</th>
</tr>
</thead>
</table>

- **Type A**
  - Smart Key remote
  - Push ONCE: Driver door
  - Grasp TWICE: All doors

- **Type B**
  - Power sliding door operation (if equipped)
  - Push and hold Left side
  - Push and hold Right side

- **Type C**
  - All-door unlock
  - Push

**NOTE:** If a door is not opened within 60 seconds of unlocking, all doors will relock for safety.

## LOCKING OPERATION

<table>
<thead>
<tr>
<th>Type A</th>
<th>Type B</th>
<th>Type C</th>
</tr>
</thead>
</table>

- **Type A**
  - Smart Key remote
  - Push

- **Type B**
  - All-door lock
  - Touch

- **Type C**
  - All-door unlock
  - Pull

## POWER SLIDING DOOR OPERATION (IF EQUIPPED)

- **Type B**
  - Push and hold
  - Left side
  - Right side

- **Type C**
  - Push and hold
  - Left side
  - Right side

**NOTE:** Driver door unlocking function can be programmed to unlock driver side doors only, or all doors. Grasping any passenger door handle will unlock all doors. Please refer to the Owner’s Manual for more details on how to program the doors.

**NOTE:** Doors may also be locked/unlocked using remote.
POWER BACK DOOR OPERATION (IF EQUIPPED)

Type B

Type C

PANIC BUTTON

Smart Key system (if equipped)

START FUNCTION

NOTE: The Smart Key must be carried to enable the start function. With gear shift lever in Park and the brake pedal depressed, push the “ENGINE START STOP” switch.

POWER (WITHOUT STARTING ENGINE)

Without depressing the brake pedal, pressing the “ENGINE START STOP” switch will change the operation mode in succession from:

- **ACCESSORY**
  - **ON**: Accessory – Some electrical components can be used.
  - **OFF**: On - All electrical components can be used.
  - Off - All systems OFF. Emergency flashers can be used.
NOTE: Tighten until one click is heard. If the cap is not tightened enough, Check Engine “CHECK” indicator may illuminate.
Instrument panel light control

Pressing the button will adjust the brightness of the meter panel lights. The brightness level of the meters when the surroundings are bright (day mode) and dark (night mode) can be adjusted individually.

Engine maintenance

NOTE: Regularly scheduled maintenance, including oil changes, will help extend the life of your vehicle and maintain performance. Please refer to the “Warranty & Maintenance Guide.”
Auto lock/unlock

Automatic door locks can be programmed to operate in different modes, or turned OFF.

Shift position linked door locking/unlocking function
-Doors lock when shifting from Park.
-Doors unlock when shifting into Park.

Speed linked door locking function
-Doors lock when the vehicle speed is approximately 12 mph or higher.

Driver’s door linked door unlocking function
-(Without a Smart Key) Doors unlock when the driver’s door is opened within 45 seconds after turning the ignition switch to the “ACC” or “LOCK” position.
-(With a Smart Key) Doors unlock when the driver’s door is opened within 45 seconds after turning the “ENGINE START STOP” switch OFF.

Refer to the Owner’s Manual for more details.

Door locks

Parking brake

Tilt and telescopic steering wheel

Hold wheel, push lever down, set angle and length, and return lever.

NOTE: Do not attempt to adjust while the vehicle is in motion.
**Automatic transmission**

* The “ENGINE START STOP” switch/ignition switch must be “ON” and the brake pedal depressed to shift from Park.

### “S” (SEQUENTIAL) MODE

Shift the shift lever to “S” position from “D” position.

+ : Upshift (push and release)
- : Downshift (pull and release)

Downshifting increases power going uphill, or provides engine braking downhill. For best fuel economy during normal driving conditions, always drive with the shift lever in the “D” position.

**Steering lock release**

**Without Smart Key system**

When starting the engine, the engine switch may seem stuck in the “LOCK” position. To free it, turn the key while turning the steering wheel slightly left and right.

**With Smart Key system**

The green indicator light on the engine switch will flash and a message will be shown on the multi-information display. Press the engine switch while turning the steering wheel left and right.
FEATURES & OPERATIONS

Lights & turn signals

HEADLIGHTS

Daytime Running Light (DRL) system (if equipped) Automatically turns on under certain conditions to make vehicle more visible to other drivers. Not for use at night. Automatic light cut off system Automatically turns lights off after a delay of 30 seconds, or lock switch on remote is pushed after locking. Automatic High Beam (AHB) system Automatically switches between high and low beams as appropriate for enhance forward visibility.

Refer to Toyota Safety Sense™ P (TSS-P) in this guide or the Owner’s Manual for more details on the Automatic High Beam feature.

* Operating conditions must be met. Refer to the Owner’s Manual for details.

FRONT FOG LIGHTS (IF EQUIPPED)

Front fog lights come on only when the headlights are on low beam.

TURN SIGNALS
Rotating the dial downward will lower the angle of the beam.

Windshield wipers & washers

**FRONT**

*Intermittent windshield wiper frequency adjustment* Rotate to increase/decrease wipe frequency.

- Intermittent
  - Adjust frequency*

Seats-Removing 2nd row outside seats

Tip-up seats

Ottoman seats

Refer to the Owner’s Manual for more details.

Seats-Removing 2nd row center seat (if equipped)

Refer to the Owner’s Manual for more details.
Seats-Stowing 3rd row seats

MANUAL

1. Lower the 3rd row seats.
2. Stow the seat belt buckles.

POWER

1. Lower the 3rd row seats.
2. Stow the seat belt buckles.
3. Push and hold the “3RD SEAT” feature to stow the 3rd row seats.

3rd seat fold incomplete warning light*

* Incomplete warning light:
An alarm will sound for 10 seconds and the warning light will flash three times if the shift lever is moved from P.

“3RD SEAT” (“3RD SEAT”) warning indicator will light up on the instrument panel if the third seat is not fully open or stowed.

Refer to the Owner’s Manual for more details.
Seats-Head restraints

Front and second row outside seats  Second row center (8-passenger models) and third row center seats  Third row outside seats

Press and hold the switch to open and close each sliding door.

Power
- Sliding doors will not fully open if the sliding door window is open.
- Power sliding doors will open only when gear selector is in the “P” (Park) position, and doors are unlocked. Refer to the Owner’s Manual for more details.
- An alarm will sound if a sliding door is open and the vehicle is shifted out of Park.
- Left sliding door will not open if gas door is open.
- If battery is disconnected, the power sliding doors need to be reinitialized.

Refer to the Owner’s Manual for more details.

Manual
- Sliding doors will not lock into the open position if the sliding door window is open.
Power back door (if equipped)

ON/OFF SWITCH

Instrument panel

Front overhead console

OPENING/CLOSING

- **All window auto up/down**: Push the switch completely down or pull it completely up and release to fully open or close. To stop window partway, lightly push the switch in the opposite direction.

- **Window lock switch**: Deactivates all passenger windows. Driver’s window remains operable.

NOTE: If battery is disconnected, the power back door needs to be reinitialized. Refer to the Owner’s Manual for more details.
**Moonroof (if equipped)**

### FRONT MOONROOF

**Without a rear moonroof**

- Push once to open partway; again to open completely.

**With a rear moonroof**

- Lightly press either side of the moonroof switch while opening/closing is in progress, the moonroof stops partway.

### REAR MOONROOF (IF EQUIPPED)

**Disable the rear moonroof**

- Lightly press either side of the moonroof switch while opening/closing is in progress, the moonroof stops partway.
**Driver Easy Speak (if equipped)**

This feature utilizes the vehicle’s built-in microphone to amplify the driver’s voice through the rear speakers. To activate this feature, select “Driver Easy Speak” from the Apps screen on the audio unit. The feature must be turned on every time you enter the vehicle, and automatically turns off when any door (including the liftgate) is opened. There are 7 volume settings.

**Garage door opener (HomeLink®)* (if equipped)**

Garage door openers manufactured under license from HomeLink® can be programmed to operate garage doors, estate gates, security lighting, etc.

Refer to “Garage door opener,” Section 5-4 in the Owner’s Manual, for more details.

For programming assistance, contact HomeLink® at 1-800-355-3515, or visit http://www.homelink.com/toyota.

* HomeLink® is a registered trademark of Gentex Corporation.
Steering wheel telephone switches

Enter switch

Start call

End call

Voice command switch/
Mobile Assistant access*

Microphone

Type A (with moonroof)

Type B (without moonroof)

Bluetooth® technology allows dialing or receipt of calls without removing your hands from the steering wheel.

* Push and hold to access Mobile Assistant. When a compatible smartphone is Bluetooth® connected push and hold the Voice Command switch 2-3 seconds to access Siri® Eyes Free.

Refer to the “Bluetooth® Device Pairing Section” in this guide for more information about phone connections and compatibility.

Refer to the “Navigation and Multimedia System Owner’s Manual” for more details.

NOTE: Concentrating on the road should always be your first priority while driving. Do not use the Audio Multimedia system if it will distract you.
**FEATURES & OPERATIONS**

**Audio**

- Push to display HOME screen
- Push to display MENU screen
- Push to access AUDIO system
- Push to display MAP screen
- Push to turn ON/OFF

- Seek station/CD track select
- Push to display Bluetooth® hands-free system
- Push to display APPS screen
- Turn to tune radio stations manually or select tracks or files

**Touch screen display**

- Eject CD
- Push to pause or resume playing

Press to display the map screen and repeat a voice guidance. (Premium audio only)

1 If equipped.

Refer to the “Navigation and Multimedia System Owner’s Manual” or visit www.toyota.com/audiomultimedia for additional resources.

**NOTE:** Concentrating on the road should always be your first priority while driving. Do not use the Audio Multimedia system if it will distract you.
**USB media/AUX port**

**USB media port**
By connecting a USB-compatible portable audio device or USB memory stick into the USB media port, you can listen to music through the vehicle’s speaker system.

**AUX port**
By inserting an AUX cable into the AUX port, you can listen to music from a portable audio device through the vehicle’s speaker system while in AUX mode.

Steering wheel-heater (if equipped)

The ignition/“ENGINE START STOP” switch must be in “ACC” or “ON”/ACCESSORY or IGNITION ON position for use.
Intuitive parking assist (if equipped)

The parking assist sonar system operates when the vehicle approaches an obstacle. The distance from your vehicle to nearby obstacles when parallel parking or maneuvering into a garage is measured by sensors and communicated via the Multi-Information Display (MID), the navigation system screen and audible beeps.

When the sensor detects an obstacle, the direction of and the approximate distance to the obstacle are displayed on the MID display or the navigation system screen by illuminating continuously (far) or blinking (near), and beeping sounds will switch from intermittent to continuous as you approach and get closer to a detected obstacle. When the sensors detect two or more obstacles, the audible alerts will respond to the nearest zone.

Always check the surrounding area when using this system.

Refer to section Intuitive parking assist in the Navigation and Multimedia System Owner’s Manual for more details.
**VSC/TRAC OFF switch**

The VSC OFF switch can be used to help free a stuck vehicle in surroundings like mud, dirt or snow. While the vehicle is stopped, press switch to disable the TRAC system.

To disable both VSC and TRAC systems, press and hold the switch for at least 3 seconds.

*Refer to the Owner’s Manual for limitations and more information.*

**Hill-start Assist Control (HAC)**

HAC helps prevent rolling backwards on an incline. To engage, push the brake pedal farther down while at a complete stop until a beep sounds and slip indicator illuminates. HAC holds for approximately 2 seconds after releasing brake pedal.

*Refer to the Owner’s Manual for more details.*
The Blind Spot Monitor is a system that has two functions:

- The Blind Spot Monitor function (assists the driver in decision-making when to change lanes)
- The Rear Cross Traffic Alert function (assists the driver when backing up)

The system is designed to use radar sensors to detect vehicles traveling in the Sienna’s blind spot. If a vehicle is detected the driver will be alerted via the outside rear view side mirror indicators.

Refer to the Owner’s Manual for limitations and more details on this system before attempting to use it.

The rear view monitor system displays an image of the view from the bumper of the rear area of the vehicle. The camera for the rear view monitor system is located above the license plate.

To adjust the image on the rear view monitor screen, press the “MENU” button and select “Display” on the screen. Select “Camera” to adjust the screen contrast and brightness.

Refer to the “Navigation and Multimedia System Owner’s Manual” for limitations and more details on this system.
**Bird’s Eye View Camera with Perimeter Scan Function (if equipped)**

The Bird’s Eye View Camera with Perimeter Scan function assists the driver in viewing the surroundings, when operating at low speeds or parking, by combining front, side and rear cameras and displaying an overhead image on the Audio Multimedia screen.

To view or turn OFF the screen, press the camera switch when the shift lever is in the “P” position. It will display two angles, the Moving view and the See Through view.

Refer to section 6-3 in the “Navigation and Multimedia System Owner’s Manual” for limitations and more details on this system.
FEATURES & OPERATIONS

AUTOMATIC ACCESS SEAT (if equipped)

The AUTOMATIC ACCESS SEAT (right-hand second seat) can be rotated, raised and lowered electrically to help the seat occupant easily enter and exit the vehicle. Have all operations carried out by an assistant.

Refer to the AUTOMATIC ACCESS SEAT Owner’s Manual for more information.

AUTOMATIC ACCESS SEAT

WIRELESS REMOTE CONTROL EFFECTIVE RANGE

Approximately 3.3 ft. (1 m)
CORRECT RIDING POSTURE

Align both knees and sit inside the seat
Lower the armrests, keep both arms inside the armrests
Lower the footrest and place both feet on the footrest

OPERATING THE AUTO ACCESS SEAT

When operating the AUTO ACCESS SEAT, confirm the following:

- Park the vehicle on a flat surface and leave the engine running.
- Shift the shift lever to P and set the parking brake.
- Check that there are no people or items of luggage around the AUTO ACCESS SEAT and the vehicle.
- The occupant is sitting correctly in the AUTO ACCESS SEAT.
- The seat belt is not caught up in the AUTO ACCESS SEAT.
- The occupant of the right-hand third seat is safe.
- Open the right-hand sliding door fully when opening the door.

For more details, refer to the AUTO ACCESS SEAT Owner's Manual.
Quick overview-Toyota Safety Sense™ P (TSS-P)

Toyota Safety Sense™ P (TSS-P) is a set of active safety technologies designed to help mitigate or prevent collisions across a wide range of traffic situations, in certain conditions. TSS-P is designed to help support the driver’s awareness, decision making and vehicle operation contributing to a safe driving experience.

Refer to the Owner’s Manual for operation, setting adjustments, limitations and more details to understand these functions and complete safety precautions. For more information, please go to http://www.toyota.com/safety-sense

Pre-Collision System with Pedestrian Detection (PCS w/PD)
PCS w/PD is designed to provide alert, mitigation, and/or avoidance support in certain conditions, when the system detects a potential collision with a preceding vehicle is likely to occur.

The advanced millimeter-wave radar sensor system is designed to work with the camera sensor to help recognize a preceding pedestrian, and provide an alert, mitigation and/or avoidance support in certain conditions.

Lane Departure Alert with Steering Assist (LDA w/SA)
LDA w/SA is designed to provide notification when the system detects an unintended lane departure.

The Steering Assist function is designed to provide small corrective steering inputs to the steering wheel for a short period of time to help keep the vehicle in its lane.

Dynamic Radar Cruise Control (DRCC)
DRCC is designed to help maintain a pre-set distance to a preceding vehicle when the preceding vehicle is traveling at a lower speed.

Automatic High Beams (AHB)
AHB is designed to detect the headlights of oncoming vehicles and the tail lights of preceding vehicles and switch between high beams and low beams as appropriate.

Sensors

TSS-P combines an in-vehicle camera mounted in front of the inside rear view mirror and a millimeter-wave radar mounted in the front grill. These sensors support the driver assist systems.
The Pre-Collision System uses a radar sensor and camera sensor to help detect a vehicle or pedestrian in front of your vehicle.

As there is a limit to the degree of recognition accuracy and control performance that this system can provide, do not overly rely on this system. This system will not prevent collisions or lessen collision damage or injury in every situation. Do not use PCS instead of normal braking operations under any circumstances. Do not attempt to test the operation of the pre-collision system yourself, as the system may not operate or engage, possibly leading to an accident. In some situations, such as when driving in inclement weather such as heavy rain, fog, snow or a sandstorm or while driving on a curve and for a few seconds after driving on a curve, a vehicle or pedestrian may not be detected by the radar and camera sensors, preventing the system from operating or engaging properly.

Refer to the Toyota Owner’s Manual for a list of additional situations in which the system may not operate properly.

**Pre-Collision Warning**
When the system determines that the possibility of a frontal collision is high, a buzzer will sound and a warning message will be displayed on the Multi-Information Display (MID) to urge the driver to take evasive action.

**Pre-Collision Brake Assist**
If the driver notices the hazard and brakes, the system may provide additional braking force using Brake Assist. This system may prime the brakes and may apply greater braking force in relation to how strongly the brake pedal is depressed.

**Pre-Collision Braking**
If the driver does not brake in a set time and the system determines that the possibility of a frontal collision with a preceding vehicle is extremely high, the system may automatically apply the brakes, reducing speed in order to help the driver reduce the impact and in certain cases avoid the collision.

Refer to the Toyota Owner’s Manual for additional information on PCS w/PD operation, settings adjustments, limitations, and precautions before attempting to use it.
PCS PEDESTRIAN DETECTION

Under certain conditions, the PCS system included with the TSS-P package may also help to detect a pedestrian in front of your vehicle using the in-vehicle camera and millimeter-wave radar. The in-vehicle camera of PCS detects a potential pedestrian based on size, profile, and motion of the detected pedestrian. However, a pedestrian may not be detected depending on the conditions, including the surrounding brightness and the motion, posture, size, and angle of the potential detected pedestrian, preventing the system from operating or engaging.

As part of the Pre-Collision System, this function is also designed to first provide an alert and then automatic braking if needed.

Refer to the Toyota Owner’s Manual for additional limitations and information.

CHANGING PCS ALERT TIMING

(1) Press “겠습니다” switches and select [ ] from the MID.
(2) Press “겠습니다” or “겠습니다” switches and select the [ ] setting function from the MID and then press “겠습니다”. The setting screen is displayed.
(3) Select “Sensitivity” and then press “겠습니다”. Each time “겠습니다” is pressed, the response to the PCS alert timing changes as shown above. You can press “겠습니다” to go back to the menu.

Note: PCS is enabled each time the engine switch is turned to Ignition On. The system can be disabled/enabled and the alert timing of the system can be changed. (Alert timing only, brake operation remains the same).
DISABLING PRE-COLLISION SYSTEM (PCS)

(1) Press “〈 〉” switches and select  from the MID.
(2) Press “〈 〉 or 〈 〉” switches and select the  setting function from the MID and then press “〈 〉”. The setting screen is displayed.
(3) Select 〈 PCS 〉 and then press “〈 〉.” The Pre-Collision System will be disabled.
You can press “〈 〉” to go back to the menu.

Note: PCS is enabled each time the engine switch is turned to Ignition On. The system can be disabled/enabled and the alert timing of the system can be changed. (Alert timing only, brake operation remains the same).

Lane Departure Alert with Steering Assist
(LDA w/SA)

LDA in TSS-P uses an in-vehicle camera designed to detect visible white and yellow lane markers in front of the vehicle and the vehicle’s position on the road. If the system determines that the vehicle is starting to unintentionally deviate from its lane, the system alerts the driver with an audio and visual alert. When the alerts occur, the driver must check the surrounding road situation and carefully operate the steering wheel to move the vehicle back to the center part of their lane.

LDA is designed to function at speeds of approximately 32 MPH or higher on relatively straight roadways.

In addition to the alert function, LDA w/SA also features a steering assist function. When enabled, if the system determines that the vehicle is on a path to unintentionally depart from its lane, the system may provide small corrective steering inputs to the steering wheel for a short period of time to help keep the vehicle in its lane.
Press the LDA switch to turn the LDA system on. Depress again to turn it off.

**Note:** The system will continue in the last state it was in (ON or OFF) when the engine is started again.

Refer to the Toyota Owner’s Manual for additional information on LDA operation, settings adjustments, limitations, and precautions before attempting to use it.

### LANE DEPARTURE ALERT

**LDA function display**

The LDA function displays when the Multi-Information Display (MID) is switched to the driving assist system information screen.

1. The system displays solid white lines on the LDA indicator when visible lane markers on the road are detected. A side flashes orange to alert the driver when the vehicle deviates from its lane.
2. The system displays outlines on the LDA indicator when lane markers on the road are not detected or the function is temporarily cancelled.

**Note:** When operation conditions are no longer met, a function may be temporarily canceled. However, when the operation conditions are met again, operation of the function is automatically restored. For example, LDA may not function on the side(s) where white/yellow lines are not detectable.
DISABLING STEERING ASSIST

(1) Press “<<” switches to find and select .
(2) Press “<<” or “>>” switches to find the setting function and then press “■”. The LDA Steering Assist system will be disabled.
(3) You can press “■” to go back to the menu.

Note: Operation of the LDA system and setting adjustments continues in the same condition regardless of Ignition cycle until changed by the driver or the system is reset.

ADJUSTING LDA ALERT SENSITIVITY

The driver can adjust the sensitivity of the LDA (warning) function from the Multi-Information Display (MID) customization screen.

  - **High** - Is designed to warn approximately before the front tire crosses the lane marker.
  - **Normal** - Is designed to warn approximately when the front tire crosses the lane marker.

(1) Press “<<” switches to find and select .
(2) Press “<<” or “>>” switches to find the setting function and then press “■”. The setting screen is displayed.
(3) Select “Sensitivity” and then press “■”. Each time “■” is pressed, the response to the LDA alert sensitivity changes. You can press “■” to go back to the menu.

Note: Operation of the LDA system and setting adjustments continues in the same condition regardless of Ignition cycle until changed by the driver or the system is reset.

SWAY WARNING SYSTEM

Continuous lane deviations from swaying.

Gentle swaying from driver’s inattentiveness.

Acute steering wheel operation after the number of operations decrease due to driver’s inattentiveness.

SWS is a function of LDA and is designed to detect swaying based on the vehicle location in the lane and the driver’s steering wheel operation. To help prevent swaying, the system alerts the driver using a buzzer sound and a warning displays in the MID.
(1) Press “<>” switches to find and select .
(2) Press “<>” switches and select the setting function and then press “.”
(3) Press “” each time to change the setting.
(4) Press “” to go back to the menu.

Note: Operation of the LDA system and setting adjustments continues in the same condition regardless of Ignition cycle until changed by the driver or the system is reset.

ADJUSTING SWAY ALERT SENSITIVITY

(1) Press “<>” switches to find and select .
(2) Press “<>” switches and select the setting function and then press “.”
(3) Press “” each time to change the setting.
(4) Press “” to go back to the menu.
Dynamic Radar Cruise Control (DRCC)

DRCC helps maintain a pre-set distance to a preceding vehicle when the preceding vehicle is traveling at a lower speed. This mode is always selected first when the cruise control button is depressed. Constant speed cruise control mode is also available.

Dynamic Radar Cruise Control (DRCC)

DRCC helps maintain a pre-set distance to a preceding vehicle when the preceding vehicle is traveling at a lower speed. This mode is always selected first when the cruise control button is depressed. Constant speed cruise control mode is also available.

1. Push the ON-OFF button. The “RADAR READY” or “!” indicator will come on.
2. Push the lever down to SET speed, push it up to Resume and pull it or depress brake to Cancel.
3. Push up to increase the set speed, push down to decrease (1 mph [1.6 km/h] or 1 km/h [0.6 mph] increments).

Vehicle will cruise at a set speed, decelerate to maintain selected distance from a slower vehicle traveling in front and accelerate back up to the selected speed if the vehicle in front changes lanes or speeds up.

1. The set speed may also be cancelled by depressing the brake pedal.
2. The set speed may be resumed once vehicle speed exceeds 25 mph.

Refer to the Toyota Owner’s Manual for additional information on DRCC operation, settings adjustments, limitations, and precautions before attempting to use it.
TOYOTA SAFETY SENSE™

ADJUSTING DISTANCE

This mode employs a radar sensor to detect the presence of vehicles up to approximately 328 ft (100 m) ahead, determines the current vehicle-to-vehicle following distance and operates to maintain a preset following distance from the vehicle ahead. These distances vary based on vehicle speed.

Note: Vehicle-to-vehicle distance will close in when traveling on long downhill slopes.

(1) Constant speed cruising when there are no vehicles ahead
The vehicle travels at the speed set by the driver. The desired vehicle-to-vehicle distance can also be set by operating the vehicle-to-vehicle distance control.

(2) Deceleration cruising and follow-up cruising when a preceding vehicle driving slower than the set speed appears
When a vehicle is detected running ahead of you, the system automatically decelerates your vehicle. When a greater reduction in vehicle speed is necessary, the system applies the brakes (the brake lights will come on at this time). The system will respond to changes in the speed of the vehicle ahead in order to maintain the vehicle-to-vehicle distance set by the driver. A warning tone warns you when the system cannot decelerate sufficiently to prevent your vehicle from closing in on the vehicle ahead.

(3) Acceleration when there are no longer any preceding vehicles driving slower than the set speed
The system accelerates until the set speed is reached. The system then returns to constant speed cruising.

Note: When your vehicle is too close to a vehicle ahead, and sufficient automatic deceleration via the cruise control is not possible, the display will flash and the buzzer will sound to alert the driver. An example of this would be if another driver cuts in front of you while you are following a vehicle. Depress the brake pedal to ensure an appropriate vehicle-to-vehicle distance.
SWITCHING TO CONSTANT SPEED (CRUISE) CONTROL MODE

If you are already using DRCC "[image of icon]", push ON-OFF button to turn the system off first, then push and hold ON-OFF button for at least 1.5 seconds to switch.

Note: When the engine is turned off, it will automatically default to DRCC.

SETTING CONSTANT SPEED (CRUISE) CONTROL

To adjust speed or cancel, see steps (2) and (3) of ADJUSTING SET SPEED on page 43.

Refer to the Toyota Owner’s Manual for additional information on DRCC operation, settings adjustments, limitations, and precautions before attempting to use it.
Automatic High Beams (AHB)

AHB is a safety system designed to help drivers see more of what’s ahead at nighttime while reducing glare for oncoming drivers. When enabled, AHB uses an in-vehicle camera to help detect the headlights of oncoming vehicles and tail lights of preceding vehicles, then automatically switches between high and low beams as appropriate to provide the most light possible and enhance forward visibility. By using high beams more frequently, the system may allow earlier detection of pedestrians and obstacles.

Refer to the Toyota Owner’s Manual for additional information on AHB operation, settings adjustments, limitations, and precautions before attempting to use it.

ACTIVATING THE AHB SYSTEM

(1) With the engine switch in ON/IGNITION ON mode and headlight switch turned to “AUTO” position, push lever away from you.

The “AUTO” indicator will come on when the headlights are turned on automatically to indicate that the system is active.

(2) Pull the lever back toward you to turn the AHB system off.

The “AUTO” will turn off and the “ ” turns on.

CONDITIONS WHERE AHB WILL TURN ON/OFF AUTOMATICALLY

When all of these conditions are met, high beams will be automatically turned on (after approximately 1 second):

- Vehicle speed is above approximately 20 mph (32 km/h).
- The area ahead of the vehicle is dark.
- There are no oncoming or preceding vehicles with headlights or tail lights turned on.
- There are few street lights on the road ahead.

If any of these conditions occur, the system is designed to automatically turn off high beams:

- Vehicle speed drops below approximately 20 mph (32 km/h).
- The area ahead of the vehicle is not dark.
- Oncoming or preceding vehicles have headlights or tail lights turned on.
- There are many streetlights on the road ahead.
SAFETY & EMERGENCY FEATURES

Rear door child safety locks

Rear door

Moving the lever downward will allow the door to be opened only from the outside.

Seat belts-Shoulder belt anchor

Child restraint anchors

2nd seat
8 passenger models

2nd seat
7 passenger models

3rd seat

Push up, or squeeze lock release to lower
Seat belts

NOTE: If a passenger’s seat belt is fully extended, then retracted even slightly, the Automatic locking retractor (ALR) will prevent it from being re-extended beyond that point, unless fully retracted again. This feature is used to help hold child restraint systems securely.

To find more information about seat belts, and how to install a child restraint system, refer to the Owner’s Manual.

Tire Pressure Monitoring (warning) System (TPMS)

System reset initialization
1. Push and hold “SET” button until the indicator blinks three times.
2. Wait a few minutes to allow initialization to complete.

After adjusting tire pressures, or after tires have been rotated or replaced, turn the ignition switch to “ON”/engine switch to IGNITION ON and press and hold the “SET” button until indicator blinks three times. Let the vehicle sit for a few minutes to allow initialization to complete.

Refer to the load label on the door jamb or the Owner’s Manual for tire inflation specifications.

If the tire pressure indicator flashes for more than 60 seconds and then remains on, take the vehicle to your local Toyota dealer.

NOTE: The warning light may come on due to temperature changes or changes in tire pressure from natural air leakage. If the system has not been initialized recently, setting the tire pressures to factory specifications should turn off the light.
Spare tire & tools

All-Wheel Drive models are equipped with run-flat tires. Refer to the Owner’s Manual for more details.

TOOL & SPARE TIRE LOCATION

Spare tire & tools

Front Wheel Drive models

Refer to the Owner’s Manual for jack positioning and tire changing procedures.
Safety Connect is a subscription-based telematics service that uses Global Positioning System (GPS) data and embedded cellular technology to provide safety and security features to subscribers. Safety Connect is supported by Toyota’s designated response center, which operates 24 hours per day, 7 days per week.

**Services for subscribers include:**
- Automatic collision notification
- Stolen vehicle location
- Emergency assistance ("SOS" button)
- Enhanced roadside assistance

Contact your dealer for more information about Safety Connect.

*For details, refer to the “Owner’s Manual” or visit www.Toyota.com/safety-connect.*
Your vehicle comes standard with the Star Safety System™, which combines Anti-lock Braking System (ABS), Brake Assist (BA), Electronic Brake-force Distribution (EBD), Smart Stop Technology (SST), Traction Control (TRAC) and Vehicle Stability Control (VSC).

Refer to the Owner’s Manual for more details and important information on limitations to these systems.

**ANTI-LOCK BRAKE SYSTEM (ABS)**

Toyota’s ABS sensors detect which wheels are locking up and limits wheel lockup by “pulsing” each wheel’s brakes independently. Pulsing releases brake pressure repeatedly for fractions of a second. This helps the tires attain the traction that current road conditions will allow, helping you to stay in directional control.

**BRAKE ASSIST (BA)**

Brake Assist is designed to detect sudden or “panic” braking, and then add braking pressure to help decrease the vehicle’s stopping distance. When there’s only a split second to react, Brake Assist can add additional brake pressure more quickly than just the driver alone can.

**ELECTRONIC BRAKE FORCE DISTRIBUTION (EBD)**

Toyota’s ABS technology has Electronic Brake-force Distribution (EBD) to help maintain control and balance when braking. EBD responds to sudden stops by redistributing brake force to enhance the braking effectiveness of all four wheels.

**SMART STOP TECHNOLOGY (SST)**

Smart Stop Technology automatically reduces engine power when the accelerator and brake pedals are pressed simultaneously under certain conditions.

SST engages when the accelerator is depressed first and the brakes are applied firmly for longer than one-half second at speeds greater than five miles per hour.

SST doesn’t engage if the brake pedal is depressed before the accelerator pedal, allowing vehicles to start on a steep hill and safely accelerate without rolling backward.

**VEHICLE STABILITY CONTROL (VSC)**

VSC helps prevent loss of traction during cornering by reducing engine power and applying brake force to selected wheels.

Toyota’s VSC monitors steering angle and the direction your vehicle is traveling. When it senses that the front or rear wheels begin to lose traction, VSC reduces engine power and applies braking to selected wheels. This helps restore traction and vehicle control.
TRACTION CONTROL (TRAC)

VSC helps prevent loss of traction during cornering by reducing engine power, and Traction Control helps maintain traction on loose gravel and wet, icy, or uneven surfaces by applying brake force to the spinning wheel(s).

Toyota’s TRAC sensors are activated when one of the drive wheels starts to slip. TRAC limits engine output and applies the brakes to the spinning wheel. This transfers power to the wheels that still have traction to help keep you on track.

Floor mat installation

There are two types of Toyota floor mats: carpeted and all-weather. Each vehicle has model-specific floor mats. Installation is easy.

To keep your floor mat properly positioned, follow these steps:

• Only use Toyota floor mats designed for your specific model.
• Use only one floor mat at a time, using the retaining hooks to keep the mat in place.
• Install floor mats right side up.
BLUETOOTH® DEVICE PAIRING SECTION

Do not attempt the Bluetooth® Pairing process while driving.
To begin the Bluetooth® Pairing process, press the HOME button on the faceplate of your multimedia system.

**Bluetooth® Pairing for your phone**

Pairing your phone is the first step in connecting with your Toyota for hands-free calling and for audio streaming via Bluetooth. This pairing process is quick and easy. All you have to do is setup the phone and multimedia system to form a connection.¹

1. **STEP 1** Press [MENU] on the faceplate, then select "Setup" on display screen.

2. **STEP 2** Ensure Bluetooth is turned on for your device.

3. **STEP 3** Select "Bluetooth", then select "Add New Device" on display screen.

4. **STEP 4** Select "Device Name".

5. **STEP 5** Check the display on your smart phone. Does the PIN XXXX match the PIN displayed? If it does select "Pair".

¹ Some Android devices may have slightly different SETTINGS screen layout depending on manufacturer of device and Android OS version.
"Connecting" displays while device is forming the connection to your multimedia system.

Enable Notifications (text message). While pairing your device message will display: "You may need to allow message access on your phone".

Note: You may also select "Skip" on display screen to skip enabling notifications. If skipped proceed to Step 8.

Turn on "Show Notifications" for iPhone or "ON" for Android.

A confirmation will appear once your phone has been paired and connected.
NOTES
